This one is 29th of August, .066 to another customer. Here is one for .063 to another customer.

Q. Did you sell to any customer below 6.3c per gallon?

A. I think 6.3 would be about the lowest price at that time.

Q. Have you any record or statement there for 1939 or 1940 by months or showing the number of customers which you sold at different prices?

A. No. It would require an exhaustive study of the records to determine the gallons and the prices delivered to different people in those periods. It could be compiled but, frankly, it would be a lot of work.

Q. Can you state—

A. I think we can give you the same thing you are asking for by simply picking out different invoices at different periods.

Mr. Abbott: I want the record to show that the witness is refreshing himself from a large sheet of invoices, and I would like to inquire whether the accountants for the Respondent will be permitted to examine these for the purpose of cross examination of the witness.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5246 Trial Examiner Ballinger: On the record.

Mr. Abbott: I think we ought to be permitted to have some check on this matter of price quotations, and if they are not going to introduce in evidence the invoices, then we certainly ought to see the basis of the witness' recollection, if he is going to use those for refreshing his recollection.

Trial Examiner Ballinger: Have you any objection to permitting counsel for Respondent to examine the invoices you are now referring to in giving your testimony?

The Witness: No, I haven't, sir. I think it is perfectly all right.

Trial Examiner Ballinger: Will you kindly lay those aside?

Mr. Austin: Yes, just the ones that you used.

The Witness: Yes, I understand.

Mr. Austin: And try and pick out a representative group, because I want you to be able to tell me that you are—well, I want to know the range of prices, Mr. Feinberg. That is what I am trying to get, whether it be from 6.3 to 6.7.

The Witness: Is this on the record or off the record?

Trial Examiner Ballinger: It is on the record.

The Witness: The only way to determine that, of course,
would be to go through our invoices and have either
5247 one or both of you pick out whatever you want to
look at. You don't want all of our records.

By Mr. Austin:

Q. No. I thought perhaps you had already made a schedule.

A. We haven't. I mean, we just picked out invoices at random over those periods.

Q. Can you tell me whether you sold to any customer below 6.3¢ per gallon, talking about Marathon gasoline in 1939 or 1940?

A. I think 6.3 was our lowest price.

Q. Would the period of the price war at the end of 1939 have any effect upon that?

A. No, it didn't. As a matter of fact, our prices—here is one in September of 1939 at 6.6. Here is one in November of '39 at 6.6. Here is one of February of 1940 at 6.3 (indicating). I am perfectly willing to have them look and choose anyone of these.

Trial Examiner Ballinger: Are you willing that counsel may—

The Witness: Yes, I am. I am only too glad to let him look at it.

Trial Examiner Ballinger: The invoices referred to by the witness are now tendered to counsel for Respondent.

By Mr. Austin:

Q. Was the gasoline to which you have been referring in stating these prices sold F. O. B. the buyer's tanks?

5248 A. Yes.

Q. Do you know how many customers you had in 1939 who purchased Marathon gasoline for resale?

A. As Marathon?

Q. Yes.

A. Very few.

Q. What do you mean by very few?

A. Three or four.

Q. Has the Argo Oil Corporation ever been in a position since January 1, 1939, to sell Marathon gasoline to any purchaser in Detroit at two cents or more below the prevailing major tank wagon price and makes a profit?

Mr. Abbott: Now, just a moment, if the Court please. The question is, has the Argo Oil Company been in a position to sell at two cents less than the tank wagon price. I object to the form of the question as to whether it has been in a position to do so. Does that mean financial position or what is the meaning of the question? I object to it upon the ground that the question is ambiguous a unintelligible.

Mr. Austin: I think that the word "position" in bu ness is pretty well settled and, of course, it means view of the entire business relationships of the busin

Trial Examiner Ballinger: The objection is sustai Reframe your question so as to remove any doubt.

By Mr. Austin:

5249 Q. If the Argo Oil Corporation at any time si January, 1939, had entered into an agreement sell gasoline in tank car or transport truck quantities a jobber in Detroit, at two cents or more below the p vailing major tank wagon price, could it have carried such a contract profitably?

A: No.

Trial Examiner Ballinger: Could it have carried such a contract without a loss?

The Witness: No.

Mr. Austin: That is all I have.

Mr. Abbott: All right. May we take a recess at t time?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Abbott: Your Honor, I move we adjourn until 1 o'clock.

Trial Examiner Ballinger: Motion of counsel Respondent is granted and now, at 12:05 p. m., the hear stands in recess until 1:00 p. m.

(Whereupon at 12:05 p. m. a recess was taken u 1:00 p. m.)

5250 Afternoon Session.

1:00 P. M.

Trial Examiner Ballinger: We are now reconvened, at 1:00 p. m.

You may proceed.

Mr. Abbott: Mr. Austin, are you through with the direct examination of this witness?

Mr. Austin: Yes.

Cross-Examination by Mr. Abbott.

Q. Mr. Feinberg, where is Mr. Roy Fisher at the present time?

A. We have no knowledge, sir. We don't know where he is.

Q. Isn't he in California?

A. It has been rumored that he was in Florida and then in California, and, as a matter of fact, we don't know. They are looking for him. I mean he is involved in some legal action where they are looking for him and I frankly don't know where he is.

Q. That isn't any criminal matter, is it?

A. It involves bankruptcy I think; involuntary bankruptcy I think.

Q. Well, of your own knowledge do you know whether Roy Fisher of the Argo Oil Company made this offer in question to the Citrin Kolb Oil Company in 1939?

5251 A. No, I don't, sir.

Q. You don't know.

A. Of my own knowledge, no sir.

Q. You don't know.

Trial Examiner Ballinger: Do you know whether or not he made it—such an offer—for and on behalf of your company?

The Witness: No sir. May I add just a word to that?

Mr. Abbott: You answered the question.

Trial Examiner Ballinger: The witness may explain his answer.

Mr. Abbott: If the Court please, this is cross examination of the witness. If they wish to bring out anything on redirect examination, why, that is all right, but of course, if your Honor wishes to have him explain the answer why, I will have to submit to that.

The Witness: It isn't necessary.

Trial Examiner Ballinger: You may explain th answer, if you desire.

5252 A. Naturally, it is quite possible that Mr. Fishe may have made a number of offers in the course o business.

Mr. Austin: We want to know what the witness— asked him those same questions on direct and he gave th same answers.

The Witness: That's right. The answer is "no."

By Mr. Abbott:

Q. That you don't know?

A. That's right. I don't know, sir.

Q. Now, Mr. Feinberg, you had, according to th records of the Michigan Gasoline Tax Department, a number of customers in the year 1940 and 1939, in additio to those that you have mentioned in your testimony, and I want to ask you whether these were some of your customer in those years. J. J. Bright & Son. I mean the customers of the Argo Oil Company.

A. I understand, sir. Without referring to our offic records I would hesitate to answer either way because frankly, I am not familiar with the individual accounts At one time or another Bright's have been a customer o the Argo Oil Corporation but whether in that exact period I am reluctant to answer without referring to our records.

Q. They were at one time, though, a customer of the Argo Oil Corporation?

A. Yes, sir.

Q. Bull Dog Oil Company?

A. Yes, sir.

5253 Q. Were they a customer of yours in 1939 and '40?

A. I would have to give you the same answer. They have been a customer of ours. In what particular period I wouldn't know without referring to records.

Q. Great American Oil and Refining Company?

A. That isn't familiar to me.

Q. Meurer Brothers Company?

A. Yes, sir, they were in that period. I definitely know that.

Q. Now, Meurer Brothers have a station out on Gratiot Avenue, haven't they?

A. Yes, sir.

Q. Were they a customer of yours?

A. Yes, sir, they were in 1939 and 1940.

Q. Do you know whether you supplied them with their requirements of gasoline or did they buy it from other sources also?

A. I think we were supplying their entire requirements.

Q., Miller Tank Car Company? Did you suply them?

A. Yes, we did.

Q. Did you supply their entire requirements of gasoline in those years '39 and '40?

A. I can't answer that of my own knowledge.

Q. Montgomery Ward & Company?

Mr. Austin: Your Honor, I don't know whether this is proper cross examination. I think I will object to it on
that ground because I asked the witness no question
5254 about any jobber customers except all I asked him
was prices charged. Now, I did ask him about a number of retail stations buying in small quantities. On that branch I think this would be correct, but I didn't ask him anything about the names of any customers or as to the number of customers that he had on jobber quantities.

Mr. Abbott: The pertinency of this is, if the Court please, to show the volume of their business in gallons of gasoline, because there already is in evidence the volume of gasoline of some of these customers from the records of the Gasoline Tax Department, and I am asking this for the purpose of—they have attempted to show that they didn't have a large enough volume of business to fulfill any contract that might have been made with Citrin-Kolb Oil Company. I wish to show by this that the volume of their business in those two years with reference to customers that they served—

Mr. Austin: Well, on that point, as counsel for Respondent stated this morning, the volume of the Argo Oil Company business as shown by the State Tax reports is in the record, and it was put in by the Respondent. So I fail to see the relevancy of this in trying to build up a volume when we already know what the volume was, and the Respondent itself has put in evidence on that point.

Trial Examiner Ballinger: The evidence in the record is evidently the best evidence.

5255 Mr. Austin: Evidently the best evidence and, furthermore, the fact that volume was made up of sales to a certain number of main customers would not show at all that additional volume equal to Citrin-Kolb's could have been taken off. If counsel means that they might have taken on Citrin-Kolb and robbed some of their other customers, why, I would concede that their total volume was what is shown in the record.

Mr. Abbott: I want to show that they had such customers as Montgomery Ward & Company, and to ask the witness to submit some invoices showing at what price they sold the Montgomery Ward Company.

Trial Examiner Ballinger: Do you propose now to impeach your own testimony?

Mr. Abbott: No, I am attempting to cross examine this witness.

Mr. Austin: Well, if it is on the question of total volume, that is in the record, the best evidence.

Trial Examiner Ballinger: This witness did testify with reference to total volume, did he not?

Mr. Abbott: Yes, he did, and he also testified with reference to the price charged, which I have a right to go into.

Trial Examiner Ballinger: You have a perfect right to go into the question of the price charged.

Mr. Abbott: Yes.

Now, in order to get that, I have to know the names
5256 of the customers in order to lay a foundation to ask
him what price was charged to those customers.

Trial Examiner Ballinger: The objection is overruled, subject to renewal and a motion to strike.

Q. The last question asked you was this—

A. The answer is "yes."

Q. Montgomery Ward & Company?

A. Yes.

Q. And they have a number of large retail outlets?

A. Yes.

Q. At the various Montgomery Ward stores, don't they?

A. Yes.

Q. One on Grand River?

A. Yes, sir.

Q. How many stations do they have altogether that you supplied their gasoline with?

A. We supplied all their gasoline requirements. I don't know how many stations.

Q. They had also a station on Gratiot Avenue, didn't they?

A. That is the one you asked about, on Gratiot.

Q. Also one on Grand River?

A. Yes, sir.

Q. Have you any invoices here showing the price charged Montgomery Ward & Company for their gasoline in the years 1939 and 1940?

5257 A. These invoices are not in alphabetical order. It may be a little difficult to find the exact ones.

Trial Examiner Ballinger: Take your time and find them.

(Pause.)

Trial Examiner Ballinger: Are you ready to answer?

The Witness: Ready to answer, sir.

A. On the 23rd of August, 1939, .0685 per gallon.

5258 Mr. Abbott: May we see those?

Witness: Oh, yes. I have any number of those; of various dates.

Trial Examiner Ballinger: The witness hands the invoices to counsel for the Respondent as he testifies to them.

Witness: September, October, November, 1939.

By Mr. Abbott:

Q. May I see those?

A. There are any number of those.

Mr. Austin: Your Honor, I think if the invoices are being produced, shouldn't the testimony be put in the record regarding them?

Mr. Abbott: You didn't do that this morning.

Mr. Austin: I think I did; all he withdrew.

Trial Examiner Ballinger: If he testifies with reference to the price, and that's all that's desired, but if you want them in more concise form on the record, then they should be identified.

Witness: I gave him an invoice dated, I think it is August, 1939, showing sales to Montgomery Ward at .0685.

By Mr. Abbott:

Q. The bills that you have given me—

Mr. Austin: Mr. Feinberg, will you state these pri[illegible] in cents?

5259 A. 6.85¢ per gallon.

In April of 1940—I gave Mr. Abbott an invoice showing delivered price of 6.6¢ per gallon.

By Mr. Abbott:

Q. That was on April 19, 1940?

A. Yes, sir.

Q. And that price was 6.75¢ per gallon.

A. No. 6.6¢ per gallon.

Q. 6.6. Oh, yes. That was for delivered gasoline?

A. That's right, yes, sir. I have a subsequent delivery here in July at 6.3¢ per gallon.

Q. What year?

A. 1940.

Q. Now this one of August 23, 1939 is 6.85¢ a gallon?

A. Yes, sir; 6.85¢.

Q. That is for transport truck deliveries direct to Montgomery Ward Company, Montgomery Ward Company's service station?

A. Yes, sir.

Q. In other words, they don't operate a bulk plant?

A. No, they don't.

Q. And they were not required, under this, to do any hauling of their own?

A. No, they weren't. That was delivered.

5260 Q. And all these other prices that you have testified about this morning were for delivered gasoline, also, were they not?

A. All delivered, sir.

Q. Direct to the service station?

A. That's right, sir.

Q. And not to the bulk plant?

A. Not to the bulk plant.

Q. So they were, in effect, transport truck prices?

A. I don't know how to answer that. When you say transport truck prices; those were our prices delivered to the dealers or the distributors' storage. They were delivered direct, in many cases, by the truck transport.

Q. Did it make any difference to you whether you delivered it to the service station or to the storage of the customer?

A. No. In many cases we have delivered, ourselves, to that customer.

Q. Were any of those orders delivered by tank car?

A. None.

Trial Examiner Ballinger: When you refer to delivery by transport truck you mean the same as tank wagon?

Witness: Well, tank wagon is a smaller amount. Tank wagon, I think, could definitely be construed in deliveries less than 3000 gallons, or 2500 gallons. Truck transport, as a rule, is about 6000 gallons or more.

By Mr. Abbott:

5261 Q. And these prices referred, then, to truck transport deliveries, did they?

A. They referred to quantity deliveries. Let me give you the exact amounts. On the invoices you have, there, what is the amount delivered at that time.

Q. You can check these, if you wish. They were approximately 4600 gallons—

Trial Examiner Ballinger: What delivery was that?

Mr. Abbott: That is the one of April 19, 1940, to Montgomery Ward and Company.

By Mr. Abbott:

Q. And the other one which I have, August 23, 1939, was approximately 4500 gallons.

A. That's right, sir.

Q. Did you make any deliveries, Mr. Feinberg, at those prices that you have testified about this afternoon or this morning, involving deliveries of 500 gallons or less?

Mr. Austin: Just a moment. Your Honor, that question is not sufficiently certain because the witness testified this morning that in small deliveries to retail stations they sold at a half a cent under the major price whereas they sold at lower prices by transport truck delivery, so I think Mr. Abbott's question, when he mentions any prices, I think it should be specified.

Mr. Abbott: I think the witness can clear that up 5262 if there is any question about it.

Trial Examiner Ballinger: Suppose you ask him with reference to the two kinds of delivery?

Mr. Abbott: Yes.

By Mr. Abbott:

Q. Now this morning you testified as to certain prices and I have here a price of 6.1¢ a gallon which you mentioned in connection with one delivery.

Trial Examiner Ballinger: 6 and what?

Mr. Abbott: 6.1¢ a gallon.

Mr. Austin: I don't think the witness ever testified to that. That's what they paid; not what they sold for.

Trial Examiner Ballinger: The witness testified that the lowest price was 6.3¢.

Mr. Abbott: Yes, that's right.

By Mr. Abbott:

Q. Did those prices that you testified to, this morning, relate to tank wagon deliveries?

A. They would be larger deliveries than tank wagon.

Q. They were, then, transport truck, or—

A. Truck transport, truck train, and only in cases of an emergency would a delivery be made by tank wagon.

Q. And you didn't use tank cars, in any case?

A. No, sir.

5263 Q. Now where were those deliveries made from? Where was the bulk storage that you took them out from?

A. The bulk storage would either be the storage of the Ohio Oil Company at the Rouge, or one of the other oil companies with whom the Ohio Oil Company had made a trade.

Q. I see. In other words they would arrange to get the gasoline from some other company to fill the order?

A. No. Ohio Oil Company could have made—let us say the White Star Refining Company, which was an actual case in point.

The gasoline would be taken from White Star and charged to Ohio, and Ohio, in turn, would charge us, as Ohio Oil. It made no difference to us as to the source from where that came.

Q. It made no difference to you who manufactured the gasoline?

A. None.

Q. Now as a matter of fact you got your supply of gasoline during the years 1939 and 1940 from other sources than the Ohio Oil Company, didn't you?

A. We did, some.

Q. Did you get any from the Thiesen-Clemens?

Mr. Austin: Your Honor, I object to any questioning on another source of supply because Mr. Citrin's testimony
specifically says that the gasoline which he talked
5264 about with Mr. Fisher was the gasoline supplied by
the Ohio Oil Company and there is no basis on the direct examination for going into other suppliers of the Argo Oil Company.

My question on direct was did they get the major portion of their gasoline from the Ohio Oil Company and all of the direct examination related to that Ohio Oil Company gasoline.

Mr. Abbott: There was nothing in the testimony of Mr. Citrin that the offer was made limited to Marathon or Linco gasoline and I wish to show that the Argo got their supply of gasoline from other sources than the Ohio Oil Company, because the Court has admitted in evidence a contract, here, which has certain limitations as to the supply.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. The objection is sustained.

Mr. Abbott: Now, if the Court please, we would have the right to show, of course, that they were getting their supply of gasoline from other companies with which to furnish their customers even though they would wish to furnish the product of the Ohio Oil Company to the Citrin Kolb Oil Company. We have a right to show the capacity they had under the proof this morning which attempted to show a limited supply which they could rely upon to fill their orders.

5265 Trial Examiner Ballinger. Yes, but the question here is whether or not this offer was limited to the product of the Ohio Oil Company.

Mr. Abbott: My question wasn't that, that I asked of the witness. I asked him whether they got any gasoline from the Thiesen-Clemens Oil Company, for the purpose of showing they got supplies from other companies than the Ohio Oil, with which they could supply their customers.

Mr. Austin: That involves a conclusion the other customers would be willing to change over. All the questions I asked him were limited to the Ohio Oil Company.

Trial Examiner Ballinger: The Examiner considers that it is speculative. The objection is sustained.

By Mr. Abbott:

Q. Did you also secure a part of your supply from the Roosevelt Oil Company?

Mr. Austin: Same objection.

Trial Examiner Ballinger: Objection sustained.

By Mr. Abbott:

Q. Did you secure a part of your supply from any other company besides the two mentioned?

Mr. Austin: I object. I don't see why I should have to continue.

Trial Examiner Ballinger: Sustained.

By Mr. Abbott:

5266 Q. Now there was a witness who testified in this case by the name of Roman Miller. Do you know him?

A. No, I don't, sir.

Q. Did your company ever have any dealings with him?

Mr. Austin: I object to that, your Honor, on the ground that it is immaterial and not a proper cross examination. It has no connection with any previous testimony about the Argo Oil Company in this case and if it is intended to be on the Respondent's case, in answer to any testimony given by Roman Miller on behalf of the Commission, then the witness should be called by the Respondent as its own witness.

Mr. Abbott: It relates to the question of price, if the Court please. This man Miller, himself, testified in this case, in the record.

Trial Examiner Ballinger: What did Miller testify to?

Mr. Abbott: That he left Standard Oil and began to get his supply from the witness' company because they were willing to deliver to him in transport truck at a price considerably under the Standard Oil tank wagon price.

Trial Examiner Ballinger: As to the price, the Examiner considers the evidence proper.

Mr. Austin: That, your Honor, is entirely consistent with all of the prices he has named for tank car deliveries which were, concededly, from around 1½c. at least, 5267 under the Standard Oil tank wagon price.

Mr. Abbott: Do I understand you to say, then, that you consider that the differential of one and one half cents between the tank car and tank wagon price to be justified?

Mr. Austin: No. I said not only your tank car price but also Argo's is a cent and a half below the Standard tank wagon price. That is true of your jobber prices and also true as to the prices that Mr. Feinberg testified to, but I have no objection Mr. Abbott, if you want to ask him what price he charged Roman Miller. Go ahead.

Mr. Abbott: Then as I understand it, Mr. Austin, it is your summarization of the evidence here, that the truck transport price of the Argo Oil Company was approximately a cent and a half under the posted tank wagon price, at the same time?

Mr. Austin: The prices which Mr. Feinberg mentioned were, some of them, a cent and a half under, and some a little more. 6.6¢ is 1½c under.

5268 By Mr. Abbott:

Q. Now, witness, is it not a fact that in the year 1939, to which this offer refers, the offer of Mr. Citrin, that your company made a contract with the Titan Refining Company of Stark, Michigan? Do you have any knowledge about that contract?

A. Yes, I have. I have and they did.

Q. How is that?

A. I have, and they did.

Mr. Austin: I object to further questions regarding the contract unless there is some indication as to its materiality here. I don't know of any question direct regarding the Titan Refining Company.

Trial Examiner Ballinger: How does this become material?

Mr. Abbott: I will have to ask the witness a question unless you want me to go off the record and have me state what the materiality is.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

You may make a proffer of proof.

Mr. Abbott: The purpose of asking questions relative to the Titan Refining Company contract is to show that in 1939 the Argo Oil Company agreed to furnish the 5269 Titan Refining Company 4,000 barrels of crude oil daily for refining purposes, and that the contract further provided that in this deal the Argo Oil Company would have a further source of supply of gasoline which would enable it to fulfill its contract or engagements with persons with whom it had agreed to furnish gasoline, and the purpose of it is to show that they really did have in contemplation avenues and sources of supply other than the Ohio Oil Company.

Trial Examiner Ballinger: The proffer of proof is rejected.

By Mr. Abbott:

Q. Now, you testified this morning, witness, that in your opinion if Mr. Roy Fisher of the Argo Oil Company did make an offer to Citrin-Kolb Oil Company to furnish their requirements of gasoline at the price which was stated this morning, that it would show a loss to your company?

A. That's right, sir.

Q. Isn't it a fact that if you had a contract to supply Citrin-Kolb Oil Company with five million gallons of gasoline per year, which I think was the testimony or the figure used this morning, that you could purchase gasoline at less than the price which you were in 1939 paying to the Ohio Oil Company for your supply of gasoline for a larger quantity?

Trial Examiner Ballinger: Before you answer that, it is the recollection of the Examiner that the witness used the figure four million, not five.

5270 Mr. Austin: No, I stated that the volume of the Citrin-Kolb Oil Company was five million gallons, your Honor, on the record.

Mr. Abbott: And we agreed to that.

Mr. Austin: Yes, I object to that question unless it is restricted to the purchase of gasoline from the Ohio Oil Company.

Mr. Abbott: Under the ruling of the Court I think I am required to do that. It is restricted to the Ohio Oil Company.

Trial Examiner Ballinger: Do you understand the question?

The Witness: Yes, I do.

Trial Examiner Ballinger: As restricted.

The Witness: Yes, I do.

Trial Examiner Ballinger: You may answer.

The Witness: The answer is "We could not."

By Mr. Abbott:

Q. How do you know that?

A. We were always trying to get a better price from the Ohio Oil Company and the price that we had did not permit us to make—would not have permitted us to make a profit.

Q. Well, I mean, if you had increased the volume by five million gallons per year.

A. The Ohio Oil Company would not permit us to increase the volume other than the figures that had

5271 already been set up on the schedule.

Q. That, then, is the basis for your answer is it?

A. Not the basis. That is supplementary.

Q. That is the reason for your answer?

A. That's right, sir.

Q. Your answer is then predicated—

A. The increased volume would not bring a better price.

Q. Your answer is then predicated upon your assumption that they wouldn't give you the increased volume?

A. That's right.

Q. Is that right?

A. An increased volume would not bring a better price.

Q. There was nothing to prevent you from going out in the open market and buying that from some other source, would there, the increase of five million gallons per year?

A. None that I know of.

Mr. Austin: I object to that question, your Honor, on the ground that there is no indication that the Citrin-Kolb Oil Company would have accepted gasoline from any other source.

Trial Examiner Ballinger: Objection sustained.

By Mr. Abbott:

Q. Where is the Marathon brand of gasoline or where was it manufactured in 1939, if you know?

5272 A. I do know.

Q. Was it in Findlay, Ohio?

A. The brand itself was manufactured in Findlay but a lot of the gasoline supplied to us by the Ohio Oil Company was never manufactured in Findlay.

Q. Was it traded with other companies?

A. Yes, sir.

Q. Didn't it make any difference to you where it came from?

A. No, sir.

Q. Then was it Marathon gasoline?

A. We called it Marathon.

Q. That was just a name applied to any brand of gasoline that you might get?

A. No, it was a brand name that belongs to the Ohio Oil Company. It was used, with their permission.

Q. I believe you stated that the Argo Oil Company at the present time is virtually out of the gasoline business; is that right?

A. Yes, sir.

Q. At the present time you emphasize the fuel oil business?

A. Yes, sir.

Q. In supplying this gasoline at the prices you have quoted, both this afternoon and this morning, you sometimes sent the shipment by transport truck direct from the marine terminal to the customer, without going through your own bulk plant?

5273 A. Yes, sir.

Q. And that affected a saving, did it not?

A. Yes, sir.

Q. If you didn't have to load it into your own bulk plant but could send it—route it around?

A. That's right.

Q. From the Ohio Oil Company marine terminal t the customer?

A. That's right, sir.

Q. In large quantities?

A. That's right, sir.

Mr. Abbott: That is all.

Trial Examiner Ballinger: Any redirect?

Mr. Austin: Why, just one question.

Redirect Examination by Mr. Austin.

Q. You have given some testimony regarding the so called exchange of gasoline between your supplier and some other supplier for the purpose of filling you orders.

A. Yes, sir.

Q. Now, when you ordered Marathon gasoline from the Ohio Oil Company—you did, did you not?

A. Yes, sir.

Q. And when you ordered it, did you know from wha source it was to be supplied to you?

A. Not altogether, no, sir.

5274 Q. In other words, if you order so many thousand gallons of gasoline for delivery to your bulk plant, was the gasoline delivered to your bulk plant by the Ohio Oil Company? Answer that, first.

A. Yes, it was.

Q. And when it was delivered, did the Ohio Oil Company notify you whether they brought it from their own terminal or from the White Star terminal?

A. Yes, their invoices would show where it came from.

Q. But did they ask your consent as to which place it should come from?

A. No. No.

Q. In each case the gasoline was furnished you from them as Marathon gasoline?

A. That's right, sir.

Q. Therefore, you relied upon the Ohio Oil Company to furnish you gasoline of a standard quality?

A. That's right, sir.

Q. And by standard quality I mean only as respect to—

A. Specification.

Q. —as to what source it might come from.

A. That's right, sir, up to specifications regardless of the source.

Mr. Austin: That is all.

Mr. Abbott: The witness is excused.

(Witness excused.)

5275 Mr. Austin: May we have a five-minute recess?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Abbott: May we go on the record a minute?

Trial Examiner Ballinger: On the record.

Mr. Abbott: I want to make a motion at this time to strike the testimony introduced this morning as to the custom which was testified to of talking over with Mr. Roy Fisher any offers which were made by him on the ground that is purely speculation and any testimony as to custom is surely irrelevant, and the Court, if you will recall, allowed the evidence to go in subject to a motion to strike.

Trial Examiner Ballinger: The Examiner rules that the question presented relates solely to the weight of the evidence, which may have some weight. The Examiner is not prepared to rule upon that point. Upon that ground the Examiner overrules the motion.

Mr. Abbott: Do you want a five-minute recess?
Mr. Austin: Yes. Off the record.
Trial Examiner Ballinger: Off the record.
(There was a discussion off the record.)
Trial Examiner Ballinger: On the record.
The hearing will stand in recess for five minutes.
(A short recess was taken.)
5276 Trial Examiner Ballinger: Come to order.
Mr. Austin: I will call Mr. Slaughter.

WILLIAM E. SLAUGHTER was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Austin.

Q. Will you state your name, please?
A. William E. Slaughter.

Q. Where do you reside, Mr. Slaughter?
A. Birmingham, Michigan.

Q. And what is your business?
A. With the Aurora Gasoline Company.

Q. What is your position with that company?
A. President.

Q. And in what business is the Aurora Gasoline Company engaged?
A. The Aurora Gasoline Company is a petroleum refiner and marketer.

Q. Is it a corporation?
A. It is; a Michigan corporation.

Q. You say that the Aurora Gasoline Company is a petroleum refiner and marketer. Where are its refiners located?

A. We have one refinery Elsie, Michigan that is 5277 under contract, or under lease to us, a long term lease. We have another refinery in Detroit, Michigan that is operated by the owner of that company under a joint venture contract with the Aurora and we have a third plant which is owned by Aurora Gasoline Company which is the Dubb's process cracking plant.
Trial Examiner Ballinger: Where is that located?
Witness: Detroit, Michigan.

By Mr. Austin:

Q. And what company did you refer to as engaged in a joint venture contract?

A. The Keystone Oil Refining Company.

Q. Where is that located?

A. Detroit, Michigan.

Q. Does the Aurora Gasoline Company sell branded or unbranded gasoline?

A. Unbranded gasoline.

Q. Entirely?

A. Entirely. We have no brand of our own.

Q. From what refinery do you obtain the gasoline, or from what source do you obtain the gasoline which you sell in the Detroit metropolitan area?

A. The majority of that gasoline comes from the Keystone Oil Refining Company and the Aurora cracking plant operation. That is, today.

5278 Q. Well, let us direct your answers to the year 1940.

A. The Aurora cracking plant was only completed in October, 1940, and for the first part of 1940 we purchased considerable gasoline on the seaboard, eastern coast, and brought it in to Detroit to augment the Keystone Oil Refining Company production which was not adequate to take care of our sales.

Q. How did you bring it in?

A. It came in by small tanker, or barge lots.

Q. And was that also unbranded gasoline?

A. That was also unbranded gasoline.

Q. Was it sold by you as unbranded gasoline?

A. That's right.

Q. Did you sell any gasoline other than Ethyl gasoline under a brand in 1940; under a brand name?

A. No. Our regular grade was unbranded.

Q. Has the Aurora Gasoline Company, during the past three years, done any advertising such as newspaper or billboard advertising or radio advertising, in Detroit?

A. No, they haven't.

Q. Have you done any advertising of any kind?

A. No. The only time our name would appear would be in some charity publication where we were asked to contribute.

Q. I should have limited that question to consumer advertising. Would your answer be the same if I do so limit it?

A. Yes. We have no advertising program at all.

5279 Q. To what classes of customers does the Aurora Gasoline sell, very generally?

A. Gasoline?

Q. Yes, gasoline; and restricting it to the Detroit metropolitan area and you can direct all your answers to these questions to the year 1940, if it would be any different than from the present time.

A. We sell the independent gasoline job trade and independent gasoline retailing trade, all of whom, upon buying our gasoline, adopt their own trade name for their own group of stations or accounts and resell under their own names. Other than that, we bid on City of Detroit business and various road commissions.

Q. That's consumer business, isn't it?

A. Yes.

Q. I really was thinking chiefly of reseller accounts.

A. Well, that would be the independent jobbing trade.

Q. Does the Aurora Gasoline Company sell on what is commonly known as the spot market?

A. Yes. We don't make any long term contracts on gasoline. Our prices fluctuate depending on the demand and supply and based on competitive conditions as of the day of sale.

Q. How are your prices determined from day to day?

A. By those same competitive conditions; supply and demand and competition from other suppliers in 5280 this market.

Q. Do you refer to supply and demand and other suppliers of unbranded gasoline?

A. Yes.

Q. I understood you to say that the company does not enter into any long term contracts for sale of gasoline to jobbers or distributors. What is the longest period of time at which you will agree to maintain a price?

A. 30 days from date of commencement.

Q. And is that the usual way you do business, or under what conditions will you guarantee a price for 30 days?

A. Usually a quotation from us will be good on a spot basis subject to change without notice but if the account desires to contract on a 30-day basis, or shorter time, we are willing to reach an agreed upon price for that time and will supply and protect that price for that agreed time.

Q. Did you in 1940 make any sales to retail service stations by so-called tank wagon or tank truck in quantities of 3000 gallons or less?

A. No, our business is limited to full tank transport and tank car business and our smallest unit, company-owned unit is around 3200 gallons or over and the smallest unit which we can hire from any public carriers is around 4500 gallons. From there, those sizes range up to 10,000 gallons. We usually specify that it has to be a full load for us to deliver. We don't deliver the so-called 5281 tank wagon group; that is the small station-to-station partial load business.

5282 Q. You don't do any of that?

A. No.

Q. Did the Aurora Gasoline Company operate any retail service stations in 1940?

A. They did not.

Q. Now, does the company employ salesmen?

A. Yes, we have salesmen.

Q. What are the duties of the salesmen as regards to obtaining of new accounts?

A. Well, the salesmen operate under the supervision of our sales manager or assistant sales manager and it is their job to develop any new accounts, prospective accounts, and to contact established accounts, to get as much of their gallonage as we can hold and supply.

Q. What authority has the salesman got regarding the quotation of prices?

A. Well, the salesmen on our type of business has a price for his product which is more or less agreed upon daily, in the morning.

Q. What do you mean "more or less"?

A. Well, it is agreed upon daily to the extent that competitive conditions might change that price in any given day or even during the day. The salesmen can state a price at which the company is generally offering its gasoline as of that time on the spot market basis, and if he can develop any deal or any proposition from a customer involving any quantity, any substantial quantity or—

5283 Q. What do you mean by a substantial quantity, Mr. Slaughter?

A. Well, I would say a substantial quantity might be 50,000 gallons or over, to take an arbitrary figure.

Q. 50,000 gallons for what period of time?

A. For immediate shipment.

Q. For immediate shipment?

A. Yes. That—of course, the quantity, of course, would be subject to a definite understanding reached that day depending on our supply of gasoline available for sale that day. Any proposition the salesman can develop that is tangible in any quantity such as I mentioned, say over 50,000 gallons, or over a period of time up to thirty days is reported back to the office and confirmation is obtained from the sales manager, and, if acceptable to us on price, the quantity, and the period as suggested, then we confirm the same. We only have a limited amount of gasoline to sell. Today it is based on our production. In 1940 it was based on our purchases and our production, and we have to require that the salesmen check back with the home office before closing any substantial quantity. Otherwise, we would be selling the same gasoline maybe two or three times.

Q. Do you have any procedure regarding obtaining a credit rating on new customers?

A. Any new account that the salesman develops to the point where he believes that it is a tangible account and there is a possibility of closing a deal, he reports 5284 that to my particular attention and we draw our credit report and the salesman is held in status until the credit is approved on that particular account.

Q. Has the salesman any authority to make a binding offer to a new customer until the approvals which you have just described as to credit and as to availability of gasoline have been passed upon by your office?

Mr. Abbott: Just a moment, now. If the Court please, I object to that upon the ground that it is not proper rebuttal testimony in this case.

Mr. Austin: It is a preliminary question, your Honor.

Trial Examiner Ballinger: The objection is overruled.

A. The salesman cannot bind the company until the credit—

Q. Would you like to have the question reread?

A. I believe so, yes.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. He cannot bind the company until the credit has been approved, although there have been occasions when he has made small spot sales, that is, spot market sales, in limited quantities on C. O. D. basis.

Q. What do you mean by limited quantities? Well, I will withdraw that.

5285 You said on C.O.D. basis?

A. Yes.

Q. Now, I guess you had better state what you meant by limited quantities.

A. Well, if the salesman has specific instructions that day that he has available or should attempt to move twenty, thirty, forty thousand gallons; he could accept a spot sale at that moment for that quantity subject to credit approval. He couldn't bind the company for any large quantity or over any period of time.

Q. Who has the responsibility of obtaining credit ratings on prospective customers?

A. That is my specific department.

Q. That is your specific department?

A. Yes.

Q. Were you ever asked to pass in 1940—to pass upon the credit of the Citrin-Kolb Oil Company?

A. No, I was not.

Q. Have you examined the records of your company to determine whether or not the credit of the Citrin-Kolb Oil Company ever has been investigated by your company?

A. I have examined the records and I find no record of Citrin-Kolb ever being a subject of inquiry in my department.

Q. Is that credit inquiry made of any and all new

5286 customers regardless of what your general knowledge or opinion may be of them in Detroit?

A. I draw a credit report on every company we sell before we sell them.

Q. Now, I would like to take up for a moment the method of the Aurora Gasoline Company's sales and deliveries to jobbers of gasoline in metropolitan Detroit.

I would like to know when a jobber orders gasoline from you and you decide to sell to him, accept the order, where does the gasoline originate and how is it delivered for the purpose of filling an order?

A. I presume you are referring to regular grade.

Q. Regular grade gas.

A. Well, the regular grade of gasoline for Detroit sales originates at the refinery of the Keystone Oil Refining Company under this joint venture contract.

Trial Examiner Ballinger: You are speaking of the present time?

The Witness: During 1940 also.

Trial Examiner Ballinger: The entire year 1940?

The Witness: Yes. There were a few occasions where we purchased gasoline elsewhere on exchange arrangements but they were very limited, and the great majority, in fact, I would say 95 per cent of our sales were filled from the Keystone Oil Refining Company plant.

5287 By Mr. Austin:

Q. When you sell to a jobber in Detroit, is that F.O.B. the Keystone plant or is it F.O.B. the jobber's bulk plant?

A. Well, there are two classes of sales: If the jobber has his own delivery equipment and chooses to pick up gasoline, he can pick it up F.O.B. the Keystone plant at the price quoted F.O.B. that plant. If it is a delivered account where they have no pick-up equipment, then we either use one of our own trucks or we hire a common carrier or contract carrier to deliver the gasoline and the price is quoted his plant or station.

Q. Is the delivered price higher than—I mean, at any one time any particular day or particular hour is your delivered price higher than the price F.O.B. the Keystone plant?

A. Yes, it is usually higher by the same margin as we have to pay for the hauling.

Q. In other words, you just add your hauling charge on to your plant price?

A. That's right. That hauling charge will vary to the different sections of the city.

Q. Who does the hauling?

A. We either use our own equipment in rare cases or contract haulers for those cases where they want larger amounts than our trucks can haul. That depends upon availability of equipment at the time of delivery.

Q. Do you know what the average or the usual 5288 cost was to you of gasoline delivered within the metropolitan area of Detroit by contract haulers in 1940?

A. It will range from fifteen hundredths of a cent a gallon to sometimes as high as twenty-five hundredths of a cent. The breaking point is usually whether it is east or west side.

Trial Examiner Ballinger: What do you mean by the east or west side?

The Witness: We are located—

Trial Examiner Ballinger: Where is the division line?

The Witness: Well, we are located on the west side out by the Ford Motor Company, which is quite a distance from Detroit's east side, and most of the carrier companies make their breaking point in hauling, if you cross Woodward Avenue, they call it the east side and charge more for such a haul.

Trial Examiner Ballinger: Woodward Avenue is then really the dividing line?

The Witness: Yes, as a general rule.

Trial Examiner Ballinger: As a general rule.

By Mr. Austin:

Q. Referring to your reseller customers in the Detroit metropolitan area, what percentage of those customers are
steady customers purchasing all or part of their re-
5289 quirements of gasoline from you from week to week
and month to month?

A. You have my list there. Can I see that list?

Mr. Abbott: How do you mean, on a gallonage basis or on a customer basis by the name of the customer?

Mr. Austin: Well, I said—

Trial Examiner Ballinger: Read the question.

Mr. Austin: —steady customers.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Austin: I am not referring to gallons or names; I am purely referring to the class of business, having in mind the fact that it is well established on the record that the Standard Oil Company and other major companies supply branded gasoline to stations who buy it regularly throughout the year and sell it under that brand. This is directed to whether the Aurora Gasoline Company has any of that sort of business.

Mr. Abbott: I object to this line of questioning on the ground it is not proper rebuttal. It is my understanding that this rebuttal is on the question of competitive offer, is it not?

Mr. Austin: It is on the general question of meeting competition but meeting competition brings in a great deal of testimony put in by the Respondent regarding the
nature of the competition it encounters. I have in
5290 mind particularly the long list of companies that
Mr. Raupagh described as being comparable in

operation to the Standard Oil-Ned's Auto Supply Company arrangement.

Trial Examiner Ballinger: The objection is overruled. Now, before you answer do you desire to consult something?

The Witness: Yes, if I may.

Trial Examiner Ballinger: Some memoranda that you have?

Mr. Austin: I hand the witness a statement which the witness handed me prior to the hearing and which, so far as I know, was prepared entirely by the witness; at least, there is nothing on there I have added.

Trial Examiner Ballinger: That memorandum was prepared by yourself, was it?

The Witness: Yes, from our company records, the sales records.

Trial Examiner Ballinger: Have you the question clearly in mind?

The Witness: Yes, I have.

A. I would say roughly 50 per cent of the accounts shown on this sheet bought from us every month consistently. The other 50 per cent were more or less spot market
purchasers, that when our proposition was as good
5291 or better than the next man's or they desired our
particular quality and service, we were favored with the business, and during the other times, the other months when they didn't purchase from us, they bought from competitive sources.

By Mr. Austin:

Q. Out of that 50 per cent that you say bought from you every month, do you know how many of those customers purchased their entire requirements from you, if any?

A. To the best of my knowledge, there is one customer on this list that purchased his entire requirements from us. That covers a range of 16 accounts.

Q. Does that list, which I understand you are using to refresh your recollection refer to the year 1940?

A. July through December, 1940, the last half of the year.

Mr. Austin: I would like to have this sheet marked for identification, your Honor.

Trial Examiner Ballinger: The Reporter will mark

the document "Commission's Exhibit 113," for identification.

(The document referred to was marked "Commission's Exhibit 113" for identification.)

By Mr. Austin:

Q. I show this paper marked "Commission's Exhibit 113" for identification and ask you if you will describe it. I don't want you to read what is on it. I want you to tell us what it is and where it was prepared, and so forth.

A. This is a schedule of the prices charged by 5292 Aurora Gasoline Company to various accounts in the City of Detroit for the period July, 1940, through December, 1940, and is divided into two parts. The first part of the schedule are the prices charged F.O.B. the Keystone Oil Refining Company plant and are the prices applicable to pick ups and customer own equipment or equipment that they hire; and the second part of the schedule is the prices we charged for delivered quantities on which we assume the delivery charge to customers in the City of Detroit area. This schedule is broken down into monthly periods for the six months.

5293 Q. And does it show the prices to all of your customers on regular gasoline in the City of Detroit during the last half of 1940?

A. Yes, it does.

Q. Does this list include prices to consumers or is it restricted to reseller customers?

A. Well, the reseller customers shown there would be both—let me ask: What do you call a consumer?

Q. A man, a person like a commercial account who uses the gasoline themselves and does not sell it.

A. No, this is the reseller group.

Q. The consumer would also include a large manufacturing company; anybody who buys it for use in their own vehicles or for their own purpose.

A. I question that, Mr. Austin, because some of these people buy gasoline from us and also use some of it in their own equipment.

Q. If they resell part of it I would still call them a reseller, for the purposes of this question.

A. A reseller.

Mr. Austin: I will offer this sheet in evidence.

Mr. Abbott: May we see it?

Trial Examiner Ballinger: Let counsel for the Respondent see it.

Document handed to counsel for Respondent by 5294 counsel for the Commission.

Mr. Abbott: May I ask the witness a question?

Trial Examiner Ballinger: You may.

Voir Dire Examination by Mr. Abbott.

Q. Mr. Slaughter, you say that you yourself, personally, took these prices off your books from account sales?

A. No, I supervised them being taken off of sales records. I didn't personally write them down, if that's what you mean.

Q. And you have invoices, I suppose, substantiating these prices?

A. I didn't bring them to Court, no.

Q. You have them, though, have you?

A. Yes.

Q. And you can produce those, if necessary?

A. From the standpoint of the fact that each of these accounts shown are current accounts, I would not like to produce the names of the account in court because that is information that we feel is available to competitors.

Mr. Austin: We don't have to decide that at this moment. The question now is the production of this paper.

By Mr. Abbott:

Q. Are these figures, here,—do they relate to deliveries made east and west of Woodward Avenue?

5295 A. On the delivered part of the schedule on the bottom, the delivery charge would give some indication to where the delivery was made. You will find on there delivery charge and it will show some fifteen points, some twenty points.

Q. They are 6.25¢ a gallon, excepting a few that are 6.3 and one is 6.5 and 6.3 indicate that the lower price was applicable to deliveries made on the west side of Woodward avenue; the lower price?

A. I have the delivery charge set forth on the sheet.

Q. Is that in addition to the price of the gasoline?

A. No, that's included therein.

Q. That's included.

Mr. Abbott: Well, your Honor, we object to this transcript of a record on the ground that it is not the best evidence.

This witness is not in the position of an accountant who is permitted in these proceedings to take a tabulation from an available record. He is a lay witness; President of the corporation he represents; and we insist that we are entitled to see the books of the company or the original invoices substantiating these prices, if the evidences as to prices is to be put into the record.

Trial Examiner Ballinger: To do that would enable you to ascertain the names of the customers, would
5296 it not?

Mr. Abbott: That's right. That's a matter of public record. It is already in evidence. We have exhibits, here,—here is one right here, that shows the people who file gasoline tax reports, have to show who supplies their gasoline.

Mr. Austin: It don't show who they sell to, does it, Mr. Abbott? It doesn't show prices charged to any customers certainly.

Mr. Abbott: We have an exhibit in evidence with at least a dozen or fifteen cases which are supplied by the Aurora Gasoline Company in the City of Detroit. That's a matter of a public record.

Mr. Austin: In so far as it is a matter of public record, it is available to the Respondent.

Mr. Abbott: However, the record of the price charged is not available to the Respondent and there is nothing to connect these prices up with the individual customer.

We have a right, if your Honor please, if we wish to, to put in surrebuttal on this in order to show that it is not reliable. I don't say it is not, but we have that right and how can we do that unless we know to whom the price pertains? It would be absolutely impossible.

Mr. Austin: Your Honor, these prices are copies
5297 by the witness or under his supervision, from the company's books. He has testified to them. They are no different than the testimony which Commission introduced on its case in chief from numerous service stations' operators stating the number of gallons of gasoline that they sold in each month during certain periods. We have a lot of those in the record and, of course, this witness is the President of the company and he is entitled to state the prices which they charge and he has on that exhibit referred to customers by code numbers, or numbers.

Those numbers, each one, as I understand it, represent a customer. Is that correct, Mr. Slaughter?

Witness: Yes, sir.

Mr. Austin: Certainly a witness should not be compelled to state the names of his customers to a competitor. That will in no way prove any more fully the price charged.

Trial Examiner Ballinger: Well, the only thing that would then appear in this record would be the naked statement of this witness that he took the items appearing on this exhibit from his books.

Mr. Austin: Yes.

Trial Examiner Ballinger: Certainly the respondents are entitled to examine the original documents to see whether or not the statement is true.

Mr. Austin: The witness knows the prices that
5298 were charged and he has that record in his office.
How else can one prove the prices charged?

Trial Examiner Ballinger: It is perfectly proper for him to testify to that but if there is a question raised as to the accuracy of the testimony is it not necessary to produce the original documents? How else could the testimony of any witness be disproved if it was in error and the error shown?

Mr. Austin: Well, I assume that your Honor doesn't mean that that's any ground for questioning the testimony of this witness now, as far as allowing it in the record. It's his sworn testimony and I assume it is admissible.

If the Respondent wants to subpoena these records and have them bring them here, why, I think then we would have the question as to whether or not we could disclose the names of customers in the record in order to prove prices?

Trial Examiner Ballinger: The Commission itself has brought this question into the case.

Mr. Austin: Yes.

Trial Examiner Ballinger: The records are certainly the best evidence.

Mr. Austin: I think if this witness knows the prices
he charged, of his own knowledge, and he is entitled
5299 to use any paper he has, to refresh his recollection;
he is entitled to testify to them.

Trial Examiner Ballinger: If he knows of his own personal knowledge, independent of any record, he may so testify.

Mr. Austin: And he may use any statement he has to refresh his recollection, may he not?

Trial Examiner Ballinger: Yes, but not if that statement was prepared from the records.

Mr. Austin: Your Honor has previously ruled that there is no limit upon what a witness may use to refresh his recollection.

Trial Examiner Ballinger: That's true, but here the basis ground for his testimony is the records; not his independent recollection.

Mr. Austin: Well, but, he can refresh his recollection, can he not, by looking at any memorandum that he may have prepared when he had the record before him?

Trial Examiner Ballinger: Yes, he may refresh his recollection and then if, independent of the records themselves, he has a distinct recollection as to the facts, he may so testify. If it is challenged, he can be required to produce the records.

Off the record.

(There was a discussion off the record.)

5300 Trial Examiner Ballinger: On the record.

Mr. Austin: Mr. Abbott, is your objection to this exhibit for identification upon the ground that you don't think that these records were correctly copied or prices correctly copied from the books of the witness?

Mr. Abbott: I assume they are, but I am not sure of it. I don't have any reason to believe that Mr. Slaughter wouldn't take off the correct prices but we have a right to call sur-rebuttal witnesses and I don't know who to call. If we have any idea that some of these weren't correct, we wouldn't have any way of calling them to substantiate that.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: If it is the ruling of the Trial Examiner that this witness may not testify regarding the prices charged by his company as shown on his books without being subject to cross-examination by the Respondent as to the names of individual customers and prices charged, then the Commission will not press further the introduction of the prices charged by the Aurora Gasoline Company.

Trial Examiner Ballinger: The Examiner rules that in order to render the exhibit admissible it would be necessary for the Commission to at least produce the records

from which the exhibit was made for examination by
5301 counsel for Respondent, or in lieu thereof, to advise counsel for the Respondent of a list of the customers who are charged the amount set forth in the list. In the absence of that, the Trial Examiner sustains the objection.

Mr. Austin: I am not clear as to that ruling, your Honor, whether it means the witness must both produce the records and disclose the names of customers, or, is it in the alternative.

Trial Examiner Ballinger: It is in the alternative.

Mr. Austin: I don't quite understand why the record need be produced in one case and not the other; at least so far as the authenticity of the prices stated here, are concerned.

Trial Examiner Ballinger: The Examiner has ruled that if the witness will produce his records, he need go no further. If he declines to produce his records, then, in order to make this exhibit admissible, he should state the name of the customers and the amounts charged each customer. Otherwise, the Respondent is disabled from challenging or making any inquiry into the correctness of the testimony of the witness.

By Mr. Austin:

Q. Well, I understand, Mr. Slaughter, that you prefer not to disclose to the Respondent the prices charged particular customers in 1940?

5302 A. I can see no harm, if they want to make specific inquiry.

Q. It is entirely up to you. I won't ask you to do it if you don't care to. I assume that the inquiry will be limited to the individual sales reflected on this schedule.

Trial Examiner Ballinger: Would there be any objection to that?

Witness: I can't see any. It's 1940. If they would like to question me about any one of those, I would have to refer to records, your Honor. I don't have six months' quotations for 16 people in my memory.

Trial Examiner Ballinger: Will you bring those records into the hearing room so that you can refresh your recollection?

Witness: I can refresh my mind right here because I have a list of the names.

Trial Examiner Ballinger: You don't have—

Mr. Austin: If he has the information requested and can refresh his recollection from a document, there, that is certainly admissible, if he knows that's taken from the records of the company. Your Honor said he didn't need to produce the records if he could answer the questions.

Witness: I have here the original work sheets from which we made this up.

Trial Examiner Ballinger: That will answer the purposes. Off the record.

5303 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record. You make a formal tender of it.

Mr. Austin: I tender Commission's Exhibit 113, for identification, in evidence.

Mr. Abbott: I object to it. I think I have already stated the grounds of my objection. The first is—

Trial Examiner Ballinger: The grounds of the objection have been fully stated. The Examiner withholds his ruling on the admissibility of the document, pending cross examination:

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Has it been the practice of the Aurora Gasoline Company at any time during the past three years to sell to any customer for or agree to sell to any customer for a period of thirty days or any period of time at a fixed margin below the major oil company prevailing tank wagon price in Detroit?

A. No, we don't base any of our sales on the major tank wagon price.

Q. Have any of your salesmen ever been authorized to quote prices in any other manner than a definite price in cents and fractions of a cent according to the company's price at the particular time?

5304 A. No. They are given a specific price to quote in cents and hundredths of a cent but these prices are not contingent upon any other factors than our stating of that price for that period.

Mr. Austin: That is all.

Cross-Examination by Mr. Abbott.

Q. Now, Mr. Slaughter, you say that you have two refineries in Michigan, one at Elsie and one down here at Oakwood and Dix?

A. We don't own the two that you mention. We own one refinery.

Q. Which one do you own?

A. That is at the rear of 1215 South Dix. That is a cracking plant and not a complete refinery as such. The plant that is adjoining that is a joint venture.

Q. That is the Keystone?

A. That is the Keystone. That is the joint venture plant.

Q. The one at Elsie, that is under—

A. A long term lease.

Q. That is a lease from the Handlers, isn't it?

A. Yes.

Q. What is the name of the people up there that lease it to you?

5305 A. The Handlers Oil Company.

Q. That lease expires next year, doesn't it?

Trial Examiner Ballinger: Mr. Abbott, how is that material?

Mr. Abbott: All right. I will withdraw the question if there is any question about its materiality.

By Mr. Abbott:

Q. What is the capacity of the refinery at Elsie?

A. 3,000 barrels of crude per day.

Q. And translated into gallons of refined gasoline based on output, can you state what the capacity is?

Mr. Austin: May I ask what the relevancy of that question is?

Mr. Abbott: ~~I want to show~~ by the witness what the volume of his refining facilities is at all the plants operated by the Aurora Gasoline Company.

Mr. Austin: I will concede on the record, Mr. Abbott, that the Aurora Gasoline Company had a large enough volume either of its own gas or gas which it could have purchased in 1940 to supply the Citrin-Kolb Oil Company if it had had the Citrin-Kolb Oil Company business.

Mr. Abbott: I think there is testimony in the record that this offer was made also to the Wayne Oil Company, so—

Mr. Austin: That testimony was stricken from the record.

5306 Mr. Abbott: Well, I insist on the question for the purposes of showing the capacity in the year 1940 of the refineries operated or leased under a joint venture operation by the witness.

Trial Examiner Ballinger: The purpose of this line of examination is to establish that the company could have filled all the requirements of the Citrin-Kolb Company?

Mr. Abbott: And the Wayne Oil Company. That amounted to something like eight million gallons a year, the combined gallonage.

Trial Examiner Ballinger: The testimony with reference to the Wayne Oil Company was stricken from the record. Is the Examiner correct?

Mr. Abbott: I think your Honor on his own motion did that, as I recollect. I don't think there was any motion made by the Commission.

Mr. Austin: Yes, I made a motion.

Trial Examiner Ballinger: In view of the admission on the part of counsel for the Commission, further examination along this line will not be permitted.

By Mr. Abbott:

Q. Do you have any knowledge, Mr. Slaughter, any personal knowledge of any negotiations or offers between Mr. McGrady of your company, and Citrin-Kolb Company and Wayne Oil Company in the year 1940? I mean, knowledge not based on hearsay, but on 5307 your own knowledge.

Mr. Austin: May I have that question read?

(The question referred to was read by the Reporter.)

Mr. Austin: I object to the question so far as it relates to the Wayne Oil Company. I have no objection to the rest of it.

Trial Examiner Ballinger: Objection sustained.

Mr. Abbott: Then as to the Citrin-Kolb Oil Company, the question remains?

Trial Examiner Ballinger: You may answer as to the Citrin-Kolb Company.

A. The question of selling the Citrin-Kolb Company was never brought to me for examination as to credit.

Mr. Abbott: That is not my question. I move to strike the answer on the ground it is not responsive.

Trial Examiner Ballinger: The motion is granted.

By Mr. Abbott:

Q. Do you have any personal knowledge of any negotiations having been conducted between your Mr. McGrady and Jacob Citrin of the Citrin-Kolb Oil Company relative to the sale of gasoline to the latter company in the year 1940?

A. No.

Mr. Abbott: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5308 Mr. Abbott: Let's go on the record on this because I want to have this on the record.

Trial Examiner Ballinger: You may make your statement. I don't care about anticipating the situation.

Mr. Abbott: All right. I will make a statement, then, with reference to it.

Commission's Exhibit 113, marked for identification which the attorney for the Commission has offered in evidence, it is the position of the Respondent that prices charged by the Aurora Gasoline Company from July to December, inclusive, of 1940, both for gasoline F.O.B. its refinery or for delivered gasoline is inadmissible unless Respondent can have access to the original books or records from which this compilation is made, and in view of that position of the Respondent, the Respondent at this time elects not to cross examine upon this proposed exhibit.

Trial Examiner Ballinger: The Examiner understands the witness to have tendered to you the records upon which Commission's Exhibit 113, for identification, is predicated, if you desire to examine them.

Mr. Abbott: I don't understand—

Trial Examiner Ballinger: Am I correct?

The Witness: Yes, the worksheet from which the typewritten copy was made.

Trial Examiner Ballinger: Are you willing that the
Respondent may go to your office and make an
5309 examination of the original records from which
this document, Commission's Exhibit 113, for identification, has been compiled?

Mr. Austin: Your Honor, I will have to object to that on the record. I don't think that the Respondent has any right to do that or that that condition can be properly imposed upon the witness from the standpoint of counsel for the Commission on the question of admission here. If the witness testifies under oath that these figures were prepared from his records under his supervision and that they are correct figures and is willing to be cross examined upon them, I think the cross-examination as to who copied them and the method in which it was done may be proper, but unless the inaccuracy of the figures is established, I don't believe that the Respondent has the right on cross examination or as a condition to having the exhibit go in, to go and see the original books.

I think that is no different from any other testimony, than a witness makes on the stand, and which he makes under oath, and if it is desired to prove that the witness has perjured himself, his testimony is not correct, that is outside I think the province of cross-examination in the case and I don't believe that when a man comes into a Commission hearing—I think it would be a very dangerous precedent to say that people coming in here, business men, as they do everyday in our hearings, and testify that they have made entries from their books, and 5310 then say that that cannot go in evidence until the Respondent has a right to go to their office and look into those records. I don't believe that that ruling in any respect should prevail. I think it goes merely to the question of whether or not the witness has testified correctly under oath and whether or not he has told the truth on the stand, and whether or not these figures were actually copied from the books of the company.

Trial Examiner Ballinger: Here is a document, Commission's Exhibit 113, offered in evidence by the Commission. It is admitted by the witness that the exhibit reflects the results shown by the books and records of his company; that it was compiled not by him but by an accountant who prepared it in the form in which he directed. The witness did not check the computations, and there is no possible way by which the Respondent can conduct any cross-examination based upon this document without opportunity to examine the documents. And the Examiner has asked the witness whether there is any objection on the part of his company to such an examination being made by counsel for Respondent if counsel so desires.

Now, if there is no objection on his part—

Mr. Austin: Well, I have objection. I will not submit the exhibit in evidence. I will withdraw it before—

5311 Trial Examiner Ballinger: Do I understand that counsel for the Commission makes an objection to divulging names which the witness is perfectly willing to divulge and will not be prejudicial to his business?

Mr. Austin: I do object to calling a witness here and having him asked whether the Respondent may go to his office and examine his books. I believe that just on common knowledge that is distasteful to a business man, to have a competitor do that and, therefore, I think that and request your Honor that you pass one way or the other on the admissibility of this exhibit upon the qualifications that have already been presented and that if it is not admissible on what appears here, that it be not admitted in evidence, but I will not offer the exhibit in evidence upon the condition, that is, if it is a question of the witness permitting a competitor to come and examine his books at his office.

Trial Examiner Ballinger: Well, if the witness—

Mr. Austin: If that is necessary as a foundation, then I don't want to offer the exhibit.

Trial Examiner Ballinger: If the witness has no objection to that, in order that counsel may test the accuracy of his testimony, and also the accuracy of the exhibit, do I understand that you are interposing an objection independent of the wishes of the witness?

Mr. Austin: Well, I think that if the Respondent
5312 is entitled to see the books, they are entitled to have them brought here. I don't think they are entitled—I don't see how the admissibility of this paper can depend upon the right of the Respondent to make a trip to the witness' office.

Trial Examiner Ballinger: The witness has testified that the records are very voluminous, as I understood, probably two truckloads. Is that correct?

The Witness: Well, there were quite a sizeable quantity, yes.

Trial Examiner Ballinger: Which would be impractical to bring into the hearing room. Will the witness answer the question of the Examiner? Have you any objections?

The Witness: If necessary, your Honor, I would bring the necessary documents to the court, but I would prefer to do that than to throw our office records open to the accountants of the competitor.

Trial Examiner Ballinger: Have you any objection to such an examination being made by counsel for Respondent as to enable them to examine you as to the correctness of this exhibit?

Mr. Austin: I would like to say—

The Witness: You mean at my office?

Trial Examiner Ballinger: Yes, at your office.

The Witness: I would rather bring the records and submit them to the Court.

5313 Trial Examiner Ballinger: Have you any objection to doing that?

The Witness: To bring the invoices here?

Trial Examiner Ballinger: Yes. If you have, say so; if you haven't—

The Witness: I would prefer not to. I can bring the invoices to the Court, if the Court desires but—

Trial Examiner Ballinger: The Court will not require you to do it.

The Witness: "Desires."

Trial Examiner Ballinger: Well, I say the Examiner will not require you to do it if you don't want to.

5314 Trial Examiner Ballinger: On the record.

Mr. Austin: May I ask a question on the record?

Trial Examiner Ballinger: You may.

Mr. Austin: Would your Honor's ruling be any different if the man was produced here who actually copied the exhibit from the records?

Trial Examiner Ballinger: I think that would strengthen the exhibit but still it wouldn't afford Counsel for the Respondent any basis for cross-examination.

Mr. Austin: We are interested in prices and if the prices were the actual record in the course of business and were proved by sworn testimony to be entries made in the usual course of business—

Trial Examiner Ballinger: We are interested in the establishment of prices.

Mr. Austin: Yes sir.

Trial Examiner Ballinger: But they cannot be established upon ex parte testimony and that is virtually what is being attempted here.

Mr. Austin: Your Honor, suppose the records were produced? Who would know that they were accurate? It is the same thing.

Mr. Abbott: You can't go behind the records.

Mr. Austin: And you can't go behind sworn testimony as to what is in them.

5315 Trial Examiner Ballinger: Are you willing to produce the records here?

Mr. Austin: I don't want him to, your Honor.

Trial Examiner Ballinger: Then the objection to the exhibit is sustained.

Mr. Abbott: No further questions.

Trial Examiner Ballinger: Commission's Exhibit 113 is excluded.

(Thereupon, Commission's Exhibit 113 for identification, was rejected.)

Mr. Austin: I would like my exception to that ruling to appear on the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. I hand the witness Commission's Exhibit 113, for identification. Mr. Slaughter, can you state the prices which you company charged for gasoline sold in the City of Detroit to reseller customers during the last half of 1940, and in answering that question you may refresh your recollection from any notes or documents that you may have at hand.

Mr. Abbott: Just a moment, if the Court please. I would like to ask the witness: Did you make that memo-

5316 randum that you have in your hand?

Mr. Austin: I object to that, your Honor.

Mr. Abbott: I have a right to ask the witness what he has in his hand.

Mr. Austin: I don't think you have. The witness hasn't said he has anything in his hand.

Mr. Abbott: ou said "I hand you Commission's Exhibit 113," as I remember.

Mr. Austin: All right. Nevertheless, the witness hasn't answered the question yet or looked at anything and I think that there should be a chance to answer the question and if the witness uses certain documents to answer the question, I think that after that happens the counsel may ask about them or have them marked for identification.

Mr. Abbott: You said to him, "I hand you Commission's Exhibit 113, for identification."

Mr. Austin: All right.

Mr. Abbott: And now you are asking him to testify what is on the exhibit without putting the exhibit in evidence.

Mr. Austin: No, I am not. I didn't ask him that at all. He has got other papers in his hands besides those exhibits.

Mr. Abbott: I have a right to ask him what he is using to refresh his recollection.

Mr. Austin: Not at this time.

5317 Trial Examiner Ballinger: The objection is overruled. The counsel may ask witness what papers he has in his hands.

Mr. Austin: The witness hasn't made any answer from any papers. Maybe the witness can make an answer without looking at any papers.

Trial Examiner Ballinger: Can you answer the question independent of any papers or documents?

Witness: Yes, having refreshed my memory during the period when these prices were made up. That is, when our schedule was made up.

Trial Examiner Ballinger: That would enable you now to answer based solely upon your own independent recollection, refreshed by examination of the documents, would it?

Witness: Yes. I know what prices were charged during that period.

Trial Examiner Ballinger: You may answer the question.

A. During the last half of 1940 our price on regular gasoline, charged f. o. b. our Keystone plant in Detroit, ranged from 6c to 6.35c per gallon.

By Mr. Austin:

Q. That was f. o. b. Keystone plant?

A. F. O. B. Keystone.

Q. And what were your prices on gasoline delivered f. o. b. the buyer's tanks?

5318 A. As I recall, prices f. o. b.—or delivered to the buyer's plant, ranged from 6.25 to 6.35 delivered.

Mr. Austin: That's all I have.

G

Recross Examination by Mr. Abbott.

Q. What do you mean, Mr. Slaughter, by "regular gasoline"?

A. Regular gasoline is our grade that would be, during this period of 1940, classified as our 80-octane gasoline. It's the competitive grade to other so-called regular gasolines in this area.

Q. You say that the f. o. b. price Keystone refinery was 6c to 6.3; per gallon. You mean that that is a range over a period of months?

A. It is a range over a period of six months; the price fluctuating up and down, depending on supply and demand and our competitive conditions.

Q. Do you have any independent recollection of what the price was during the December month of 1940?

A. As I recall it our price ranged in that month from 6c to 6.1c.

Q. That is to say, a minimum of 6c f. o. b. Keystone, and a maximum of 6.1c per gallon, f. o. b. Keystone?

A. Yes. Can I refresh my memory on that?

Q. You are testifying now without any refreshing as I understand it.

5319

A. All right.

Q. The delivered price, as I understand it from your testimony, would depend on whether it was delivered east or west of Woodward Avenue, is that correct?

A. And also competitive factors, other than the price charged by these hauling companies.

Q. In other words, if there was a competitive situation which requires you to sell for less, would your price be less?

A. Yes, and I will explain that in this respect: A refinery operating in the northern part of the state, or central part of the state, can deliver from their refinery to Detroit without charging an extra five points for the east side of town, because their hauling, coming from up north, consists of several hundred miles, approximately, or 150 miles, and the difference coming into town from up north creates no hardship on them to deliver either east or west, whereas we have a condition that occasionally we have to absorb the differential charged by the hauling company because of competitive conditions and prices quoted by competition from up north.

Q. I understand that these prices that you have quoted are all based on quantity deliveries of the minimum of how many thousand gallons?

5320 A. The smallest unit in our particular fleet, in the Aurora fleet, is 3,200 gallons. We only use our own equipment in the City of Detroit hauls, when it is more—well, when one of our particular units is available at that moment, and that won't interrupt its regular schedule.

When our units are not available and they are not based at Detroit, we use hired carriers and I believe the smallest hired carrier unit we can get is over 4,000 gallons.

Q. Now I understand also from your testimony that you would make a lesser price for delivered gasoline in large quantities of 3,200 gallons or more to a bulk plant located in Dearborn, than you would to a bulk plant located on the east side of Woodward Avenue, other things being equal and eliminating the element of competitive situations that you have mentioned. Isn't that correct?

A. You are limiting the quotation to an exact time for both quotations?

Q. In December, 1940?

A. No, I mean for an exact time for both quotations? Because our prices can fluctuate from day to day.

Q. I mean on the average situation.

A. At a given instance, you mean?

Q. Yes.

5321 A. At a given instant, all other conditions being equal, it will cost you five points less to deliver on the west side than it will on the east side and, as a general custom, that allowance is given to the customer.

Q. When you say five points, do you mean .05 of a cent?

A. Yes.

Q. And when you say west side, would it make any difference whether the delivery were made in Dearborn or on Linwood Avenue in the City of Detroit?

A. I don't believe the hired carriers differentiate for the haul into Dearborn, but the differentiation in freight charged is based more on the time involved and the distance traveled and, as a general rule, nearby Dearborn is, in fact, closer to our plant than Woodward Avenue; all being on the west side of Detroit.

Q. When you say freight, now, you are delivering not tank car deliveries but truck transport deliveries?

A. That's right.

Q. And that is the way you deliver all your gasoline, I believe you said?

A. Yes. We didn't make, during 1940, any tank car shipments of gasoline to any resellers in the City of Detroit.

Q. And I believe you stated that you made no deliveries to retail stations—or did you?

A. I didn't make that statement, no.

Q. It makes no difference, then, to you, whether the delivery is made to a retail station or to a bulk plant,
5322 is that right?

A. That is correct.

Q. Just as long as the delivery is more than 3,200 gallons?

A. Several of our customers are exclusively retail stations.

Q. So you do deliver at these prices that you have testified concerning by transport truck deliveries in quantities of 3,200 gallons or over, to retail service stations where they retail it to the consumer?

A. Yes.

Q. And it makes no difference to you, then, whether the sale and delivery are made to a customer's bulk plant or to the customer's retail service station?

A. No.

Q. Where he retails to the ultimate consumer?

A. No.

Q. You don't, then, police your sales after they are made to the customer?

A. We have no interest whatsoever in what the consumer does with the gasoline after we have sold it to him.

Q. If he wants to, he can dump it down the sewer, as far as you are concerned?

A. Absolutely.

Mr. Abbott: That's all.

Redirect Examination by Mr. Austin.

5323 Q. Mr. Slaughter, you said you made some deliveries to customers who are entirely retailers. Do those customers have bulk plants or are the deliveries made in storage tanks at the station itself? In other words, storage tanks under the pumps?

A. A number of retail accounts among the independent accounts have large storage tanks under their driveways or adjoining property and in several instances among the independents, rail facilities are also available and they must have at least have ten thousand gallons' storage in order to unload rail shipments.

Q. Well, I am talking about, now, the—

A. In shipping to those same accounts by truck transport we deliver direct into their tanks and whether or not their pump is hooked up direct to that tank, or to a small marketing tank from which they draw on their main storage, we have no knowledge whatsoever, but we deliver directly into the tanks, on occasion, at the retail outlet.

Q. Are there a number of retail outlets in Detroit, to your knowledge, including those which you supply, which have storage tanks at their stations of 6000 or more?

A. Yes, among the independents.

Q. I am talking about storage tanks under the driveway, now.

5324 A. Among the independents I know there are a number of stations. I wouldn't know about the companies to whom we have never sold.

Q. I am just asking whether that is done and whether it is practical to do it in Detroit?

A. Yes, it is.

Q. And does your price to the customers in the City of Detroit on regular gasoline at the same time vary as between customers having bulk plant facilities and those who do not?

A. We don't make any differentiation because of that reason. Our prices are set by competition; supply and demand.

Mr. Austin: That is all.

Recross Examination by Mr. Abbott.

Q. Is Howard J. MacGrady of your company, in the Court Room?

A. Yes, he is.

Mr. Abbott: That's all.

Mr. Austin: That's all.

Trial Examiner Ballinger: You are excused.

(Witness excused.)

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin I will call Mr. MacGrady.

5325 HOWARD J. MacGRADY was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Austin.

Q. What is your name, please?

A. Howard J. MacGrady.

Q. What is your business, Mr. MacGrady?

A. Salesman for the Aurora Gasoline Company.

Q. And how long have you acted in that capacity?

A. For the Aurora Gasoline Company?

Q. Yes.

A. Seven years.

Q. Will you state briefly what your duties are as salesman for the Aurora Gasoline Company?

A. Sell gasoline; tank car and truck train.

Q. And do you try to obtain new accounts for the company?

A. Yes.

Q. Did you ever meet Mr. Jacob Citrin, of the Citrin Kolb Oil Company?

A. Yes, sir.

5326 Q. Do you recall having a conversation with him at the time of a convention in the Detroit Leland Hotel in, I think it was December, 1940?

A. Yes.

Q. Is that the correct month?

A. Well, I have seen him several times in the Detroit
eland.

Trial Examiner Ballinger: About that time do you
ecal having a conversation with him?

The Witness: Yes.

Trial Examiner Ballinger: At the hotel.

y Mr. Austin:

Q. Do you recall a conversation with him at that hotel
which the subject of the price charged by the Aurora
asoline Company for gasoline at that time was mentioned?

A. Do you know what month it was?

Q. I think the testimony shows it in the record Decem
er 10, 1940.

A. I had lunch with him on December 10, 1940.

Q. Where was that?

A. At the Leland.

Q. Can you relate any conversation that you had with
im so far as it related to or had any relation to the pur
hase of gasoline by him from the Aurora Gasoline Com
any?

A. As far as I can remember, he just asked me
327 what the price on our gasoline was.

Q. Did you tell him?

A. Yes.

Q. Did you have any conversation with him for the
urpose of persuading him to become a customer of the
urora Gasoline Company?

Mr. Abbott: Now, just a moment. Objected to upon the
rounds that that question asks for a conclusion of the
itness as to what the conversation was for. All that he
an ask the witness is to state what the conversation was.

Mr. Austin: That is what I want him to say, if there
as any such conversation.

Mr. Abbott: Well, I object to the form of the question
ecause it rather seeks to interpret the purpose of the
onversation.

Mr. Austin: I will withdraw the question.

Mr. Abbott: I don't want you to lead the witness, Mr.
ustin. I think that question is very leading.

Trial Examiner Ballinger: After the witness has
nswered with reference to the first question "State what
he conversation was" if he has omitted any portion,

counsel then may ask him specifically with reference to any particular matter.

Mr. Abbott: He can ask him whether there was
5328 any further conversation between the parties.

Mr. Austin: I would like to withdraw the question.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. Did you have any further conversation with Mr. Citrin at that time beyond his asking you what your price was and your quoting him?

A. Oh, we discussed the general gasoline business.

Q. Was there any discussion, further discussion regarding the purchase of gasoline by Mr. Citrin from the Aurora Gasoline Company?

A. As far as I can remember, he just asked me what our price was.

Q. Do you know what price you quoted?

A. Oh, yes.

Q. What price did you quote him?

A. "Six-ten" F. O. B. our refinery.

Q. Was that the price communicated to you by your office as Aurora's price at that time?

A. Yes, sir.

Trial Examiner Ballinger: By "six-ten" you mean 6.1¢?

The Witness: 6.1¢.

By Mr. Austin:

Q. Did you tell Mr. Citrin that Aurora Gasoline
5329 would sell him gasoline at two cents below the prevailing or tank wagon price?

A. No.

Mr. Austin: That is all.

Cross-Examination by Mr. Abbott.

Q. Do you know that that price actually was two cents below the tank wagon price at that time?

A. It may be.

Q. Now, you did mention that the Detroit Leland Hotel price of 6.1 for what you call regular gasoline?

A. That's right.

Q. Is that right?

A. Yes.

Q. And that did not include any taxes, of course?

A. No, sir.

Q. Was that for delivery by transport truck or how?

A. For F. O. B. our refinery.

Q. In transport truck?

A. Yes.

Q. What difference would it make if it was F. O. B. your refinery how they took it out?

A. If they took it out in a transport truck, you would have to pay the freight on it. If he took it out in his own truck it didn't make any difference to me.

5330 Q. In other words, the customer could get the gasoline in his own trucks at the price of 6.1¢ per gallon?

A. That's right.

Q. That would be regardless of how much he took?

A. No, there would have to be a specified amount.

Q. Did you tell him anything about that?

A. He didn't go any further.

Q. He didn't say anything about that?

A. All he was interested in was how much our price was F. O. B. our refinery.

Q. Well, you talked to him several times before this, hadn't you?

A. Oh, on and off.

Q. Do you remember who else was present at the time of this conversation?

A. I think Elmer Ledbetter.

Q. And he is the proprietor or one of the officers of the Wayne Oil Company, is he not?

A. That's right.

Q. Anyone else?

A. No, I don't think so.

Q. Do you recall that sometime after the meeting you arranged for them to go down and see the refinery?

A. Not Mr. Citrin, no.

Q. Whom did you have go down and see the refinery?

5331 Mr. Austin: Wait a minute. He hasn't said he had anybody go down.

Mr. Abbott: He said "Not Mr. Citrin."

Q. Whom did you have go down and see the refinery?

A. Mr. Ledbetter.

Q. How long was that after this meeting?

A. That was before this meeting.

Q. Before the meeting?

A. Yes.

Q. That happened before the conversation between you and these parties?

A. Yes.

Q. How long before, in days or weeks?

Mr. Austin: What parties?

Mr. Abbott: Any of the parties who have been referred to.

The Witness: Well, I think the first call I had from Mr. Ledbetter was about a year before that.

Q. Well, you say the first call—

Mr. Austin: Your Honor, I object to any questioning regarding what happened to Mr. Ledbetter. If I understand the last two answers of the witness, they referred only to Mr. Ledbetter and not to Mr. Citrin.

Mr. Abbott: Now, if the Court please, here is the situation. The ruling of your Honor as to Mr. 5332 Ledbetter's testimony was based upon the fact that the offer was received after the filing of this Complaint. Now if it appears from the testimony as it now seems to appear that there were some negotiations a year before December 10th, 1940, which would be at a time prior to the issuance of the Complaint, that would be a matter that we ought to go into. If this witness as he now says had negotiations with Ledbetter going back to December, 1939—

Trial Examiner Ballinger: The negotiations hadn't culminated in any offer or price.

Mr. Abbott: According to the testimony of the witness it did culminate in an offer by the witness, at least—

Mr. Austin: Your Honor—

Mr. Abbott: —of a price F. O. B. the refinery. And that was true whether the customer hauled it or whether they hauled it by transport truck.

Mr. Austin: I am amazed at the facility at which Mr. Abbott with the testimony we have just taken concludes there was an offer, but aside from that, this is entirely outside of cross examination.

If it is now the purpose of the Respondent to attempt to show an offer to Mr. Ledbetter, why, that is a matter for them to call witnesses in their own behalf.

Mr. Abbott: There was testimony that Mr. Mc
5333 Grady arranged for someone to go down and look at
the plant which they had down there.

By Mr. Abbott:

Q. Was that the Lincoln Park plant or Elsie or the Keystone?

Mr. Austin: I object to the questioning except in so far as it relates to the conversation at the Detroit Leland Hotel, which is the only thing that I asked the witness about on cross examination—on direct examination.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Abbott:

Q. What kind of a meeting was this at the Detroit Leland Hotel?

A. It was a luncheon.

Q. Oil Men's Club?

A. Yes.

Q. Were you gentlemen all members of that club?

A. Yes.

Q. Mr. Citrin, yourself, and Mr. Ledbetter?

A. Yes.

Q. Did you all sit at the same table when the conversation took place?

A. Yes.

Q. Was anything said to you at the time as to the kind of gasoline to which this price pertained?

A. As I told you before, he just asked me what the
5334 price of our gasoline was and I told him we are selling
it at six-ten F. O. B. our refinery, our regular gasoline.

Q. By regular gasoline you refer to what?

A. 80 octane.

Q. Previous to going to the stand, did you discuss this matter with Mr. Austin, the attorney for the Commission?

A. In what way?

Q. Have you talked this over with him, discussed the nature of your testimony?

A. No, not the nature of my testimony.

Q. What I mean to say is this: You told him previous to going on the stand what you remembered about the conversation at the Detroit Leland Hotel?

A. Well, he didn't ask me any questions.

Q. What did he ask you?

A. He was talking to Mr. Slaughter.

Q. Oh, the conversation was with Mr. Slaughter?

A. Well, Mr. Slaughter, yes.

Q. Was Mr. Slaughter down at the Detroit Leland Hotel?

A. No, he was not.

Q. On the 10th of December, 1940?

A. No.

Q. Mr. MacGrady, do you want to sell your gasoline?

A. Yes.

Mr. Abbott: That is all.

5335 Mr. Austin: That is all.

(Witness excused.)

Mr. Austin: May we have a five-minute recess, your Honor.

Trial Examiner Ballinger: The hearing stands in recess for five minutes.

(A short recess was taken.)

IRVING B. DWORMAN was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows;

Direct Examination by Mr. Austin.

Q. Did you state your name to the Reporter?

A. Irving B. Dworman.

Q. Where do you reside?

A. At 19545 Shrewsbury, Detroit.

Q. What is your business Mr. Dworman?

A. I am engaged in the petroleum business as president of the Red Indian Oil Company.

Q. Is the Red Indian Oil Company a corporation?

A. It is a Michigan corporation.

Q. When was it incorporated?

A. 1923.

Q. How long have you been with the Red Indian Oil Company?

5336 A. Since 1928.

Q. What is your position with that company now?

A. I am president and general manager.

Q. You personally supervise the business of the company?

A. I do.

5337 Q. And how long has that been true?

A. That has been for the last 15 or 16 years,—14 years.

Q. Where is the Red Indian Oil Company engaged in business?

A. In metropolitan Detroit, including parts of Oakland County, Nacomb, Washtenaw, Monroe and all of Wayne.

Q. Does the Red Indian Oil Company sell gasoline?

A. They do.

Q. What brand of gasoline, if any, does the Red Indian Oil Company sell.

A. The Fleet Wing brand.

Q. How long have they sold Fleet Wing gasoline?

A. My memory says about seven or eight years; between seven or eight years.

Q. What brand did you sell before that?

A. Phillips Petroleum Company brand, Phillips' 66.

Q. And from whom do you purchase Fleet Wing gasoline?

A. From the Fleet Wing Corporation.

Q. Is the Fleet Wing Corporation a subsidiary of the Standard Oil of Ohio?

A. They are.

Q. And where is the main office of the Fleet Wing Corporation?

A. Cleveland, Ohio, in the Republic Building.

Q. Is the gasoline purchased by Red Indian Oil Company from the Fleet Wing Corporation shipped to it direct from Ohio or from the refinery of the Fleet Wing
5338 Company or from the refinery of the Standard Oil of Ohio or does the Red Indian Oil Company obtain its gasoline from a terminal or some other source in Detroit?

A. Generally most all of it comes from a terminal in Detroit. However, on occasions, when they, for reasons best known to themselves, they may ship us gasoline from their Toledo refinery.

Q. If shipped from Toledo, how is it shipped?

A. By transport and sometimes by tank car.

Q. Does the Red Indian Oil Company have its own tank storage in Detroit?

A. We do.

Q. What is the address?

A. 12402 Cloverdale Avenue.

Q. Is that the same address as the main office of the company?

A. It is.

Q. When your gasoline is obtained from the Pure Oil terminal in Detroit—

Mr. Abbott: Pure Oil?

By Mr. Austin:

Q. That is the terminal of the Pure Oil Company?

A. Pure Oil uses that terminal. I believe it is owned by the Pure Oil, yes.

5339 Q. And does the Fleet Wing have storage facilities at that terminal?

A. I understand they have one tank there.

Q. Since 1938 has part of the business of the Red Indiana Oil Company been in the supplying of retail gasoline service stations in metropolitan Detroit?

A. It has.

Q. How many retail service stations were supplied by the Red Indian Company with Fleet Wing gasoline in 1938?

A. Roughly, it would be around 28 to 30 accounts; varying at the time of the year. We would lose an account, maybe one, two or three, and might pick one or two up, but the number would vary from month to month.

Q. And about how many retail stations did you supply in 1940?

A. About 17 or 18.

Q. Does that include any stations operated by the Red Indian Oil Company?

A. We did not operate any stations ourselves at that time so it would include all types of outlets, retail outlets.

Q. Retail outlets to whom you sold gasoline?

A. That's right, sir.

Q. Does the Red Indian Oil Company, and did it, since 1938, supply any jobber or distributors?

A. We have one jobber who is supplied by our transport from the Pure Oil terminal.
5340 I want to correct that. We have two. One we supply and the other one picks up his own gasoline.

Q. Where does he pick it up?

A. At the Pure Oil Terminal, or Toledo.

Q. One of those is the Victor Oil Company, is it not?

A. Yes sir.

Q. Is that the one that picks up its own gas or—

A. That's the one that picks up its own gas.

Q. Does the Fleet Wing Corporation sell Fleet Wing gasoline through any other supplier in Detroit, other than the Red Indian Oil Company?

A. They do not.

Q. Does the Red Indian Oil Company at any of its stations or in any advertising, use the name Standard or Standard of Ohio?

A. We do not.

Q. Are you permitted by the Fleet Wing Corporation to use the name Standard or to advertise in any way that Fleet Wing gasoline is a product of the Standard Oil Company of Ohio?

A. We were told not to.

Q. Do these retail stations that you referred to sell their gasoline under the brand Fleet Wing?

A. Generally, yes.

Q. And do these two jobbers sell their gasoline under the Fleet Wing brand?

5341 A. They do in their own service stations.

Q. Have you had occasion to drive around and visit these service stations at any time?

A. Yes.

Q. Both the ones you supply and the ones supplied by the jobbers?

A. Not the one supplied by the jobbers, except our own company operation.

Q. I mean, you have seen those?

A. Yes.

Q. Can you state whether there is any advertising or signs or globes at any of these service stations that indicates that the gasoline is a product of the Standard Oil Company of Ohio?

Mr. Abbott: I object to this on the ground it is wholly immaterial and not proper rebuttal testimony.

Trial Examiner Ballinger: What does counsel for the Commission say?

Mr. Austin: There is testimony in the record that Ned's Auto Supply Company was considering the purchasing of gasoline from the Red Indian Oil Company because they felt that they could still say it was Standard Gasoline coming from the Standard Oil Company of Ohio, and that, therefore, they wouldn't hurt their patronage as much as if they switched to some other company.

5342 Trial Examiner Ballinger: The Examiner recalls the testimony.

The objection is overruled.

A. I think on several occasions, in years gone by, some of our dealers did make an effort to display a sign that Fleet Wing was a brand of the Standard Oil of Ohio and we were asked to get our dealers to remove the signs, which was subsequently done.

By Mr. Austin:

Q. Well, in getting the dealers to remove the signs, what did you do to accomplish that?

A. We either called up or sent one of our own men out; either a salesman or repair truck; to remove the sign; insisted that there were objections made to the use of the sign and we insisted that the sign must come down.

Q. Since that time has it been the policy of the company to refuse to sell to any customer who advertises that the gasoline is the product of the Standard Oil of Ohio?

A. I don't believe we have had occasion to do that because I do not believe any of our customers were advertising that way.

Q. Does the Red Indian Oil Company advertise, or has it, since 1938, advertised in any way that the gasoline it sells is a product of the Standard Oil of Ohio?

5343 A. I think, in some methods, it has been done. I think certain handbills were printed up at one time that carried that but I believe those handbills, or most all of them were destroyed before they were distributed.

Q. How long ago was that?

A. I would say about three years ago.

Q. And since that time has there been any such advertising?

A. There had not; to my knowledge.

Q. Red Crown gasoline is a major brand in Detroit, is it not?

Mr. Abbott: Now just a moment, if the Court please. I object to this upon the ground that it is wholly incompetent and immaterial and the witness is being asked his opinion as to whether Red Crown, so-called, is a major gasoline. It makes no difference, your Honor. The purpose of the competitive offers of the Standard Oil Company of Indiana is competing in the Detroit area with gasoline. We emphasized that on the record time and again. The question of this kind being addressed to the situation as to which constitute major gasolines and which are not major, are not material because, as I say, we feel that the record shows that we are in Detroit competing with gasolines and we have to meet that competition.

Trial Examiner Ballinger: The objection is overruled.

5344 A. I would say that Red Crown was considered to be a major brand gasoline in the City of Detroit.

By Mr. Austin:

Q. How about White Star?

Mr. Abbott: Same objection.

Trial Examiner Ballinger: The objection is overruled.

A. I would say White Star is also a major brand gasoline.

Trial Examiner Ballinger: Generally accepted as such?

Witness: Yes, it is.

By Mr. Austin:

Q. How about Texaco?

Mr. Abbott: Same objection.

Trial Examiner Ballinger: The objection is overruled.

A. That would also be considered as a major brand gasoline.

Q. And how about Blue Sonoco?

Mr. Abbott: Same objection.

Trial Examiner Ballinger: The objection is overruled.

A. That would also be considered a major brand gasoline.

By Mr. Austin:

Q. Now I want to ask you whether, now, and during the past three years, the Fleet Wing brand gaso-
5345 line has had as high a public acceptance in Detroit as the four major brands you have just named?

Mr. Abbott: If the Court please, I object to that on the same grounds: namely that Fleet Wing gasoline, whether it is named Fleet Wing or by any other name, is a Standard Oil Company of Ohio product and that it is in competition with Red Crown and other brands produced by the Respondents and does constitute upon this record competition which we have a right to meet under the Robinson-Patman Act.

Trial Examiner Ballinger: The objection is overruled.

A. My opinion is that Fleet Wing could not or is not considered a major brand gasoline and does not have the public acceptance of the four major brands previously mentioned.

By Mr. Austin:

Q. Does the Red Indian Oil Company have a contract with the Fleet Wing Corporation?

A. We do not have a contract.

Q. I am, of course, referring to the contract for the sale of gasoline.

A. I understand.

Trial Examiner Ballinger: In what period of time are you referring to?

Mr. Austin: Well, I will make it clearer.

5346 By Mr. Austin:

Q. Well, have you had a contract for the purchase of gasoline from Fleet Wing Corporation since January 1, 1938?

A. We have not.

Q. How is the price fixed at which you purchase gasoline from the Fleet Wing Corporation?

A. Generally by mutual understanding between a representative of the Fleet Wing Corporation; namely, Mr. Laufman, and myself.

Q. Do you generally buy your gasoline at a certain margin below the prevailing major tank wagon price in Detroit?

Before you answer that, I mean is your price generally quoted as a marginal price or is it quoted as so many cents per gallon?

Mr. Abbott: I object to that upon the ground that the question is unintelligible. It starts out by asking: Do you buy your gasoline and, as I understand, it winds up with asking the witness the basis upon which he sells it.

Mr. Austin: No.

Trial Examiner Ballinger: He is asking whether he buys it one of two different ways.

Mr. Austin: That's right.

By Mr. Austin:

Q. I am asking how the price is fixed. How it is 5347 quoted really.

A. That is a difficult question to answer and I can only answer by saying that it is a matter of negotiation and while the discussion of margin or, rather, the marginal discussion enters into the discussion, definitely does, yet our cost is based upon so much per gallon rather than so much below the tank wagon price.

Q. During the past three years can you say that your price, the price which you have paid for Fleet Wing gasoline, has normally been a certain amount below the major, prevailing tank wagon price in Detroit?

A. It has been below their tank wagon price but not a fixed amount.

Trial Examiner Ballinger: Has it fluctuated from time to time?

Witness: It has fluctuated, on several occasions.

Trial Examiner Ballinger: Approximately what has been the fluctuation?

Witness: About five eighths of a cent. No; I would say about three eighths of a cent.

By Mr. Austin:

Q. You mean the fluctuation?

A. Yes. In the margin.

Q. But what has the margin been?

A. Between one and five eighths cents and two cents a gallon.

5348 Q. Has it been two cents a gallon most of the time?

A. It has.

Q. And when has it not been?

A. When the tank wagon price was at a lower level or the net back to the refinery was under 6.5c per gallon.

Q. Would that be during a price war?

A. That would be during a price war, yes.

Q. During normal periods of competition in the Detroit market, has your price been two cents below the market; that is, the tank wagon?

A. It has, in recent years.

Q. Now turning to the prices at which you sell, at which the Red Indian Oil Company sells gasoline to retail service stations in the City of Detroit. At any one time do your prices vary to different customers?

A. They do.

Q. And what are the causes of such variation as exists?

A. There are a group of circumstances that enter into it. Of course it is a matter of determining whether or not we want the business, the amount of money that's generally required to invest in the dealer's place of business; his volume of business; his credit; the amount he will purchase at one delivery, as well as competition.

5349 Q. Have you, during the past week, at my request, examined your record, to determine the prices charged by you to retail service stations in Detroit?

A. I have.

Q. For regular gasoline during 1938 and 1940?

A. I have.

Q. And as a result of that examination of your records, and based upon your recollection and refreshing your recollection with any notes that you may wish to refer to, can you state for the record what prices were charged by Red Indian Oil Company for house brand, Fleetwing gas, to retail stations in Detroit in 1938 and 1940?

Mr. Abbott: Just a moment. I object to that upon the ground that the records themselves are the best evidence. We have a right to know what they are.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: Have you any independent recollection?

The Witness: There has been such a wide fluctuation of prices that an independent recollection, to my mind, would be inconceivable, without referring to notes or to records.

Trial Examiner Ballinger: After you referred to your records or the notes, would that enable you to recall with certainty these prices?

The Witness: No, because there is a great fluc-
5350 tuation, there: of ten-thousandths of a cent a gallon and it would not be—if I should refer to my memory, I know it would not be correct.

By Mr. Austin:

Q. Could you testify to the prices charged by looking at notes made from your records and from the examination of your records which you say you personally made?

~~A. Yes, by the use of my notes, I can.~~

Mr. Abbott: We demand the privilege of looking at the records upon which these notes are based for the purpose of surrebuttal, if the Respondent wishes to make any.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Abbott: It follows that this witness has already testified that his prices have variations between customers depending upon volume, depending upon how much he wants the business, depending upon competition and that being the case I think we have a right to know on what basis these variations have existed and to what customers they pertain.

Now, if he just tells us the prices, that doesn't tell us anything.

Mr. Austin: The prices show the variation and I don't think you have any right to know what the customers' names are they were sold to.

5351 Mr. Abbott: He says it depends upon the volume, how much he wants the business and competition and a number of other factors. If that's the kind of competition we have to make I think we ought to know what it is. I think the Commission ought to know what the situation is.

Trial Examiner Ballinger: Read the question again.

The Reporter: "Q. And as a result of that examination of your records, and based upon your recollection and refreshing your recollection with any notes that you may wish to refer to, can you state for the record what prices were charged by Red Indian Oil Company for house brand, Fleetwing gas, to retail stations in Detroit in 1938 and 1940?"

Trial Examiner Ballinger: Are these records voluminous?

The Witness: They are.

Q. Have you any objection to counsel for the Respondent examining your records?

The Witness: I definitely do.

Trial Examiner Ballinger: Have you any objection to disclosing to counsel for the Respondent your customers?

The Witness: I do.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Austin:

Q. May I have that paper?

(A document was handed to counsel by the witness.)

5352 Mr. Austin: I would like to have this paper marked for identification, if your Honor please.

Trial Examiner Ballinger: The Reporter will mark the paper for identification as Commission's Exhibit 114-A and 114-B.

(The paper referred to was marked "Commission's Exhibit 114-A and 114-B" for identification.)

By Mr. Austin:

Q. I show these two sheets, marked Commission's Exhibit 114-A and 114-B, for identification, and ask you if you will tell me what they are?

A. They are recapitulations on prices on which we sold gasoline to retail service station's accounts in Detroit proper during the year 1938 and 1940.

Q. Do they show the names of the service stations?

A. They do not.

Q. Do they show the prices charged during each month and the number of stations to which each price was charged?

A. They do.

Q. And how were those sheets prepared?

A. They were taken from our records.

Q. Records of the Red Indian Oil Company?

A. Yes, sir.

Q. Are those records the regular records kept in the usual course of your business from year to year?

5353 A. They are.

Q. And who prepared those two sheets?

A. I directed them to be prepared and they were done by two employes in the office.

Q. Did you personally take the records and point out to the employees, yourself, exactly what you wanted them to copy?

A. I did.

Trial Examiner Ballinger: Is there anything copied on there from the records?

The Witness: Pardon me, your Honor? Did you ask me a question?

Trial Examiner Ballinger: Read my question.

(The record was read by the Reporter.)

The Witness: Everything that's on there is copied rom the records.

y Mr. Austin:

Q. The numbers of service stations are not copied from e records, are they?

Trial Examiner Ballinger: Isn't that a compilation?

The Witness: That is a compilation, yes, sir.

Trial Examiner Ballinger: Then it isn't a copy of a ecord, is it?

Mr. Austin: Well, just a minute.

y Mr. Austin:

Q. What is this top column, here; the figures in this top column opposite the word "month"?

354 A. That is the prices for which gasoline was sold during that month.

Q. And were those prices copied from the records?

A. They were.

Q. Now what do these other figures down here in the quare refer to?

A. They were the number of service stations who purhased at those particular prices; underneath the figures.

Q. And were those figures, those numbers obtained by dding up the number of service stations to whom you old at a certain price during a certain month?

A. They were.

Q. And was that done from the records under your upervision?

A. It was.

Q. Do these prices on the top line on each sheet represent dollars or cents?

A. Cents.

Q. Will your look, please, and—

A. That's fractions of a dollar.

Q. Fractions of a dollar?

A. Yes.

Q. Are those the prices charged which you say were opied from the records?

A. They were.

Q. Do those prices include taxes, or not?

355 A. They include the State and Federal tax.

Q. Do they include the Michigan Sales Tax?

A. They do not.

Mr. Austin: I offer these two sheets, Commission's Exhibit 114-A and 114-B, in evidence.

Mr. Abbott: I have already objected. I don't think the examination recently adduced adds anything to the situation.

Before I make the objection, I want to ask just one question: Is that proposed exhibit in your handwriting?

The Witness: It is not.

By Mr. Austin:

Q. It is typewritten, isn't it?

A. It is typewritten.

Mr. Abbott: And did you do the typewriting?

The Witness: I did not.

Mr. Abbott: Did you yourself personally inspect all the book entries that are compiled in that exhibit?

The Witness: Not all of them.

Trial Examiner Ballinger: You delegated that to two other people, I understand.

The Witness: That's right; I did.

Mr. Abbott: And the work, then, was done partly by one person and partly by another person?

The Witness: That's right.

5356 Mr. Abbott: That is correct?

The Witness: Yes.

Mr. Abbott: And not by yourself?

The Witness: That's right, ~~sir.~~

Mr. Abbott: Well, I object to the exhibit, your Honor; first, upon the ground that it is incompetent for the reason that it is not the best evidence, the witness having stated that he is unwilling to have the Respondent inspect the books, the books being the best evidence. The compilation is not competent to be introduced as an exhibit.

Secondly, upon the ground that, as appears from the statement of the witness, the compilation is not the product of his own investigation and compilation but is the product of two persons neither of which did all the work but it is a result of the efforts of two different persons and is not the work of the witness, even though it was done under his supervision, he having stated that he has no— that he did not make the entries and did not do the work himself.

Upon those two grounds, therefore, I object to the introduction of the exhibit.

5357 Trial Examiner Ballinger: The Examiner sustains the objection; also on the further ground that without the production of the original entries there is no opportunity afforded counsel for Respondent to cross-examine.

Mr. Abbott: I think that is included in the first ground of objection. If I didn't, I adopt that as part of the objection.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: May I ask the witness a couple of additional questions to qualify the proposed exhibit?

Trial Examiner Ballinger: You may.

Mr. Austin:

Q. Mr. Dworman, you said that you personally instructed one of your employees regarding the preparation of these two sheets? I am referring to Commission's Exhibit 114-A and B. And when the first list of prices was presented to you, did you go over it and personally make any check of any part of it with the original records?

A. Yes, I did.

Q. Did you find any errors?

A. I did.

Q. What did you do about that?

A. I had the girl bring the original records and to
determine how she got those figures and apparently
5358 she did make some errors and had them corrected,
the subsequent list corrected.

Q. Did you explain to the second girl what the errors were and what should be corrected?

A. The second girl was more familiar with the work and the handling of records and I did explain to her the errors I found and then the two girls together compiled this particular list.

Q. After this particular list was presented to you, did you then make any further check personally of any of these items with the original records?

A. I did check a few of them.

Q. Did you find any errors?

A. Not on this particular list.

Q. What do you mean by that? This is the only list that we have produced here, is it not?

A. That's right. Well, this was the third copy. In other words, there were two that were in error.

Q. I am referring to this one.

A. There was no error that I could determine on that list.

Q. Were there any errors in the first two lists prepared and corrected as a result of your personal knowledge of the business and your personal comparison of these figures with the records?

A. There were some corrections made by checking and because some of the figures of my personal knowledge 5359 showed could not be true.

Q. Did you do that checking yourself?

A. Yes.

Trial Examiner Ballinger: That is only as to a part of it, is it not?

The Witness: That's to a part of it, yes, sir.

By Mr. Austin:

Q. But you did make a test check of some of the figures appearing on these sheets here after they were in this form?

A. I did.

Q. Were they found to be correct?

A. They were.

Q. And is it your belief that these two sheets accurately show the prices charged and the number of customers to which those were charged during each month in 1938 and 1940?

A. I believe they are correct.

Mr. Austin: Your Honor, I now again offer these two sheets, Commission's Exhibits 114 A and B, for identification, in evidence.

Mr. Abbott: Your Honor, upon the same grounds as previously stated, I object to their introduction for the reasons stated. I don't think I need to repeat them, but the questions that have now been asked, I submit, do not 5360 change the basis upon which the objections were made.

Trial Examiner Ballinger: Objection sustained. The exhibits are excluded.

By Mr. Austin:

Q. I would like to show you a letter which is in evidence in this case as Respondent's exhibit 47, Mr. Dworman.

Is that letter on the stationery of the Red Indian Oil Company?

A. It is.

Q. Did you write it?

A. I did.

Q. Is that your signature?

A. It is my signature. I dictated the letter.

Q. That is a letter which is addressed to Ned's Auto Supply Company under date of April 30, 1941. Does it refer to a price which you quoted Ned's Auto Supply Company in the Fall of 1940?

A. To the best of my knowledge, it does.

Q. In the third paragraph of that letter, there is a statement that the offer in 1940 included an advertising allowance of ".25 points per gallon on all regular and ethyl gasoline purchased from us."

Would you explain what is meant by ".25 points"?

A. That is intended to be a quarter of a cent per gallon.

Q. Will you explain what was meant by an advertising allowance of a quarter of a cent per gallon?

5361 A. The advertising allowance as it is utilized by the Fleetwing Corporation makes it necessary for the jobber to spend the money and submit paid bills that he has spent that money for advertising and they reimburse them on the basis of a quarter of a cent per gallon for that work.

Q. Does he receive that additional discount of a quarter of a cent a gallon unless he has shown that he has spent the money for advertising?

A. He does not.

Q. What sort of advertising does he have to spend it on?

A. Anything he chooses. He can use it for radio, newspapers.

Q. Does it have to be gasoline advertising?

A. It has to specify "Fleetwing" in the gasoline advertisement.

Q. In other words, he can't use it for advertising of the products that have no connection with the Fleetwing Corporation?

A. He cannot. It has to be definitely for the Fleetwing brand.

Trial Examiner Ballinger: Does it have to be an advertisement devoted entirely to Fleetwing?

The Witness: If the—the Fleetwing would only pay that portion which is devoted to Fleetwing or allow credit for that portion.

By Mr. Austin:

5362 Q. At the time you quoted that price referred to in the letter to Ned's Auto Supply Company, had you previously obtained the approval of the Fleetwing Corporation for such a deal in case it was accepted by Ned's?

A. I did.

Mr. Austin: That is all.

Cross Examination by Mr. Abbott.

Q. Under this offer it was not necessary for Ned's to operate a bulk plant, was it, unless they wanted to?

A. That's right.

Q. They could haul it out of your pipe line terminal?

A. Yes.

Trial Examiner Ballinger: You refer to the offer contained in what? Commission's exhibit what?

Mr. Abbott: That is Respondent's exhibit 47.

By Mr. Abbott:

Q. Is that right?

A. That's right.

Q. In that event you allowed them what amount per gallon for the hauling?

A. It was a tenth of a cent a gallon.

Q. In addition to the—

A. That was to cover their hauling, the hauling cost, a tenth of a cent a gallon, from the Detroit terminal and four tenths of a cent if it were hauled from
5363 Toledo.

Q. I see. Then as I understand it, the price that you offered them in this letter contemplated that you would deliver the gasoline but if they hauled it out of your pipe line terminal, then you gave them an allowance for their additional work in doing the hauling; is that right?

A. That's right.

Q. You had for a great many years sold Ned's Auto Supply Company motor oil; hadn't you?

A. I have.

Q. One time you sold them their requirements of Quaker State motor oil, didn't you?

A. I did.

Q. In doing that you called at their place of business quite often; didn't you?

Mr. Austin: Your Honor, I object to general questioning on previous calls at Ned's since on direct examination I did not bring up any question of any offer of Ned's Auto Supply Company except as shown by that letter which relates to this specific time, and I don't think that the Respondent at this time should be attempting to use my witness for putting in further direct testimony of any previous call.

Mr. Abbott: I won't go any further with that.

Trial Examiner Ballinger: Objection sustained.

By Mr. Abbott:

5364 Q. You mentioned the fact in your testimony that you had two jobbers. You mentioned the Victor Oil Company. What was the other one?

A. There was one, Bath City Service, in Mount Clemens. That is still in effect. It slipped my mind that Fleetwing with our consent had another one for a short period of time and that was Terminal Oil Company.

Q. I understood you also to say that ordinarily the margin on Fleetwing brand gasoline between the tank wagon and the tank car or truck transport prices was from 1 5/8 to two cents a gallon; is that correct?

Mr. Austin: I object to that because the witness didn't testify to that.

Mr. Abbott: If I am mistaken, why, I want to be corrected, but that is what I understood him to say.

Mr. Austin: Your margin is right but the record shows he referred to the prevailing major tank wagon price.

By Mr. Abbott:

Q. All right. What is your testimony as to that?

A. My testimony as I recollect it, I said that the invoice price would show a differential of approximately 1. 5/8 to two cents below the existing tank wagon price in the City of Detroit at the time of shipment.

Q. Independent of the existing tank wagon price did you have a prevailing tank wagon price of your own?

vertises refrigerators and bicycles, do you consider that the Standard Oil Company obtains a reciprocal benefit from that advertising?

A. I not only consider, I know we do receive a benefit from that advertising.

Q. What is that opinion based on; will you explain it a little?

A. It is as old as the problem of merchandising. If the Wayne Oil Company decides to advertise Camel cigarettes at ten cents a pack distributed at their outlets and lose money on every package of cigarettes they sold, there would be a beautiful derivative benefit to the Standard Oil Company in the sale of gasoline because that is the object.

5390 Now, if Ned's Auto Supply Company advertises refrigerators, many of those refrigerators are paid on time payment plans. Let us assume that they advertise Firestone tires; they are put on a budget plan. You or I as a purchaser drive in to make a payment on that tire; we drive across that driveway from ten to twenty times; we stop our car by the pump island. There is a man on the car as soon as the car comes to a stop, and they are selling gasoline and motor oil. We derive a tremendous benefit from it.

I might even add that most large distributors grant an advertising allowance for partial payment of the ad insertion upon the theory that they do derive the benefit. We do not. We make no advertising allowance whatsoever.

Trial Examiner Ballinger: How is that susceptible of computation?

The Witness: Your Honor, I venture that there has been at least five national organizations employing some of the most astute minds in the country attempting to measure advertising influences. I have yet to find a measurement that is all inclusive or that will be accepted by all readers of the analysis made. Advertising as a selling effort is a tremendously difficult expenditure to measure the benefit therefrom. Many times selling results from a pleasant word and entertainment, an invitation to dinner, an inquiry as to the health of a sick child, but a sale is made, and it is in 5391 the aggregate of all of these influences that the selling weight and pressure of an organization is felt in a given community.

Trial Examiner Ballinger: What I had in mind is, how is it possible to approximate the benefits.

5365 A. Yes, sir.

Q. What was ordinarily the margin in 1938, '39, and '40 between your tank wagon price and your track transport price?

Mr. Austin: Do you need to refresh your recollection on that, Mr. Dworman?

A. I don't believe I can answer that.

Mr. Abbott: I didn't ask the witness to refresh his recollection from anything. I just asked him if he knows from his knowledge.

A. I do not. I believe that is a question that has too many answers.

Trial Examiner Ballinger: You may explain your answer further, if you desire.

The Witness: Well, transport prices have fluctuated without regard to tank wagon price.

By Mr. Abbott:

Q. That is dependent on a lot of factors, isn't it?

A. That is right.

Q. And you are not prepared at this time to testify definitely on that point?

A. I am not.

Mr. Austin: Now—

Mr. Abbott: Now, just a moment. This is my witness. I am asking him these questions. If yor want to re-direct him—

5366 Mr. Austin: Well, all right, but there was a misunderstanding.

Mr. Abbott: That is all.

Mr. Austin: Will you go back and read the question asked by counsel about three questions back?

(The record was read by the Reporter.)

Mr. Austin: I have no more questions.

Trial Examiner Ballinger: You are excused.

(Witness excused.)

Mr. Abbott: I move now that we adjourn until 10:00 o'clock tomorrow morning.

Trial Examiner Ballinger: The motion of counsel for Respondent is granted, and now, at 5:40 p. m., the hearing is adjourned to reconvene at 10:00 a. m. February 21, 1942, in room 859 Federal Building, Detroit, Michigan.

(Whereupon, at 5:40 p. m. the hearing was adjourned to reconvene on Saturday, February 21, 1942, at 10:00 a. m.)

The Witness: It is just as possible to approximate the benefits of advertising as it is to approximate the benefits of an addition or of the elimination of salesmen to your sales organization.

Trial Examiner Ballinger: Wouldn't that be determined by the volume prior to his employment and then after he had been in your employ for a while?

The Witness: I have tried that, your Honor, and whenever I attempt such a measurement as that, the individual on the other side who perhaps has opposed the addition of the salesman will say, "How do you know that gain was due to volume? Actually we had to introduce a subnormal price in that community," or, "A year ago there was ice on the ground and now there is no ice on the ground," or "We got a new account over here by the effort of the manager of the division who stopped in and signed a contract."

There are so many variables, your Honor, in measuring the influence of selling expenditure on your cash register that I have yet to see the accurate measurement thereof of either advertising or direct personal selling, and there is only one difference between them. When you spend a thousand dollars on advertising, you are attempting
5392 a mass selling job; when you spend a thousand dollars for the salary of a salesman, you are just gambling that you make a little bit more money by spending that thousand dollars on personal selling than you would if you spent it on mass selling, and there is your sum total difference. It is a tremendous problem of balancing those two types of expenditures in any market, and we none of us know whether we have the right combination at any time, but we vary them, we watch, and we do what we think is the best.

Trial Examiner Ballinger: Of necessity, don't you adopt some arbitrary figure?

The Witness: In connection with advertising?

Trial Examiner Ballinger: Yes.

The Witness: No, I don't think that is quite a fair statement. To illustrate, your sales in a given community may be reacting adversely because of some new competitive influence. You will decide that you have to take more positive steps in that community. Now, the step that you do take, the particular step is arbitrary as to the magnitude of the steps, yes, sir, but as to whether a step should

5367 Room 859 Federal Building,
Detroit, Michigan,
February 21, 1942.

Met, pursuant to adjournment at 10:00 a. m., war time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5368 PROCEEDINGS

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, in the matter of the Standard Oil Company of Indiana, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 21, 1942. The last hearing was in the same room in the same city, February 20, 1942.

Counsel for the Commission and Respondent are present.

You may proceed.

Mr. Hanley: If your Honor please, before a witness is called this morning, I wish to call the Court and counsel's attention to the fact that the Respondent is prepared to respond to several requests for information. I mentioned it informally last evening. Mr. Austin, at that time wasn't ready for the proffer but if it is desired, we are ready to do it now. We are not insisting upon it, at all.

Trial Examiner Ballinger: Apparently this is an opportune time. Let's dispose of it.

Mr. Hanley: A request was made, if your Honor please, in connection with Account number 520 in respect to the general office payments into the fund represented by that or should not be taken is not arbitrary. That is competitively compelled.

Trial Examiner Ballinger: Without a measurement of the gallonage sale before a step is taken and after the step is taken, is there any possible way by
5393 which the benefits could be even approximated.

The Witness: Well, we do know the gallonage sale before and after, and all that we can do in the field of assigning results to efforts is to observe the trends that take place in a given market. Now, that is what we have to do here in Detroit as well as elsewhere. We have some markets where we probably should add a jobber or two to have a greater flexibility of action and take over certain of the function which normally the company performs, and it would probably be a distinct benefit to our accomplishments in that community.

By Mr. Austin:

Q. Mr. Boatwright, is it your opinion that the Standard Oil Company obtains some benefit from the advertising of non-petroleum products by jobbers based upon the theory that the advertising of other products brings the customer to the jobber's station and that after he gets there he sees the Standard Oil pumps and is subjected to selling effort by the jobber salesman?

A. Well, anything that a jobber does to win a friend to the products of the Standard Oil Company is to our advantage. I think you would concede that.

Q. I would like you to answer the question, though, whather your opinion is not based in such a case primarily on the fact that the advertising brings the customer there in search of something else although after he gets
5394 there he then is in a position to buy gasoline?

A. Oh, yes. The jobber may advertise, as I illustrated, cigarettes. I merely took that out of the air; I know of no such advertisement on the part of the jobbers in this area, but they might do it. And that would merely be a means of attracting customers to their outlet.

Now, a customer is not won or lost on one sale in very many cases. A customer that is really important to any supplier is one that would classify himself as a regular user, and it is in the regularity of use that we build or that we slip in a market position. And it is the first contact that we want. We must have that first contact before we account. It is now stated by the Respondent that this item of expense represents the payment by the Standard 5369 Oil Company to set up the trust fund covering retirement credits for employes' service prior to January 1, 1939. The total to be contributed to the fund by the Company (and such of its subsidiaries as are participants in the plan is determined by the Board of Directors each year prior to December 31st. The total amount contributed in any year cannot exceed ten percent of the consolidated net earnings of the company and its subsidiaries for the year after all taxes but before deducting the amount contributed to the annuity trust fund during the year.

The allocation of the total contribution to the trust fund among the companies participating in the plan is based on actuarial studies of the amounts that would be required by each company to completely cover the future payments of annuities for service prior to January 1, 1939.

The Indiana company's contribution is allocated to the various departments on the basis of the company's current cost payments to the insurance company for the purchase of annuities for service since January 1, 1939.

The company's contributions to the trust fund are recognized by the Bureau of Internal Revenue as proper deductions from taxable income.

A request was made for some information in respect to Account number 001 which is a salary account and at this time the Respondent produces and hands to counsel a statement in respect to that account entitled: "Basis 5370 used to Allocate Salaries Charged Account 001—Salaries Supervision Others—to Direct Shipment Channels."

A request was made for certain information in respect to the amount of gallonage handled by commissioned agents and drivers. In response to that request there ~~is now~~ produced by the Respondent and handed to counsel for the Commission a statement entitled: "Standard Oil Company Detroit Field 1940. Recapitulation of Tank Wagon Reseller Volume Delivered by Commissioned Agents and Drivers."

As I recall I handed you, Mr. Austin, certain of those freight hauling contracts.

Mr. Austin: Yes.

Mr. Hanley: And I assume you are not yet prepared to say what you ~~may~~ want.

Mr. Austin: I haven't had a chance to go through them.

Mr. Hanley: Very well, but just now I wish to call our Honor's attention to the fact that those have been upplied to counsel.

Mr. Austin: On that point, that transportation is being andled right along and paid for, so I assume there houldn't be any difficulty in finding what contracts cover ne transportation from the Marine Terminal of the company to the bulk plants of the jobbers, since that is a
371 continuous business relationship under which the company is making payment.

Mr. Hanley: I believe it is there, Mr. Austin, and I elieve we gave them to you. I just don't know what additions you think you want.

372 Your Honor will recall that a considerable discussion was had about certain freight bills that had been equested by the Commission, and it was finally suggested Mr. Austin and agreed that we would undertake to xtract a freight bill for each month for the year 1939 repesenting a shipment to each of the following: Citrinolb, Ned's Auto Supply, Stikeman Oil Company, and ayne Oil Company, the same to be as of the 15th of each onth in the year or as near to that date as we could find e bill. That has been done and we now are ready to roduce and do produce the freight bills referred to.

We have prepared a list of each of these freight bills dicating a date and the number and certain identifying formation and the amount. If agreeable to Court and ounsel, we would like to have that list used after it has een compared by counsel and his staff and would like to ave back the freight bills which we made.

Trial Examiner Ballinger: Copies?

Mr. Hanley: Well, it would be necessary for us to otostat all of these, and I believe it will just encumber e record to do that, your Honor. It may be that counsel ill be perfectly willing to grant us this request for the bstitution of the information after he has looked them er.

I am handing him, of course, the original bills
73 together with this statement referred to.

Mr. Austin: Thank you.

Mr. Hanley: The next and the last request has to do ith certain classifications of salaries and accounts to hich they are allocated.

I may say, your Honor, that this is not the request concerning which your Honor spoke to me and asked me to consult with Mr. Austin about. This is a different classification than Mr. Austin has requested.

In response to that request I now produce on behalf of the Respondent and hand to counsel a statement of certain salaries or salary accounts entitled "Detroit Salaries and Commissions for the Year 1940."

Mr. Austin: Off the record, please.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Now, if your Honor please, so far as I am aware, that complies fully with all of the requests made by the Commission for records, data, and information.

Mr. Austin: Well, there was one other request about which there was some discussion, and that was regarding whether there was a 461 contract of Ned's Auto Supply Company in 1937 covering any of the time when Ned's had the half cent differential. I would like to be able to ask Mr. Boatwright or somebody whether a search has
5374 been made for such a contract.

Mr. Hanley: There was some such discussion. I didn't understand it was in the nature of a request for that contract, but if there is any such record and we have it, we will produce it.

Mr. Austin: I think you said that there is no contract except that there might have been a form 461. That appeared on the record.

Mr. Hanley: I am not sure. My understanding is that there were not any written contracts with Ned's. I did qualify it by saying that there was a possibility that there might have been this Form 461. We will look. If we have any such record, we will produce it, Mr. Austin.

Mr. Austin: I think there was also some doubt expressed as to whether it would still be here if there had been such a contract.

Mr. Hanley: That is the reason I say if we have any such record, we will produce it. My understanding is that those records are not kept indefinitely.

Mr. Austin: One of those is in the record.

And on those freight bills, this statement which counsel has produced, I see no figures either on the freight bill or the statement to indicate the number of gallons of gasoline shipped in each car of the amount per gallon of the freight charge.

5375 Mr. Hanley: If your Honor please, in connection with that suggestion of counsel, I am informed that it doesn't make any difference in the charge as to the amount of gasoline in the car. It is a switching charge made by the railroad company.

Trial Examiner Ballinger: Per car?

Mr. Hanley: Per car, and applies to any sized car, that is, anything from 6,000 gallons up to, say, a maximum of 12,500.

Mr. Austin: Well, the exhibits, or, rather, the records, whatever they were—I don't know what they are called in the language of the company—but the records that I offered in Washington which we got from the files of the company show a freight charge per gallon. Now, it is going to be necessary for me to go into that, whether I have to call someone from the railroads or how, I will do it, but I don't know. That is a matter which, naturally, it will be necessary to clear up.

Mr. Hanley: I think we are talking about different things, your Honor. These represent shipments from the company's River Rouge terminal to points in Detroit. The freight bills that counsel is talking about in Washington represented interstate shipments from the Whiting Refinery, as I recall it, to points in Detroit, and what I said about these representing a switching charge, of course, wouldn't apply to such a shipment as counsel has 5376 in mind. That would be a regular freight charge.

Mr. Austin: Well, these sheets that I have here are based upon shipments from River Rouge, I think. I would have to examine them. I guess there is no point in putting anything more in the record about it now, but it is a question which will have to be gone into to establish the freight charge.

Trial Examiner Ballinger: Counsel may examine them and after examination if there is any question, he will bring it to the attention of counsel for the Respondent.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Abbott: Mr. Boatwright.

JOHN W. BOATWRIGHT resumed the stand and testified further as follows:

Redirect Examination by Mr. Abbott.

Q. Dr. Boatwright, I show you Exhibit 100 and direct your attention to page 34 thereof, particularly to the table of figures appearing on page 34 and ask you whether it is a fact that you prepared that table?

A. Yes.

5377 Q. You have already testified in this case that the Respondent secures a reciprocal advertising advantage from jobber distribution based on the amount expended in advertising by three of the Detroit jobbers.

I will ask you whether the table on page 34 of Exhibit 100 in any way reflects Form 189, Commission's Exhibit 101 in this case?

A. Do you mean the dollar values reflected therein?

Q. Yes.

A. No, they are not.

Mr. Austin: Which dollar values are you referring to on page 34?

Mr. Abbott: Referring to the amount which appears to have been expended after applying the percentage which appears on the bottom of the page.

By Mr. Abbott:

Q. It is stated on the next page, at the bottom of page 35, that the company does have an advertising advantage which is referred to as reciprocal from the amount expended by the jobbers in advertising in the Detroit metropolitan area.

Would you state—would you just elaborate on that to some extent?

Trial Examiner Ballinger: Before you answer, what particular item or items do you refer to on page 34, Respondent's Exhibit 100?

5378 Mr. Abbott: Well, when you say "that we refer to" do you mean in reference to the advantage advertising? Advertising advantage?

Trial Examiner Ballinger: Yes.

Mr. Abbott: To the items on the third line from the bottom of the page. That is what I refer to. Is that what you refer to, Dr. Boatwright?

Trial Examiner Ballinger: Costs; opposite the word "costs"?

Mr. Abbott: Is that what you refer to?

The Witness: None of the dollar values indicated in the table on the bottom of page 24 appear at all or are a component part of any expense classification on Form 189.

By Mr. Abbott:

Q. When you said page 24, you meant 34?

A. I thought I said 34. Yes, that's right.

5379 By Mr. Abbott:

Q. Now the last question, Doctor Boatwright, asked you to elaborate on the statement made on the bottom of page 35 relative to advertising value to the company, the Respondent Company, of the expense which is laid out by the jobbers in the Detroit metropolitan area as of the year 1940, or any other year.

Mr. Austin: If your Honor please, that matter was gone into at length at Washington and I think all of the Respondent's reasons or intentions regarding reciprocal benefit were stated at length on the record at that time by counsel for the Respondent. I suggest it is not necessary to state that same argument again on the record, it having been very completely referred to, there.

Mr. Abbott: Will you refer to the page of the record where that does appear?

Mr. Austin: I think I can, with very little delay. I think Judge Hanley would probably recall having made that statement.

Mr. Hanley: I recall, if your Honor please, that there was some testimony about it on the part of Mr. Boatwright. I don't know that whatever occurred in Washington is responsive to what Mr. Abbott is now undertaking to develop.

Trial Examiner Ballinger: It is desired, of course, to avoid unnecessary duplication.

5380 Mr. Abbott: We will take more time, possibly, in objections than we will by having the testimony.

Trial Examiner Ballinger: The Examiner hasn't a distinct recollection with reference to the matter and if it was gone into at some length at Washington it might be well to refer to the record.

We will take a recess for three minutes.

(Whereupon a short recess taken.)

Trial Examiner Ballinger: Come to order.

Mr. Abbott: Will you repeat the question?

(The question referred to was read by the Reporter.)

A. You are undoubtedly referring to that part of page 35 bringing out the reciprocal benefits incident to advertising.

Q. Yes; bottom of page 35 and top of page 36.

A. Yes: Well, in brief, the objective of any supplying company is to bring the full weight of selling organization into any given market that will produce, in their judgment, the best composite results. In one market that might mean a large proportion of direct selling, a smaller proportion of advertising. In a second market it might mean a smaller portion of direct selling, a larger proportion of advertising; while in the third market it may be a combination of direct selling through reseller outlets supported by advertising, supplemented by a jobber distribution, likewise with their advertising, while still having your
5381 own advertising effort.

It has seemed to us that our best results are obtained in the Detroit potential by the combination we have maintained in this area.

We recognize that the jobbers in this area do advertise. We recognize that they advertise to promote the sales through their outlets of our products.

We recognize, also, that the jobbers in this community derive a benefit from our advertising but we also recognize that we, in turn, derive a benefit from their advertising. Because of this reciprocal relationship of benefits derived we regard our advertising expenditures in this Detroit area, other than that which we have isolated and associated with the point-of-sale, as being an entire tank wagon charge, tank wagon reseller charge, and we do not regard our advertising expenditures in this area as an appropriate charge against jobber business because of the reciprocal benefits we receive from their expenditures.

Q. Now I direct your attention—

Mr. Austin: If your Honor please, now I move to strike the testimony of the witness in answer to that question upon the ground that it is a conclusion and the basis of the conclusion does not appear and that the witness having stated that the company considers that it obtains a reciprocal benefit from jobber advertising,
5382 that that opinion is worthless unless the advertising itself and the nature of the advertising appears.

Mr. Abbott: This witness, your Honor, is asked to state his opinion as an economist and upon that basis it is not a lay opinion but the opinion of an expert and we, therefore, submit that it is proper in this record.

Trial Examiner Ballinger: That's true, but there must be some evidentiary basis upon which the opinion could rest.

Mr. Austin: The witness has based his opinion upon jobber advertising and we don't know what the jobber advertising is.

The Witness: Is it desirable, your Honor, that I amplify my reasons for arriving at that opinion?

Mr. Abbott: I want to ask the witness this question:—

Mr. Austin: There is a motion pending.

Mr. Abbott: I would like to ask this further question before the objection is ruled upon.

By Mr. Abbott:

Q. Doctor Boatwright, do you state your answer to that question based upon any knowledge that you have of the nature of the advertising done by the jobbers in the Detroit area?

A. It so happens that I have a general knowledge of the advertising done by the jobbers.

5383 Q. And what is the basis of that knowledge?

A. I have gone over their advertising, have reviewed it, not entirely, but in part. My answer would have been the same even without that knowledge.

Q. What particular investigation have you made of the nature of the advertising of the jobbers and when did you make it? What were the circumstances of making it?

A. Why, I spent three days in the offices of the various jobbers going over with the jobbers their various forms of advertising, expenditures and their methods of keeping books on those expenditures, so I have seen both the advertising itself, I have seen the bills that they have paid thereon, and the method of entry and charging those expenses to the proper accounts.

Q. And that's the basis of your answer that you made?

A. Yes.

Q. To which there is now an objection interposed?

A. Yes, sir.

Trial Examiner Ballinger: Do you care to be heard further on the motion?

Mr. Abbott: No, your Honor.

Trial Examiner Ballinger: The motion is sustained. The testimony is stricken.

By Mr. Abbott:

Q. Now referring to the tabulation, then, appear-
5384 ing on page 34 of Exhibit 100, I will ask you, first, what was and is the source of the data appearing on that tabulation?

A. That information was furnished by the respective jobbers; namely, the Wayne Oil Company, Citrin Kolb Oil Company, Ned's Auto Supply Company.

Q. And, secondly, what was and is the source of the percentage figure appearing opposite the words: "Gasoline Percentage Realization"?

A. That was furnished by the respective jobbers.

Q. And, if you know, what does it represent?

A. It represents the realization from the sale of gasoline, excluding Federal and State Tax, expressed as a proportion of total realization from sales; likewise excluding tax, with the exception of the three percent State Tax, which is included on other products and on gasoline.

Q. And what is the relationship between the total amount as appears on that page 34 of Exhibit 100, between the percentage and the total amount spent by each jobber on advertising in the year 1940, as appears in the Exhibit?

Mr. Austin: I would like to have that question read.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Abbott: I will reframe the question, thus:

By Mr. Abbott:

5385 Q. What is the relationship between the total amount as is shown by the exhibit as having been spent by the jobber in the year 1940 and the amount which appears in the third line from the bottom of page 34 of Exhibit 100?

Mr. Austin: Doesn't that appear on the Exhibit itself?

Mr. Abbott: I don't think so.

The Witness: Yes, I think it does.

A. The grand total advertising expenditure shown at the footing of each of the jobber's advertising expenditures. To this grand total was applied the percentages of realization resulting in the third line from the bottom referred to as cost.

By Mr. Abbott:

Q. In other words, there was applied to the total, the gasoline percentage of realization?

A. Yes, sir.

Q. ~~Now~~ state whether or not it is an accepted practice in cost accounting to allocate advertising expense in cases where several products are advertised, based upon the percent of realization in dollars' worth of sales?

A. It is.

Q. In your opinion is it or is it not the proper method of ascertaining advertising cost, justified on any scientific basis of accounting theory and practice?

5386 A. I think it is a completely proper method of allocation.

Q. State whether in your opinion any other method would be possible, under the circumstances?

A. Well, there are other methods used. I have seen studies where they have used some part of the gross realization, such as gross margin by products, but, as a rule, I think I am correct in stating that the realization is used more frequently than are the gross margins, but, at times, gross margins are used.

5387 Q. Well, where several products are advertised by a person such as these jobbers, is there an accounting problem which is susceptible of any method of treatment upon any sound accounting basis and have you applied that method to this exhibit, page 34 of Exhibit 100?

Trial Examiner Ballinger: You have two questions. Answer the first one.

A. In answer to the first one, there is, of course, a problem of allocation. It does not present a particularly serious problem. There have been many practices adopted by distribution cost accountants for different classifications of expense. One that is frequently adopted and frequently used in distributing advertising costs is percentage of realization, and I have used that.

Does that meet your question?

Q. Yes, and the second part of my question I think you answered in the last clause of your answer; namely, that you have used it in this study.

A. Yes, sir.

Q. Now, what was and is the source of the figures appearing on page 34 of Exhibit 100 opposite the word "gallon" in next to the last line of the exhibit on that page?

A. Those were likewise furnished by the jobbers.

Q. And they represent what?

A. They represent their gasoline sales.

5388 Q. In what year?

A. 1934.

Q. Nineteen what?

A. 1940. I am sorry.

Q. When you said '34, you were referring to the page?

A. I was looking at the page.

Q. What was and is the source of the figures appearing on page 34 of Exhibit 100 opposite the words "cents gallon" in the last line of the exhibit on that page?

A. That is merely the result of a division of the cost of advertising attributed to gasoline divided by the gasoline volume resulting in the unit cost.

Mr. Abbott: Take the witness.

Recross Examination by Mr. Austin.

Q. Mr. Boatwright, I believe you said a minute ago that you treated the advertising expenditures of the company aside from point of sale advertising as chargeable only to the tank wagon reseller channel?

A. No, tank wagon reseller, tank wagon consumer and other methods. I think you are stating correctly that I did mention only the reseller channel.

Q. Do you wish to correct that?

A. I do. The advertising of the company was applicable to the tank wagon reseller, the tank wagon consumer
5389 and the Other Methods channel as reflected on our regular Form 189.

Q. And you said your opinion regarding the reciprocal benefits to the company of jobber advertising would have been the same even if you had had no knowledge of the nature of the advertising itself or had not seen the advertisements?

A. It would have been, sir.

Q. Then do I understand it to be your opinion that the company obtained some reciprocal benefit from jobber advertising even though the jobber advertising contains no reference to any products which the jobber purchases from the Standard Oil Company?

A. Certainly.

Q. In other words, if Ned's Auto Supply Company ad-have a chance to become the possessor of a regular customer.

Q. Would you say that the cigarette advertisement itself created any consumer acceptance for the Standard Oil products?

A. No, not necessarily; no.

Q. And isn't it consumer acceptance if it does result in acceptance after the customer arrives there and then by the efforts of the salesman and by the signs on the pump and other point of sale advertising—

A. Mr. Austin, consumer acceptance is an extremely broad term and encompasses the end results of an infinite number of factors. Advertising as a rule does not result in consumer acceptance of anything. That isn't the
5295 primary object. Consumer acceptance is based largely upon the accomplishments of the products when it is applied to the end that the customer purchased the product for.

You can overadvertise as well as you can underadvertise. There are many cases where claims have been made for a product in advertising that the product hasn't lived up to. The customer tried it once. That isn't a customer; that is just a unique event. The customer is the repeat man. That is where our value and that is where all of our effort must be directed.

Q. Well, you believe, do you not, that the Standard Oil Company's advertising does create consumer acceptance and that the expenditures are made chiefly for that purpose?

A. I don't agree with you that they are made chiefly for that purpose.

Q. Isn't it what is commonly called consumer advertising?

A. It is consumer advertising, that's right.

Q. And it is for the purpose of influencing consumers to believe that the Standard Oil products are good products, isn't it?

A. But it is for the purpose of convincing the consumer to get on our driveways, and then we know that the quality characteristics of our merchandise will retain that customer in many cases. You can't sell your man until you get him on your driveway, and it is after you get him on your driveway that your important merchandising
5296 starts. You can read all the newspapers in the City

of Detroit and see a full page ad of the Standard Oil Company in every one of them and it wouldn't make you a regular user of Standard Oil gasoline unless you make a purchase and try it, and the quality of the merchandise and the selling and the service and everything else lives up to your expectation, then consumer acceptance starts.

Q. Don't you think that a customer is influenced to buy a product and to go to the driveway for the purpose of buying it by ideas he gets from reading the advertisements?

A. Yes, sir, in part. He goes there to buy it; his continued use is dependent upon the satisfaction of the accomplishments of the product.

Q. Now, on page 34 of Respondent's Exhibit 100, third line from the bottom, I believe you said that those figures are reached by applying the percentages in the line immediately above to the figures opposite the heading "Grand Total" in the next line above that?

A. Yes, sir.

Q. In other words, the figures opposite "Costs" are reached by applying the percentages opposite the heading "Per Cent Realization" to the total advertising expenditures opposite the heading "Grand Total"?

A. Yes, sir.

5397 Q. Does that mean that you have treated the figures opposite—or on the line headed "Costs" as the advertising expenditures of the respective jobbers on gasoline regardless of the nature or content of the advertising itself?

A. Yes, sir.

Mr. Austin: That is all I have.

Redirect Examination by Mr. Abbott.

Q. Referring to your last answer, Dr. Boatwright, I understand that you take the percentage of gasoline realization and apply that to the grand total which appears opposite the words "Grand Total" in the exhibit on page 34 of Exhibit 100, and applying that to the grand total you get the result, and the figure opposite the word "Cost" in the third line from the bottom of the exhibit; is that correct?

A. That is correct.

Mr. Abbott: That is all.

Trial Examiner Ballinger: One moment.

Was there any express provision in the contracts with the four jobbers for an advertising allowance?

The Witness: There is no advertising allowance granted by the Standard Oil Company to any jobber.

Mr. Austin: There is no contract, either?

The Witness: And there is no contract at all in the sale to these respective jobbers.

5398 Mr. Abbott: That is all.

Trial Examiner Ballinger: That is all. The witness is excused.

(Witness excused.)

Mr. Abbott: Mr. Ledbetter.

ELMER E. LEDBETTER was thereupon recalled as a witness for the Respondent and, having been previously first duly sworn, testified as follows:

Direct Examination—by Mr. Abbott:

Q. Mr. Ledbetter, you have already testified in this case, I believe, last Spring?

A. Yes, I believe I did.

Q. You testified that you were president of the Wayne Oil Company?

A. That's right.

Q. And you still are?

A. Still am.

Q. What is the nature of the records kept by your company for the year 1940 on the subject of advertising costs? What records do you keep and did you keep?

A. Why, I should say the usual bookkeeping records.

Q. Were they kept on a fiscal year or calendar year basis?

A. Calendar year.

5399 Q. And who kept them?

A. Our bookkeeper.

Q. Was that done under anyone's supervision in your organization?

A. Yes, it was under mine.

Q. You were the one that supervised the keeping of those records, were you?

Mr. Austin: Your Honor, I don't remember, but I think

I have a continuing objection to all of this line of testimony.

Trial Examiner Ballinger: You have.

Mr. Austin: On the ground that no evidence of reciprocal benefits is material, whether or not any such benefits exist.

Mr. Abbott: I think that is true, but I intend to pursue this until the Court rules that I can't. If that time appears, why, of course, I will act upon it.

By Mr. Abbott:

Q. Were you requested to prepare for the purpose of this hearing a chart or a statement summarizing your book entries bearing upon and reflecting advertising costs of your company for the calendar year 1940?

A. Yes.

Q. Have you prepared a summary of such book entries reflecting such advertising costs?

5400 A. We have.

Mr. Abbott: I would like to have this marked, for identification.

Trial Examiner Ballinger: The Reporter will mark the document Respondent's Exhibit 104-A to H inclusive.

(The documents referred to were marked "Respondent's Exhibits 104-A to H, inclusive" for identification.)

By Mr. Abbott:

Q. Mr. Ledbetter, I now show you Respondent's Exhibit 104-A to H, inclusive, and ask you to identify it and state what it represents?

A. If you don't mind my taking a little time to compare it with the bookkeeper's actual work.

Q. Yes.

A. It seems to be a copy of the statement or chart that our bookkeeper prepared.

Q. Do you have the original from which that typewritten copy was taken?

A. I have a carbon copy of the original. I presume you would call that an original.

Q. Do you have a recollection of the fact that Dr. Boatwright, who was last on the stand, and someone else from the Standard Oil Company office came to your place of business and made a study of your advertising costs in that connection?

A. Yes, I remember that.

5401 Q. Were you present at that time when the study was being made?

A. Part of the time, at least; my recollection is all the time.

Q. I now ask you if you can answer the question as to what Exhibit 104 A to H, for identification, is and what it represents?

A. I haven~~'t compa~~red it item for item, but, as I stated before, it seems to be a copy of the chart that our bookkeeper made from our books.

5402 Q. On what subject?

A. On the subject of advertising expense for Wayne Oil Company in 1940.

Q. And do the figures which appear on that exhibit, referring to Exhibit 104-A to 104-H, inclusive, correctly, to your knowledge, state the items of advertising expense of your company for the calendar year of 1940?

A. They do.

Q. And are those figures, as appearing on that exhibit, correct, to the best of your knowledge and belief?

A. They are.

Q. Showing a total—I believe the totals are classified, are they not, by media which were used by your company during the year 1940?

A. Yes.

Q. And I refer you to the fact that there is also a classification there of Blue Ribbon expenses, or something to that effect. What is the significance of that, as appears—

A. That is part of our advertising cost.

Q. That appears on the next to the last page of the exhibit. Just what is the significance of that classification?

A. We had two methods of charging advertising in our books. One class of advertising called the Blue Ribbon balances, in this chart—

5403 Trial Examiner Ballinger: Explain what that means, will you?

Witness: Blue Ribbon balances?

Trial Examiner Ballinger: Yes.

A. (Continuing.)—Our method of handling that was to enter all of the charges for advertising in that particular classification throughout the month and at the end of the month we would charge them to Blue Ribbon Stations.

Trial Examiner Ballinger: That included all your advertising?

Witness: No. Certain types of advertising. Certain kinds of advertising only.

Trial Examiner Ballinger: What types, for instance?

Witness: Well, more or less arbitrary, I would say.

By Mr. Abbott:

Q. What is a Blue Ribbon station?

A. Blue Ribbon Stations is a non-profit corporation organized by a number of Wayne Oil Company dealers.

Q. Are they outlets of your company?

A. That's right.

Q. And what is the reason for keeping the advertising costs on the last two pages of that exhibit separate from the advertising costs on the preceding pages of the exhibit?

5404 A. At the time the Wayne Oil Company had a contract with Blue Ribbon Stations which was a corporation. In consideration of our agreeing to spend at least a thousand dollars a year advertising Blue Ribbon Stations, advertising for Blue Ribbon Stations, we were, in turn, to have certain controls over the use of the Blue Ribbon Stations emblem and the membership of the Blue Ribbon Stations corporation.

Q. And in pursuance of that did you do advertising for the Blue Ribbon Stations, in addition to the other advertising expense you incurred?

A. We did.

Q. Do the last two pages of the exhibit reflect that advertising cost?

A. That's right.

Q. Does that exhibit, on the last page thereof, show the total of the advertising cost of the Wayne Oil Company for the year 1940? I am not asking you for the figures but I am asking whether it shows the total?

A. Yes. I am trying to find out whether I can answer it, or not.

Q. I will ask it this way, Mr. Ledbetter: On Exhibit 1-4-F—

Mr. Austin: For identification.

Mr. Abbott: Yes, for identification.

By Mr. Abbott:

Q. (Continuing.) —is there a total of advertising 5405 costs for the year 1940, inclusive, of the charge of the Blue Ribbon balances?

A. There is.

Q. I don't ask you for what the total is but I will ask you further is there a figure on Page 104-H of the exhibit showing the grand total of the advertising expense on these Blue Ribbon Stations?

A. There is.

Q. And is the total of the advertising costs for Wayne Oil Company for the year 1940 the total of these two totals as appearing on Exhibit 104-F and as appearing on Exhibit 104-H?

Do you want to make a computation before you answer that question?

A. Yes.

(The witness made computation.)

Witness: Now may I hear the question?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: They are for identification.

Mr. Abbott: Yes.

A. I can't answer the question at the present time without doing considerable figuring.

Mr. Abbott: Well, let us have a five minute re- 5406 cess then, if the Court please, to enable Mr. Ledbetter to answer that question.

Trial Examiner Ballinger: We will take a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Abbott: I will withdraw the last question and ask this:

By Mr. Abbott:

Q. Do you know of your own knowledge the amount that you spent, that the Wayne Oil Company spent on advertising costs in the year 1940?

A. I do.

Q. And what is that figure?

Mr. Austin: Just a moment. Do you know that of your own knowledge, Mr. Ledbetter, or is it something you looked up from the record, or what?

Mr. Abbott: He testified he knew of his own knowledge. I object to this having the Attorney for the Commission go into that because he stated of his own knowledge in answer to my question.

Trial Examiner Ballinger: Yes, but the attention of the witness has been called to the question more directly. If he cares to make any explanation, he may do so.

Witness: I will have to nave a little explanation 5407 as to what is meant by do I know of my own knowledge. I think I do know of my own knowledge.

Mr. Austin: Did you obtain that knowledge from your records?

Witness: Yes.

Mr. Austin: Do you have any personal recollection of what was spent?

Witness: In a great many cases, yes, but not, of course, in every instance.

Trial Examiner Ballinger: Not in the aggregate?

Witness: I beg your pardon?

Trial Examiner Ballinger: Not in the aggregate?

Witness: No, only by addition of the various items would I get the total.

Trial Examiner Ballinger: He can state what he knows of his own knowledge but if that knowledge is derived 5408 from his books, then his books are the best evidence.

By Mr. Abbott:

Q. You say you can state that of your own knowledge?

A. I beg your pardon?

Q. I understand you to say you can state the amount of your advertising costs for 1940 of your own knowledge.

A. I thought it was of my own knowledge.

Q. What is that amount?

Mr. Austin: Your Honor, I object.

Trial Examiner Ballinger: The witness has stated in answer to a question by the Trial Examiner that his knowledge of the cost of advertising in connection with his business is based upon the records kept in his office and not upon any independent recollection.

Mr. Abbott: Well, I don't think the record exactly shows that, but I will—

Trial Examiner Ballinger: Have I correctly stated the substance of your testimony, Mr. Ledbetter?

Witness: Yes, I think you have—and I think I have correctly answered the question. I know that these figures are right, just as well as the party who made them knows.

Mr. Abbott: I insist on the question, your Honor.

Mr. Austin: I object to the question further upon the ground that it is immaterial what the total advertising
expenditures of the Wayne Oil Company were, in the
5409 absence of any showing that the advertising referred
to was consumer advertising or advertising which in any way related to the sale or to the products sold at Wayne Oil Company stations, or related to any products at all.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Abbott:

Q. Now then, referring to the original question based on Exhibit 104-A to H, inclusive, I will ask you, Mr. Ledbetter, if the exhibit on Page 104-H contains any figure as to the total amount spent by the Wayne Oil Company on advertising for the year 1940?

A. It does.

Q. That's in the penciled notation at the bottom of the—

A. That is the penciled total.

Q. At the bottom of page 8 of Exhibit 104?

A. That's right.

Trial Examiner Ballinger: For identification.

Mr. Abbott: Yes.

I offer the ~~exhibit~~ in evidence.

Mr. Austin: In the first column on these exhibits, Mr. Ledbetter, is headed "Supplied" and it has a lot of names. What are those names?

Witness: Can I see it?

Mr. Austin: Yes. (Handing document to witness.)

Witness: That is the name, or part of the name
5410 of the company from whom was purchased the supplies, or service, or whatever it was that we spent our money for.

For instance, on the first one, Stockwell & Marcus, 1/31; "Retail Gas Dealers News," $26. That means that Stockwell & Marcus, who are advertising agents, placed an ad for us and billed us for $26, which we paid.

5411 Q. Well, are these names under the column headed "Supplier" the names of the advertising agents or the people whom you paid for the advertising?

A. That's right. They are our suppliers.

Q. Suppliers of advertising?

A. Of whatever it is that we classed as advertising there. It wouldn't necessarily be advertising in their minds. It might be a package of paper that we went out and had handbills printed on. We would charge that to advertising if that is what it was used for.

Q. It might be rubber stamps or stencils or tire wrapping paper?

A. Right; all kinds of things that we got to be used for advertising purposes.

Q. It includes a good many materials used at the service station, does it not, for passing out to customers there or—well, wrapping tires or—I see one article here for spray varnish for old wrapped tires. What would that be used for?

A. That was a tire display made out of junk tires wrapped up with new tire paper and sprayed with lacquer so that when they set out in the weather, the rain wouldn't spoil the paper. It was a display of old tires wrapped up to look like new tires and set out in a rack all the time. They didn't have to bring them in at night; they just let them sit.

Q. There is an item here "Knives and Christmas Cards." What would that represent or how were they used?

5412 A. Knives and Christmas cards? Let's see what it looks like there. That is Brown & Bigelow, who were our suppliers on that. They are manufacturers of advertising novelties. I will just have to testify to the best of my recollection on that without going back and looking up the invoice itself.

Trial Examiner Ballinger: You may do so.

A. For instance, there is an advertising novelty, a knife. My recollection is that we got a few of those for some of the dealers, some of the Blue Ribbon dealers, gave them to them, or paid half of it and charged a half to the Blue Ribbon stations, whichever it was. I don't remember at this time, but I can tell by looking at the invoice.

Trial Examiner Ballinger: Can you get those off the records at the station?

The Witness: Well, I don't—before I could answer that question, I would have to look at that invoice and see exactly what it covered. I am just guessing at it.

By Mr. Austin:

Q. Here is one for 19 cases of clothes pins, Mr. Ledbetter. What was that for?

A. We bought a whole lot more clothes pins than that. We had a method of distributing handbills at that time by folding them up and sticking them in a clothes pin and throwing them on the porch, for two reasons: One, so that they wouldn't be blown away in the first gust of wind; and,
second, the housewife would be more likely to pick
5413 the thing up and look at it because she got a free
clothes pin. It was a very good stunt, and we bought
those clothes pins by the gross.

Q. How about the thousand aluminum thimbles?

A. The same kind of a proposition, advertising novelty, that we bought for some of the stations; either paid half or all of it and gave it to them to distribute with Blue Ribbon advertising on this thimble.

Q. Part of these costs as shown here involve advertisement in dealer publications such as the publication of the retail gasoline dealers' association?

A. Yes.

Q. Was that advertising directed to the sale of products or was it direct to obtain dealers?

A. It was all directed to obtaining members of Blue Ribbon stations, new members. Primarily, that was it. Secondary advertising value would be to sell products that the stations had for sale.

Q. There are a number of rather large items here called "Blue Ribbon Balance." What does that mean?

A. That is explained this way. All of the expenses that we charged to Blue Ribbon stations during any one calendar month at the end—were during the month charged directly to Blue Ribbon stations. A bill was sent. Then at the end of the month we would credit Blue Ribbon stations
with the entire total for the month and charge that
5414 total to advertising.

Q. I don't quite get that. For instance, here on April 30th, 1940, there is an item of $245.47, Blue Ribbon balance. How does that become charged to Wayne Oil Company advertising?

Trial Examiner Ballinger: That is on sheet what?

Mr. Austin: Sheet 104-E. There are other similar items.

A. That if our program or custom was carried out represents the total charges to Blue Ribbon stations made during the month of April.

Q. What were those charges made for, advertising expenditures?

A. They were.

Q. Well, what is the distinction between those entries and the entries over here under chart of Blue Ribbon balances? In other words, this item I referred to on 104-E under Wayne Oil Company advertising is entitled "Blue Ribbon Balance" and now on pages G and H there is a chart of Blue Ribbon balances. What is the relation between the Blue Ribbon balances on the first pages of the exhibit and the chart of Blue Ribbon balances on the last two pages?

A. Now, read the question.

(The question referred to was read by the Reporter.)

A. I didn't make this. I have got to see what it really is.

I can't answer that question without doing some more figuring.

5415 Q. Well, did I understand you to testify that the two last sheets here, G and H, which are entitled "Chart of Blue Ribbon Balances" set forth the expenditures of the Wayne Oil Company for the Blue Ribbon stations?

A. Right.

Q. Don't these Blue Ribbon balances on the previous sheets also represent the same kind of expenditures?

A. It might represent the same kind.

Q. Wasn't this item of $245.47 on April 30, 1940, a Blue Ribbon station expenditure or a total of Blue Ribbon expenditures?

A. I think it was a total of the Blue Ribbon station expenditures for advertising for the month of April.

Q. Aren't those same expenditures shown over here on these last two sheets?

A. That is the thing I can't tell you without some additional figuring.

Mr. Abbott: Your Honor, the witness has stated that in order to answer Mr. Austin's question, it will be necessary for him to do some more research, and I wish at this time, therefore, to withdraw this witness and permit him to do that.

Mr. Austin: Before that is done, your Honor, I would like to ask the witness one or two further questions and perhaps elaborate my objection to the exhibit, and there will be no need of his figuring up the answer 5416 to the pending question if some other objection should be granted.

By Mr. Austin:

Q. What is that sheaf of paper that you have in your hands, Mr. Ledbetter, while you were talking on direct examination?

A. That is a carbon copy of the chart that my bookkeeper made up on the advertising expenses for the year 1940.

Q. And from what source were the sheets, marked, for identification, as Respondent's Exhibit 104-A to H, compiled?

A. I presume from the same source, that is, from the original of that carbon copy.

Q. Did you furnish the original of that carbon copy to the Respondent?

A. I did.

Mr. Austin: Your Honor, I object further to the production of these sheets, for identification, upon the same ground that was passed upon yesterday; in other words, that the—

Mr. Abbott: You mean yesterday?

Mr. Austin: Yes.

Mr. Abbott: Oh, I see.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

5417 Mr. Austin: I object upon the same ground which was discussed at some length here yesterday, and that is that the records are the best evidence and that these sheets are merely copied from the records of the company and they are not the records themselves, and the witness has no knowledge of the facts purported to be set forth on the exhibit offered except in so far as those facts are set forth in his records.

Mr. Abbott: Now, upon that, if the Court please, I wish to state, in line with what was stated yesterday, that the Respondent is perfectly willing and I think Mr. Ledbetter is also willing to have the accountant for the Commission examine the books of the Wayne Oil Company to ascertain the correctness of these things.

Your Honor, you recall, asked yesterday if the witness would be willing to have us examine their books and in each case the witness stated he would not be willing to have that done.

Are you willing to have that done, Mr. Ledbetter?

The Witness: Yes.

Mr. Austin: I think that makes no difference. I don't believe that Respondent is under any obligation to examine the books of the witnesses I had yesterday, nor do I believe that I am under any obligation to examine Mr. Ledbetter's books. I think the sheets offered in evidence are either admissible or they are not. If they are
5418 not the best evidence and are not themselves the
records of the company, they should not be admitted and the burden put on the other party to go to the place where the records are and make his own comparison.

Mr. Abbott: If you are not satisfied with that, then we offer to bring the books into court and introduce those in evidence.

That can be done, can it not, Mr. Ledbetter?

The Witness: Yes. We have got the books that that was copied from.

Mr. Abbott: All right. We make that offer.

I will say, your Honor, that we will have them here first thing Monday morning ready to put them in evidence.

Trial Examiner Ballinger: Does counsel for the Commission have anything further to say?

Mr. Austin: No, except to urge both grounds of objection. Well, I guess I didn't make any objection previously. I asked the witness some questions and he asked for time to be permitted to obtain an answer to them. So there was no objection made as to the content of the exhibit.

However, I will make an objection entirely aside from any answer to the question I asked the witness a while ago. I object to the introduction of those papers upon the ground that on their face they indicate that they include a great conglomeration of all kinds and types of
5419 advertising, the nature of some of which is not stated,
and other types of advertising shown there are expenditures for all types of articles and merchandise and other things used at the station, and I think on its face the exhibit shows that a great many of the items included could not be treated as offering any reciprocal benefit, advertising benefit to the Standard Oil Company of the nature of

the benefits claimed by the company in its proposed cost justification.

Mr. Abbott: I will say on that point, Mr. Examiner, which I understand is an entirely different ground than the one urged previously, that that was the purpose this morning of introducing testimony on behalf of the Respondent in the examination of Dr. Boatwright, to qualify the admission of this class of testimony by showing that there was a reciprocal benefit to the respondent whether the advertisement related to gasoline or to other products. I wish further to say in that connection, that the tabulation on exhibit 100 reduces the amount of total advertising expenditures by the gasoline percentage of realization which in the case of the Wayne Oil Company was 70.1 per cent; in the case of the Citrin Kolb Oil Company, 81.6 per cent; and in the case of Ned's Auto Supply Company, 19.3 per cent.

Dr. Boatwright has stated that that is a scientific method of allocation supported both by theory and 5420 practice in accounting. I, therefore, upon the basis of that testimony, submit that the testimony is admissible.

Trial Examiner Ballinger: The objection to Respondent's exhibit A to H, inclusive, is sustained. No proper basis has been laid for its admission.

Mr. Abbott: In view of the ruling of the Court, I wish to say that we wish to make an offer of proof in connection with this advertising cost and also in connection with the claimed advertising cost of Ned's Auto Supply Company, which will be done sometime during the day on Monday.

That is all, Mr. Ledbetter.

(Witness excused.)

Mr. Abbott: Mr. Biber, take the stand.

MAX BIBER was thereupon recalled as a witness for the Respondent and, having been previously first duly sworn, testified further as follows:

Direct Examination by Mr. Abbott.

Q. Mr. Biber, you have already been sworn and have testified in this case.

In the year 1940 what was your occupation? I believe you may have already stated it, but I ask it again.

A. Office manager of the Citrin Kolb Oil Company.

Q. As office manager was it a part of your duties 5421 to supervise the books of the company?

A. Yes, it was.

Q. Were the records of the Citrin Kolb Oil Company for the year 1940 on a fiscal year basis or on a calendar year basis?

A. Calendar year basis.

Q. Have you been requested for the purpose of this hearing to prepare a summary of book entries bearing upon and reflecting advertising costs of the Citrin Kolb Oil Company for the year 1940?

A. Yes, I was.

5422 Q. Have you prepared such a summary?

A. Yes, I have.

Q. Have you it with you?

Mr. Abbott: Well, I will use this copy.

I would like to have this paper marked for identification.

Trial Examiner Ballinger: The Reporter will mark the paper Respondent's Exhibit 105-A, 105-B, 105-C for identification.

(The document referred to was marked "Respondent's Exhibit 105-A, 105-B, 105-C", for identification.)

By Mr. Abbott:

Q. Mr. Biber, I show you Respondent's Exhibit 105-A, 105-B, 105-C, for identification, and ask you to state what that is?

A. That is a copy of a compilation of the advertising charges taken from the books of the Citrin-Kolb Oil Company.

Q. Showing what?

A. Showing the date of each charge to the advertising account; the amount of that charge and a description of the advertising.

Q. Does it also show the total of advertising costs for the year 1940, on Exhibit 105-C of the paper?

A. It shows the total of the advertising costs and also a total of each description of advertising.

5423 Q. In other words, I understand that the exhibit has an itemization of advertising costs by categories of advertising media, is that right.

A. That's right, it has.

Q. Do these figures, as appearing on the exhibit, correctly, of your knowledge, state the items of advertising expense of Citrin-Kolb Oil Company for the calendar year of 1940?

A. Yes, they do.

Mr. Abbott: The exhibit is offered in evidence.

Trial Examiner Ballinger: Mr. Biber, when you said that they correctly reflected the cost of advertising during the period covered, that statement was based upon the records in your office, was it not?

Witness: That's right.

Trial Examiner Ballinger: And not from your independent recollection?

Witness: No. I checked each item with the books of the company.

By Mr. Abbott:

Q. You did that personally, didn't you?

A. Yes.

Q. I mean, you didn't delegate it to anybody else?

A. No. This was made personally. We checked every entry of advertising in 1940 and created this record.

Trial Examiner Ballinger: Have you a copy of that?

5424 Witness: Yes, sir.

(Handing document to the Examiner.)

Trial Examiner Ballinger: I will return it to you.

Mr. Austin: Was that a copy of this Exhibit 105 you handed to the Examiner?

Witness: Yes.

Mr. Austin: What is meant by "donations and memberships;" the second column on this sheet?

Witness: Those are items of donations to charitable organizations or civic organizations, or memberships in such charitable or civic organizations. Possibly memberships in trade organizations.

Mr. Austin: Do the records of the company set forth more in detail the nature of these expenditures?

Witness: No. Most of these items are taken directly from the check record or check journal and the check stub is made out almost identical with this item. In other words, it gives the payee's name, the amount, and the notation as to what it is; donation, membership, newspaper; whatever it happens to be.

Mr. Austin: I object to the introduction of the exhibit, your Honor, first upon the ground that the records themselves are the best evidence. This is only a copy from the record.

5425 Secondly, upon the ground that there are many items of advertising shown on the face hereof as to which I do not believe Mr. Boatwright's testimony was broad enough to cover, as having stated the opinion that there would be reciprocal benefit from such types of advertising.

Mr. Abbott: What specific items do you refer to?

Mr. Austin: "Donations and memberships" is one thing. I think Mr. Boatwright testified only as to advertising of products. Consumer advertising, I believe, was the subject of his opinion.

Mr. Abbott: I want to ask the witness a question.

By Mr. Abbott:

Q. Mr. Biber, during all the time that you were with the Citrin-Kolb Company did that company allocate memberships and donations to charity, to the advertising expense?

A. We have always carried it as an advertising expense.

Q. That has been the custom of the company all the time that you were identified with it?

A. Yes, it has been.

Mr. Abbott: Now I understand that this motion is made partly on the ground that the original books themselves are the best evidence. In that connection I wish to make the same observation and offer as I made in connection with the testimony of Mr. Ledbetter; namely,
first, that the Respondent is willing to have the ac-
5426 countants for the Commission—and I think the wit-
ness will concur in this offer—examine the books of
account of the Citrin-Kolb Oil Company for the year 1940 to ascertain the authenticity of these entries on the exhibit now under consideration.

By Mr. Abbott:

Q. Is that true, Mr. Biber?

A. I wouldn't be able to say whether the books were available at this time, or not.

Q. The reason for that being what?

A. I am no longer associated with Citrin-Kolb Oil Company.

Q. So you can't answer for them?

A. No.

Mr. Abbott: And in the second place, the Respondent offers in connection with the objection, that if the exhibit is not the best evidence, to bring the books, themselves, in to Court and to introduce the books in lieu of the exhibit now offered in evidence.

As far as the other objection is concerned, if the Court please, the Respondent takes the position that under the testimony of Doctor Boatwright and the other testimony in this case, the fact that some of these entries on the exhibit appear to be entries for the advertising of products other than gasoline, is compensated by the fact that on Page 34 of Exhibit 100 a percentage of 81.6% is applied to the total of advertising expenditures of the Citrin-5427 Kolb Oil Company for year 1940 and only the balance, to which, the sum of $3,211.10 is taken as the advertising expense for gasoline.

Trial Examiner Ballinger: What page are you referring to?

Mr. Abbott: That is Page 34 of Exhibit 100.

Trial Examiner Ballinger: Is there any statement there as to the basis for the allocation?

Mr. Abbott: Doctor Boatwright supplied that in his testimony.

Mr. Austin: What percent did you say was allocated to gasoline?

Mr. Abbott: 81.6%. In other words, the balance of the 19-plus percent was allocated to other products than gasoline.

Trial Examiner Ballinger: The Examiner is prepared to rule.

Mr. Abbott: I want to ask the witness just one more question before your Honor rules on that.

By Mr. Abbott:

Q. As a matter of fact, Mr. Biber, will you state of your own knowledge what you know as to whether the advertising of the Citrin-Kolb Oil Company in 1940 was devoted to advertising of Standard Oil gasoline, and if so, what approximate percent, if you know of your own knowledge?

A. Well, my recollection—

5428 Mr. Austin: I object to that, your Honor. The advertising copy itself is the best evidence of that and not the witness' recollection.

Trial Examiner Ballinger: The objection is sustained.

Mr. Abbott: I have no further observation to make.

Trial Examiner Ballinger: Passing over the first grounds of objection; namely, the failure to produce the original records; and resting the ruling entirely upon the second grounds of objection, Respondent Exhibit 105-A, 105-B, and 105-C is rejected.

(Thereupon Respondent's Exhibit 105-A, 105-B, and 105-C were rejected.)

Mr. Abbott: Now, I want to ask this for the record, also:

Do I understand that the basis of your Honor's ruling with reference to the exhibit offered in evidence in connection with Mr. Ledbetter's testimony; namely, Exhibit 104-A to 104-H, inclusive, was rejected on the same ground and not on the ground of the failure to bring in the original records?

Trial Examiner Ballinger: Yes.

Mr. Abbott: That is correct, is it?

Trial Examiner Ballinger: That is correct.

Mr. Abbott: In view of the ruling of the Examiner 5429 the Respondent at this time wishes to state on the record that Respondent will ask to make an offer of proof in connection with the advertising costs of the Citrin-Kolb Oil Company for the year 1940, which offer to proof will be submitted on Monday.

That's all Mr. Biber.

(Witness excused.)

Mr. Abbott: We have no further testimony for today.

Trial Examiner Ballinger: Is counsel for the Commission prepared to go on?

Mr. Austin: It is nearly 1:00 o'clock, your Honor, and I would like to adjourn until Monday.

Mr. Abbott: Then I move that we stand adjourned until Monday, February 23rd, at 10:00 o'clock, a. m.

Trial Examiner Ballinger: The motion is granted and now, at 12:45 P. M., the hearing stands adjourned, to be reconvened in Room 859, Federal Building, Detroit, Michigan; February 23rd, 1942, at the hour of 10:00 A. M.

(Whereupon, at 12:45 P. M. the hearing was adjourned to reconvene on Monday, February 23, 1942, at 10:00 A. M.)

5430

Room 859 Federal Building,
Detroit, Michigan,
February 23, 1942.

Met, pursuant to adjournment at 10:00 A. M., War Time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq.: Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5431

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, in the matter of the Standard Oil Company of Indiana, is reconvened in room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 23, 1942. The last hearing was in the same room in the same city, February 21, 1942.

Counsel for the Commission and Respondent are present.

Gentlemen, this is a legal holiday and this proceeding will continue today conditioned upon their being no objection on the part of the respective parties. Is there any objection?

Mr. Hanley: The Respondent makes no objection.

Mr. Austin: No objection.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I would like to request a five-minute recess before we proceed.

Trial Examiner Ballinger: We will have a five-minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order. You may proceed.

5432 Mr. Austin: Commission's Exhibit 86 is a list supplied by the Respondent of the reseller service stations supplied in the Detroit Field in 1937.

Commission's Exhibit 109-B, also supplied by the Respondent, is a list of reseller service stations served by the Respondent in 1937 which were in the territory of the salesmen Robinson, Meulenberg and Coutchie. I have asked Mr. Warmack to make a check of the list in Commission's Exhibit 109-B against the larger list, that is, the complete 1937 list in Commission's Exhibit 86, and there are four or five dealers listed on Exhibit 109-B which, apparently, do not check with the list in Commission's Exhibit 86. The name of G. Scanlon, 19906 Fenkell appears on Commission's Exhibit 109-B and we have not been able to locate it on Commission's Exhibit 86.

J. R. Dudley is listed on Commission's Exhibit 109-B at 20300 Grand River. There is a dealer named G. W. Butler on Commission's Exhibit 86 listed at the same address but the name of J. R. Dudley does not appear on Commission's Exhibit 86.

The next name is A. J. Ginella, which appears on Commission's Exhibit 109-B and has not been found on Commission's Exhibit 86. However, at the address given, which is Fenkell and Welland, a dealer named W. M. C. Engler is listed on Commission's Exhibit 86. There is an-
5433 other place, here, where the address coincides but the name given is different, the name W. Sokol appears on Commission's Exhibit 109-B, 9442 Wyoming. The name given for that address on Commission's Exhibit 86 is F. E. Hughes.

Further, on Commission's Exhibit 109-B there appears the name of a dealer listed as C. A. and W. J. Walsh, at Grand River and Rutherford. Commission's Exhibit 86 lists a Charles E. Walsh at 16000 Grand River.

I would like to ask whether the Respondent would be willing to recheck the five dealers that I have just named from Commission's Exhibit 109-B and in the event that those names are correctly listed would the Respondent please supply the gallonage figures; that is, of gasoline purchased from the Respondent by those five dealers in 1937, because it is not clear that the gallonage for those five dealers can be taken from Commission's Exhibit 86.

I might say further that in asking for the list for Robinson, Meulenberg and Coutchie I did not ask for gallonage figures because we already had those figures on Commission's Exhibit 86 and I assumed we could merely copy them off the other list and, consequently, as to these five I am not sure that we have the gallonage figures and I would like to have them.

Mr. Hanley: May I see them?

(Documents handed to counsel for Respondent by
5434 counsel for the Commission.)

Mr. Hanley: We shall, of course, check, in response to this request, your Honor.

May I inquire what the pertinency of this is? I don't understand what difference it makes what the gallonage figures of some reseller operator may have been served by Mr. Coutchie or the other salesmen.

Mr. Austin: This is in connection with Respondent's Exhibit 31-A to 31-Q where the computation of selling expense for Ned's Auto Supply Company was shown as alleged by the Respondent by way of comparison with its general selling expense for its stations in Detroit in 1937 and the purpose for asking for these figures is so that we may be enabled to make certain computations which we may desire to offer in rebuttal on the 1937 cost study.

Will you take the stand, Mr. Boatwright?

JOHN W. BOATWRIGHT was thereupon recalled as a witness for the Respondent and, having been previously first duly sworn, testified further as follows:

Direct Examination by Mr. Austin:

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Austin: I would like to have this paper
5435 marked for identification, please.

Trial Examiner Ballinger: The Reporter will mark the paper Commission's Exhibit 115 for identification.

(The document referred to was marked "Commission's Exhibit 115" for identification.)

By Mr. Austin:

Q. Mr. Boatwright, I show you Commission's Exhibit 115 for identification entitled "Standard Oil Company Acknowledgment of Orders" and ask you if you are familiar with that form (handing document to witness)?

A. Yes, I have seen this form several places.

Q. That particular form that I have handed you is in respect to a shipment from where to where?

A. It is with respect to a shipment from Whiting, Indiana, to Ned's Auto Supply Company.

Q. In Detroit?

A. In Detroit.

Q. Now have you seen similar forms prepared for shipments from the River Rouge terminal of the Respondent to Ned's Auto Supply Company and other jobbers in Detroit?

A. Yes, I have.

Q. And referring, now, to the similar form in respect to shipments from the River Rouge terminal do you know where those forms are made out; filled out?

A. Yes, they are made out here in the Detroit 5436 office.

Q. What department of the company handles the shipments from the River Rouge terminal to jobber bulk plants and, also, handles the payments for freight or cartage for such shipments?

A. Well, the orders for delivery to jobbers move through the gasoline and refined oils department of the general office. The payment of freight is by the manufacturing department.

Q. When you say the orders for jobbers move through the gasoline and refined oil department of the general office that doesn't mean, does it, when a jobber wants a carload or truckload of gasoline that in order to get it the order has to go through the general office in Chicago?

A. They place the order with the Detroit division and the Detroit division places that order. The account memoranda submitted to Chicago moves through the gasoline and refined oil department and the freight bill goes to the manufacturing department.

Q. And where is the freight bill made out?

A. I don't know.

Q. I suppose it is made out by the railroad but—I didn't mean that. What I wanted to ask you was whether the River Rouge terminal makes a record of shipments and the charges on those shipments and submits that to Chicago on shipments from the River Rouge terminal?

A. I don't know. I couldn't answer your question. 5437

Q. Do you know whether the original bills from the trucking companies or from the railroads are submitted in the first instance to the company's representatives at the River Rouge Terminal, or whether they are submitted in the first instance to Chicago?

A. No.

Q. Your answer is that you don't know.

A. I don't know.

Mr. Austin: Well, in view of the uncertainty that appears to exist as to both charges which the Respondent pays for freight and/or switching to the railroads and also in view of the uncertainty which exists as to just what contract haulers covering shipments of gasoline from the River Rouge Terminal to jobber bulk plants and the rates charged, I feel that I should call a witness or witnesses who can testify directly as to the cost to the Respondent on these various types of transportation.

If there is some one at the River Rouge Terminal whose business it is to keep track of the shipments, and of the charges, I would like to have such employee produced but I don't know who it would be; and it seems to me the best way to prove this matter would be to put some one on the stand and have produced, as to the truck charges, actual receipted bills. And as to the freight charges, 5438 I am perfectly satisfied to use the freight bills which were submitted by the Respondent the other day. But I think that some explanation is also required on the record of freight charges appearing on these acknowledgements similar to Exhibit 115, for identification.

So that—I don't want to pursue this matter further now, but I would like to know if the Respondent will be good enough to ascertain and advise me whether or not there is some employee of the Respondent here in Detroit, or at the River Rouge Terminal who can testify and produce records on these questions.

Mr. Hanley: Well, I am not sure whether there is or not, and I would have to ascertain that, myself, before I could make any statement about it. I am not at all clear on just what this witness is going to need to know. We have supplied you with the contracts. We did that in Washington, with the exception of one, and you now have that. We supplied you with the freight bills and there was testimony on the part of Mr. Raupagh as to how this thing works; also testimony on the part of Mr. Boatwright relative to the charges which were introduced in Washington and indeed, he made a computation which was put in the record based on those transportation costs.

Now, I don't know of anybody who can testify as to what an actual freight rate was on a given day without 5439 just—reference to a tariff. I really don't know how far you want this man to go and what you are trying to prove that isn't already proven.

Mr. Austin: Well, I have decided not to go back to ~~1939.~~ The original offer of these acknowledgements last June in Washington was at the time you were offering them in 1939 and 1940, but it appears from the freight bills that you have just given me that the charges were uniform during the entire year of 1939 for each of the various jobbers. So as to your charges I will be glad to use the freight bills for December, 1939, as evidence of what the freight charges were for tank car shipments to jobbers during January, 1940. Of course, we are willing to be corrected on that if it is found there are any changes during the month of January, 1940, but the charge was the same during all of 1939 and probably continued.

It also appears from the evidence already in the record that about the end of January, 1940, shipments to jobbers were commenced by transport truck and that tank car shipments were discontinued so that what I would desire would be to have a witness who could testify to, first: The extent of the period of tank car shipments to jobbers from the River Rouge Terminal in 1940. I may say parenthetically that I am not questioning the dates already put in by Mr. Boatwright representing information 5440 given to him from either Detroit or Chicago when these jobbers were getting deliveries by transport truck, but, nevertheless, I would like to find out a little more definitely when tank car shipments stopped, on one date, and the other method of shipment exclusively used from then on.

Then I would like to be able to question the witness regarding any freight charges and switching charges on tank car shipments—a matter which is not at all clear now from the matter which we have and which has been supplied by the Respondent.

We have some acknowledgements similar to Exhibit 115, for identification, to indicate the freight charges and a number of bills which indicate the switching charges and I am very uncertain at the present time as to which kind of charges were used or whether there wasn't both charges; and then, going into the transport truck situation, it seems to me that instead of putting these contracts in, which are rather difficult of interpretation as related to the transport truck hauling to jobbers, it would be much better to put in the record a sampling of invoices similar to freight bills produced for 1939, which would show the trucking charge per gallon on shipments from the River Route plant to jobbers' bulk plants during the various months of 1940.

The contract with the Smith Company for trucking,
5441 which is now in evidence is, of course, useful for the purpose of showing transport hauling to the Respondent's own bulk plants, but it would require the introduction of, I think, some additional riders and also the introduction of other contracts to attempt to show just what the contracts were with respect to jobbers' hauling and I think that the introduction of actual paid bills showing the payments made by the Respondent for the hauling of a certain number of gallons in various months of 1940 would be much more useful and better evidence because it would not call for conclusions as to how the terms of contract applied.

I am just trying to explain what I have in mind. It seems to me it is a rather simple matter provided we can call a witness from the department of the Respondent that handles those matters.

Mr. Hanley: Well, there may be some witness to whom it might sound simple, but it does~~n't sound simpl~~e to me. I will just have to take that request and analyze it and see what we can do with it. I don't know what you are getting at.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5442 Trial Examiner Ballinger: On the record.

Mr. Hanley: I am now informed that we will not be able to comply with the modified request made by Mr. Austin, which I think may not have been made on the record, but which in substance was that we furnish an invoice or bill paid for hauling cost and having to do with a shipment to each of the four jobbers for each month of 1940. The reason we cannot do so is because the haulers make up a bill at the end of the month and it has to do with many, many places where they haul for us, in Detroit and elsewhere, and they just cumulate the things and we have to check back in our own records and identify the amount of gallonage that actually moved and extend it by what they charge us to see if we have been charging the right unit amount.

If the testimony of Mr. Boatwright is not acceptable when he says that this charge is .155 cents per gallon for the year 1940 for all gallons hauled by truckers into the Detroit metropolitan area, irrespective of whether that gallonage goes to jobber bulk plants or to Respondent's bulk plants, with the exception of two Respondent's bulk plants which figures are in the record, then all I can offer to do is to comply with the request of Mr. Austin to find out the witness that knows. Doubtless, somebody in the Detroit office writes a check to these haulers on the basis of .155 cents, and if you don't accept the testimony of Mr.
5443 Boatwright as supported by all of the rest of the gentlemen here who know, we will just have to give you the name of somebody whom you may believe. That's all I can do.

Mr. Austin: Well, I would like to get the record evidence on this, if possible, just because I think it is a better way to prove a case when you are involved in these sort of charges; and, furthermore, I think I am correct in saying that this part of the business of the company is not within Mr. Boatwright's province, and that Mr. Boatwright's knowledge is second hand, even though I know that whatever he has stated has only been stated after thorough inquiry, and I have no reason to doubt that the inquiries he has made have been thorough.

Trial Examiner Ballinger: Mr. Austin, in view of Judge Hanley's statement, aren't you now relegated to the contract?

Mr. Austin: I don't think so because I don't know what the contract is or what it provides. It is rather difficult to understand.

Trial Examiner Ballinger: Well, apparently, the production of the bills Judge Hanley has described are not going to throw any light on the matter you desire information upon.

Mr. Austin: Your Honor, I think we had better pass this
matter over now temporarily. We have accomplished
5444 something in regard to the freight on the tank car, and
I am going to suggest that Mr. Warmack be permitted
to look over the records of the Detroit office that have been referred to here regarding jobber shipments and payment for jobber shipments and, perhaps, after he does that with the Respondent's accountants, it will be possible to make some better request or one which can be practicably complied with, but until we know what sort of records are available, it is rather difficult now to make any request which is intelligible to the Respondent, and, consequently, I suggest we just let the matter drop until Mr. Warmack has an opportunity to determine what records are available and then we will know what, if anything, to ask for.

Mr. Hanley: If your Honor please, now I understand that the only request left on the record is that Mr. Warmack be given an opportunity to examine such records as he may want to look at.

Mr. Austin: That's right.

Mr. Hanley: Of course, that request has been complied with long since. Mr. Warmack has been looking at them for weeks. Of course, they are all available to him all the time, anytime he wants to go at them.

Trial Examiner Ballinger: Proceed, Mr. Austin.

Before we start, Mr. Austin, if you desire Mr. Boatwright
to produce his worksheets, I understand that they are
5445 quite voluminous. You haven't any objection to some
representative of the company who is familiar with
those worksheets sitting over here so as to save him the time of digging them out?

Mr. Austin: Not a bit. Not a bit.

By Mr. Austin:

Q. Mr. Boatwright, I hand you Commission's Exhibit 108, for identification, which is a booklet entitled "Retirement Plan for the Employees of the Standard Oil Company."

Have you made any further inquiry or check upon which you can now state whether the retirement plans set forth in this booklet are the retirement plans which are now adopted and being carried out by the company and which have been in effect since January 1, 1939?

A. This is an outline of the plan which is now in effect and is being carried out by the company.

5446 Q. There is more than one plan listed in that book, is there not?

A. Plans.

Q. And did you find that the cancellation of those two examples, or three examples, on pages 19 and 20 does not mean that any part of the plans as described in the booklet are withdrawn or changed?

Mr. Hanley: Just a moment, Mr. Boatwright.

That is objected to by the Respondent as immaterial. The same objection might have been made to the preceding four or five questions. There can be no issue, here, as to what the plans, the detail of the plans used by Respondent in connection with this annuity system may be. The only thing in issue, here; the only thing that the Commission is entitled in this proceeding to inquire into is the method used by the Respondent in allocating the expense to which it was put by virtue of any plan that it may have had in effect, irrespective of the detail of that plan.

I concede the right of the Commission to inquire into the propriety of the allocations but deny the right of the Commission to investigate the detail of any of the plans of the Respondent.

Mr. Austin: I think the details of the plans are material only in so far as to determine the nature of the pay-
5447 ments made which are claimed by the company as expenses in connection with the marketing of gasoline, in 1940 and the only purpose of the present question is to establish this exhibit so that I can offer it in evidence. I don't see how I can offer it in evidence if part of what is in here is not at the present time in force.

Mr. Hanley: Are you going to offer that in evidence?

Mr. Austin: It was offered the other day and I believe there was no objection to it except upon the question that there were two pages cancelled.

Mr. Hanley: I made an objection to the production of it.

Mr. Austin: They were offered the other day. I forget whether you were here the other day, or not. The death benefit was introduced and this one was held up because of the two pages that were cancelled.

Mr. Hanley: Was that other matter received in evidence?

Mr. Austin: The death benefit plan was received in evidence.

Mr. Hanley: Do you remember the number of it?

Mr. Austin: Commission's Exhibit 107.

Mr. Hanley: Respondent at this time moves to have Commission's Exhibit 107 stricken from the record for 5448 all of the reasons explained in the objection just made to the question to the witness.

Mr. Austin: There is a previous objection pending but—I don't know what the proper procedure is.

Trial Examiner Ballinger: As to the last motion, the Trial Examiner denies it.

Now with reference to the question propounded to the witness: Doesn't that run to the method adopted by the company?

Mr. Hanley: It does not, your Honor. I don't know how many different kinds of plans there may be in existence in the United States by various companies, all having, in principle, the same objective; namely, some plan of retirement protection, annuity or pension or insurance for their employes. I apprehend there are many, many different types of plans. They all involve expenses to whatever company uses such a plan. That expense is a cost of selling, if it is a merchandising company.

If the Respondent undertakes to make allocations of cost as between its different methods of distributing its products, then we concede that the Commission, in this type of a proceeding, has a right to inquire into the propriety of our allocation. To just put it as bluntly as I can, I will say it is just none of the Commission's business as to what the type of plan is. We are not inquiring into that in this 5449 law suit. There isn't any question raised about the propriety of the plan itself. It isn't a secret. We are rather proud of it, in fact.

Mr. Austin: It isn't a method of allocation, your Honor, but there is a question that arises all through this cost study whether certain items are of such a nature that they may afford any basis for a cost differential under the terms of it.

Of course, we have to know the nature of the expenses and in order to know them, why, the purpose for which they are made is extremely important. It isn't just any payment that the Standard Oil Company makes in connection with the marketing of gasoline that it can take advantage of under the Robinson-Patman Act; or, at least, that's my contention.

Trial Examiner Ballinger: The witness has testified that the booklet marked Commission's Exhibit 108, for identification, contains the plans of the Respondent with reference to insurance.

Mr. Austin: Retirement benefits and annuities.

Trial Examiner Ballinger: Retirement benefits.

Now on Page 19, under the heading: "How the Plan Operates" is, apparently, an illustration. That page and the succeeding page relating to the same matter is stamped "cancelled". That doesn't in any wise affect the probative value of the document if you desire to offer it in evidence.

5450 Mr. Austin: Well, that was my question to the witness: how—in it did affect what was in the rest of the book.

Trial Examiner Ballinger: The objection to the question is sustained.

By Mr. Austin:

Q. Mr. Boatwright, is the plan described in Part I of this booklet entitled "Annuities for Service before January 1, 1939," still in force and has it been in force since January 1, 1939?

A. It is still in force and has been in force since January 1, 1939.

Mr. Austin: I offer this booklet in evidence.

Trial Examiner Ballinger: Is there any objection?

Mr. Hanley: We make the same objection.

Trial Examiner Ballinger: The objection is overruled, and Commission's Exhibit 108 for identification is admitted in evidence.

(The booklet referred to, heretofore marked for identification as "COMMISSION'S EXHIBIT 108" was received in evidence.)

By Mr. Austin:

Q. Will you now turn to Page 92 of Respondent's Exhibit 100, please? In the last paragraph on that page, Mr. Boatwright, do you note a statement regarding a "General Office Payments of Past Annuities and Accumulation for Future Reserves," amounting to "$130,
5451 787.89"?

A. I notice the statement.

Q. Are you familiar with the nature of that payment and the purposes for which it was made?

A. Again I would have to repeat the testimony that the statement, I think, itself, is self-explanatory as to the payment of services prior to January 1 in the building of a reserve.

Mr. Austin: Just a minute, please. Will the Reporter please read the question?

(The question referred to was read by the Reporter.)

A. Yes sir.

By Mr. Austin:

Q. Now, showing you Commission's Exhibit 108, and referring to Page 4 of that exhibit, will you state whether the General Office payment of $130,787.89 just referred to was a payment made into the annuity trust referred to in Paragraph "A" on Page 4 of Exhibit 108 and whether that payment was made for the purposes stated in said Paragraph "A" on Page 4?

A. It was made to meet the trust requirements as stated in Paragraph "A".

Q. It was a payment of the nature described and referred to in Paragraph "A" on Page 4?

A. May I check my work sheets on that?

5452 Mr. Austin: Yes.

Trial Examiner Ballinger: You may.

A. I have before me the work sheet which gives the breakdown of the $130,000 under discussion and I find that it is made up of two parts. Of the total, 108,500-plus dollars is a payment to the trust fund in keeping with Paragraph "A". The remaining portion are the amount that is paid to the insurance company representing annuities of present annuitants.

5453 By Mr. Austin:

Q. What present annuities do you refer to?

A. People who are now on and are receiving annuities for past services with the company.

Q. Are they receiving those annuities under either plan set forth in Commission's Exhibit 108?

A. May I have the question again, please?

(The question referred to was read by the Reporter.)

A. I would have to answer that subject to check. I am under the impression that when the plan that you have outlined before you in Commission's Exhibit 108 was made effective that the insurance company took over the annuities then being paid by the company for past service. Therefore, if I may answer subject to checking, I would say that it is in accordance with that plan.

Q. In the last pages of Commission's Exhibit 108, beginning with page 21, there is a copy of a trust agreement. Is that the trust agreement covering the trust into which the payment of $108,000 odd was made? It is my understanding that that is the same trust that is referred to in paragraph 4 (a) that we were looking at a while ago?

A. Yes.

Mr. Hanley: There is only one man in the company that I know of that really knows the answer to that, and he is the treasurer.

5454 By Mr. Austin:

Q. Well, is there any difficulty about this present question as to identifying that trust agreement as being the one referred to on page 4, paragraph A?

A. Mr. Austin, you are asking me a series of questions on a phase of our operations that I have been primarily concerned with for personal interests, but it has not been a part of my regular duties and I have made no study or no analysis. Therefore, my knowledge on the retirement plans and the details of the plans and the details of the trust as established under those plans is quite limited.

Q. I just wanted to identify that trust as being the trust referred to in paragraph 4 at the moment. I don't intend to ask you anything about the effect of the trust agreement or any detail. In fact, I am not interested in that.

A. Well, I could answer that by saying that I think it is an outline of the trust referred to on page 4, paragraph A, Commission's Exhibit 108.

Q. Do you know, Mr. Boatwright, whether the balance of the sum $22,000—is it?—that you say was paid to the insurance company for the payment of past annuities—was that your testimony?

A. Yes, sir.

Q. —whether that is a continuation of annuity payments which were already being made by the com-
5455 pany at the time these new plans went into effect on January 1st, 1939, and which annuities were not taken over into the plans described in Commission's Exhibit 108?

Mr. Austin: I would like to have that reread.

(The question referred to was read by the Reporter.)

Mr. Hanley: Well, that is assuming a fact not in evidence.

Mr. Austin: I am not assuming.

Mr. Hanley: Read the last phrase of that question.

Trial Examiner Ballinger: Read the entire question.

(The question referred to was read by the Reporter.)

Mr. Hanley: Has the witness testified there were any annuities that were not paid that were cut out of the plan?

Mr. Austin: That is what I am asking him.

Mr. Hanley: You are assuming that.

Mr. Austin: I will try to reframe my question.

By Mr. Austin:

Q. In the first place, it is conceded, is it not, Mr. Boatwright, that there was an annuity plan in force prior to January 1, 1939?

A. There was.

Q. And the company prior to January 1st, 1939, was and had been paying annuities to certain employees who had retired prior to that time; is that correct?

A. Yes, sir.

5456 Q. Now, my question is: Whether this payment of some $22,000—which the witness has described—was made for a continuation of those annuity payments to annuitants who were already on the annuity list prior to January, 1939, and—well, I will stop there. Is that correct or do you know?

A. Yes, it is correct.

Q. Now, if that is correct, does it follow or is it a fact that the payment of those annuities which were—if that is a fact, were the annuities upon which payments were being made prior to January 1, 1939, included from that date on in the new plants or was the payment of those past annuities continued separately by the company?

Mr. Austin: I will withdraw the question. Your Honor, I think it is giving the witness some difficulty and I believe that is as far as it is—

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: —material at this time. The previous questions and answers define the annuities effective, and I don't know that I care to go any farther now about how they are being handled.

Upon review of the record, if we find that further questioning about these plans appears to be material, perhaps we will be able to ask such questions at a future date.

I move we take a five-minute recess, your Honor.

Trial Examiner Ballinger: Motion is granted.

5457 The hearing stands in recess for five minutes.

(A short recess was taken.)

By Mr. Austin:

Q. Mr. Boatwright, I call your attention to Respondent's Exhibit 99, page 20, the lower part of that page referring to Accounts 243, 244, and 520.

A. I have the page referred to.

Q. The statement appears there that the charges to those accounts are allocated to channel on the basis of all salaries and commissions in each channel to total all salaries and commission for the corresponding month. Is that statement correct?

A. That part which you read is correct. You omitted the phrase "representing additional salary consideration."

Q. Yes. Is it strictly true that the total of all salaries and commissions in each channel and the total of all salaries and commissions for the corresponding month were used for the purpose of allocating the charges to those accounts?

A. It is true that the salary accounts—now, if you are challenging the statement because we had not isolated that part of the miscellaneous operating expense that might be represented by wages or salaries or something like that as a component part of our allocation factor, your statement is correct.

Q. Well, I haven't made a statement. I am asking you.

5458 A. I say, if you challenge on that basis, that is correct. We have not isolated the part of salaries or wages which are not isolated in the expense classification shown on our Form 189.

Q. And that applies, does it not, to the numerous accounts which you have listed the other day which included part salaries and part other expenses?

A. It does.

Mr. Austin: I would like to have this sheet marked for identification.

Trial Examiner Ballinger: The Reporter will mar the paper Commission's Exhibit 116, for identification.

(The document referred to was marked "Commission' Exhibit 116" for identification.)

By Mr. Austin:

Q. I show you Commission's Exhibit 116, for identification, Mr. Boatwright, and ask you if you can describe th nature of the material appearing on that sheet?

A. The material on that sheet represents the salarie and commissions incurred in the Detroit Field for variou salary account classifications on our regular Form 18 which are recapitulated to provide a basis for allocatio of the account 520, Annuities and Retirement Plan Expense, on Form 189.

5459 Q. Is it your understanding that Commission's Exhibit 116, for identification, sets forth all of the sa ary charges which were used as a basis for the allocation of Accounts 243, 244, and 520, in the company regular accounting procedure?

A. It is.

Mr. Austin: I offer this sheet in evidence.

Trial Examiner Ballinger: Any objection?

Mr. Hanley: None except as to its materiality.

Trial Examiner Ballinger: The objection is overrule Commission's Exhibit 116, for identification, is admitte in evidence.

(The document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 116", was receive in evidence.)

By Mr. Austin:

Q. Is it your opinion, Mr. Boatwright, that the salari included in the accounts listed on Commission's Exhib 116 in the tank wagon reseller, tank wagon consumer, an Other Methods channels are sufficiently representative an substantially representative of the total distribution salaries in those channels to provide a proper basis f allocation of the expenses in Accounts 243, 244, and 520 the Form 189?

A. Certainly.

5460 Q. Without questioning that answer, Mr. Bo wright, I have had certain computations made of t percentage to the total of Account 520 on Form 189 f

1940 represented by the divisions of the expense on that account in the three channels. I don't know whether you can answer this question without doing some checking but Commission's Exhibit 116 indicates that 34.8 percent of the total salaries in the accounts listed fall into the tank wagon reseller channel; 36.4% in the tank wagon consumer channel and 28.8% in the other methods channel. It appears from Form 189 for 1940, according to our computation, that 34.26% of the expense to Account 520 was entered in the tank wagon reseller channel—

A. Will you compare them as you go through them, please, so that I may have them in mind?

Q. Yes. The percentage for the tank wagon reseller channel, Commission's Exhibit 116 is 34.8%.

A. Yes.

Q. The percentage for Account 520 in the tank wagon reseller channel is 34.26%.

A. Yes.

Q. In the tank wagon consumer channel the percentage on Commission's Exhibit 116, based on total salaries, is 38.4%. The percentage of Account 520 in the tank wagon consumer channel on Form 189 is 37.01%.

A. Yes, sir.

5461 Q. The percentage on Commission's Exhibit 116 for the other methods channel is 28.8%. The percentage for Account 520 in the other methods channel is 28.73%.

A. Yes sir.

Q. Assuming that the percentages stated are correct—and I will give you an opportunity to check them, if you wish to do so—would that indicate to you that the list on Commission's Exhibit 116 is not, perhaps, an entirely complete or correct list of salaries used, or that there may have been some other salaries?

A. No, that doesn't indicate that. What you are referring to, here, are insignificant differences which grow out of making an allocation of a salary on a montnly basis. These salaries that are indicated on Commission's Exhibit 116 are annual. We prepare the allocation factors for the accounts under discussion; namely, 243, 244 and 520, each month.

The application of the ratios on a monthly basis are then enumerated for each succeeding month so that at the end of the year we have had a series of twelve different per-

centage factors applied to twelve different base salar
amounts so that when we take the ultimate, the enumera
tion you have on Commission's Exhibit 116, the ratios ma
not agree exactly because those ratios that you see on Com
mission's Exhibit 116 are a weighted average for an an
nual basis and may not have been used in any or
5462 month.

Q. Then those variation of percentages is n
reason for questioning the completeness of the salarie
listed on Commission's Exhibit 116 as the basis for alloca
tion of the three accounts referred to?

A. The differences of the percentages does not give ri
to a question of the determination of the allocation.

Q. Will you turn now, please, to Page 96 of Respon
dent's Exhibit 100, which is Sub-schedule 9 "A".
You will note on that page, Mr. Boatwright, under Ac
count 243, there is a line headed: "Total Salary."
similar entry line, under Account 244: "Total Salary".
similar line under Account 520. Do you see those lines th
I am referring to?

A. Yes sir.

Q. Now, on each one of these three lines there are thre
figures, the figures being identical in each line. The fir
figure under "Jobber Naphtha and Gasoline" is $3,635.3
The second figure is $669.30, under "Jobbers, Oth
Products", and the third figure is $19,831.82 under "Dire
Shipments Other Customers."

A. Yes sir.

Q. Do those figures represent the total salaries in th
Detroit Field, 1940, allocated to those respective dire
shipment channels, or do they represent only the po
5463 tion of the salaries listed in the accounts enumerate
on Commission's Exhibit 116 which were allocated
direct shipment channel.

A. The salaries included in the figures by the Attorn
for the Commission are the total salary charges which w
found assignable to direct shipment business and is slightl
broader in its scope than the accounts enumerated on Com
mission's Exhibit 116.

Q. Then do I understand your testimony to be th
taking the figure $3,635.34, that that represents the porti
of all salary expense in the Detroit Field for 1940 whi
was allocated to the "Jobber, Naphtha and Gasoline" cha
nel and that the computation of that figure was not

stricted to a computation of the salaries in the accounts listed on Commission's 116 which were allocated to that same channel.

Mr. Hanley: If your Honor please, that question is objected to for the reason that it contains a statement by counsel to the effect that the figures appearing on Commission's Exhibit 116 were allocated to the same channels as certain allocations to direct shipments were made in the special Form 189, Exhibit 101, prepared by Mr. Boatwright when, as a matter of fact, there never was any allocation of the figures on Exhibit 116 in direct shipment channels. They are entirely different sets of figures; 116.

Mr. Austin: I don't think my question involved any assumption but I would be glad to have it read again.

5464 Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Mr. Austin: I will withdraw the question, if your Honor please. It is a little complicated.

By Mr. Austin:

Q. Perhaps I can ask you that more briefly and clearly, Mr. Boatwright.

Does the figure of $3,635.34 on Page 96 of Respondent's Exhibit 100 represent the total salary expense charged by you to the "Jobber, Naphtha and Gasoline" channel, or does it represent only the portion of that expense entering into the accounts listed on Commission's Exhibit 116?

A. Well, the accounts listed on 116 include therein certain expense classifications which have nothing to do with jobbers.

Q. Yes.

A. Therefore, as an illustration, we could not use commission payments as an allocation factor with any reasonable degree of accuracy in allocating cost to direct shipments.

Likewise, in Commission's Exhibit 116, you have drivers' salaries for drivers operating out of our bulk plant. That could not be included in those.

Therefore, what we had to take in determining the allocation factor was those salary classifications which were the same in both the direct shipment channels and the tank wagon channels, plus such other salary determination

5465 as we could measure in other accounts supplementing

these which remained applicable to both direct shi
ment and the tank wagon channel.

Q. Now I realize that there were some accounts on Co
mission's Exhibit 116 as to which there is no allocation
direct shipments but that still doesn't affect my questio
I don't believe, and I don't believe you have answered
and I would like to have the Reporter read it again.
would like to have a direct answer to it, if possible.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

By Mr. Austin:

Q. In other words, I want to know whether that figure
restricted to a total of allocations to jobber, naphtha a
gasoline on Commission's Exhibit 116. Conceding th
there may be some accounts there as to which there w
none.

A. Well, plus certain other accounts in which we h
determined the salary allocation to direct shipment.

Q. Can you state what other accounts are covered
that figure of $3,635.34, in addition to the accounts listed
Commission's Exhibit 116 and, if you will, Mr. Boatwrig
before you attempt to answer that question, I would li
to have you, if you have not already done so, total the e
tries under jobbers, naphtha and gasoline in the accour
listed on Commission's Exhibit 116, and that will sh
you how close the total in those accounts comes
5466 the total of $3,635.34, and will show how much the
is left over for you to look for.

Mr. Austin: I have the figures, but I prefer to have t
witness do it.

5467 Trial Examiner Ballinger: You have asked t
witness a question, also called his attention to certa
other matters. I will permit him to answer the question
he can.

A. I am prepared to answer your question at this ti
In addition to the salary items enumerated on Comm
sion's Exhibit 116, recognition was given to the sala
items included in Account 070, being E.L.A. expense; 0
being safety expense; and 220, being employment depa
ment.

By Mr. Austin:

Q. And that is true for all three direct shipment c
umns as well as for jobber, naphtha, and gasoline?

A. Yes, sir.

Q. Does it follow, Mr. Boatwright, that the computation described in the last paragraph on page 92 of Respondent's Exhibit 100 was not applied to the salary expense in certain other accounts, a portion of which salary expense was allocated to direct shipment business, for the purpose of making a transfer to direct shipment channels of expense in Account 520?

A. I am sorry. We will have to break that down some way; either that or else maybe we can read the question back and I can get all of it. I was trying to follow you in your references.

5468 Q. I think it permits a yes or no answer, but you will have to determine that after you hear the question.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. I am afraid I don't understand your question.

Q. Well, the accounts listed on Commission's Exhibit 116, plus the three accounts which you have just referred to as being given recognition in these direct shipment salary figures—

A. Yes.

Q. —are not all of the accounts on Respondent's Exhibit 101 which contain salary expense, a part of which was allocated to direct shipment channels.

A. That is correct. No, they are not 100 per cent of every salary item that would be a component part of some of these accounts which represent both salary and other expenses.

Q. Then does it not follow that there are some salary expenses on Respondent's Exhibit 101 which were allocated to direct shipment channels in part but which were not given recognition in making the allocation to direct shipment channels for Account 520?

A. That is a correct statement.

Mr. Hanley: May I see if I understand this by asking a question?

Trial Examiner Ballinger: You may.

5469 Mr. Hanley: Would the result of what you have just said, Mr. Boatwright, be to reduce the allocation in any appreciable amount in connection with Account 520?

The Witness: I am afraid that there is a lack of understanding throughout. In the following of the question, confess to great difficulty myself. I can well illustrate—

Trial Examiner Ballinger: Mr. Austin, I suggest yo pay attention to this.

The Witness: I can well illustrate the difficulties. you assume an account like, oh, miscellaneous operatin expenses, there are certain salary items included in then Now, if we were to go through our worksheets and pick u every penny of salary, it would result in the determinatio of three figures. These three figures would be used t determine an allocation ratio, which is used in the allocatio of Account 520. Now, actually, we picked up those mai accounts which itemize the salary, for the purpose of dete mining the allocation ratio between channels.

Mr. Hanley: I wonder, if your Honor please, if I mig inquire from Mr. Austin as to just how much he is talkin about in money in this controversy between Exhibit 1 and Respondent's Exhibit 101?

Mr. Austin: I don't know, Judge Hanley. I am simp trying to find out where the methods used and the figur that were used in these various accounts where I think tha it may result in some inconsistency, perhaps, or ina
5470 curacy in the account, and I have not in all cas attempted to make any computation to determi what the effect would be. I don't know that I ever wi I may in some cases. I think this is a case where it ca be done. If that is your question, it can be done qui easily but I haven't done it.

Mr. Hanley: It seems to me to be very trivial, ju looking at the exhibit here.

Mr. Austin: Well, it may be. Of course, there is the I don't know whether this should be on the record.

Trial Examiner Ballinger: This is on the record.

Mr. Austin: All right. I was going to say, wheth the amount should be allocated to automobile supplies think is arguable. That is another question that aris But I can't tell you now what effect the argument I a inferentially making might lead to. As a matter of fa I can't tell you really for anything that I am asking rig now.

The Witness: I wonder if I might make a statem which would contribute to clarity in some respect?

Trial Examiner Ballinger: You may.

The Witness: In making our study of the special a

analysis of direct shipment expenses, as I am sure Mr. Warmack has had adequate opportunity to examine the work-sheets to date, we carried this through by individual employees, by individual months, and every place that we
incurred a salary item, we charged the appropriate
5471 cost for the various insurance items under discussion.

That would be true even if it would be the labor of a painter. He still has a charge against him for the salary and for the insurance cost to the company, and then we recap those to get our charges to these various insurance items.

Now, when the Commission accountants suggested it would be easier for them to follow the accuracy of our work if they had a spelling out of the processes used in the entire calculation, you may recall that I pointed out that we would recap these and that we would calculate a ratio based on a recap of the twelve months.

To illustrate, you will notice that on page 96 of Respondent's Exhibit 100, Account 243, Taxes-Old Age Benefits, we have a charge of $37.45 accumulated. Now, picking up the various salary items where we can isolate those salary items without a complete recapitulation of every small charge, we come to $3,635.34. Now, the charge against 243 is $37.45, which represents 1.03 per cent of these salary items that we pick up. Therefore, there are additional little increments in there, but that this sheet was prepared to illustrate the methodology followed throughout, and I thought that was clearly understood when we explained our method of keeping books and determining those ratios on a monthly basis, and the annual figure may not concur to a hundredth of a per cent with the monthly figures.

5472 By Mr. Austin:

Q. Well, yes, I notice that all the way through for each instance you can't follow down. You wouldn't get the same annual percentages. Just as an example, for the salaries in, say, Account 005, advertising manager, and in the Accounts controlled by 005, such as traveling expense or depreciation of vehicles or operation of maintenance, advertising—now, as I understand it, each month the same figures are used for the allocation of all of those accounts and yet at the end of the year, due to the fact that the expense varies in each month in the various accounts, you will get a different annual percentage. That is a fair example, is it not?

A. Well, yes. And there are many where the application of monthly ratios build up so that the annual ratio will not coincide with any one of the monthly ratios, and that is why, Mr. Austin, we found it necessary to work this on a monthly basis. Frankly, from our system of keeping books and distributing costs, I don't think that an accurate piece of work could have been done any other basis. But I just wanted to point this out. I wanted to point out that the actual charges to these accounts are complete, that is, recapitulated direct from the allocation of effort of the individual involved.

Q. Then referring again to page 96, take for instance the figure of $88.99, under Account 520 in jobber, naphtha, and gasoline column, the figure of $88.99 appearing 5473 directly over the figure $3,635.34. And, as I understand it, the $88.99 is shown to be 2.45 percent of $3,635.34; is that correct?

A. Yes.

Q. Now, was not the figure of $88.99 reached by applying the method of computation described in the last paragraph on page 92 to the salary expense making up the total of $3,635.34?

Do you want that read?

A. I think I had better.

(The question referred to was read by the Reporter.)

A. The method described in the last paragraph of page 92 was followed on the $3,635.34, plus the similar application of the identical method to any minor salary charges incurred and isolated separately in other individual accounts which were in part salary.

Q. Then that percentage figure of 2.45 has no particular significance at all, does it?

A. The percentage figure of 2.45 is an illustration which is an approximation based on those salary items that could be isolated and used in the spelling out process which was offered for complete clarification for the Commission's accountants in following the work.

Mr. Austin: Will the Reporter please mark these sheets for identification?

Trial Examiner Ballinger: The Reporter will 5474 mark the documents Commission's Exhibits 117-A, B, C, and D.

(The documents referred to were marked "Commission's Exhibits 117-A, B, C, and D" for identification.)

By Mr. Austin:

Q. Can you identify these Commission's Exhibits 117-A, B, C, and D?

A. Commission's Exhibits 117-A, B, C, and D represent the distribution of time of the accounting department for the channels: tank wagon reseller, tank wagon consumer, Other Methods, and automobile supplies, and total by sub departments of the accounting department and represent, respectively, the months of December, '39, March, '40, June, '40, and September '40.

Q. Are these exhibits, for identification, what are commonly called the quarterly distribution of time reports for the accounting department?

A. They are.

Q. And are they the reports which we have referred to before in your testimony as being prepared from and representing a compilation of the information recorded during the last month of each quarter by the accounting employees on the form introduced in evidence as Commission's Exhibit 106?

A. Commission's Exhibits 117-A, B, C, and D are recapitulations made during the respective months of the individual reports submitted by Commission's Exhibit 106.

5475 Mr. Austin: I offer these four distribution of time reports in evidence.

Trial Examiner Ballinger: Is there any objection?

Mr. Hanley: What is the purpose? I see no materiality, yet.

Mr. Austin: The purpose is to show the percentages used in allocating the expense of the field office accounting department in Account 200 to the various channels on company form 189 as described in Respondent's Exhibit 99.

Mr. Hanley: Well, will you tell us, Mr. Austin, if you are challenging any of this stuff? Is there any point to all this examination?

Mr. Austin: We intend to question a number of accounts in expense allocations which appear in the cost study on Exhibit 101 and the various forms and figures I am asking for are forms and figures which we believe, is necessary to form a basis for computations which we expect to make, or for arguments which we expect to make and present upon our rebuttal.

Mr. Hanley: I object to it on the ground it is not material.

Mr. Austin examined on this quarterly form for a day in Washington and we have got exactly nowhere.

Trial Examiner Ballinger: The objection is overruled
and Commission's Exhibit 117-A, 117-B, 117-C, and
5476 117-D are admitted in evidence.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 117-A, 117-B, 117-C, and 117-D," were received in evidence.)

Mr. Hanley: Had you finished for the moment with your examination on that Exhibit 116?

Mr. Austin: Yes, I had.

Mr. Hanley: Well, counsel having stated he has finished with his questions—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Counsel having stated that he has concluded his examination on Commission's Exhibit 116, Respondent now moves to strike the exhibit from the record and all of the testimony submitted in connection with it for the reason that it is now apparent that the purpose counsel had in mind in using the exhibit was to make comparisons of certain figures on it with figures on Respondent's Exhibit 100 and 101 and it further appearing from the testimony now that no such comparisons can be made because the two exhibits are not comparable, in that one is built up on a monthly basis and the other is built up on an annual basis, and there is nothing in the record
asserted by the Respondent and upon which the Re-
5477 spondent has undertaken to justify salary figures on
the basis of the annual build-up, but only on the basis of the study as represented by Exhibit 100 and 101.

Trial Examiner Ballinger: Counsel for the Commission?

Mr. Austin: Well, I hardly know how to answer that because I don't feel like making any attempt to argue objections to the various expense entries and allocations in the Respondent's Exhibits 100 and 101 at this time, but I desire the salary figures upon which the Account 520 was based, and also a statement of salaries entering into a number of accounts in various channels, for the basis of being able to analyze and present testimony on rebuttal in connection with the cost study and that will be true of practically everything I am putting in.

I don't expect that the purpose of most of the testimony that I am obtaining at this time will appear, if by purpose is meant the entire use that the Commission intends to make of it. I think we are entitled to get in here any basic figures which were used in the preparation of this cost study and which do not appear upon the face of the cost study and, of course, we didn't want the Respondent to put in all of his work sheets and we feel that there is a great deal of material in the work sheets we don't want and, on the other hand, there are some
5478 things we do need, and I understood it was sort of a practical compromise that the Respondent would, through exhibits 100 and 99, explain in a general way and with the use of some examples the methods of allocation that were used and the nature of the expense distributed and then we could ask, on cross examination, for such additional figures entering into those computations and cost analyses as we might feel were necessary in order to enable us to analyze them properly so that while, from time to time, certain accounts are used as a basis for questioning the use of figures elicited from the witness in connection with one account, doesn't mean necessarily that the Commission will not desire to use those figures in other ways, or that those figures did not also enter into the building up of other accounts than the one which the witness is being questioned upon at the time.

Mr. Hanley: As I understand Exhibit 116, the basis of my objection was that it is not a basic figure which was used in making this cost study. Counsel has just said he thinks he is entitled to put in basic figures. That is the whole purpose of the objection. It doesn't prove anything.

Mr. Austin: Well, Judge Hanley, I think now you are just thinking of Exhibits 101 and 100. The witness I am sure, will agree with me that the Exhibit 116 does set forth basic figures which were used in allocation of Account
5479 520, company form 189—

Witness: No. The figures set forth in Commission's Exhibit 116 were in response to your specific request, whereas I asked you whether you wanted that data by individual months or whether the annual total would be used, and explained that we determined the allocation figures on a monthly basis.

You then stated that you would be satisfied to have the annual recapitulation although in our work sheets the annual figure will not be found any place. That is done entirely on a monthly basis.

Mr. Austin: Those are still the accounts and total salaries that were used in charging—making your charges to Account 520. I am not attempting to say you used those figures in the total form in which you gave them to me.

Witness: Let me state it this way: Those are the accounts and those are the annual totals in those accounts by channels but the ratios that might be determined from those totals may not be found in the allocation of any single month.

Mr. Austin: I have nothing further, your Honor, except as I said before all of these figures are necessary. If we don't put them in one way, I will have to put them in another.

They are figures which are involved in these cost studies. I mean, I will be at a complete loss if I have to
5480 explain the purpose that I want to use every figure
that I want to put in, which will mean that I have to go back over my entire preparation for cross examination and we will be here three weeks from now, I will promise you that.

Mr. Hanley: We will be here three months from now if counsel just keeps on aimlessly on these fishing expeditions.

Mr. Austin: I know exactly what I am hunting for, Judge, and I know exactly the purpose I want to make use of of these, but I don't want to state it on the record at this time.

Mr. Hanley: I think he should be required to state the purpose, Judge. I object to this sort of examination.

Trial Examiner Ballinger: The exhibit has been fully explained on the record. It is not clear to the Trial Examiner the exact purpose for which it has been offered, or was offered, and admitted in evidence, but it is in evidence and the Examiner at this time declines to strike it.

The motion is overruled.

Off the record.

(There is a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I move that we adjourn for lunch until 2:15.

Trial Examiner Ballinger: In the absence of objection the motion is granted. Now, at 1:15 p. m., the hearing 5481 stands in recess until 2:15 p. m.

(Whereupon, at 1:15 p. m., a recess was taken until 2:15 p. m.)

5482 Afternoon Session.

2:15 P. M.

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. From Commission's Exhibits 117-A to B, which I now hand you, Mr. Boatwright, can you state what portion of the salaries of the Detroit Field Office accounting employees, exclusive of the general office pay roll and casual help was charged to Account 200, tank wagon reseller channel, on company Form 189 for each quarter in 1940?

A. Yes, I can.

Q. Will you do so, please?

A. For the first three months of 1940, 29.9 per cent of the accounting salaries was charged to Account 200; the following quarter, 31.3 per cent; the following quarter, 39.9 per cent; in the last quarter, it was 39.1 per cent.

Q. Were the same percentages for each quarter applied to the part of these salaries allocated to direct shipment business in Respondent's Exhibit 100 and 101 to determine what adjustment should be made in the tank wagon reseller charge to Account 200 for the purpose of this cost study?

A. Yes. Any direct shipment time was taken out of the original Form 189 on the basis of the ratios for the respective channels as read.

Q. Weren't the direct shipment charges taken out 5483 of Form 189 on the basis of the percentage ratios for each class of employees separately rather than on the basis of the composite percentages which you read?

A. You are correct; that was taken out by individual departments of the total accounting department.

Q. And those percentages which you read as applied in the distribution on Form 189 were composite percentages for the entire department, were they not?

A. Yes, sir.

Mr. Austin: I have two documents here I would like to have marked for identification, if your Honor please.

Trial Examiner Ballinger: The Reporter will mark the documents Commission's Exhibits 118 and 119, for identification.

(The documents referred to were marked "Commission's Exhibits 118 and 119" for identification.)

By Mr. Austin:

Q. I show you Commission's Exhibit 118, for identification, and ask you, if you will please, to identify that document, if you can?

A. Commission's Exhibit 118, marked for identification, is a Standard Oil Company sales department comparative statement of expenses and referred to throughout these hearings as Form 189 for the Detroit Field for the year 1939.

Q. Will you identify this document, Commission's
5484 Exhibit 119, for identification?

A. Commission's Exhibit 119, for identification, is a Standard Oil Company sales department comparative statement of expense for the Detroit Field, year 1940, again the form referred throughout these hearings as Form 189.

Mr. Austin: Your Honor, I offer in evidence Commission's Exhibit 119, for identification, the completed Form 189 for the Detroit Field, 1940. This form has been referred to so constantly throughout the cost testimony that I think the form itself as filled in showing the method of the company's statement of accounts for each year and particularly for 1940 is desirable. Furthermore, it is introduced for the specific reason that this form sets forth in a separate column the income and expense from the operation of leased service stations, which is not set forth separately in a separate column on Respondent's Exhibit 101, and this form shows the segregation of those items in the regular accounting procedure with respect thereto.

Trial Examiner Ballinger: Any objection?

Mr. Hanley: I don't believe I will make any objection, your Honor. We had hoped this thing could be done without the introduction of these exhibits.

Trial Examiner Ballinger: Commission's Exhibit 119, for identification, is admitted in evidence.

(The document referred to, heretofore marked for
5485 identification "COMMISSION'S EXHIBIT 119," was received in evidence.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I have another paper here which I would like to have marked, for identification, your Honor.

Trial Examiner Ballinger: The Reporter will mark the paper "Commission's Exhibit 120," for identification.

(The document referred to was marked "Commission's Exhibit 120" for identification.)

By Mr. Austin:

Q. Will you please look at this paper, Commission's Exhibit 120, for identification, and identify it if you can?

A. Commission's Exhibit 120 is a recapitulation of the tank wagon reseller volume delivered by commission agents and drivers according to product classification in the Detroit Field for the year 1940. This data was prepared, taken directly from the records of the company in response to your request the other day.

Mr. Austin: I offer this exhibit just as identified by the witness, your Honor. It relates to commission gallonage, and there has been a contention from the inception of this cost study and as far back as last June, when we first discussed it, that there is a natural division in the
5486 types of business and types of customers between those served in commission territory and those served through "A" station territory or salaried station territory.

This exhibit is merely offered now for the purpose of having the record of the commission gallonage so that in the event the Commission attempts to make any distinction or comparison between the two types of cost, that is, between commission stations and salaried stations, we will have a statement of the gallonage as a starting point.

Trial Examiner Ballinger: Is there an objection?

Mr. Hanley: Only as to its materiality.

Trial Examiner Ballinger: The objection is overruled. Commission's Exhibit 120, for identification, is admitted in evidence.

(The document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 120," was received in evidence.)

By Mr. Austin:

Q. Mr. Boatwright, do you recall last June in Washington being asked to date what accounts on the list used on Form 189 and also on Respondent's Exhibit 101— should say parenthetically Exhibit 101 wasn't in existenc at that time but the reference is made because the accounts listed are the same on both Form 189 and on Exhibit 101—is that correct?

5487 A. Yes, the itemization of the accounts is th same.

Q. Now, reframing the question, do you recall bein asked to state what accounts contain expenses which wer incurred in connection with the marketing of the companies products through "A" stations only, and one o the accounts which you mentioned in reply to that question was Account No. 106, which is entitled "Depreciatio Expense Vehicle-Trucks, Motor, Horsedrawn (includin vehicle tanks and excluding advertising trucks)."

Then at that same hearing you later corrected that testimony, Mr. Boatwright, to state that there was a certai depreciation expense going into that account on vehicl tanks amounted on other than company owned chasses, s that to the extent the expense in 106 was incurred a depreciation on vehicle tanks mounted on other than company owned chasses, that portion of the expense is "B" station expense. Do you recall that?

A. Well, either a "B" station expense or an expens incurred on commission drivers operating out of "A stations.

Q. Yes.

A. I think must have been the way the statement wa made.

Q. Well, it is a—

A. It is a commission cost.

Q. A commission cost. But you did not at that time attempt to make any division of the expense as betwee

5488 the commission cost and salaried cost for 1940.

Mr. Austin: I have asked Mr. Warmack to chec if he could the figures of the company here to determin the portion of the expense going into Account 106, whic represents depreciation on vehicle tanks mounted on othe than company owned chasses, and on Respondent's Exhibit 101 the figure which Mr. Warmack has given m which I believe was obtained with the assistance of you accountants was $4,544.86, leaving a balance of $11,710.0 for the portion of that account chargeable to the salarie driver business.

I wanted to ask counsel for Respondent whether would be willing to stipulate that that division of expense in Account 106 in the tank wagon reseller channel on Respondent's Exhibit 101 is correct subject to the right of Respondent, of course, to check those figures and if they are incorrect in any respect to subsequently make a change. I am just doing this because I have the figure here and I didn't want to ask you to go and look it up before putting it in.

5489 Mr. Hanley: I can't, Mr. Austin. We don't know whether they are right or not.

Mr. Austin: Well, I thought maybe you would accept my statement that those are the figures Mr. Warmack got and could check them yourself at your leisure.

Mr. Hanley: We will be glad to check them but we don't know whether our people gave them to Mr. Warmack or whether Mr. Warmack obtained them from the records.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Have you been able to make any check on that figure, Mr. Boatwright?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Reporter, will you go back and read the last two questions and answer?

(Thereupon the record was read as requested.)

Trial Examiner Ballinger: Judge Hanley has an objection pending.

Mr. Austin: There was no question asked the witness, your Honor.

Trial Examiner Ballinger: There is a question

5490 before that, unanswered, and then there is an explanation of the question. Isn't that the situation?

Mr. Austin: I don't think so.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Reporter: "But you did not at that time attempt to make any division of the expense as between the commission cost and salaried cost for 1940?"

Trial Examiner Ballinger: Now there is no answer
that question.

Mr. Austin: I didn't intend that as a question. Th
was just a statement by me as to the record.

Trial Examiner Ballinger: Then proceed.

Mr. Austin: The record shows that.

Trial Examiner Ballinger: Counsel for Responder
as I understand, has declined to enter into the stipulati
requested.

Mr. Austin: Well, I have just asked the witness no
since that time, whether he has had an opportunity
make any further check and, if so, I would like to ren
the request for a stipulation.

Witness: I haven't made any further check becau
I didn't understand that it was desired.

Mr. Austin: I mean right now, Mr. Boatwrigh
5491 since I asked the question. I have seen you tal
ing it over with Mr. Houghton.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Will you turn to Exhibit 99, Page 19, please?
You have stated, in the middle of that page, an examp
of employes whose expenses are allocated or charged
account 000 and there are four employes named ther
That is not a complete list of the employes whose salari
are charged to Account 000, is it?

A. No, it is not.

Q. Could you state a complete list of those employes
not by names, but by titles?

A. I shall enumerate the various individual positio
entering into Account 000: The field manager; the assis
ant field manager; the superintendent of construction; t
assistant superintendent of construction; the superinten
ent of maintenance; the superintendent of equipment; t
superintendent of tank wagon and warehouses; the pla
superintendent; a part of the time of the agent superi
tendent or salesmen; the plant supervisor. Those are t
positions.

Now, of those, many are in there only in part as the
are split on a time card basis but you asked for a-

5492 Q. Which ones are only in there in part?

A. The superintendent of maintenance—I a sorry, I have before me the 1940 and the instructions were changed during that year. The superintendent of maintenance is not entirely in that account.

Q. I am referring to 1940, Mr. Boatwright.

A. The superintendent of maintenance is carried entirely in that account for the months after the accounting instructions were changed. Prior to that time it's in another account. All of your plant superintendents. There was a change of instruction on your plant superintendents, also, and again I find that what I have before me is only the latter part of the year when, after the change of instructions, they were entered entirely in this account. Again, prior to the change of instructions. They were in another account.

Q. Were you referring, then, to plant superintendents?

A. Superintendent of plant.

Q. And how about plant supervisor? Is the same true as to them?

A. Plant supervisors maintain time cards representing a split of their salaries and that part which has to do with supervision of plant is allocated direct to this.

Q. In the case where there is a split on a time card basis is the theory of the split only part of the time is in a supervisory capacity and that part, only, is assigned
5493 to Account 000?

A. Yes sir. I don't know about the rest of them; whether they are on a time card basis or whether on a change of accounting instructions. I would have to check.

Q. Is there a distinction between superintendent of plant and plant superintendent and a plant supervisor? I don't mean in the method of accounting, now. I just want to know about the position.

A. About the position?

Q. Yes.

A. Your superintendent of plant is the individual in charge of the plant and is held fully responsible for all functions of the plant.

The plant supervisor is now regarded as the chief clerk and is in charge of the clerical work at the plant, coming under the superintendent of the plant.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Witness: Your superintendent of plant and your plant superintendent are the same thing.

By Mr. Austin:

Q. When did the change in accounting procedure tak place which you just mentioned affecting the superintendents of maintenance and the plant superintendents

5494 A. I will have to consult the work sheets.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5495 A. I can answer your question positively fro the worksheet as far as the position of superintendent of maintenance, that change becoming effective November 1, 1940.

Q. Where was the salary expense of superintendent o maintenance charged prior to November 1, 1940?

A. Prior to November 1 salary of the superintendent of maintenance was charged to Account 9944 as a part o the construction men's time.

Q. What is Account 9944, Mr. Boatwright? I don' think we ever went any higher than the 7000 number before.

A. 9944 is a clearing account which is used to distribute the costs to various sub-account classifications on ou Form 189.

Q. Well, did the salary of the superintendent of maintenance and of the men working under him find its wa into more than one account on Form 189?

A. Prior to November 1st?

Q. Yes.

A. Yes, sir.

Q. And would that still be true after November 1s 1940, as to the construction men, and so forth, workin under the superintendent of maintenance?

A. It would still be true as to the mechanics. Th superintendent of maintenance himself, his salary, woul be wholly in 000.

5496 Q. Now, did you complete your list of employee going into Account—whose salaries go into Accoun 000 or whose salaries were charged to Account 000 durin any time in 1940?

A. Yes, in whole or in part. You understand that i some of these there is a split prior to entering into th account.

Q. Yes. And in making a distribution of the expens in Account 000 to direct shipments channels for the pu pose of this cost study, was it necessary for you to have the individual salaries and to use the individual salaries of the employees charged to Account 000?

A. It was necessary for us to have and to use the salaries of individuals whose functions in any way touched upon or whose time was absorbed in part by direct shipment business.

Q. Which of the employees whose salaries are charged to Account 000 were concerned in part with direct shipment business?

A. Salaries of the manager, the assistant managers, the superintendent of construction, the assistant superintendent of construction, superintendent of maintenance, superintendent of equipment, and then that part of the salary of those individuals whose salaries were split on a time card basis which was charged to this account where selling or calls were made on any jobber or direct shipment accounts.

Q. Aren't there some employees there that are excluded?

A. Yes, there are.

5497 I would like to correct that last statement which I made. Where the time was devoted to calling on jobbers, the entry is in 004, selling cost, not in this, so in the allocation of Account 000, the superintendent of plant was not needed. That is wholly a tank wagon charge.

Q. How about plant supervisors?

A. That is wholly a tank wagon charge.

Q. Were there any others there whose salaries were treated as wholly a bulk plant charge?

A. Plant superintendent.

Q. Tank wagon superintendent?

A. There is a tank wagon superintendent—or there is a superintendent of tank wagon and warehouses, which is wholly a tank wagon charge.

Q. On page 84 of Respondent's Exhibit 100 there is a table which is stated to be "Ratios of Time Devoted to Direct Shipment Business for Each Individual Whose Salary and Expense are Included Under Supervision Costs, Determined According to the Above Outline."

Why is not the superintendent of maintenance included in that list?

A. Well, the answer to your question is to be found on page 83 of Respondent's Exhibit 100, in the explanatio there. The superintendent of equipment—

Q. Maintenance.

5498 A. Superintendent of equipment.

Q. I asked you about superintendent of maintenance.

A. It is superintendent of equipment on page 84.

Q. At the bottom of page 83 is a statement on that.

A. Well, just—on the bottom of page 83 is a statemen on that, that his time was allocated on the basis of th analysis of all work orders maintained on the variou pieces of equipment having any contact with direct shi ment business. Therefore, in keeping with the paragrap at the bottom of page 83, the superintendent of maintenanc is not allocated as are the other positions enumerate because his time is not only based upon the ratio of tim of the mechanics but time and equipment on the vehicle as a ratio to total operation and maintenance of thos vehicles.

Q. Well, it says at the bottom of page 83, Mr. Boa wright, that the salary of the superintendent of maintenance was spread on the basis of the allocation of effort o men working under his supervision. Now, doesn't tha mean that definite percentages were applied to the portio of the superintendent of maintenance's salary which goe into Account 000? And I will refer you also to the firs paragraph on page 83 in which a somewhat similar metho was used for the purpose of construction, and since th percentages applied to these salaries for allocation of dire shipments is stated for the purpose of constructio
5499 and superintendent of equipment, I would also lik
to have the percentages for the superintendent o maintenance.

Trial Examiner Ballinger: We will take a recess fo five minutes.

(A short recess was taken.)

5500 Trial Examiner Ballinger: Come to order.

Is there any question pending?

Mr. Austin: Yes.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. The statement that percentages were used to alloca the salary of the superintendent of maintenance for th months of November and December when included in expense classification 000, is correct:

Q. And have you been able to ascertain those percentages?

We are speaking only, of course, of the percentages used for allocation to the three direct shipments channels similar to the percentages given on page 84 for other employes whose salaries are included in Account 000?

A. That is my understanding of the question and of the answer.

Based on a hasty calculation, bringing the months together, I read the percentages as follows as applicable to each channel: Jobber, naphtha, gasoline and refined oil, the last two months, 80%.

Mr. Hanley: The last two months of 1940.

The Witness: Yes, sir.

A. (Continuing.) Jobber other products, .25%. Other direct shipment customers, .26%.

Mr. Austin: I am not sure whether it was on or 5501 off the record a few days ago but counsel for the Respondent expressed a desire that the individual salaries of the supervisory employes whose salaries are charged to Account 000 in Respondent's Exhibit 101 be not spread upon the record. I would like to ask counsel for Respondent whether he still objects or whether the Respondent still objects to spreading on the record the individual salaries of the individual supervisory employes going into that account?

Mr. Hanley: If your Honor please, the Respondent does still object to the individual salaries of an employee going into the record. Mr. Austin has asked that I briefly indicate the reason for that. They are, primarily, two-fold. One is that it has just been found desirable to keep that class of information as confidential as possible, which is true for a number of reasons which I am sure the Commission will appreciate and, I believe, counsel has already recognized and, secondly, it is the position of the Respondent that the individual salary of any particular employee is in no wise material. That the only material thing in this inquiry is the method of allocating that salary, whatever it may be, as to any particular employee.

Mr. Austin: Aside from the question of materiality do I understand that the Respondent would be reluctant to disclose individual salaries of its top supervisory employes?

Mr. Hanley: That's right, Mr. Austin, and we
5502 wish just not to do it and I wish to state further i
there is any question about my former statement being on the record that all of the individual salaries of individual employes have, in fact, been disclosed to Mr Warmack, and I believe it to be true that that information has been passed on to Mr. Austin. At least there is no objection to having that done. We haven't objected at all to the accountants for the Commission knowing, for their own purposes of calculation, in test checking our arithmetic what the actual salaries are. Our objection goes to the matter of making it a public record.

Mr. Austin: In view of that objection I would like to ask the witness just one or two questions on salaries.

By Mr. Austin:

Q. In the first place, Mr. Boatwright, are the entire salaries of the field manager and two assistant field managers charged to Account 000 on Respondent's Exhibit 101 referring now, to 1940?

A. They are.

Q. And can you tell me whether the total of the salaries of the field manager and two assistant managers amount to more than half of the total salary charge of $51,360.21 which is made to salaries, supervision account 000 on Respondent's Exhibit 101?

A. The salaries paid to the field manager and to the holders of the position assistant field managers
5503 inasmuch as there was a transfer during the year 1940, but the sum total of the salaries for those three positions exceed 50% of the total amount of Account 000 as shown on Form 189 for the year 1940, being—

Q. And as shown on Respondent's Exhibit 101?

A. Yes, sir.

Q. Now turning to Page 84—

Mr. Hanley: May I ask a clarifying question, if you are through with that particular examination, Mr. Austin

As I understand your testimony, Mr. Boatwright, there may be a considerable number of employes whose salaries in part are allocated to Account 000?

The Witness: That's correct.

Mr. Hanley: The salaries of all of these three positions manager and two assistant managers are allocated to Account 000?

The Witness: The entire salary of those three positions goes into this account.

Mr. Hanley: Did you understand Mr. Austin's question to inquire as to whether or not the salaries of these three positions was something in excess of 50% of the amount of the allocated portion of salaries to Account 000?

The Witness: Yes. I think that was his statement inasmuch as he quoted, the actual figure being $51,360.21. In other words the salary for these three positions 5504 is in excess of 50% of that particular figure.

Mr. Hanley: One further question: When you made the study which is reflected in Respondent's Exhibit 100, as I understand it you made an analysis of the actual time spent by these three officers in so far as you were able to do that; which time went to work on jobber accounts.

The Witness: Jobber and other direct shipment accounts.

Mr. Hanley: And that you then allocated that direct shipment expense to direct shipments?

The Witness: Yes, sir.

Mr. Hanley: As a direct charge, Mr. Boatwright.

The Witness: Yes, sir.

Mr. Hanley: After having done that, as I understand your study, you took the remaining portion of those salaries and allocated them on a basis of a factor which you had determined relative to the effort expended by the office.

The Witness: Predicated upon the sum total of the effort expended by people under these three supervisory positions.

Mr. Hanley: Yes.

The Witness: Yes.

Mr. Hanley: Expended on the jobber or direct shipment business.

The Witness: Yes.

5505 Mr. Hanley: And that's all disclosed and explained in Exhibit 100, is it not?

The Witness: Yes, that's clearly stated there.

Mr. Hanley: That's all.

Mr. Austin: Well, I was just coming to that.

By Mr. Austin:

Q. Turning to page 84 of Respondent's Exhibit 100 there are certain percentage figures given which, I believe, represent the percentages of time of each of the supervisory officials there named, which is allocated to each of the three direct shipment columns on the basis of salary value of such time, is that correct?

A. Salary or hours, either one. It would be the same.

Q. As just explained in response to Judge Hanley's questions, and also as described on Page 82 of Respondent's Exhibit 100, I understand that a part of the field manager's time was charged direct to jobber operations, is that correct?

A. Yes, sir.

Q. Does that reference to jobber operations mean that none of the field manager's time was charged direct to direct shipment other customer's?

A. The only direct selling time found on behalf of the field manager was incident to jobber direct shipments.

Q. And is it a fact that the time covered by that direc charge is in included in the time represented by th

5506 percentage 1.73% and .06% on Page 84?

A. Yes, that is correct.

Q. But it is also correct, is it not, to state that the per centage of the field manager's time represented by tha direct charge is not shown separately anywhere?

A. No, it is not shown separately in this exhibit.

Q. I wonder if you would have any objection to statin the portion of the field manager's salary, or perhaps i would be better to state the percentage of his total hours which was assigned directly to the two jobber columns. I other words, separating, if you have already done so, a I believe you have, in the preparation of your cost study separating the two figures 1.73% and .06% so that it wil appear what portion of those percentages represent a direc charge and what percentage represent a charge based upo the allocation of time of other employes.

A. All direct selling time to jobbers on the part of th field manager is charged against jobber, naphtha and gaso line. Mr. Rapagh does the selling on that produc almost entirely. That represents 1.355%, which is include in the 1.73%.

Q. Now still referring to those three percentage figure opposite the field manager's position on page 84 of Re spondent's Exhibit 100, let us first deduct the 1.355 from 1.73%, and what is the balance?

A. .375%.

5507 Q. Will you explain how the three percentag figures, .375 per cent, .06 per cent, and 1.23 per cen were computed? With particular reference to what employes' hours were used in determining those percentages and in what accounts the employes' hours fall?

A. The figure .375 was secured by taking the sum total hours of all employees in the Detroit Field as the base.

Q. Excepting Mr. Raupagh?

A. Excepting Mr. Raupagh—as the base and then taking the sum total of the hours devoted to jobber, naphtha, gasoline, and refined oil of all employees in the Detroit Field touching upon that business in anyway, and expressing that as a percentage of the base which is made up of the total effort in the field excepting Mr. Raupagh.

Q. Was the same method used for the other two percentages in the jobber or other products channel and other direct shipment customers?

A. Yes, sir.

Q. And in using as one part of that measuring factor the total hours of the other employees in the Field which were allocated to the respective direct shipment channels, did you use the hours of all employees even where their time was buried as a part of the expense in these various accounts that are only in part salary and in part other, or did you use only the hours of the employees enter-
5508 ing into those accounts on Commission's Exhibit 116?

A. All hours; grand total devoted to direct shipments.

Q. Did that involve the separation of salary hours from the expense of each of those accounts where the expense is only in part salary?

A. Well, it involved a separation of hours. When you say salary, again the only difference being that we worked on an hourly unit basis instead of a dollar basis, but we segregated the time, and that was segregated even for the painters, the mechanics, the pipefitters and everybody else right on through.

Q. That is the direct shipment time?

A. Yes, sir.

Q. Now, turning to the assistant manager, wholesale, percentages of his time allocated to the direct shipment channels as shown on page 84, was there any of his time which was charged directly to any direct shipment channel in the same manner that the 1.35 per cent to Mr. Raupagh's was charged directly?

A. There was no direct shipment time either the assistant manager, wholesale, or the assistant manager resale. Oh, assistant manager, wholesale.

Q. Is the same true as to the assistant manager, resale

A. He did have some direct selling time.

Q. Was that time all included in the .59 per cen

5509 on the jobber, naphtha, and gasoline?

A. It was.

Q. Can you give me that figure for the direct allocation

A. .220 was the direct selling time.

Q. Leaving .73 per cent allocated according to the tim of the employees working under him?

A. That's correct

Q. Will you now explain as to the assistant manager wholesale, what employees' hours and the portion thereo charged to direct shipment were used to obtain the percent ages .41, .04, and 1.36?

A. I wonder if I might give you the answer to you question that would not enumerate all individuals on th payroll by answering you generally in this manner There are certain employees directly responsible to th assistant manager, reseller. There are certain employee directly responsible to the assistant manager, wholesal In determining the allocation factor to use on the assistar manager, wholesale, we took out of the total all thos individuals directly responsible to the assistant manage reseller, and regarded the remainder as providing th basis for recapitulating the distribution of effort of individuals working under the assistant manager, wholesale. O the other hand, when we are determining the ratios fo the assistant manager, reseller, we took out the grou

5510 of individuals responsible only to the assistant manager, of course, and determined the ratio for th assistant manager, reseller, upon the residual of employe in the Detroit Field.

Q. Then as to all of those employees who do not wor directly under either one of those two superintendent I understand that the ratio of their hours charged to dire shipment was used for both the assistant manager, wholesale, and the assistant manager, reseller?

A. Yes.

Q. Do you know how many employees are assigned did you treat as working directly for each of the tw assistant managers?

A. Yes, I have that right here on the worksheet.

Q. Will you state it?

A. Well, it varied by months. Those working exclusively for Mr. Hamer were either 38 or 39.

Q. He is the assistant manager, resale?

A. Yes, sir.

Those working exclusively under Mr. Blough varied from 56 to 58.

Q. How many employees are there in the Detroit Field?

A. That likewise varies by months; but it varies from 500 to as high as 540.

Q. Does that include commission agents?

A. Yes.

5511 Q. Were they treated as employees working directly under the assistant manager, wholesale, or were they treated as part of the residue coming partly under both?

A. Partly under both.

Q. And since in the group of employees whose time was used for making the charge to direct shipments, for the time of each of the assistant sales managers, there was included a large group under the supervision, at least, in part, of both assistant managers plus, in each case, a separate group charged— or, rather, working directly under the particular assistant manager, was the time in each case of the employees working directly under the particular assistant manager multiplied by two or was other adjustment made so that there would be no undue waiting of the time of the groups working under both? I will try to explain that, Mr. Boatwright.

A. I am afraid that will be necessary, sir.

Q. If you used for a large group of employees somewhere around 450, or in that neighborhood, used their time and their direct shipment ratios for distributing the time of one assistant manager and added to that you used a single group of employees working directly for that field manager, and they were all combined in one group, were they not for the purpose of that allocation?

A. That's right, as a component part of his group.

5512 Q. Isn't it true that theoretically, at least, only a portion of the time of the large group should be assigned or used in allocating the time of the assistant field manager, since if that large group works for both, probably only part of their time or part of their functions are they working for one and in part for another?

A. Not if you are going to apply your residual percentage to the total base salary of your employee supervisor. If you are going to do that, then you have to divide your salary of your supervisor by two. You come to the same end, Mr. Austin, whether in one case you multiply by two or in the other case you divide by two. But if I have got to multiply one by two then—

Q. Well, I don't want to get into an argument about it. It just occurred to me that as to each of the groups of employees who work directly for the respective assistant managers you used each of those groups only once and as to the rest of the employees you have used it twice, and I was just raising the question whether in your opinion that makes any difference in the allocations?

A. Not as long as I apply the ratios so determined to the total salary of the individual in the supervisory capacity.

Q. In determining the portion of the assistant manager's time to be charged to direct shipment channels, you
used ratios which were based upon a distribution of
5513 hours and not of salaries of the employees working
under them; is that correct?

A. Yes, sir, distribution of hours we used.

Q. And does that not mean that the time of all employees working under these two assistant managers was given equal weight regardless of the salaries of the various employees?

A. It does.

Q. And is there not a wide variation in the salaries of the various employees working under the two assistant managers and under the field manager?

A. That is a variation, sir.

Mr. Hanley: I am sure I understand what this is about. May I ask a question, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: As I understand your study, Mr. Boatwright, you took accomplishment and effort in time of all the employees and then on the basis of the ratio of that time to total time effort by those employees, you used that as a factor against the salary of the supervising manager?

The Witness: Of the employee, taking first the distribution of effort of an individual employee. We then allocated the salary on the basis of the allocation of hours. Now, to allocate the salary of a supervisor, we would take the distribution of time of employees working under 5514 his supervision.

Mr. Hanley: That is what I am getting at.

The Witness: Yes.

Mr. Hanley: You acquired the actual time factor so far as the individual employee is concerned against his individual compensation?

The Witness: Yes, sir.

Mr. Hanley: Then when you came to allocating supervising personnel, you took the total time effort of jobber or direct shipment accounts as to total time effort in the office and applied that ratio against supervising officers' salaries?

The Witness: Yes, sir, except that it was broader than just in the office; it was the sum total of employees.

Mr. Hanley: Yes; I understand that.

The Witness: Yes, sir.

Mr. Hanley: Now, the thing that isn't clear to me is this: If the suggestion of Mr. Austin is true, and I understand it is, you gave no consideration to the salary of an employee when you used his time against the salary of his supervisory officer; you just used effort?

The Witness: That is a true statement.

Mr. Hanley: Consequently, if an employee were getting a thousand dollars a month and another one was getting a hundred dollars a month, and they both used an equal 5515 amount of time effort on jobber business, you gave in your allocation of the supervisor's salary equal weight to the supervision of the hundred dollar employee as with the thousand dollar employee; is that now the effect of what you did?

The Witness: That is correct.

Mr. Hanley: So the net effect of your system of allocating here would be on the basis of the value of the highest paid employee that the field manager, for instance, supervised?

Mr. Austin: I object to that question, your Honor. I didn't object to Judge Hanley interpolating certain questions here for the purpose of bringing out the facts as to what was done, but I don't believe that this is the time to ask for further opinions on redirect, and I think that question would probably lead to further controversy or questioning.

I object to it upon the ground that it is not a proper interpolation of cross examination.

Trial Examiner Ballinger: The objection is overruled. The question has been asked and the Examiner would like to hear an answer.

Mr. Hanley: Is it clear to you, Mr. Boatwright?

The Witness: No. I would like to have it read, please.

(The question referred to was read by the Reporter.)

5516 Mr. Austin: I further object to it on the ground that it is a leading question.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Well, the net effect is that what we state in fact as the factor determining the allocation of supervision is manpower, whether he is making $100 a month, $250, or even greater amounts, but it is a composite of the difference. It is neither on the basis of the highest paid man nor on the basis of the lowest paid man. It is on a cross section of the men.

Mr. Hanley: I may not have made myself clear. The allocation which you have made to the jobber business is a cost, which cost is based on Mr. Raupagh's salary, for instance, exactly the same as it would be if every employee in the Detroit Field were getting what the highest paid employee is getting supervised by Mr. Raupagh.

The Witness: Oh, yes. In answer to that question, as I now interpret it, if every employee in the Detroit Field had been making a salary equal to the highest under Mr. Raupagh's supervision, the allocation factor used would have remained exactly the same.

Mr. Hanley: That is all.

By Mr. Austin:

Q. That is also true, isn't it, Mr. Boatwright, if 5517 every employee in the Field were making an equal salary regardless of whether it was equal to the highest or equal to the lowest?

A. Yes, that would be true.

Q. It would have been possible, would it not, Mr. Boatwright, to have computed the ratios to be applied to the salaries of the Field managers for the purpose of distributing them to direct shipment channels by using the salaries of the employees working under them instead of the hours?

A. Well, it would have been possible. It would have just extended the work.

Q. Well, what I was just leading up to was this question: Did you make any calculation as to the effect that the use of salary of employees would have had as contrasted with the results you arrived at by using hours?

A. No such calculation was made because hours are a more acceptable means of allocation.

Q. In your opinion?

A. In my opinion.

Q. You have referred to the fact that certain employees were treated as working directly under each one of these two assistant managers and that the balance of the employees were treated as working partly under the supervision of both. Is there any division of accounts which it is practical to make or which you can make in that connection? For instance, are there any accounts here,

5518 salary accounts, which include salaries of employees assigned only to one or only to the other of the two field managers?

A. I would have to review the Form 189 to see if there is such a classification possible, for the simple reason that our accounts just are not set up on the basis of what the two assistant supervisors are doing.

5519 Q. Well, I didn't mean whether it was possible, Mr. Boatwright. I meant whether you actually—you actually did group certain employes, whether it was 38 or 40, to one of your field managers and you group fifty-odd, I believe, to the other. I am just asking you as a matter of fact whether or not either one of those groups go into his account or whether there is any one account here which includes only the salaries of employes of one or the other of those groups.

Let me ask you a specific question. Just as an example, take Account 005, "Salaries—Advertising." Would the salaries in that account fall into the large group where the employes are partly under both field managers or would those salaries be all salaries of employes working directly for one of the managers?

A. You are asking a question directly.

Q. I am asking that as an example and if the whole question is not practical, you can tell me so.

A. The salary of the advertising representative is considered as being under the supervision of both the field managers.

Q. I suppose that their seller salesmen will be a group which are assigned as working directly for the assistant manager reseller?

A. Yes, sir.

Q. And would city salesmen be a group assigned directly to the assistant manager wholesale?

5520 A. Yes, sir.

Q. "B" station salesmen would be assigned to assistant manager wholesale?

A. Yes, sir.

Q. Asphalt salesmen?

A. Yes, sir.

Q. Industrial salesmen?

A. Yes, sir.

Q. Can you carry that along any farther along any of the classifications we already have?

A. Heating oil salesmen—

Q. You are speaking, now, of assistant manager wholesale?

A. Yes, sir. Special salesmen, heating oil. Tank wagon superintendent. The "A" station agents. The automotive engineer and the sales promoter and assistant sales promoter wholesale would be under the assistant manager wholesale.

The specialized reseller salesman. The T. B. A. representative. The sales promoter reseller; the assistant sales promoter reseller and certain clerks working for these promoters would be exclusively under the assistant manager reseller.

Q. Does that cover by general classifications the employes who were treated as working directly for one or the other of the assistant managers?

A. Yes, sir.

Q. Were the employes whose salaries make up the 5521 salaries of expense, Account 200, all treated as employes in part under both managers?

A. Yes.

Q. And were the employes whose salaries who make up the expense entering into Accounts 006 and 008 treated as employes whose time was under the supervision of both the assistant managers?

A. Yes, sir.

Mr. Austin: May we be off the record a moment?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I move that we adjourn until 9:00 o'clock tomorrow morning, your Honor.

Trial Examiner Ballinger: The motion is granted, and now, at 5:10 p. m., the hearing is adjourned, to be reconvened at 9:00 a. m., February 24, 1942, in Room 859, Federal Building, Detroit, Michigan.

(Whereupon, at 5:10 p. m., February 23, 1942, the hearing in the above-entitled matter was adjourned.)

5522

Room 859 Federal Building,
Detroit, Michigan,
February 23, 1942.

Met, pursuant to adjournment at 10:00 A. M., War Time.

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission:

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5523

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, in the matter of the Standard Oil Company of Indiana, is reconvened in Room 859 Federal Building, Detroit, Michigan, at 9:00 a. m., Eastern Standard Time, February 24, 1942. The last hearing was in the same room in the same city, February 23, 1942.

You may proceed.

JOHN W. BOATWRIGHT was thereupon recalled as a witness for the Respondent and, having been previously first duly sworn, testified further, as follows:

Direct Examination (Resumed) by Mr. Austin.

Q. One or two more questions about the superintendent of maintenance, Mr. Boatwright.

For the first ten months of 1940 was the time of the superintendent of maintenance allocated to direct shipment channels on Respondent's Exhibit 101 on the basis of the ratio of direct shipment efforts of the employes working under him, to the total effort of those employes?

Trial Examiner Ballinger: Do you understand the question?

Witness: Yes.

A. It amounts to that, in fact, although it isn't
5524 exactly put that way; as about as well as I can express it.

During the first ten months the superintendent's of maintenance time was included with other employes in that department in the calculation of a number of hours of effort reduced to a productive hour rate. Is that clear; to that point?

Q. Yes.

A. Then measuring the number of hours devoted to direct shipment effort this productive hour rate was applied, which automatically allocated the expense incident to the superintendent's of maintenance position.

Q. Well, yes, but the point in which I am interested in is when you state the number of hours your direct shipment was estimated.

A. No, no.

Q. I didn't mean estimated, but calculated.

A. It was taken direct from the work sheets.

Q. I don't know what word you used; whether you said estimated, or what, but you determined it anyway.

A. We determined the exact number of hours devoted to direct shipment.

Q. As to the superintendent, were his hours determined as a proportion of his total hours based upon the number of hours of the employes to their total hours?

A. That wasn't necessary because his hours and
5525 his salary was in the total cost of this department:
Therefore, by extending the number of hours actually worked on equipment having to do with direct shipment, and extending that by the composite average productive hourly rate, then we have automatically allocated his expense as well as the expense of the mechanics—

Q. How did you find the number of hours on direct shipment?

A. By a complete review of the work orders.

Q. Did that include the time of the superintendent as well as the others?

A. No, that included the time of the construction men. Then, inasmuch as his salary was included in the productive hourly rate calculated at the end of each month for this division of our company's operation, we estimated the hours of time of the construction men by this overall average salary which included the superintendent's of maintenance salary.

Q Then perhaps my question is refuting the productive hourly rate, using the salary of the entire department for that purpose, as I understand you have just explained it—

A. Yes, sir.

Q. (Continuing.)—but while you used the entire salaries, did you use the entire hours or did you use the hours of the superintendent for the purpose of obtaining the productive rate per hour?

5526 A. It was entire hours.

Q. What I was trying to get at was whether or not the salary of the superintendent of maintenance was treated the same way in the first ten months as it was in the last two, even though it was charged to different channels in the last two months.

A. No. I understand your question. It was not treated in the same way for the simple reason it couldn't be.

Q. And the direct shipment charge for that department was spread among various accounts for the first ten months and, as a matter of fact, with the exception of the superintendent himself, also during the last two months, is that right?

A. Yes, sir.

Q. Are the construction men and mechanics working on installation and maintenance of E. L. A. equipment under the supervision of the superintendent of maintenance?

A. Yes, sir.

Q. And are the construction men or mechanics who install and maintain equipment at leased service stations also under the superintendent of maintenance?

A. Yes, sir.

Q. Are the employes who install and repair advertising signs at dealer outlets under the superintendent of maintenance?

A. Yes, sir.

Q. Now I have one or two questions regarding the
5527 responsibilities of the field manager.

Is the Field Manager, Mr. Raupagh, charged with supervision of all marketing activities in the Detroit Field?

A. Yes, sir.

Q. Does he supervise all employes of the sales department working in that field?

A. Yes, sir.

Q. And does his responsibility cover the sale of all products sold by the Standard Oil Company in the Detroit Field?

A. Yes, sir.

Q. And does his responsibility cover sales to all classes of customers to whom the company sells in this field?

A. Yes, sir.

Q. In short is not Mr. Raupagh responsible to the company for the success or failure of the company's business in the Detroit Field?

A. Certainly.

Q. The field managers and the organizations under them in the respective fields are a part of what you call the sales department of your company? Are there not two departments; sales and manufacturing?

A. Yes, there is a sales department and a manufacturing department. I am not sure just what you mean, though.

Q. I wondered whether—isn't it true that the
5528 various fields that we have been treating here, as we
have been treating them, are sales fields; part of the sales department headed by the field manager?

A. That is true.

Q. And you are the head of the sales research department, are you not?

A. Yes, sir.

Q. And I wonder if you could state, in your opinion, how the success of the company's business in a given field is measured or upon what does it principally depend?

A. There are many factors taken into consideration. Obviously, one: Our accomplishments—

Mr. Hanley: I wonder if that is a pertinent question, your Honor.

Trial Examiner Ballinger: The Examiner doesn't understand the materiality of it. Counsel for the Commission must have some object.

Mr. Hanley: There are a thousand ways you can measure it. You can write a book on that.

Mr. Austin: I don't know that that is so. At least I didn't when I asked the question, but I am just going into, generally, the responsibility of the field manager and the fact he is responsible for the success of the business and now I am asking the witness how the success of the
business is measured or if he could give any answer
5529 that would set forth the principal factor or factors
which would measure the success of the business.

Mr. Hanley: I will withdraw the objection, your Honor, but I would like to have the witness, in answering the question, indicate what kind of success he is talking about when he refers to "success".

Witness: All right.

A. As I think I started, I pointed out that there were many factors taken into consideration in evaluation of the accomplishments of the sales field. Naturally, I shall name only a few of the more prominent ones.

Number one is the trend of sales accomplishments by products and by channels of distribution.

By Mr. Austin:

Q. What do you mean by "trend"?

A. The direction of our sales trend; be it up or whether it is down. That, alone, is inadequate and, therefore, we attempt an evaluation of the trend of sales by product and channel, according to the potential as reflected by the best indication we can get on total consumption for the field.

Next, the analysis of the success or the failure of the manager and the assistant managers' in dealing with their personnel problems, in handling men, in getting the utmost out of their men and the cooperation and the follow-through that is a component part of the effort of the sales force.

5530 Q. Would that be in connection with keeping down unit costs of operation?

A. In part, and also in part in terms of sales accomplishment because we may talk at great length on many other factors but when all is said and done the manager who has his entire personnel with him to the man, is the man who is going to produce the best results.

Another standard that is followed constantly is the analysis of marketing costs in the 27 different fields and the control of expenses in the respective fields.

Now I think those four or five that I may have mentioned are those most commonly used, although you will find different men in the executive positions who lean more heavily on one or the other, but these four or five things are pretty generally followed.

Q. Then judging from your first two that you mentioned, would you say that volume of sales, compared with the potential market, was the most important measure of success?

A. Your term "success" is so terribly broad. A man might be a very poor business man and yet be able to accomplish a very good sales result relative to potential but ignoring the question of realization received for a price.

Q. What do you mean by "realization?"

A. The price that we get for it.

Q. Does the field manager have anything to do
5531 with fixing the prices at which products are sold?

A. He recommends that we meet or do not meet competitive prices in given local markets.

Now a manager who is extremely price concious will recommend and will advocate, on the part of the company, through the general office, that we meet competitive prices right and left. Now that manager may get unusually good sales results in terms of volume.

Q. You mean provided the company permits him to follow out his price theories?

A. Yes; provided the company follows his recommendation.

Q. On price recommendations?

A. That's right.

Now if the company does follow his price recommendations he can get a very high volume and we can do quite well, let us say, in respect to potential but that might not be good business?

Q. Volume, I suppose, and realization naturally go together and neither one—rather, volume alone isn't of much benefit to the company without proportionate realization, is it?

A. That is correct, and we can't get anything on the dollar value of potential. There just is no such figure as that that is available. You are aware of the fact, I am sure it has been brought out in this trial, that throughout we are the high seller. It is unfortunate, but it is just 5532 one of the penalties of size.

Mr. Austin: May we pause off the record for a moment?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

We will have a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: It has been requested, off the record, by counsel for the Commission, that the work sheets prepared by and under the direction of Mr. Boatwright, which are very voluminous and which underlie the conclusions expressed in Respondent's Exhibits 100 and 101, be delivered to accountants for the Commission and removed to Washington, there to be further examined by the accountants for the Commission and perhaps copies to be made of the whole or a part of such work sheets.

I have now consulted with Messrs. Boatwright and Houghton, whose work sheets these are and have had the benefit of the advice of the Office Manager of the Detroit Office, as well, and am informed that it is the only copy of such work sheets in existence and that these gentlemen have been so careful of them that they have declined to ship them between Detroit and Chicago by express but 5533 have always carried them and have never let them out of their possession and custody. I find them definitely opposed to permitting the work sheets to be removed from their immediate custody at any time and in explanation of this I will say that the Respondent would be absolutely helpless in the matter of explaining its work in the event even one of the series of these work sheets was lost. In order to replace it it would simply mean a re-doing of several months of original work which was accomplished in the summer and fall of last year, here in Detroit, by many accountants.

During the past several weeks Mr. Warmack of the accounting staff of the Commission has had an opportunity to examine and, has examined the work sheets, together with many other records of the Respondent in the Detroit Office and has been assisted in that effort by Mr. Houghton of the Chicago Office and by others in the Detroit Office.

I am informed that in all probability it would be most difficult if not, indeed, impossible for any accountant, no matter how competent, to take the work sheets and from an independent examination of them and without some explanation of those who made them and understood them and understood the underlying records, that such effort would probably and we think most likely result in erroneous conclusions.

For that reason, when it was learned that Mr. Warmack
was going to make his studies here, it was arranged by
5534 the Respondent that Mr. Houghton, who is very
familiar with the work sheets, should be relieved of
his duties in the Chicago Office and remain in Detroit, which
he has done.

The Respondent is perfectly willing to either continue that arrangement or make such other arrangement for the aid of Mr. Warmack's examination of the work sheets as may be feasible but for all of these reasons indicated the Respondent feels it is imperative that we should decline to permit the work sheets to leave the custody of the Respondent's officials whose property they are and who want to be certain that they have continuous personal custody of them.

5535 Mr. Austin: Well, do I understand that there is no objection to our having some of these sheets photostated here if we so desire so that we can take these photostats back? I don't understand that we want to get all of them by any means, but I think Mr. Warmack wants copies of some that he has been over.

Mr. Hanley: Your Honor, and Mr. Austin: I am rather inclined to the view that these work sheets are not records of the company in the usual sense and in the sense that entitles the Commission to obtain them at all unless the Respondent voluntarily exhibits them. Now, we make no point of that; we haven't. As I have said, Mr. Warmack has had complete access to them and, so far as I am concerned, I haven't any objection to Mr. Warmack making photostats or other copies of these worksheets here, provided and conditioned upon the proposition that before he does so he understands thoroughly what such worksheets mean with the aid of Mr. Boatwright or Mr. Houghton. I don't want any long conclusion being drawn from some independent examination and later application of a worksheet; and I don't know just how the mechanics of that might be devised, but I would want to be thoroughly assured that that would not happen.

Mr. Austin: Mr. Warmack and Mr. Houghton have been working together on this and I see no difficulty if it be left up to them for them to determine what is wanted and 5536 what copies are wanted and there is no—if it is agreeable to you to leave it to the accountants, why, I think Mr. Warmack would just like to know whether he can, since he can't take them back to Washington—whether he can make arrangements within some limited expense figure which probably will be applied to have some copies made here. Of course, any copies that are made would be with the knowledge and under the direction of Mr. Houghton and Mr. Boatwright, I assume.

Mr. Hanley: I am perfectly willing that Mr. Warmack and our people discuss it and arrive at what they think is a proper conclusion. Indeed, I don't think I can go any further in the matter until that happens.

Trial Examiner Ballinger: That is sufficient for the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Referring to Account 001, Mr. Boatwright, it is stated on page 85 of Respondent's Exhibit 100 that salaries shown in this account represent the stenographic and clerical assistance afforded to the men working in a supervisory capacity?

A. Yes, sir.

Q. Are all of the salaries entering into this account the salaries of the stenographers and clerks?

A. All individuals whose salaries are in that account are stenographers or clerks with the exception of part of the salary of one employee. 5537

Q. Who is that? The asphalt representative?

A. Yes, sir.

Q. And are the employees with the exception of the asphalt representatives whose salaries or a part of whose salaries are charged to Account 001 stenographers and clerks to supervisory employees who are grouped in Account 000 or may some of the employees in Account 001 be assistants or stenographers or clerks to employees in Accounts other than Account 000?

A. The only exception to your statement that all employees whose salaries are shown in Account 001, being under the supervision of individuals whose salaries are shown in 000 is in the case of stenographic assistance furnished to the supervisor of personnel whose salary is not included in Account 000.

Q. Where is the salary of the supervisor of personnel charged?

A. In Account 220, expense, employment department salaries and all other expense.

Q. Is the salary of the stenographer to the supervisor of personnel allocated to direct shipments upon the basis of the ratio of the personnel supervisor's time to direct shipment against his total time?

5538 A. Yes, sir.

Q. And is that explained under Account 220 in Respondent's Exhibit 100?

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Is the method of allocation to direct shipments of the time of employees in the employment department stated on page 110 of Respondent's Exhibit 100?

A. It is.

Q. And is the method of allocation used there the same method which was applied to Mr. Raupagh's salary as described by you yesterday?

A. Yes, it is the same.

Q. I suppose, of course, with the exception that Mr.

Raupagh's salary would also be included here where it would not be in determining the allocation for his own salary?

A. It wouldn't make any difference whether Mr. Raupagh was included here or not as much as they are the same ratios, you see.

Q. That is right. I see. I was trying to be technically accurate in my—

A. Yes, it would make no difference.

5539 Q. I believe you already stated that the entire salary of the stenographer to the supervisor of personnel follows the method of allocation applied to the employees in the employment department?

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. How much in dollars are the salaries of the stenographer to the supervisor of personnel as charged to Account 001, for 1940?

A. $960.

Q. Does that represent all of the time of that stenographer assigned to the supervisor of personnel or does it represent the time of that employee for a certain number of months?

A. That represents a certain number of months.

Q. And what is the reason for the division?

A. It was a change of the accounting instructions during the year.

Q. During the first part of the year—do you know when the change took place? I don't know whether that is material but—well, I will ask the question I started to:

Before the change took place where was the salary of this stenographer charged?

5540 A. It was in Account 220.

Q. Did the salary of the supervisor of personnel remain in Account 220 for the entire year?

Mr. Hanley: If your Honor please, the Respondent at this time moves to strike the answer to the last question that was answered, and objects to that question and objects to the present question, for the reason that it is entirely immaterial and irrelevant and has no probative value, and, in any event, is repetitious and cumulative and encumbers the record.

The examination that has been conducted by counsel for the Commission in a great deal of his questioning in respect of these salaries has been subject to the same objection which I have made and propose to amplify, although there seems to be a serious contention on the part of counsel for the Commission that it has some materiality.

The basic objection here, your Honor, is founded on this: Mr. Austin is talking about a stenographer's salary which was in part charged to Account 001 and in part charged to Account No. 220. I think there is some indication that there was some change in the accounting instructions during the year 1940 but in either event, the salary was during that year sometimes split between those accounts.

Now, first, if that salary of that stenographer were entirely eliminated from the entire consideration or put
5541 entirely in another channel, it wouldn't make the
differential that is here thought to be justified. Secondly, whether that is true or whether it isn't and whether that is material or whether it isn't, the fact is that the salary whether it be in 001 or Account 220 is in the total cost in the reseller channel and it is utterly immaterial where we have put the portion of this girls' salary allocable to reseller. It might be spread through these many, many accounts in the reseller channel or it might all be put in one account, or our accounting people might change a dozen times in the course of the year.

We say it is of absolutely no importance at all which of these accounts it is in because it necessarily appears in the total, anyway.

The entire attack, and this is another basis for our objection to the continuation of this type of examination—the entire attack of the Government has again shifted. Instead of attacking the cost study make by the Respondent and attacking the existence of a differential justification, there has been throughout this entire cost examination merely an attack upon the basic accounting system of the Respondent, namely, the use of its Form 189. While we concede the right of the Commission to cross-examine on the Exhibits 100 and 101 and 99, all of which were put into the record by the Respondent subsequently to the time when Mr. Boatwright was formerly cross-ex-
5542 amined, we do not concede, your Honor, that counsel

of this cross-examination has any right to again go into the detail of the basic accounting system of the Respondent as reflected by Form 189 beyond the point necessary to a cross-examination on the exhibits put in.

Your Honor will recall that Mr. Boatwright was cross examined for at least ten days and I think longer in Washington on this Form 1[illegible] and related accounting subjects. It has been extremely difficult to differentiate and I haven't tried to differentiate in my objection between that which was a purely repetitious question already asked in substance in the former cross-examination and a question which was not just purely repetition but might have some bearing on one of these exhibits. As to the latter, I wouldn't want to object; as to the former, I think the Respondent is entitled to some protection for itself and for the witness on the stand, that he shall not be subjected to a repetitious cross-examination and, certainly, not an examination on the matter that just can't become material.

Trial Examiner Ballinger: The materiality of this line of examination hasn't been entirely clear to the Examiner, but the Examiner has formed the opinion this line of examination possibly became necessary because of a change in the accounting method employed by the Respondent as
to part of the salaries without carrying the same prin-
3543 ciple through on the entire list.
Is that correct, Mr. Austin? Your contention?

Mr. Austin: In order to make an analysis of these salaries, your Honor, it is necessary to know where they fall. Different methods of allocation are applied to different accounts, and if a salary is in one account, another salary is in another, they are handled differently. Now, if the same salary is a part of the year in one and the other part of the year in another account, that means that that same salary by the same employee doing the same job was perhaps handled differently in allocating it between channels in one part of the year than if was in another part of the year, and we have to know where the expense falls in order to apply Exhibit 99 and Exhibit 190 to see how it was handled.

Trial Examiner Ballinger: Is it your contention that when these salaries are properly allocated that it is going to make a material change in the final result.

Mr. Austin: Oh, yes; I think so, in the aggregate. These salaries go in groups. One salary goes with something else, and you have supervisors and you have a stenographer and you have other accounts in connection with his traveling expenses. You have groups of them that go together all on the same basis or on the same method of allocation being applied.

5544 Trial Examiner Ballinger: If that is your contention, you are entitled to establish it if you can. Objection is overruled.

By Mr. Austin:

Q. Was there a construction department stenographer assigned to the superintendent of maintenance, the salary being entered in Account 001?

A. Yes, sir.

Q. Was all or a part of the salary of that clerk assigned to Account 001?

A. Only part.

5545 Q. And how much was that part?

A. $661.65.

Q. And what part of that $661.65 was allocated to direct shipment channels on the same basis as the salary of the superintendent of maintenance for the last two months of 1940?

A. The entire time and cost of this stenographer was predicated upon the distribution of effort between direct shipments and other than direct shipments of the superintendent of maintenance for the full year; not just the last two months.

Q. Oh, I see. Then was a composite percentage applied or ratio applied to this salary based upon the year's activities, or the year's hourly efforts of the superintendent of maintenance; that is, combining his last two months with the previous ten?

A. To secure the allocation factor of this $661.65 we took the entire time of the construction men by months as a percentage of the total hours of that class of employés and used it for the allocation of this $661.65 as it was spread by months throughout the year.

Q. In other words, the same allocation factors were applied to this as were applied to the superintendent of maintenance?

A. Yes sir.

Q. I think that is still correct, because we are only talking about allocation in direct shipment channels, 5546 now.

A. Yes sir.

Q. Now turning to the superintendent of construction; what part of the salary of charges to Account 001 represents the salaries of draftsmen and construction clerks assigned to the superintendent of construction?

A. Well, the salaries of the draftsmen assigned to the superintendent of construction is $4,160.04.

Salaries of the construction clerks assigned to the superintendent of construction was $2,815.

Q. Does that make a total of $6,975.04?

A. Yes sir.

Q. And was that total expense of $6,975.04 allocated to and between direct shipment channels on Respondent's Exhibit 101 by the application of the percentages set forth for the construction superintendent on Page 84 of Respondent's Exhibit 101?

A. Your statement is correct.

Q. Are the salaries of stenographers serving the Field Manager and Assistant Field Managers charged to Account 001?

A. Yes sir.

Q. What is the amount of the salaries so charged?

A. $3,646.41.

Q. Can you state what part of that represents stenographic assistance to the Field Manager and what 5547 part to the Assistant Field Manager?

A. No. I could not.

Q. Is there any such division made on your records?

A. No. The stenographic time for the employes subject to the call of the Manager and the two Assistant Managers is all carried together.

Q. Then when you reach the problem of allocating a portion of the time of these stenographers to direct shipment channels, how did you handle that problem?

A. Handled it on the basis of the distribution of the effort devoted to direct shipments and other than direct shipments as indicated by Mr. P. A. Raupagh's time distribution.

Q. Well, Mr. Raupagh's time distribution to direct shipment channels is not the same as that of either of the two Assistant Managers, is it?

A. That is correct.

Q. But you did not apply or use the direct shipment ratio of the time of the two Assistants in allocating the time of these stenographers to direct shipments?

A. No. We took the larger of the three percentages, which was Mr. Raupagh's, so that if error, error on the side of conservatism and overcharged direct shipments.

You see, we simply couldn't split the hours of these particular stenographers as to when they were answering
5548 a call from Mr. Blough, or Mr. Raupagh, or Mr. Hamer.

Q. No, I realize that.

A. We couldn't do it, and so it became necessary to exercise our best judgment and we took that one with the greatest proportion of time.

Q. Do I understand by that, Mr. Boatwright, that you applied the percentages of Mr. Raupagh's time charged to direct shipment channels, including the direct charge to jobber, naphtha and gasoline? You will recall that it was explained yesterday that 1.355 percent of Mr. Raupagh's time was directly charged to jobber, naphtha and gasoline.

A. It included the supervision time; not the direct selling.

Q. And comparing the supervision time of the Field Manager and the two Assistant Managers, is it not shown on Page 84—well, it is not shown there, but did not your testimony yesterday show that .375 percent of the Field Manager's time was charged to jobber, naphtha, and gasoline; .41 percent of the Assistant Manager, wholesale, and .37 percent of the Assistant Manager, reseller.

A. You are right.

Q. So that so far as jobber, naphtha and gasoline is concerned, it is not correct, is it, Mr. Boatwright, that more of the time of the Field Manager was assigned to that channel than of either of his assistants?

A. No sir, Based on supervision, you are correct.

5549 Q. I might say that when you said that they are quite near together—and I am not challenging the use of that—merely your statement that it was perhaps an overloading.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. I think that covers everything in Account 001 except the asphalt representative, does it not, Mr. Boatwright?

A. I think we have sir; yes sir.

Q. Now you said that the asphalt representative is not a stenographer or clerk. Is all or only a part of his salary charged to Account 001?

A. Only a part of his salary is charged to Account 001.

Q. And why is that split made in his salary; do you wish to make a further answer to the previous question?

A. What is your question?

Q. I hadn't finished it.

Trial Examiner Ballinger: Read the question.

(The partial question referred to was read by the Reporter.)

By Mr. Austin:

Q. Why is that split made in his salary between Account 001 and Account 004, if that is where the rest of it goes?

A. No, it does not go into Account 004. This individual is the asphalt representative covering several fields and as he covers several fields his salary will be found in Form 189. This is 100 percent of the amount for this man's time and effort devoted to the Detroit Field.

Q. Then this man is not the same man as the asphalt salesman?

A. No.

Q. In allocation to direct shipments the entire salary of the asphalt representative charged in Account 001 was removed from the Form 189 channels and charged directly to direct shipments, other customers, is that correct?

A. Yes, sir.

Q. I don't believe I asked you the amount of the asphalt representative's salary charged to Account 001.

A. The amount is $776.53.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. I would like now to consider Account 250, Mr. Boatwright, which has to do with the General Office accounting department.

Was any expense of the General Office accounting department charged to the manufacturing department of the company under the company's regular accounting procedure?

A. None of Account 250 represents manufacturing accounting costs.

5551 The General Office accounting function is divided in that a manufacturing department accounting staff is maintained and a sales department accounting staff is maintained. Expenses represented by Account 250 are limited to the sales department.

Q. I realize, being in Account 250 they would be limited to the sales department but the question is really in reverse: whether any of the salary of the accounting office or accounting staff whose salaries make up the charge to Account 250 was originally charged to manufacturing. I understand your statement to be now that there are two different accounting staffs or accounting departments there so that none of the salaries of the employes in the sales department accounting group is assigned to manufacturing?

A. That's right. I think of no partion thereof that would be assignable to manufacturing.

Q. I believe there is a statement to Respondent's Exhibit 99, Page 28, which says that all of this expense is charged to Account 7250. All of the expense of the General Office accounting department, but it does not explain that there are two accounting departments, so I was wondering where the manufacturing accounting expense came in.

A. I see your difficulty. The seven thousand series is the sales department series and anything charged to 7250 would be the sales department but we maintain 5552 completely separate units, each of whom works under the head of a separate supervisor so that there is a complete segregation of the accounting cost incurred in the General Office between sales, on the one hand, and manufacturing, on the other.

Q. Now will you please turn to Page 127, and also 122, of Respondent's Exhibit 100?

A. I have the respective pages.

Q. I direct your attention to the percentage figures in the direct shipment columns opposite the Account 250. There are percentages given for credit and collection and percentages given for accounting in each of the three direct channels.

A. Yes sir.

Q. And on Page 122 it is stated that "it was considered logical to allocate this expense to classes of direct shipment customer and product on the same ratios as used for field expense of these departments." I wish you would explain what you mean by "field expense of thes departments" and explain how the percentages referred to on Page 127 were arrived at?

5553 A. We took the number of employees in the field credit and collection department and the number of hours worked by these employees on direct shipments by month and expressed that as a percentage of the total hours worked by these employees during those months. Having thus secured a ratio of the distribution of their effort, that ratio was then applied to the general office portion of the Account 250, which is under the heading of credit and collections.

We then deducted from the total field office accounting these particular employees represented by credit and collection, again worked through to a distribution of effort for the direct shipment channels for the residual number of employees in the accounting department; expressed that in terms as a proportion of the effort expended in total by these employees to secure a monthly ratio of the distribution of effort; applied these monthly ratios, in their turn, to that portion of Account 250 under the general heading of accounting.

Q. What is the credit and collection department? Is that the department that is classified under the heading "Credit" on page 76?

A. The parallel accounts in the fields would be made up by that portion shown on page 76 following "Credit" plus accounts receivable.

Q. Credit plus accounts receivable?

5554 A. Yes.

Q. I still have a little difficulty with that because of the fact that the percentage on page 76 for allocation of the accounts receivable time to jobber, naphtha, and gasoline is 3.38 per cent, for credit it is 1.83 per cent, whereas the percentage for credit and collection from the general accounting office is 4.119 per cent. Unless I don't understand the method of application, it would seem to me that the percentages ought to check.

A. I can't explain without doing some checking as to why these figures do vary.

Q. I rather thought in reading on page 122 that you were referring to the field office accounting department but I had some difficulty checking the percentages. For instance, under the larger portion, the accounting portion from the general office account 250, the percentage for jobber, naphtha, and gasoline on page 127 is 1.070, the percentage for direct shipment other customers is 1.529. Those two bear a quite different ratio to each other than the percentages of 1.39 and 1.55 at the bottom of page 76. The variance isn't so wide but it is wide enough to have raised the question as to what figures were used, that is, what Detroit figures were used for the allocation of this general office expense.

Now, I don't want to take the time for you to check those, provided your answer is definite regarding
5555 the hourly ratios in the Detroit Field which were applied to the general office expense?

A. My answer in that respect is definite. You recall, of course, the percentage figures that are found throughout Respondent's Exhibit 100 on sub-schedules indicated as "A", schedules are resultants of the monthly application.

Q. Yes.

A. And sometimes those ratios do not check out exactly as would be expected when the ratios are applied to different bases, but I couldn't explain.

Q. As I said yesterday, I am not trying to check arithmetic now, but I am trying to find the methods that were used. Now, if that is definite—

A. Yes, but I just can't explain at present why those per cents vary slightly.

Q. Mr. Boatwright, if the effort of the general accounting office follows the effort of the field office accounting department, and if that premise is used and was followed by you in determining your method of allocating the general accounting office expense to direct shipment channels in the Detroit Field, then why for this cost study was not the entire amount of this general office expense reallocated throughout all channels in the Detroit Field including Auto Supplies, according to the distribution of effort in the field office department?

5556 A. Well, the quarterly time cards are on a basis of distribution of effort. I am afraid I don't follow your entire question through.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. May I ask, is your question largely limited to why was not a portion of the general office accounting charged to Automobile Supplies?

Q. No, it isn't limited to that, Mr. Boatwright. I can state it more specifically.

The expense, salary expense of the Detroit Field accounting department is allocated in your regular accounting procedure throughout the three petroleum channels on Form 189 and also to Automobile Supplies on the basis of distribution of time reports; is that correct?

A. Yes, sir.

Q. Then for the purposes of this cost study, you charged a part of that expense in Account 200 to direct shipment channels also on the basis of the time study, is that correct?

A. Yes, sir.

Q. Now, when you bring in this expense to Account 250, general office expense, charged to the Detroit Field, and you wish to allocate a part of that to direct shipments, you have followed the distribution of effort of the

5557 field accounting office but—

A. Yes, sir.

Q. —you have not, have you, in the 189 channels on Exhibit 101 followed the distribution of effort of the field accounting office, nor have you applied to the general office expense any factor for the distribution of effort of the field office going into Automobile Supplies.

A. I see your problem. The office expense for accounting in the general office includes therein and is made up of in part a great many departments that are not carried in the field at all. For instance, we have the plant investment department which keeps track of all of the investments, figures all of the depreciation, and so forth. There is no parallelism for that department in the field. Then we have—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Take a recess for five minutes.

(A short recess was taken.)

5558 Trial Examiner Ballinger: Come to order.

Witness: Your Honor, to refresh my memory, may we have the record for the discussion just prior to the recess, read?

Trial Examiner Ballinger: Read such portion of the record as the witness desires.

(Thereupon the record was read.)

A. Continuing the answer: We have a voucher department in the General Office for which there isn't an exact parallelism in the field.

The mailing department in the General Office is broader in its scope and in its functions than it is in the field.

The stationery department in the General office is likewise concerned with many problems of purchase, layout of forms, and many expenses are incurred by that department which are not comparable with the functions of the stationery department in the field.

The stock record and inventory control department of the General Office is concerned with broader and different functions than is the stock record department in the fields.

In view of these large component parts of the General Office accounting department, which differ from the functions of the field accounting department, it occurs to the Respondent in our regular accounting practice that the
most equitable means of allocation is to use gallonage
5559 as the factor in allocating among channels.

Now the reason that we did not use gallonage in making an assignment of General Office accounting expense to direct shipments is because we learned from our special study in Detroit that gallonage would not be a fair factor in allocating cost. Having a complete allocation factor predicated upon effort, the only allocation that we could make giving any recognition at all to expenses of the General Office accounting department assignable to direct shipments was the effort factor which is a more equitable means of allocation than would be gallonage because throughout this study, both in the exhibits and in the testimony throughout, to date, I think you will concur that the gallons sold by direct shipments require quite a different effort and quite a different cost than the gallonage sold through the tank wagon channels.

Does that meet your question, sir?

Q. You are referring now, in this latter part of your answer, to the accounting department of the Field Office?

A. Well, it so happens that I was, but I would not limit it to the accounting department because, as you will recall, in the sales function and in other operations, throughout the operations of the field, we found that a gallon sold by direct shipments carries quite a different expense weight than a gallon sold through the tank wagon channels.

Q. In distributing a portion of the expense in 5560 Account 250 for the Detroit Field to direct shipment channels you did follow the distribution effort of the Field Office accounting department as heretofore explained, did you not?

A. Yes, sir.

Q. And in your regular accounting procedure in allocating the expense in Account 250 between petroleum product channels on Form 189 you did not follow the distribution of effort in the field accounting department, did you?

A. Except as gallonage is a reflection of the distribution of effort.

Q. Well, you just said the gallonage was not a reflection of the distribution of effort in the field accounting department, or did you say that, as to the Form 189 channels?

A. No, I said that gallonage sold direct shipment and gallonage sold tank wagon method represented respectively different effort and different cost.

Q. Well, does a distribution of expense, of accounting expense on a gallonage basis, referring now, to the distribution of the expense in Account 250, follow the distribution of effort between the Form 189 channels of the Field accounting department?

A. That, I couldn't answer, without checking, sir.

Q. Can't you check that by looking at the distribution on Form 189 or on Form 191 of the accounting Field and accounting Office expense between channels?

5561 A. Yes, I could check it but it would take a calculation.

Q. Well, let me put it this way: The distribution between tank wagon reseller, tank wagon consumer and other methods channels in the Detroit Field on a gallonage basis throws the largest part of the expense into the tank wagon reseller channel, does it not?

A. Yes, I think it would.

Q. Well, it does, doesn't it?

A. May I have the Form 189 that you have offered as an exhibit?

Q. Yes (handing document to witness.)

A. It does.

Q. And the ratio between expense allocated on a gallonage basis to the tank wagon reseller channel and the other methods channel is approximately 69 to 5, is it not; on Form 189? In explanation of that question, Mr. Boatwright, I am just looking at the gallonage figures at the bottom of Form 189 for the tank wagon reseller channel and for the other methods channel.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. When you allocate expense on a gallonage basis
5562 between those three channels isn't the ratio of the expense—I don't care what expense it is, or what account—isn't the ratio in the tank wagon reseller channel to the expense in the other methods channel approximately 69 to 5?

A. My only difficulty is in your division when you say "69". 69 is a slight overstatement of the charge that is assignable to the tank wagon reseller channel because you have taken the gallonage factor of sixty-nine million and you have, in deriving your percentage of 69, assumed that 69 represented 69 of 106.

Q. I am not talking about percentage. I said isn't the ratio 69 to 5; just like you have a ratio of 2 to 1?

A. I thought you were talking now, of the ratio in terms of proportions of the total and on a percentage basis.

Q. No, not on a percentage basis.

I will ask you again:—

When expense, such as the expense in Account 250, is allocated between 189 channels, petroleum products' channels on a gallonage basis, does not the expense entered in the tank wagon reseller channel bear a ratio of 69 to 5 to the expense entered in the other methods channel?

A. That's approximately correct, sir.

Q. Now turning to Account 200, what is the ratio be-

tween the expense entered in that account in the tank wagon
reseller channel and the expense in that account in
5563 the other methods channel?

Are you referring to the original Form 189?

Q. Well, I think the ratio is the same, is it not? Do you mean by exactly the same—

Mr. Austin: Strike that.

By Mr. Austin:

Q. You may refer to either Form 189 or Respondent's Exhibit 101, since we are talking about the regular accounting procedure. I suggest you refer to Form 189, which is Commission's Exhibit 119.

A. Referring to Commission's Exhibit 119, the ratio of the distribution of office expense—salaries, accounting, between the tank wagon reseller and the other methods channel is as 84 is to 93.

Q. And the same method of distribution of the expenses in Accounts 200 and 250, respectively, used in the compilation of Form 189, was retained in distributing expense between those same channels on Respondent's Exhibit 101, was it not?

A. Yes, sir.

Q. Now in the regular accounting procedure of the company is a part of the expense of the Field Office accounting department charged to automobile supplies?

Mr. Hanley: What account?

Mr. Austin: 200.

A. It is.

5564 By Mr. Austin:

Q. And is any portion of the expense of the General Office accounting department assigned to the Detroit Field as shown in Account 250, charged to automobile supplies?

A. It is not.

Mr. Hanley: Do you have any further questions on that automobile column?

Mr. Austin: I have no further questions at the moment on Account 250, which was what I was discussing.

Mr. Hanley: No further questions on that subject?

Mr. Austin: Not in this connection, no. Not at this time.

Mr. Hanley: If your Honor please, the Respondent moves to strike the answer to the last question and objects to the same as being immaterial. Moves to strike, in fact, all testimony in respect of distribution of accounts or expenses to automotive supplies as immaterial for the reason that the Respondent is entirely out of the automotive supply business. This column is largely represented by tires and there just isn't any expense.

5565 Trial Examiner Ballinger: There was such expense during the period covered by the Complaint, was there not?

Mr. Hanley: No, only where it is included. The only place where there was any real expense is where it is included as explained by the witness' answer sometime ago, and in connection with the subsequent questions asked by Mr. Austin about it on the automotive supplies and on these ratios between reseller and other methods. It has been found as a matter of accounting, Mr. Boatwright said, that it is more desirable and more fair, more reasonably calculable to allocate ~~on~~ the general office expense on a gallonage basis. It has always been true where there is a real expense or has been in the past allocated to Automobile Supplies as appears on several 189's.

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Austin:

Q. I would like to call your attention now to the Account 255, Mr. Boatwright, general manager's department. That is a general office expense, is it not?

A. Yes, sir.

Q. And is not the Account 255 really a group of separate accounts?

A. It is a group of separate departments.

Q. ~~But~~ are not those departments quite different and are not different methods of allocation used in distributing the expense thereof to direct shipment channels? 5566

A. Yes, and the difference in the method of treatment of the different departments is explained in Respondent's Exhibit 99 and 100.

Q. The different departments are also charged to channels in the various fields and, particularly, in the Detroit

Field, according to different methods of allocation; is that so?

A. Yes, sir.

Q. Schedule 12-B on page 129 of Respondent's Exhibit 100 does not show by sub-accounts or by departments in the general manager's department the percentages and methods of deduction of direct shipment expense of the Form 189 channels. Now, in Schedule 1-B which relates to the Account 004, salesmen's salaries, and Schedule 7-B, relating to the accounting department, you carried your breakdown through from Schedules 1-A and 7-A, respectively, and showed the method of deduction from 189 channels by the various sub-departments in the sales department and the accounting department.

Why was not that same method followed in Schedule 12-B in Respondent's Exhibit 100?

A. Well, we have it by departments in our worksheets and it could have been placed on the same basis. We get down to some awfully small figures when we get down to individual component parts of the Account 255, and it
just didn't seem that it would be necessary in the
5567 spelling out process. Had there ever been expressed
a request in any of our reviews, we would have been delighted to have done so.

Q. Your Schedule 12-A on pages 127 and 128, particularly 127, referring to Account 255, does show the various sub-departments which make up the general manager's department, is that correct?

A. That is right.

Q. That is in the middle of page 127?

A. I have the page referred to.

Your statement is correct.

Q. And Schedule 12-B on page 129 does not show separately the amount of the direct shipment expense for each of those sub-departments which is deducted from the Form 189 channels?

A. Page 129, Respondent's Exhibit 100, does not show separately for the different component parts of the general manager's department the amounts taken out of the respective channels on Form 189. Again I state that is in our woorksheets. We will be delighted to let the Commission review it.

Q. Well, I am not making a request in that respect but, frankly, I don't know whether it is material now and—

A. I don't, either.

Q. I want to bring out the fact in case we should desire to analyze that.

A. I don't either, Mr. Austin. You will recall that 5568 the detail to which we went in explaining methodology was largely left to my discretion of what I thought might be needed. I wrote the Respondent's Exhibit 100 with that in mind, and in a subsequent discussion I felt that if additional explanatory information is needed, it would be requested, and I just didn't feel that this account merited time and space to spell it out to that extent.

Q. Well, the amounts are not large but the sub-departments are of widely varying nature; isn't that so?

A. Yes, that is so, yes.

Q. Now, getting down to the particular departments, I would like to have you describe with as much detail as you can the activities of the following departments:

First—these are sub-departments of the general manager's department—first, supervision. I would like to know the titles of the employees or in the case of a group, what the employees are, too.

A. That is what we are now getting from our worksheets.

Supervision represents expenses incident to the positions as follows: Mr. Amos Hall, vice president in charge of the sales department; Mr. R. F. McConnel, who is general manager of sales; Mr. W. H. Tell, who is in charge of the operating function of the sales department; Mr. H. E. Hanson, assistant general manager of sales; four assistant general managers. Do you wish their names?

5569 Q. I don't think so.

A. They are representatives traveling out of the main office each, in turn, contacting the managers of from six to seven fields.

Then the clerical staff: Stenographers, clerical staff assigned to these respective individuals.

Q. Would it require you any great thought and investigation to tell us the duties and composition of the sales research department?

A. No, I don't think that would—if I may give you a general answer, I don't think that would be an unreasonable expectation.

The sales research department is responsible direct to the president and the executive vice president of the company. Our function is divided between conducting what might be called contingency problem studies for management, on the one hand; conducting research in advertising, another; conducting consumer studies of wants, needs, buying habits and desires of consumers; conducting various studies of prices and competitive conditions in different markets; as well as preparing budgets, estimates of sales, product movement, movement from various terminals and supply points.

We report direct to the chief executive of the company and an appointed committee which reviews our findings, recommendations, and so forth.

5570 Does that meet your question?

Q. I am sure it does.

You are the head of the sales research department. Is Mr. Houghton your assistant?

A. Mr. Houghton is the office manager of the sales research department.

Q. How large a personnel do you have in that department?

A. Approximately 20. It varies from time to time with the flow of assignments. If there is an unusual flow of assignments calling for additional personnel, recognition is given to that, but we carry a normal staff of about 20.

Q. What are the duties and what is the composition of the statistical and personnel department?

A. The statistical and personnel department—there is no question in my mind relative to the personnel portion of that account which represents the personnel office in the Chicago division—or in the Chicago general office. There is a question, however, as to the exact individuals included in the statistical portion, and I will have to check that. I don't have that record here.

Q. Do you know what the duties and functions of the statistical department are?

A. I could tell that with a greater degree of accuracy if I knew the exact individuals so classified. Actually, a large part of my own department is statistical work.

5571 Q. Well, is it possible for you at this hearing to give any definition or story as to the statistical department?

A. Oh, yes. I could secure that information by telephone and advise.

Q. How about the personnel portion of this department which, incidentally, for the record, is not the statistical departmen, it is the statistical-personnel department—but as to the personnel portion, what is their function?

A. Well, largely it is interviewing individuals for positions and clerical capacity in the general office, secretarial help, comptometer help, mail boys, clerks, etcetera.

Q. I don't think it is necessary for you to make a call to Chicago on the statistical portion, Mr. Boatwright, at this time.

A. Well, you see, my problem is just the individuals' names that are so classified on the pay roll, and I don't have that here. Undoubtedly, they compile these various and sundry sales records and comparisons, and things of that type.

Q. Can you describe the duties and functions of the gasoline and refined oil department?

There was some explanation of that but not very complete on the record at the time we were discussing the Oklahoma survey; and at that time, I think in 1937, there had been a combination of two departments, and the discussion was in that connection, but I would like to have
you describe it now as to the whole department and
5572 describe the various functions.

Mr. Hanley: If your Honor please, the manager of that department, Mr. J. C. Marshall, was on the stand in this case and gave a full explanation and exposition of
the functions of the department and his duties.

5573 Mr. Austin: What was his name?

Mr. Hanley: J. C. Marshall.

Mr. Austin: Was he in charge of the gasoline and refined oils department?

Witness: Yes.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Witness: The gasoline and refined oil department is under the direct supervision of Mr. J. C. Marshall and the duties of that department fall broadly into two main classifications. One: it serves as a bulk sales department for the distribution of tank car quantities of gasoline, naphthas and refined oils.

Secondly: it has charge of the prices maintained on our various products in the same classification of the gasoline, naphthas and refined oils distributed by tank wagon through the same four thousand stations operated by the Standard Oil Company.

By Mr. Austin:

Q. Do the functions of that department relate solely to gasolines, naphthas, and refined oils?

A. Well, as far as products are concerned, the answer would be yes.

Q. Could you explain in a little more detail the duties and activities of the gasoline and refined oil department in relation to direct shipment? In other words, the half which you described first? 5574

A. I didn't state "half". I said two component parts.

Q. I wasn't trying to be exact but I believe you said that they were partly engaged in duties with relation to direct shipment business and partly in relation to fixing prices on tank wagon business and I wanted you to give me a little more complete description about the direct shipment part; just what they do?

A. Well, there are individuals in this department whose obligation it is to contact and sell large tank car accounts with the necessary requirements for their particlar uses of the various products enumerated.

In addition, tank car sales made by fields result in orders which clear through that department.

Q. Is that department the gasoline and refined oil department, concerned with tank car consumer sales as well as tank car reseller sales?

A. Oh, yes.

Q. And is it a selling department. Is this the department that goes out and makes contact and tries to get customers, or is it concerned with the records of sale and an analysis of the business, or anything of that sort. I am trying to find out what the function is:

5575 Mr. Hanley: Off the record.

Trial examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Q. Your question is rather difficult to answer because the dividing line between the functions named is never clear and distinct.

I would say as a general practice that members of this department are concerned primarily with the contracts and the terms of contracts of the sales but do not, in many cases, actually do the selling work direct. You understand that that is a general statement of the functions.

Q. Do you know whether the expenses of that department are separated or is a separation of such expenses capable, from the records of the company, as between the direct shipment activities of the department and the bulk plant pricing activities of the department?

A. I don't believe that it would be possible to prepare currently an accurate segregation of expenses between these two component parts, between the functions of that department.

Q. Would it be possible to do so on the basis of a time study?

A. Well, I don't know whether it would, or not. You asked me whether it would be possible by a particular study. I am encountered, now, with the same difficulty that I was encountered with when questioned of a study
5576 of that nature in Washington.

Until I have made an analysis of what the different members in each department do, whether their time would be susceptible to breaking down, I don't know.

Q. In asking the question I had in mind the two departments separately, which were consolidated. I had in mind, perhaps, the departments, putting them under one head; say under Mr. Marshall; and under one name, that the activities might still be separate and carried on as they were before.

A. Any time that two departments are consolidated the object of the consolidation is broader than just to place them under one supervisory head. The object is so that you can coordinate the entire work of those two departments with increased efficiency and decreased expense. It was broader than just putting two groups under one head.

We find now that many of these individuals work in part on one base and in part on another.

Q. Does this department have control and have charge of the fixing of prices charged in direct shipment business, as well as prices charged in bulk plant business?

A. All prices on direct shipments to consumer accounts, tank car quantities, are first recommended by this particular department; the gasoline and refined oil department.

Q. Recommended to whom?

A. Well, many of these direct shipment customers
purchased in a magniture that the price will be rec-
5577 ommended to the Vice President in charge of sale
for his review and his consideration and if it is of a
magnitude such that it is necessary for him to consult
with his associates I would assume that he would do so but
the prices are first fixed and started in this department.

Q. You refer in that answer to direct shipments, consumer business. Does this department also have charge of determining prices for direct shipment reseller business, such as jobber business?

A. That, as a rule, originates with the selling function in the field. The manager, assistant managers, or the supervisory personnel of a field may advise the general office and this department, specifically, that such and such a jobber account could be secured in their judgment for "X" price.

This department would then discuss with the heads of the sales department the desirability of that account at that particular price. It may or may not appear desirable on the price level indicated.

Q. The company's price to the four jobbers in Detroit has been the same at all times covered by the evidence in this case. Is that the general practice of the company to have only one jobber price in a given field?

A. Yes sir.

Q. That being true, I am a little puzzled at, and per-
haps you can explain your answer regarding the
5578 submission of the question as to whether a particular
account should be taken on at a particular price.
Doesn't the gasoline and refined oil department either
alone or in connection with other company officials deter-
mine a tank car price for the jobbers in a given field?

A. Some jobbers in others areas are on contracts. It so happens that the four subject in this Complaint are not on contract. They are accounts which have grown up with the Standard Oil Company, in the main. Our—

Q. Is it the practice of the company to decide on each jobber price separately, as to each customer, or is a jobber price a matter which is determined for a field?

A. Mr. Austin, we have a very few jobbers throughout our entire territory.

We may have a jobber, let us say, in the Twin Cities but it will be a jobber.

Now that particular jobber may be on a contract with our company. It is a jobber account which, perhaps, has left some competitive distributor and starts distributing our product.

Such an account would request, in many cases, a contract from the new supplying company stating the terms of the exchange.

That contract would have to be reviewed and approved in the General Office.

5579 Q. By the gasoline and refined oil department?

A. It would come to that department first, yes, sir.

That's why I made the statement as I did, that with new jobber contracts originating, it comes to this department first.

The proportion of our sales represented by jobber outlets, is quite small.

Q. Do I understand, then, that there is no company policy about either having contracts with jobbers or not having contracts with jobbers, generally?

A. I don't know of such a policy.

Q. I don't know whether you are familiar with the testimony given in this case but at least one of the jobbers that I recall definitely, said that he, on various occasions, tried to persuade Mr. Raupagh that they should have a contract and that request was never granted, here.

A. I presume that we have reached a point where the Field Manager, in his expression of his responsibilities, decides upon the advisable policy that we pursued in each case.

Q. What are the duties and functions and activities of the sales promotion reseller and sales promotion wholesale sub-departments?

A. Their names are, in reality, descriptive of their functions.

5580 The sales promotion reseller department aids, suggests in drawing up plans to promote sales through our reseller channel while the sales promotion wholesale department serves in an identical capacity with the sales channel designated as wholesale sales.

Q. What are some of the principal means or types of sales promotion?

A. They are infinite, Mr. Austin; even as the means of selling goods, are infinite.

They will vary all the way from a suggested terminology to a complete plan for a sales campaign.

Frequently it is not so much a plan as it may be to attempt to secure the adoption of a specific form of terminology which will have very advantageous influence on sales; advocating and promoting the idea of cleanliness, good housekeeping, in its broad concept and so forth, would represent the activity of the reseller promoter.

Q. Wholesale means consumer business, doesn't it, in the terminology of the company, when applied to an employee such as sales promoter wholesale—

A. Yes.

Q. (continuing)—or sales manager, wholesale?

A. Yes sir, that's right.

Q. And since wholesale refers to consumer business why was any portion of the time or expense of the sales promotion wholesale department charged to jobber
5581 gasoline and naphtha?

A. A small part of the sales promotion wholesale is allocated to jobber naphtha and gaselone because the sales promoter wholesale is the supervisor of the city salesmen and the plant agents who, in their turn, do make a few calls on jobber accounts, as was reflected in summation of effort of the testimony of the assistant manager, wholesale; namely, Mr. Blough.

Q. And is that reflected back to the sales promotion wholesale department of the General Manager's department? That is, was it the reflection of those duties from the field that resulted in a portion of the expense of the sales promotion wholesale department, general manager's office, being charged to jobber naphtha and gasoline?

A. Yes, because you see, Mr. Blough's responsibilities are the fulfillment of the promotional efforts not only emanating in Detroit but emanating with this particular group of specialists in the Chicago office and they are concerned with the operation of this city salesman and of the plant agent, who may devote part of his time to selling.

Q. The plant agent; is that the "B" station agent?

A. No, in this case I am speaking of the agent at one of the salaried stations who maintains a time card and splits his time between the operation, on the one hand, and selling functions on the other.

5582 Q. Is that what you call the agent salesman, in the cost study?

A. Yes.

Q. I wasn't aware of the fact that the city salesmen ever called on jobbers. I knew they were under Mr. Blough. In what capacity would they call on jobber accounts?

A. I am not sure that these particular city salesmen did.

5583 Q. Can you answer the question?

A. I have checked the worksheets and I find that one city salesman did actually make some calls on these jobbers, and we took those calls so made direct from his call record report, so we do find a very small part of his time was actually spent on calling on jobbers.

Q. Those particular calls by that one salesman would not be the cause of this $20 item because in jobber, naphtha, and gasoline from the sales promotion, wholesale, department in Chicago—would that account for it?

A. Well, the calls of this particular city salesman plus the distribution of effort resulting from their agent salesmen plus the supervision time, wholesale, which makes up Mr. Blough's component distribution of effort, and Mr. Blough as the field representation of this same department in the general office, therefore influences in the aggregate and adds up to the $20 that you refer to.

Q. Do you know what the reasons were for the calls by the city salesmen on jobber accounts? And I would like to ask you the same question regarding agent salesmen. You said they made some calls on jobbers. I am just wondering whether those salesmen have any particular function to perform or any particular duties in calling on jobbers which are not common to reseller salesmen.

A. Well, I would assume, sir, that they were carrying out their responsibilities as assigned to them by the assistant manager, wholesale.

5584 Q. In other words, if there was some reason for sending a salesman to a jobber account, they wouldn't necessarily send a reseller salesman, they might pick out an agent or a city salesman if it were a particular task; is that what you mean?

A. Well, it is entirely possible that given calls may be made by these two classes of salesmen referred to, agent salesmen or city salesmen on jobber accounts, in fulfillment of their regular line of duties. That would be particularly true if a jobber were located at one of the smaller "A" station markets where the direct selling function is performed in a large measure by the agent salesmen.

Q. Well, that isn't true in Detroit, is it?

A. Not as far as the Detroit area is concerned, no.

Q. Well, I am not interested in the amounts here because they are very small, but I am interested in the reasons for any charge.

A. The reason, sir, is again an illustration of a statement that I have made to you before. Had I conducted this study purely on the basis of my understanding of the theoretical functions of several individual employees, there would have been no charge, but an actual examination of the records revealed that they did make the calls. Having made the calls, the business is charged with those calls.

5585 Q. I would like to ask you one more question before exhausting this particular thought. Why is a part of the time of the sales promoter, industrial, in Detroit charged to jobber gasoline business? I was under the impression from your description of the industrial salesmen the other day that none of their time was charged to gasoline or, at least, none of it in the reseller channel.

A. In the Detroit area, the sales promoter, industrial, based on a time card maintained on that position was found to have expended ten minutes during the month the time card was maintained, and we charged jobber gasoline business for that amount.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, you say some ten minutes of time was devoted to jobbers. Actually, as I see it here, there is 2 11/100 per cent of his total time charged to jobber, naphtha, and gasoline, totalling $161.48; and 15 per cent or $1,196 charged to direct shipment to other customers.

A. What page are you on?

Q. I am on page 16 of Respondent's Exhibit 100.

There is a total of $1,357.68 on that time charged to direct shipments.

5586 A. Our difficulty in reference to page 16 is because the sales promotion, industrial, that you were reading is broader than just the industrial sales promoter. This includes the time of the clerk working under the supervision of Mr. Roth, who makes up these tank car orders and who clears these various orders, and they do have a greater amount than does Mr. Roth in particular, who had 13/100 of one per cent of his time.

Q. Then there is a substantial amount of time of the clerk here apparently on jobber business?

A. There is some portion of that time, yes, sir, in the clearing of the orders.

Q. What functions of the sales promotion, industrial, department in the Detroit Field relates to direct shipment jobber business?

A. Well, the only connection that I recall the clerks working under the supervision of the sales promoter, industrial, is in clearing orders from jobber—for jobber gasoline.

Q. In other words, if the jobber calls up and orders a carload of gasoline, does that go through the sales promotion, industrial, department?

A. Yes, sir.

Q. Well, that is a point I don't think we have ever brought out as to what part of the Detroit office handles jobber orders.

What department or is it this department that
5587 relays those orders to the River Rouge terminal and sees that they are filled?

A. May I check that?

Q. Yes.

A. Having checked, I would now state that the order from a jobber for gasoline would go, first, to a clerk who works directly under the supervision of the sales promoter, industrial, who would start that order, filling out the necessary forms, on its path to River Rouge for delivery.

Q. And what department keeps the records of the shipments made from River Rouge and the orders which are sent to it and filled? Is that part of it done in the accounting department or is that done in this department?

A. Well, the records maintained on the actual shipments is maintained in the accounting department.

Mr. Austin: If agreeable to your Honor, I move we adjourn for lunch until 1:30.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The motion is granted and now, at 12:32 p. m., the hearing stands in recess until 1:45 o'clock p. m.

(Whereupon, at 12:32 p. m., a recess was taken until 1:45 p. m.)

5588 Afternoon Session—1:45 p. m.

Trial Examiner Ballinger: Come to order.

Mr. Hanley: May we proceed, your Honor?

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Your Honor, at this time the Respondent will comply with a request for records of the Respondent made by counsel for the Commission. I do this at this time because I thought possibly counsel might want to ask Mr. Boatwright some questions inasmuch as the request was made through Mr. Boatwright. All else that we have in connection with our case we proposed to defer until Mr. Boatwright's testimony is concluded.

I now hand back to counsel for the Commission Commission's Exhibits, for identification, 94 to 99, both inclusive, which were lent to the Respondent for the purpose of identifying certain original freight bills which are now produced and handed to counsel for the Commission. As in the case of the production of former demanded freight bills, we are producing the original and are also handing counsel a statement of the contents of the freight bills for ready reference and with the hope and request that after counsel has made comparison that he may find the statement adequate to serve his every purpose and we may have the return of the original records.

5589 Trial Examiner Ballinger: The original records will be returned to you.

Mr. Hanley: It might be well to note, if your Honor please, that this demand includes several freight bills. All except two of them, however, are identical in type with that group of freight bills that were demanded and furnished the other day. Those two have to do with regular freight charges from Muskegon, Michigan.'

Mr. Austin: There appear to be more than six bills here. Maybe some of these orders were for more than one car, or something like that. I don't know.

Mr. Hanley: I know one was for four cars, if I am not mistaken.

The Witness: That is the explanation.

Mr. Hanley: I believe that is the explanation.

Mr. Austin: Is that all you had to say?

Mr. Hanley: That is all.

Trial Examined Ballinger: You may proceed.

By Mr. Austin.

Q. To what account or accounts are the salaries of the top officials of the Standard Oil Company charged such as the president and any other of the—well, the various vice presidents. I think you mentioned one vice president in charge of sales as being in charge of the general manager's department.

5590 Where would the salary of the president, for instance, be charged?

A. The salaries of the top administrative officers of the companies is segregated between manufacturing and sales department. That part which is assignable to the sales department is included in the account "Pro Rata General Administration."

Q. What department of the general office maintains and compiles the records of direct shipments and direct shipment transportation charges, payments for direct shipments coming from the field?

A. I know of no such record of the nature that you refer to.

Q. Well, let's leave out transportation. I will just ask the question with regard to the records that come from the fields regarding direct shipment business both as to the amount of it and the realization from it?

A. With respect to the realization mentioned in your question, a separate record of realization resulting from direct shipment is not maintained. With respect to the volume moving through the direct shipment channel, that is a part of the total volume as far as the accounting department records are concerned. The only record being maintained separately is a transcript or statement of direct shipment volume by fields that is prepared in the field accounting department and forwarded and compiled in the general office.

Q. Isn't there any record kept in the general office of the number of orders and the amount in gallonage 5591 of different products sold to direct shipment customers in each field or to specific customers in each field and the prices charged, and so forth?

A. No, I know of no such record.

Q. Well, that is all kept in the field office?

A. Yes, it is.

Q. What department of the company has charge of negotiations and contract with transport truck haulers and with any necessary business in connection with—or business with the railroads in connection with freight rates and with the audit and payment of tank car and tank truck charges? If that isn't all done in the general office, why, say so.

A. It isn't all done in the general office. You will recall the testimony of yesterday was to the effect that the checking and the payment for truck transport movement is made in the field. The traffic department in the general office does check and does maintain contacts with railroads on rail movement. The actual payment of the freight bills is in the manufacturing accounting department.

Trial Examiner Ballinger: How about your transport truck bills?

The Witness: Those bills and the checking of those bills and the records thereon are handled in the field 5592 office.

Trial Examiner Ballinger: Are they paid in the field office?

The Witness: They are paid in the field office.

5593 Mr. Austin: Mr. Reporter, would you read the previous answer of the witness to my last question?

(The question referred to was read by the Reporter.)

By Hr. Austin:

Q. And who takes care of the negotiations and the executions of contracts between the company and the transport truck haulers?

A. I don't know.

Q. There are two of those contracts in evidence and I think they are signed by a vice president. That wouldn't prove, necessarily, that the vice president did anything more than sign them.

A. No. In fact you will find that a vice president in charge of sales has signed part of those; a vice president in charge of production has signed others. It merely is a vice president's signature binding the company but the actual negotiations on any one of those contracts, I couldn't tell you who had conducted those negotiations.

Q. Have you made any study to determine how much of the time of the manufacturing department is devoted to the auditing and payment of bills and any other duties in connection with or arising out of the shipment of gasoline or of direct shipments of gasoline to jobber customers?

A. No, I have made no such study.

Q. Will you turn to Respondent's Exhibit 99, page 29, and the following pages? Have you that page?

5594 A. I do.

Q. If you will note, under Account 255, General Manager's Department, there are some figures there which are referred to as "Detroit Field Cost—Year 1941," and on the subsequent pages the year 1941 appears in several places.

Now, checking those figures with Respondent's Exhibit 100, Schedule 12-A, it appears that those are, in reality, the 1940 figures?

A. That's right. That's merely a typographical error, Mr. Austin.

Q. I wonder if you would permit that exhibit to be changed physically so that it appears that those figures are 1940 figures. In other words, changing the figures to 1940 instead of 1941?

A. Certainly I would.

Mr. Austin: Is that agreeable to counsel?

Mr. Hanley: Yes.

Trial Examiner Ballinger: The Examiner authorizes the witness to make the change on the original exhibit.

Mr. Austin: I will have to bring the original over for that purpose, your Honor. I am sorry. I don't have it here today.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5595 Trial Examiner Ballinger: On the record.

Mr. Austin: Unless you want the original exhibit brought over here, I will make the changes.

Mr. Hanley: That's all right. Just go ahead and make them.

Mr. Austin: I wanted to clear up that error.

By Mr. Austin:

Q. Page 30 on Respondent's Exhibit 99, Mr. Boatwright, the second sentence from the top of the page refers to an allocation of channel expense to fields based on proportion of sales of these products by fields, and so forth. I just wanted to ask as to the meaning of the words "proportion of sales." Does that mean in gallons or does it mean in dollars?

A. Proportion of sales in gallons.

Q. I wasn't sure, although I noticed that in the preceding sentence you did refer to basis of total sales in gallons.

A. Yes, sir.

Q. I assumed you meant the same thing but since I wasn't sure of this particular account, I just wanted to be sure.

A. Gallonage is the factor, sir.

Q. Now, at the top of Page 30, the first sentence which reads as follows: "The proportion charged to the sales department is first allocated to the tank wagon reseller, tank wagon consumer, and other method channels on the basis of total sales in gallons, excluding direct ship-5596 ments of refined oils, tractor fuels, naphthas, and gasoline, in each channel." And it should appear that that refers to the gasoline and refined oil sub-department of the general manager's department?

Will you explain the allocation to the other methods channel of expense in connection with refined oils, naphthas, and gasoline? I believe that for the most part throughout this case we have understood that the other methods channel included motor oils and other specialty products and I note, here, that a portion of this expense, which I understand is totally an expense of marketing gasoline, naphthas, and refined oils, is charged to the other methods channel.

A. The only reason for giving recognition to the other methods channel at all in the allocation of this departmental expense is because other methods would include barreled sales of naphthas or gasolines as a part of other methods. Not a moving through the tank wagon faucet.

Therefore, a component part of the volume in the other method channel of distribution is made up of barreled sales, aviation gasolines; barreled sales of naphthas, and so forth, and it is, we believe, more accurate to recognize in our allocation factor that there is a component part of that channel responsible and assignable to this department then it would be to ignore this factor.

5597. Then the expense in this department, as I understand it, is allocated in the General Office, and before allocation to fields, to tank wagon reseller, tank wagon consumer and other methods channels?

A. Yes, sir.

Q. And would it follow from your description of the other methods channel business in gasoline and refined oils, that the portion of the expense of the gasoline and refined oil department which is charged by the General Office to the other methods channel, would be relatively small?

A. It is very small. In fact we have here on our work sheet the magnitude of that charge, if you would like it.

Q. Yes, but I would like to know what the figures are that you—

A. The charge to other methods is $41 for the year.

Q. Is that for the General Office, or what charge is it?

A. Yes. The charge for this department to the other method channel in the Detroit Field for 1940 represents $41.31.

Q. I see. And that $41 was the amount charged to the Detroit Field by the General Office from the total amount for the company allocated to the other methods channel.

A. For this particular department.

Q. Yes, but I mean there is a segregation between channels before there is a distribution between fields?

A. Yes, sir.

5598. Q. In this particular account.

A. Yes sir.

Q. Would you mind reading the figures charged to the Detroit Field for the other two channels, as long as you read the $41?

A. Tank wagon reseller amounts to $2,643.32. Tank wagon consumer, $1,239.90.

5599. Q. And you stated this morning that the gasoline refined oil department is directly concerned as to part of its duties with direct shipment business?

A. Yes, sir.

Q. And yet, do I understand that in making an allocation of the expense of that department between the three petroleum channels, that direct shipment gallonage is not considered?

A. In our regular cost accounting procedure, it is not.

Q. We will now turn, please, to pages 122 and 123 of Respondent's Exhibit 100.

I am still referring to Account 255, general manager's department. At the bottom of page 122 reference is made to the supervision sub-department. It says: Research sub-department and the statistical and personnel sub-departments. These three are grouped together for the purpose of description of the method of allocation of general expense to direct shipment channels, and it is stated that the allocation to those channels "was based on ratios representing the effort in the Detroit Field chargeable to jobbers by product and to other direct shipment customers."

Now, turning to page 123 under the gasoline and refined oil department, the second sentence under that department states "The allocation of expense to classes of direct shipment customers and product was based on ratios representing the combined selling efforts of the Detroit
5600 Field, excluding any charges on jobber, other products."

You will note that in describing the method of allocation for the three sub-departments of the general manager's department and also in describing the method of allocation used for the gasoline and refined oil department expense, the effort in the Detroit Field is referred to. Were the same percentages used or was the same method of allocation applied in distributing the expense of those four sub-departments to direct shipment channels for the purposes of this cost study?

A. Will you read the question, please?

(The question referred to was read by the Reporter.)

Q. You are bearing in mind, of course, that the first three are grouped together so it is really a question of one against the other, one group of three against the other one.

A. Upon checking the worksheets, the allocation in the case of the gasoline and the refined oil department differs slightly from the allocation used on the other three departments, for two reasons: First—

Q. Well, that is an answer to the question, Mr. Boatwright. The answer is "No"; is that right? The same method of allocation was not used?

A. The answer is "No."

Q. I will give you a chance to tell me what was done,
but I would rather ask you that as I come to it. That
5601 is just so that the record may be clear, and I would
like to ask you the direct question, which I will do
now:

What method of allocation was used and what Detroit employees' hours were used to determine the ratios applied for allocation to direct shipment channels of the expense shown under the first group of sub-departments of the general manager's department under Account 255 as shown on page 127 of Respondent's Exhibit 100?

A. The three sub-departments in the general manager's department referred to, being supervision, sales, research, and statistical personnel have to do with the over-all function of the field operation and encompasses problems of all of the operations within a field. Therefore, in determining the proper allocation procedure for the particular sub-departments of the general manager's department, the distribution of effort for the entire field personnel was employed.

Q. And is that the same method that was used in distributing a part of the personnel supervisor's time to direct shipments in the Detroit Field and also part of Mr. Raupagh's time?

A. Yes, part of Mr. Raupagh's time would correspond with the ratios used in allocating these particular accounts.

Q. I think you said this morning that the same method was used for the personnel supervisor?

A. Yes, sir. Yes, sir.

Q. Will you explain, Mr. Boatwright, what ratios
5602 were used to obtain the percentages shown opposite
gasoline and refined oil department on page 127 and
what employees' hours in the Detroit Field were used for
the purpose of obtaining those ratios?

A. The ratios used in the allocation of the gasoline and refined oil department, first, excluded jobbers and Other Products which, as you will recall, was the motor oil portion of their sales. Then—

Q. Well, may we stop there just a moment?

A. Yes.

Q. I was a little uncertain as to the meaning of that. I assumed that that meant you simply applied no ratio for the purpose of transferring any expense to that column, but that perhaps did not affect the ratios which were applied for transferring a part of the expense to jobber, naphtha, and gasoline, and to direct shipment to other customers, for each instance might have three ratios, but you simply just left the other one out and didn't do anything with it when you got to the second column?

A. That is correct. And I just wanted that to be clear on the record that we do not use that particular ratio. Then to get the ratio for the allocation of that part of the expense which would be assignable to jobber, naphtha, and gasoline, we took the combined hours of Mr. Raupagh, Mr. Blough, and Mr. Hamer, and added the three in the
5603 top supervision classification in the Detroit Field and expressed that ratio as a percentage of their total time, to determine the proper allocation of this particular sub-account.

Q. Can you explain your reasoning as to why you used those top three supervisory employees for that purpose?

A. Yes, I can explain our reasoning for that. The gasoline selling function to these accounts is performed by these individuals named.

Q. In the field?

A. In the field, yes. It didn't seem quite an equitable thing to do, to bring in all of the personnel in the field in determining the proper allocation ratio.

Q. Were those ratios obtained by using the direct shipment ratios of the field manager and two assistant field managers applied to the total expense of the gasoline and refined oil departments assigned to the Detroit Field?

A. They were.

5604 Q. I note that on Page 127, 5.242% of the expense of the gasoline and refined oil department assigned to the Detroit Field is allocated to direct shipment other customers. That is a rather large percentage compared to most of the allocations to that channel for departments not involving motor oils or other specialty products and also it seems to be a considerably larger expense than is indicated for either the field manager's or either of the assistant managers' in the Detroit Field for that channel. Can you explain the reason why that figure of 5.242% is as large as it is, Mr. Boatwright?

A. Yes, I think I can explain that.

Mr. Blough, being one of the three men used in the determination of the ratio, is directly responsible for the sales effort to direct shipment customers of the group of engineers and industrial salesmen and because we base the allocation factor for all three of these direct shipment channels based on the direct selling effort, there is no inclusion of other personnel in the field to bring that average down.

You see, these engineers and the industrial salesmen, of necessity, devote a large part of their selling time to the direct shipment other customers and because in determining Mr. Blough's ratio we did not include the "B" station agents and the "B" station salesmen, and so 5605 forth, for your direct shipment allocation ratio, there is no other classification of personnel to weight that average down.

Q. Well, in determining the ratios used for distribution to direct shipment channels of Mr. Blough's salary expense, you used all of those classes of employees and, in fact, all the others down through the list, including the accounting department and others, did you not, in reaching the percentages which are shown on Page 84?

A. That's as pertaining to Mr. Blough's salary, yes sir.

Q. Yes. Now am I to understand that in applying the distribution of Mr. Blough's time as between direct shipment channels and other channels to the gasoline and refined oil department expense, you did not use the same distribution of time which was applied on Page 84?

A. You are to understand that, yes sir.

Q. That, you had not explained. When you said a moment ago that you used the direct shipment time of the manager and assistant field managers as related to their total time for the purpose of making your distribution of the expense for gasoline and refined oil, I assumed, of course, that you were referring to the distribution of time which was obtained as a result of the time of all employees, as you explained either this morning or yesterday.

A. No. I don't think that would be an equitable treatment, Mr. Austin.

5606 Q. I don't say it was. I just want to find out what it was, Mr. Boatwright.

A. And I think the explanation is clear because on the record I have stated that we took that part of these three supervisors which was based on direct selling effort.

You will recall in our discussion yesterday I pointed out that there were some fifty-eight or fifty-nine members who worked under Blough only, and that there were, I think it was thirty-six worked directly under Mr. Hamer, without overlapping responsibilities.

I also pointed out that Mr. Raupagh spent his time directly in selling jobber accounts.

Now what we did was that we took the efforts of these direct individuals under—

Q. You mean the direct efforts of these individuals?

A. The direct effort of these individuals under each, Mr. Hamer, Mr. Blough, and Mr. Raupagh direct, because these are the individuals that sell the gasoline and we excluded, in determining that ratio, the "S" agents and the broad, miscellaneous classifications of these employes which would have to be given consideration in a pure supervisory function.

Q. Do I understand, then, that you used only that direct selling effort; that is, the time represented by that direct selling effort, for the purpose of this allocation, arriving at the percentages shown on Page 127 for the gasoline and refined oil department?

5607 A. For this particular department, yes sir.

Q. That makes it necessary to go back to Page 84, again, on Respondent's Exhibit 100. Will you do that?

A. Yes sir. I have the page referred to.

Q. Now yesterday I only asked you about the jobber naphtha and gasoline volume and you told me that out of 1.73 percent shown there in that column for the field manager, 1.355 percent was a direct allocation. That there was no direct allocation or direct charge made of the time of the assistant manager wholesale in that column and that for the assistant manager reseller .22 percent was the direct charge. I didn't ask you any questions about the other two columns.

Will you tell me whether for the field manager and assistant manager wholesale and assistant manager reseller any time was charged directly and is reflected as a part of the percentage shown opposite those respective individuals in the last two columns?

A. Having checked the work sheets, I can testify that the direct selling effort chargeable to Mr. P. A. Raupagh was incident to jobber naphtha and gasoline only.

Direct selling effort of the assistant manager wholesale, there was none assignable to any one of the three direct shipment channels.

The direct shipment incident to the activities of the
5608 assistant manager resale amounted to the .22 referred
to and is assignable only to the jobber naphtha and
gasoline channel.

Q. Well, I don't think that the percentage of 5.242 on Page 127 is yet fully explained, Mr. Boatwright, but again I am only asking you whether you are confident and certain from an examination of your work sheets, that you have fully described the method of allocation applied to that account. If you have, I am not interested in checking out the percentage at this time.

A. I am confident and I am certain that that is explained.

Mr. Hanley: May I inquire if you have now answered satisfactorily to yourself the differences and the reason for any differences between the allocation of the three accounts referred to on Page 122 and the gasoline and refined oils account referred to on Page 123? You were not permitted to answer, except by a "no" answer, by counsel. You had started to give some explanation. Have you given it now, to suit yourself?

Witness: Yes, I have.

By Mr. Austin:

Q. Is there any way in which your work sheet on the gasoline and refined oil department under Account 255 could be identified for future reference?

A. Could we identify the work sheet?

5609 Q. Yes.

A. Why certainly. Do you wish it identified, sir?

Q. If it is convenient. If you have a number or any other way to do it.

A. Well, the complete work on 255 will be on several work sheets. Do you want the entire series?

Mr. Austin: May we go off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Witness: The work sheets attached to schedule 12 numbering from 1 through 11, inclusive, represent the series encompassing the treatment of this account.

Mr. Austin: Thank you.

By Mr. Austin:

Q. Now referring again to Page 127 of Respondent's Exhibit 100, the next two sub-departments under Account 255 are sales promotion wholesale and sales promotion resale, is that right?

A. Yes sir.

Q. And I would like to have you explain as to those accounts, also, how the allocation to direct shipment channels was made of the costs for those two sub-departments assigned by the general office to the Detroit Field.

A. Do you wish an amplification of the explanation that appears on Page 123 of Respondent's Exhibit 5610 100 with respect to these two accounts?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5611 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Yes, Mr. Boatwright, on page 123, as I now recall it, it is stated that the allocation to direct shipment channels of the time of the two sub-departments of the general manager's department follows the efforts of the wholesale department in one case and the reseller department in the other case, in the Detroit Field. I would like to have you explain just to what extent the total hourly effort or what part thereof was used for the Detroit Field in working out these percentages for the general office.

You gave us a chart which is in evidence—I think I have it here, somewhere; I don't recall the exact number—but, anyhow, it was an organization chart, and one question that would arise would be whether all of the employees shown under the assistant manager, wholesale, would be used in the one case and all of the employees under the assistant manager, resale, in the other. If not, then some further explanation is necessary.

A. The answer is no.

Do you wish a further explanation?

Q. Yes. Then I would like to have an explanation stated.

7

A. In the case of the allocation factor used in allocating sales promotion wholesale expense chargeable to the Detroit Field, the ration was predicated upon the distribution of effort of the approximately 56 individuals 5612 working directly under Mr. Blough, assistant manager, wholesale, and engaged in direct selling work. With respect to the sales promotion-reseller, a similar procedure was followed using as the determinative of the ratios the 36 individuals directly responsible to Mr. Hamer, and, likewise, engaged in direct selling work.

You see, in each case it would have been unfair to have included all of the rest of the individuals as it would have brought the ratios down so low that it would not have been a proper allocation.

Q. Was that a separate computation made for the purpose of working out these ratios to be applied to these two general office charges or were those same ratios applied anywhere else in the cost study?

A. Well, you will recall that throughout our testimony we have indicated that our study was predicated upon individual positions. That being the case, a recapitulation was made to determine the proper allocations for those particular sub-departments of the general manager's department.

Q. There are some ratios used in several places, that is, applied to several different accounts on your exhibit 101?

A. Oh, yes.

Q. You can spot them as you go along, whether there might be one to three or one to five, or approximately what it is, and you can spot them by comparison?

5613 A. Yes, sir.

Q. I just wondered whether this is one of those or whether this is the only place where this particular ratio based upon employees working directly under the assistant managers was used?

A. I think this is the only place where these respective factors were used in the allocation.

Q. Was that calculation made by the month or on an annual basis using to obtain the hour ratios of those employees assigned directly to the assistant managers?

A. On a monthly basis.

Q. Then the ratios was applied on a monthly basis to the monthly charges from these two general office departments?

A. That is correct.

Q. Have you your worksheets available on Accounts 506 and 514 which are referred to on page 93 of Respondent's Exhibit 100? Perhaps that question is out of order. There may not be any worksheets on those.

A. There would be no worksheets on those two accounts as they are entirely a tank wagon expense.

Q. Have you any data from which you could explain the nature of the expense going into those two accounts, particularly Account No. 506. Perhaps the nature of it can be stated from your own general knowledge.

5614 A. If I may state the nature of it without having to rely upon data, then I can do that.

Q. Yes.

A. Losses by dismantling abnormal other than E. L. A. under Account 506 are dismantling charges when a capital asset is dismantled prior to its complete depreciation on the books of the company. To illustrate, a bulk plant may be dismantled and yet that bulk plant, according to the depreciation rates applicable, might be only 50 per cent written off. Another illustration might be the reconstruction of the service station and the original plant be, let us assume, only 70 per cent depreciated at the time it is dismantled. Now, the items entering into this account is the difference between the original cost and the depreciated value, which would represent the book value of the capital asset at the time of dismantling.

Q. By depreciated value, as you used there, you mean the amount of depreciation previously taken, don't you?

A. I do.

Q. Would the records of the Detroit office show the nature of the individual items of expense going into Account 506 for 1940?

A. That would have to be obtained from the Chicago records. The Detroit books would show the location of different dismantling activities which would then have to be traced through the Chicago books to find where the particular charges were incurred.

5615 Q. Well, I am interested in the nature of the expense. In other words, not so much the location as what kind of property it was that was dismantled. Would the Detroit Field books show that in connection with the location? Wouldn't they show what was dismantled?

A. They would show the particular pieces of property where dismantling occurred, but they will not show whether on that particular dismantling job there was or was not a cost which would be assignable to Account 506. That would have to be traced in the Chicago office on the Chicago books.

Q. You mean there might have been some dismantling where there was no charge to Account 506?

A. Oh, yes. If the property had been fully depreciated, there would be no charge to 506.

Q. Well, I would like to know the major items entering into that account which, of course, would mean the amount of expense charged to the particular dismantling and also what was dismantled from that property. If that is available here, why, I would be glad to know what those are. It is just a matter of looking at the books and copying them down. Otherwise, I won't make any request at this time.

Mr. Austin: So I will make a request now, if your Honor please, that a look be taken at the books in Detroit,
and if you can, give me the major items going into
5616 this account from your books here; which I would be
glad to know.

Mr. Hanley: If your Honor please, that request is resisted for two reasons:

First, it appears from the Exhibit 100 and has not been contradicted, that the Account in question, namely, 506, has no relation at all to jobber business.

Secondly, the nature of the charge or charges that are made to Account 506 have been explained by the witness and have not been challenged by the Commission as a proper cost to the reseller channel or wherever they get or in whatever channel they get into Account 506. Hence, the charges so made can have no materiality, and the request ought not to be imposed upon the Respondent.

I say to your Honor some day we just have got to come to an end with these requests. We have to close the record even if we can't close the case sometime.

Trial Examiner Ballinger: Mr. Austin, how does this become material?

Mr. Austin: Why, of course, you have got an expense here of some $14,000 and a considerable portion of it more than half of it, is charged to the—just a moment—well, no, it is a total expense of $24,000 of which $14,000 is charged to tank wagon reseller.

How can we possibly know whether that is a proper charge to the tank wagon reseller channel until we 5617 know the nature of the expense? It is perfectly material and a perfectly material question.

The Witness: May I make a statement off the record to my counsel?

Trial Examiner Ballinger: You may.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Upon looking at the actual Account 506 on Respondent's Exhibit 101, it appears that in the reseller channel there is something in excess of $14,000 charged, and in the consumer channel something in excess of $9,000 charged.

I will say to the record in prefacing my further remarks that that ratio does an injustice to the—perhaps I might say the differential sought to be established here, for the reason that a great deal more of the total of those two figures should be charged into the reseller channel than is charged into the reseller channel and, thus, the reseller channel cost would be increased, the reason for that being primarily that in this there was a great predominance of dismantling of service stations which are reseller outlets.

Now, I say that just because I am going to remark that if advantage is taken of the offer that I am going to make, I am satisfied that that will be the result that 5618 is found. I stand on the resistance originally made and on the grounds therefor. The Respondent will not produce any transcripts of any of its records. All that the Respondent will do is make whatever books we have available for the examination of the Commission's representatives.

5619 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I would like to add on the record, if you please, to the grounds for my resistance to the request originally made, the further ground that it appearing from statements by counsel for the Commission made off the record that he regards that he is entitled to ascertain a complete breakdown of the item 506, that any such breakdown is immaterial on any issue in this case. That all that counsel is entitled to—and he is not entitled to that until there is a challenge of the propriety of the account—is the nature of the account and the expense.

You recognize, I am sure, Judge, that if the position of Mr. Austin is sound on this item 506, it would be equally sound on every one of these items and that means just going into the Detroit Office and the Chicago Office with a crew of accountants and following through every individual voucher that is drawn through the Detroit Office for the year 1940. That's just exactly what it means.

Mr. Austin: Well, I think that the Commission is entitled to cross-examine on any one of these accounts in Respondent's Exhibit 101 as to the nature of the items making up the total expense and where there is any division of expense in an account between different
5620 classes of business of different classes of customers,
to determine the nature of expense and the amount going into each class.

Now as far as this particular account is concerned it has already been indicated by the witness that some of the expense may be for dismantling of service stations and some of the expense may be for dismantling of bulk plants.

I am contending that those two classes of expenses should be treated differently. We have here a total of $14,000 all treated in the same way. Therefore, it is necessary to be able to determine the sources of these expense items making up a total of this kind so that we can analyze them and be in a position to determine whether or not the Respondent is correct and justified in claiming a cost differential upon the basis of such an account.

May I go off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The hearing will stand in recess for five minutes.

(A short recess was taken.)

5621 Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. Mr. Boatwright, has there been any change in the company's regular procedure in allocating advertising costs going into Account 075 since 1937?

A. I just don't know. There may have been some minor changes but I couldn't answer you positively.

Q. I will direct my questions to some portions of the exhibits in the record.

Turning to page 5 of Respondent's Exhibit 99, under Account 075, the first sentence is: "When allocating charges to Account 075, distribution is made directly to each channel when possible." And then an example is stated which refers to costs involved in installing jewel globes and advertising signs. I take it that those costs of the nature referred to in the example are costs which you here state is the practice of the company to charge directly to channels on Form 189?

A. Yes, sir.

Q. And turning to Respondent's Exhibit 100, the bottom of page 25 and the top of page 26, there is a description of the method used in charging certain of the time of the construction men spending their time on making repairs on advertising signs to direct shipment channels. Do I understand that that sort of expense such as is described at the bottom of page 25 and the top of page
5622 26 is charged directly to channels as a part of the
company's accounting procedure?

Mr. Austin: May I withdraw the question, your Honor?

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. In explanation of the withdrawal, I would like to go a little further and call your attention to various things I have in mind so you can give one answer rather than to call your attention to one thing and later to something else which I think may be inconsistent. I will call your attention to all of them and then if there is any inconsistency, you can explain it.

So that I just referred to the bottom of page 25 and the top of page 26 as illustrating as what appears to me to be a direct charge, at least, to direct shipment business.

Turning next to page 27 on Respondent's Exhibit 100, there is a charge to direct shipment channels there, particularly to jobber channels for signs, frames, and globes, on the basis of an amortization except as to Standard service signs which are charged at their entire value; is that correct?

A. Yes, sir.

Q. I take it that that is also a direct charge to channel, at least for the purpose of charging to direct shipment channels?

5623 A. Yes. The items enumerated on the bottom of page 27 were charged direct to the direct shipment channels.

Q. Now, what gives rise to the question is that previously an exhibit was put in the record, Commission's Exhibit 84, which related to 1937, which on page 84-B reads as follows:

"Dealer sign expense. As stated above, distribution to the sales channel is made on the basis of gallonage sold through that channel and, therefore, expenses incurred in advertising through these media are spread to channel on this basis."

And on page 84-C there is a summary of what is called "Other major items." And it is stated there:

"Other items of advertising expenditure are spread on a gallonage ratio basis to sales channels shown on Form 189 as outlined for newspapers."

So that as I read Commission's Exhibit 84, dealer signs which I would assume included globes, although that is one of the things you can explain, would be charged on a gallonage basis, and as I read your Exhibit 92 and 100 those similar items are charged on a direct basis.

A. Well, I would have to answer you, sir, that accounting instructions do change from time to time. Frequently in our testimony, you will recall that we have indicated a change of account classification, and for me to answer that
there had or had not been a change in the accounting
5624 instructions on this particular account in the treatment of this particular type of expenditure in a five-year period, I just couldn't do it without checking the instructions.

5625 Q. Is it true that the portion of the time of construction men working on advertising signs and globes which has been charged to direct shipment channels in this cost study was determined on a time basis and charged directly to the direct shipment channels?

A. That is true.

Q. And the charge to jobber channels for signs, frames and globes, installed at jobber outlets, was made on the basis of actual signs, frames and globes installed at jobber outlets were through actual value or amortization and not upon the basis of any allocation of total expense; is that correct?

A. Yes, sir. It was predicated upon an inventory of signs taken at the outlet.

Q. Have you any record of the total expense in 1940 of the nature described at the bottom of Page 25 and top of Page 26 on Respondent's Exhibit 100?

A. And by that do I understand you by to mean the total expense incurred by the company as reflected our forms 0133, the work orders of these particular parties?

Q. Yes. That is the form referred to here and I was referring to the expense of the nature stated at the bottom of Page 25 which refers to construction men making repairs on advertising signs at retail outlets for sign installations.

A. No, we do not have a total on that because we
5626 were concerned only with cost of that nature
incurred on direct shipment accounts. Each of the work orders was reviewed but we did not pick up those that were not involved in any way in the complaint.

Q. Well—"in the Complaint?"

A. Yes. There was no need of picking up these work orders having to do with the tank wagon reseller channel. They were already in that account.

Therefore, what we did was to pick out those having to do with the direct shipment channels so we could pull that part of the expense out and segregate it to the proper channel.

Mr. Austin: Well, in fairness to the Respondent I would like to call attention to this consideration: That we all know there is considerable dispute about some of the costs going into Account 075.

If the Commission should decide that certain of those costs did not afford the basis for a cost justification but that these costs here referred to at the bottom of page 25 and 26 are properly allocated, the Commission, as the record stands now, would have no basis of determining what amount of Account 075 was properly allocated because the total amount of expense of this is not shown; only the part to direct shipment expense is shown.

I simply call attention to that in the event that
5627 the Respondent should desire, on its own behalf, to
introduce the total amount of that expense.

By Mr. Austin:

Q. Turning to Page 27 of Respondent's Exhibit 100, Mr. Boatwright, there is a total expense there shown which is charged to the direct shipment jobber channels on Exhibit 101 of $1,358.48, is that correct?

A. Yes, sir.

Q. Have you any record of the total expense for 1940 for the Detroit Field for signs, frames and globes of the nature shown on Page 27?

A. No, I do not.

Mr. Austin: Well, the observation that I made on the record with respect to the expense described at the bottom of Page 25 would also apply to any effort to segregate the total amount of sign, frame and globe expense in the event that some other portion of Account 075 was disproved.

Mr. Hanley: May I ask a question so I will be sure I understand the point counsel is making?

Trial Examiner Ballinger: You may.

Voir Dire Examination by Mr. Hanley.

Q. Mr. Boatwright, in respect of the items of expense that are referred to on the bottom of page 25 and on
5628 page 27, that counsel has been asking you about, is
it or is it not a fact that in the regular form 189 all of that expense would be in the reseller channel, or would there be any in any other channel?

A. Your construction men's expenses would be charged to Account 7000 and prorated back on a gallonage basis.

Q. Between what channels?

A. Tank wagon reseller, tank wagon consumer and other methods.

Q. Is that the only one of the items of expense referred to on those two pages that wouldn't go into the reseller channel on the regular 189?

A. Well, I think all of the other items enumerated at the bottom of page 27 would go into the one-thousand series; namely, the reseller channel.

Q. Then as the result, Mr. Boatwright, this: That on the construction figures the total of what you have pulled out and allocated to direct shipments, taken together with the balance of that account as it is distributed among the three channels, would equal the total of that particular expense item for the year?

A. Yes, that is true.

Q. Is it not also true that with respect to all of the other figures that counsel has been talking about, that the amount of those figures that you have set up in 5629 Exhibit 100, taken together with the balance of the items under those expense accounts as appeared in Respondent's Exhibit 101, would make a total which would be equal to the total amount of such expense accounts for the year?

A. Yes.

5630 Mr. Hanley: Mr. Austin, in view of what the witness has said, I am at a loss to understand what you mean by your statement that these figures are not anywhere disclosed.

Mr. Austin: I can explain that very easily.

Mr. Boatwright, the total figure for signs, frames, and globes, for instance, of all of the expenses of the nature described on page 27 is not set forth anywhere on Exhibit 101, is it, except as it is included in a much larger figure for Account 075?

The Witness: That is correct. It is included in a larger figure.

Mr. Austin: That is the point.

Mr. Hanley: Maybe I understand your question or your suggestion now, Mr. Austin. Let me make sure. Is it your thought, referring to page 27, for example, that you might take the position and the Commission might agree with you that the Standard service signs item is a proper item to go into the reseller channel?

Mr. Austin: No.

Mr. Hanley: That the following item "Standard Oil Product signs" might not be a proper item?

Mr. Austin: No. I am treating that as a group which is a total there of $1,358.48. Now, that sum—or, rather 99.465/1000 of a cent of it, ~~as~~ you will see on page 28, is charged to jobber, naphtha, and gasoline, so that you 5631 have a sum of something less than $1,358, which is included in the item of $3,275 on Respondent's Exhibit 101.

If you will turn to Respondent's Exhibit 101, Judge Hanley, and look at Account 075, I think you can see it very plainly. That is the first account down there in the lower half.

Mr. Hanley: Yes, I have found it.

Mr. Austin: All right. Under jobber, naphtha, and gasoline, there is a total of $3,275. and some cents. We know from Respondent's Exhibit 100 that $1,358 of that less a small amount which you could compute is a charge for signs, frames, and globes—but now turn to the tank wagon reseller channel, you see a charge there of $126,225.

We do not know and it cannot be computed from anything in the record as to what portion of that $126,000 is the tank wagon expense for signs, frames, and globes. So that while it is possible from Respondent's Exhibit 100 to separate the portion of the direct shipment expense to jobbers which is allocable to signs, frames, and globes, you can't do the same thing over here in the tank wagon reseller channel from anything that we have. And if that type of expense was to be allowed, it would have to be allowed in both channels.

Mr. Hanley: Well, I won't take any more time now, your Honor, to discuss this.

Trial Examiner Ballinger: Off the record.

5632 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Direct Examination (Resumed) by Mr. Austin.

Q. Mr. Boatwright, in answer to questions asked by Judge Hanley, did I understand you to state that the expense for the time of construction men as described at the bottom of page 25 and the top of page 26 is charged between channels on Form 189 in the company's regular accounting procedure on a gallonage basis?

A. That statement is correct and it is stated on page 4 of Respondent's Exhibit 99 under the example from which I quote:

"Other painting expense and other advertising salaries not directly chargeable to the automobile supplies channel are prorated to the tank wagon reseller, tank wagon consumer, and Other Methods on a gallonage basis."

Q. That explanation on page 4 does not refer to Account 075, does it?

A. Well, the construction men would be handled in the same way as the painters, Mr. Austin.

Q. But the construction men go into Account 075, do they not?

A. For such of their work as is on advertising signs, yes, it would be handled the same way.

Q. Now, Judge Hanley further asked you about
5633 the expense of the signs, frames and globes on page
27, and that was in effect the same question I asked
you a while ago when I referred to Commission's Exhibit
84. I understood at that time that you were not certain
of the answer to what appears to me to be an inconsistency
between the two exhibits. In answer to Judge Hanley's
question now, I understood you to say that these charges
for signs, frames and globes are direct charges to the
reseller channel, and I wondered if you had now resolved
your uncertainty on that point?

A. Well, I answered Judge Hanley as I did because his question, as I interpreted it, was limited to the year 1934.

Q. 1940.

A. Or 1940. I am sorry! And your question was, has there been a change of accounting instructions between 1937 and 1940. Now, I assume there has, Mr. Austin, but you ask me from my own knowledge if I know that there has been one and I would have to check that. I am sure you see the reasonableness of that position.

Q. Do I understand that you are not prepared to state definitely now what the company's regular accounting procedure is and was in 1940 with respect to the allocation between channels of expense for signs, frames, and globes installed at reseller outlets?

A. Why, I think the exhibit—Respondent's Exhibit 99
is clear on that point and that was checked against
5634 the accounting instructions for the year 1940.

Q. When you say that Exhibit 99 is clear, are you referring to page 5, because I am referring now to signs frames and globes themselves, not to the time of the construction men.

A. I am referring to page 5 of Respondent's Exhibit 99 and, particularly, the first sentence of the first example wherein the exhibit states:

"Costs involved in installing jewel globes on gasoline pumps and reseller outlets and costs of advertising signs installed at reseller outlets which refer to a particular brand of gasoline are charged direct to the tank wagon reseller channel (1075)."

Q. And would it not follow from that explanation that the cost of installing the globes and signs and the cost of the globes and signs themselves are both charged directly to the reseller channel? If you are not sure, Mr. Boatwright, let's not try to answer it because I don't expect anyone to remember all of these details, even anyone who is as well informed as you are.

A. I don't know.

Q. I don't feel that I expect you to know all the answers.

A. I don't know. However, we all appreciate, do we not, that the cost of installing a jewel globe is a very small item?

5635 Q. Well, I wondered if there might not be a distinction between the signs and perhaps installing jewel globes, which is unimportant, but between the signs themselves and the time of the construction men on the other hand.

A. It is such a small item, Mr. Austin, that I couldn't answer you with accuracy.

Q. You are now referring to just the installation costs?

A. Yes, sir.

Q. The repairing and upkeep and maintenance is more substantial, is it not?

A. I would expect it to be more substantial, yes, sir.

Q. There is one other point there, Mr. Boatwright, that occurs to me may not be very important but if you will notice on page 28 of Respondent's Exhibit 100, the charge to jobbers for point of sale of material, station signs, and road maps is allocated between jobber, naphtha, and gasoline, and jobber and other products, according to the percentage of total jobber purchases, which was naphtha and gasoline as against Other Products. Would it not follow from that, that if the balance of the expense of the types listed here is chargeable to tank wagon reseller customers, that the expense would, in turn, be allocated between the tank wagon reseller channel and the Other Methods channel on the basis of the gasoline and naphtha purchases of the tank wagon reseller customers as against the purchases of motor oil and other company products by 5636 tank wagon reseller customers?

A. Well, there is an item there, Mr. Austin, of $16 that should be in the gasoline column.

Q. What do you refer to now as to the $16?

A. On page 27.

Trial Examiner Ballinger: Of what exhibit?

The Witness: Respondent's Exhibit 100.

By Mr. Austin:

Q. You mean that 535/1000 of a per cent?

A. Yes, sir.

Q. Well, I was assuming that this allocation on page 28 was correct, but you will concede that the portion of the tank wagon reseller customer purchases which is other than gasoline and naphtha, amounts to a great deal more than any 535/1000 of a percent; it amounts to a substantial figure, doesn't it?

A. No, not a large figure.

Q. Don't they purchase a lot of motor oils, greases, and other things?

A. Well, expressed as a percentage of the total volume, it would not be a large percentage.

Q. But in terms of gallonage it would still be much more substantial than this 535/1000 that you have given recognition to for jobbers?

A. It would. It would.

Q. My only point is that if that 535/1000 or a per 5637 cent or $16 is given recognition between the jobber channels, I wondered whether you had given similar recognition to the admittedly larger percentage of other products purchased by tank wagon reseller customers?

A. Well, the admittedly larger ratio that you are referring to is still an awfully small ratio. I don't know the exact ratio but I would estimate it as under two per cent.

Q. Well, I just asked you whether recognition had been given to it?

A. I would have to check that, too.

5638 Mr. Austin: Now, your Honor, in response to a request which I made to Respondent's counsel, the Respondent has produced a file of advertising copy used by it in Detroit in 1940 and from that file I have selected six or seven advertisements which I believe are fairly representative of the material in the file and I would like to offer these advertisements in evidence. If the Respondent doesn't think they are sufficiently representative and wants to put in more, I won't object to that, but I tried to keep the number down ~~and~~ just get representative samples.

Mr. Hanley: Is that the purpose of just selecting a few out of the file?

Mr. Austin: Yes.

Mr. Hanley: Just for the purpose of not encumbering the record?

Mr. Austin: Surely.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

We will have a five minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin: I would like to have these advertising copies marked for identification.

Trial Examiner Ballinger: The Reporter will 5639 mark the documents Commission's Exhibits 121-A to 121-G both inclusive, for identification.

The documents referred to were marked "Commission's Exhibits 121-A to 121-G", both inclusive, for identification.

By Mr. Austin:

Q. I will hand you Commission's Exhibits 121-A to 121-G, for identification and ask you if you can describe what they are, Mr. Boatwright?

A. Yes, I can explain these exhibits I think, with reasonable brevity.

Commission's Exhibit 121-A is the first ad that appeared of a particular campaign that was conducted in the Detroit area on the theory that Red Crown leads other gasoline two to one.

Trial Examiner Ballinger: When was that ad?

The Witness: This particular ad which we have is the final proof dated 5/20/40.

A. (Continuing.) Commission's Exhibit 121-B illustrates one ad of the "10 Star Spring Tune-Up" campaign which was conducted in the spring of 1940.

Commission's Exhibit 121-C is an ad which is on Iso-Vis Motor Oil, predominantly, which was run in the summer of 1940.

Commission's Exhibit 121-D is one of a series of ads which developed the theme "Laugh at Winter with 5640 Red Crown," which was run in the winter of 1940.

Commision's Exhibit 121-E is one of a series of ad announcing the improvement in the quality of our Red Crown gasoline, run in the early part of 1940.

Commission's Exhibit 121-F illustrates the nearest approach that we make to the so-called department store type advertisement, of which we would run approximately four ads a year listing various products available at our outlets, while Commission's Exhibit 121-G is not one of a series of ads or a campaign, in the true sense, but is a good illustration of an institutional type ad declaring the policy of our company in product leadership.

Mr. Austin: I offer these advertisements in evidence, your Honor, with the understanding that the Respondent will advise me if they find that they do not have duplicate copies of any of them, in which case the Commission will have photostats made and substitute the photostats for the original as an exhibit and return the original.

Mr. Hanley: The offer is objected to as immaterial and irrelevant, it not appearing that there would be any probative value at all in the demonstration to the Commission of the specific copy or phraseology of general newspaper advertising, the only material issue being the fact of whether the Respondent did general newspaper advertising and the cost thereof and the offer, if 5641 received, encumbers the record.

Trial Examiner Ballinger: The objection is overruled.

Commission's Exhibits 121-A to 121-G, inclusive, are admitted in evidence.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 121-A to 121-G", inclusive, were received in evidence.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Boatwright, I show you Commission's Exhibits 94 and 95 for identification. I asked you the other day, I think yesterday, whether you were familiar with that form. Have you made any further investigation so that you can now state what the form is and where it is made out?

5642 A. This form is an acknowledgment of orders, and it is prepared in the Detroit office by one of the clerks in the sales department.

Q. And what is done with it when it is prepared?

A. It is sent to the general offices.

Q. You say it is prepared by one of the clerks in the sales department?

A. Yes, sir.

Q. In what account does this time of the clerk appear in Respondent's Exhibit 101, Form 189?

A. In Account 003.

Q. Was the time of the clerk or clerks devoted to the handling of invoices and in making and forwarding of acknowledgments of jobber orders charged to the jobber, naphtha, and gasoline, and Other Products channel on Respondent's Exhibit 101?

A. Yes, sir.

Q. Now, on these two exhibits which I have shown you, Commission's Exhibit 94 and 95, for identification, there is one line opposite the wording "Freight to destination" and on each of the exhibits appears the figure .22 cents. Does that mean .22 cents per gallon?

A. Yes, sir.

Q. Will you explain whether or not that figure .22 cents represents the freight charge per gallon paid by the Respondent for the shipment of gasoline referred on

5643 these respective forms from the River Rouge terminal to the jobbers named?

A. It may not represent exactly the freight per gallon as the rate of .22 cents per gallon is used for all shipments from River Rouge to the Detroit metropolitan area in which only a switching charge is involved.

Q. How is the figure .22 cents arrived at?

A. Why, it is an average based upon the switching charges incurred in serving various jobbers and other tank car buyers in the metropolitan area.

Q. Did the Respondent pay any transportation charge for gasoline shipped from River Rouge to the four Detroit jobbers in 1940 determined on the basis of a certain amount per gallon of gasoline transported by tank car?

A. As long as the jobbers were served by tank car, our only payment of freight was a switching charge which was on a per car basis rather than upon a gallon basis.

Q. Was the switching charge the same for all shipments to particular jobbers regardless of the size of the car being shipped?

A. It was.

Q. Did the switching charge vary as between different jobbers to whom gasoline was shipped by tank car in 1939 and 1940?

A. The switching charge did vary among the different jobbers.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

644 Trial Examiner Ballinger: On the record.

Mr. Austin: I would like to have this document arked, for identification.

Trial Examiner Ballinger: The Reporter will mark he documents Commission's Exhibits 122-A, B, C, and D.

(The documents referred to were marked "Commission's xhibits 122-A, B, C, and D" for identification.)

y Mr. Austin:

Q. I now hand you Commission's Exhibit 122-A, to D, or identification, and ask you if you can give an identifiation of these documents?

A. Commission's Exhibit 122-A is a freight bill for the hipment of a tank car of gasoline from River Rouge to ed's Auto Supply.

Commission's Exhibit 122-B is a freight bill showing ost for shipment of a tank car of gasoline from River ouge to Citrin-Kolb Oil Company.

Commission's Exhibit 122-C is a freight bill representing he shipment of one carload of gasoline from River Rouge o Stikeman Oil Company.

Commission's Exhibit 122-D is a freight bill representing a shipment of one tank car of gasoline from River Rouge o the Wayne Oil Company.

All of these respective exhibits, A, B, C, and D, represent shipments during the month of December, 1939.

5645 Q. And are those bills indicative that payment was made by the Standard Oil Company to the raiload?

A. The bills do so indicate.

Q. Is it your testimony that the charges shown on these ills are the only transportation charges or were the only transportation charges incurred by the Standard Oil Company with respect to the transportation of gasoline referred to in the respective bills from the River Rouge terminal to the bulk plants of the respective jobbers?

A. I do so testify.

Mr. Austin: ~~I offer these four freight bills in evidence~~, your Honor, with the understanding that photostats will be made and the originals returned promptly to the Respondent in Chicago.

Mr. Hanley: The exhibits and each of them is objected to as immaterial and for all of the reasons stated by the Respondent in its objection to the offer of exhibits 94-99 in the hearing in Washington concerning the proof or attempt to prove any freight charges paid by the Respondent on gasoline into Detroit.

Trial Examiner Ballinger: The objection is overruled and upon the conditions stated by counsel for the Commission, the exhibits, for identification, are admitted in evidence as Commission's Exhibits 122-A, B, C, and D.

5646 (The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 122-A, B, C, and D", were received in evidence.)

Mr. Austin: Do I understand that the Respondent is prepared to stipulate that the transportation charge shown as a switching charge of $24.20 on Commission's Exhibit 122-A was the charge made to and paid by the Respondent on each carload of gasoline shipped from the River Rouge terminal to Ned's Auto Supply Company from January 1 to February 15, 1940; that the charge of $26.40 shown on Commission's Exhibit 122-B was the charge made to and paid by the Respondent for each carload of gasoline shipped from the River Rouge terminal to Citein-Kolb Oil Company from January 1 to February 15, 1940; that the charge of $17.60 as shown on Commission's Exhibit 122-C was the charge made to and paid by the Respondent on each carload of gasoline shipped by it from its River Rouge terminal to the bulk plant of the Stikeman Oil Company between January 1 and February 15, 1940; and that the charge of $24.20 shown on Commission's Exhibit 122-D was the same charge made to and paid by the Respondent upon each carload of gasoline shipped by the Respondent from its River Rouge terminal to the Wayne Oil Company from January 1 to February 15, 1940?

Mr. Hanley: If your Honor please, the Respondent will stipulate to the fact as expressed in the request of counsel for the Commission but Respondent pre-5647 serves its objection to the reception of the fact in evidence or the use thereof as already stated.

Mr. Austin: I hereby return the balance of those freight bills, Judge Hanley.

Mr. Hanley: Thank you.

Mr. Austin: I also hand you those supplied except for December, 1939.

Mr. Hanley: That is all of the two batches that we supplied to you?

Mr. Austin: No, that is the first batch. I think you gave me some this morning.

Mr. Hanley: Yes, I gave you a lot of the freight bills.

Mr. Austin: I also return to you herewith the ones which you gave me this morning.

Mr. Hanley: So that cleans it all up. Thank you.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I think it appears on the record that counsel for Respondent handed me a few days ago several contracts between the Standard Oil Company and contract haulers of gasoline in Detroit or in the Detroit Field. One
of the contracts handed me was an agreement between
5648 the Standard Oil Company and the Striproe Company
with certain riders and with a notice of cancellation attached. The contract in question is dated December 15, 1932, and, according to the notice of the cancellation, the parties made and executed a new contract for hauling to replace this old contract, the new contract being dated March 1, 1939, but no copy of the new contract was supplied to me by the Respondent. I don't know whether counsel for the Respondent—

Mr. Hanley: It just occurred to me, your Honor, if I may make inquiry of Mr. Austin—I am wondering if the Commission is interested in pursuing this contract feature any further. It has been expressed by Mr. Austin that they are not a very understandable thing to him, and it has now been arranged that Mr. Warmack will consult the records of the Respondent to verify the fact of our payments of certain sums to these contract haulers, and I can really see no reason why we should struggle along with that contract business any more.

Mr. Austin: I am not going farther with that except that I just wanted it to appear that there was one contract that I hadn't seen because it also appears on the record that a lot of them were handed to me.

Mr. Hanley: Well, I am just sorry—

Mr. Austin: I am dropping it at the present.

Mr. Hanley: I haven't got those contracts and
5649 haven't had them since we were in Washington.

Mr. Austin: Well, I assumed that you hadn't noticed that reference.

Mr. Hanley: I gave you what the traffic department gave us.

Do you care to have those contracts introduced in Washington any longer?

Mr. Austin: Well, I do certainly at the present time until we determine whether we can obtain some other evidence of charges made.

Mr. Hanley: I see. All right. All right.

Mr. Austin: May I go off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I have here a sheet which is one of the sheets in the file of contracts handed to me by Judge Hanley the other day and which has just been referred to on the record. This particular sheet is entitled "Rider No. 3" and is an original sheet bearing signature of a vice president of the Standard Oil Company and of the president of the L. A. Smith Company, the latter company being the contract hauler with whom the contract was made, and being a rider to a contract of November [illegible], 1939, between the Standard Oil Company and the L. A. Smith Company, 5650 a photostatic copy of the original contract, and also of rider No. 2 are now in evidence as Commission's Exhibit 93-A to E, inclusive. Rider No. 2 to the contract is in evidence as Commission's Exhibit 93-A.

I would like to offer Rider No. 3 and request if it can be done, without violating any established procedure, that it be inserted as Commission's Exhibit 93-A-1 immediately following Commission's Exhibit 93-A.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I offer this rider which has been handed to me by counsel for Respondent, after removing the same from the original contract file to be admitted as Commission's Exhibit 93-F, and will request that it be inserted in the record following Respondent's Exhibit 93-E so that its connection and relevancy to the original contract may appear, further, with the understanding that this sheet will be photostated and the original returned to Respondent.

Mr. Hanley: The offer is objected to for the reason the same is immaterial, for all of the reasons heretofore made to offers to prove by exhibit or by testimony any freight charges paid by Respondent on delivery of gasoline into Detroit, and on the grounds of all the objections made at the time of their reception in evidence to Commission's

Exhibits 92 and 93-A to E, and sub letters, if any be 5651 added, and for all of the reasons discussed and assigned by the Respondent in the arguments and discussions having to do with Respondent's Exhibits 94 to 99, both inclusive, for identification, when the same were first offered in evidence in the hearing in Washington.

Trial Examiner Ballinger: The objection is overruled. Commission's Exhibit 93-F is admitted in evidence. The Reporter and the docket room of the Federal Trade Commission are instructed to insert the document in the Commission's Exhibit immediately following Commission's Exhibit 93-E.

The document will be photographed and a photographic copy inserted in the exhibits and the original returned to the Respondent.

(The document referred to was marked "COMMISSION'S EXHIBIT 93-F" for identification, and received in evidence.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

5652 Mr. Austin: At this point, if your Honor please, I would like to make Mr. Boatwright my witness. I think this is a subject which is more properly rebuttal than cross-examination.

Trial Examiner Ballinger: The witness is now a witness for the Commission.

Mr. Austin: I would like to have this sheet marked for identification, please.

Trial Examiner Ballinger: The Reporter will mark the document Commission's Exhibit 123, for identification.

(The document referred to was marked "Commission's Exhibit 123", for identification.)

By Mr. Austin:

Q. I show you this sheet marked Commission's Exhibit 123, for identification, and ask you if you can identify it?

A. I can, sir. Commission's Exhibit 123 marked for identification was prepared under my direct supervision. It represents an outline map of the various sales divisions of the Standard Oil Company and typed thereon for each of the sales' fields are the total cents per gallon marketing cost tank reseller channel for the years 1939 and 1940, including therein the income and expense of the leased service stations as a part of the reseller cost.

Mr. Austin: I want to offer this Commission's Exhibit 123, for identification, in evidence.

5653 Trial Examiner Ballinger: Is there any objection?

Mr. Hanley: May I see the exhibit?

(Counsel for Commission handed counsel for Respondent a document.)

Mr. Hanley: No objection.

Trial Examiner Ballinger: The document is admitted in evidence as Commission's Exhibit 123.

(The document referred to, heretofore marked for identification "COMMISSION'S EXHIBIT 123" was received in evidence.)

By Mr. Austin:

Q. Mr. Boatwright, referring to Commission's Exhibit 123, I believe you stated that that exhibit shows the unit cost of the Standard Oil Company for marketing its products through the tank wagon reseller channel in its various fields?

A. Yes, sir.

Q. Is that unit cost for the tank wagon reseller channel; that is, unit marketing cost; the same in each field?

A. No, sir.

Q. And as shown by this exhibit the Detroit Field and the Chicago Field are the fields having the lowest marketing cost in the tank wagon reseller channel, in that order?

A. Yes, sir.

Q. Now it appears from this exhibit that as you go westward the company's marketing costs in the tank

5654 wagon reseller channel increase.

A. Yes, sir.

Q. And is it a fact that in the western territory of the company, particularly in the Dakotas, Montana, Wyoming, Colorado, Kansas and Missouri, that the tank wagon reseller cost per unit of marketing its products is substantially higher to the company than it is in the Detroit and Chicago fields?

A. The marketing costs in the states mentioned are higher than in either the Detroit or the Chicago fields.

Q. And the amount as to which they are higher is shown on the exhibit, is it not?

A. Yes, sir.

Q. Now is it part of your duty and a part of your functions as head of the sales research department of the Respondent to study marketing conditions in various fields nd the costs of marketing and the reasons for variation in osts of marketing in different fields?

A. We have studies assigned to us which bear on those questions.

Q. And as a result of your experience with the company can you state the reason for the higher marketing costs in he western territories of the company and particularly in he states named than in the Detroit and Chicago fields?

Mr. Hanley: That is objected to as immaterial. 5655 There are reasons for it, of course, but what is the materiality of that?

Mr. Austin: Well, I think that the different costs in the different territories of the company may be of some materiality and I would like to have the witness answer. If it does not appear, after I finish this line, that the testimony is material, why, it will be subject to a motion to strike.

Mr. Hanley: Oh, that "subject to a motion to strike" doesn't work at all, you know, Mr. Austin. I would have objected, if your Honor please, to the introduction of this exhibit on the ground of materiality except for the fact that it shows the marketing cost of the Respondent to be lower in the area under consideration in this law suit than any place else in which we market in the United States, covering fourteen entire states, and that's the only materiality it has. There isn't any question of differential between any prices in this law suit and any of these other prices at all.

Unquestionably I believe the reason Mr. Austin asked for this information in the first place was because he thought perhaps, and maybe he hoped, it would appear that the marketing cost in Detroit was higher, comparatively, than elsewhere and that there was an undue loading of the 189 reseller channel. I submit, your Honor, the only 5656 probative value that the exhibit has and the only materiality that it has—and I think it does have materiality for that purpose—is, namely, to establish that the Respondent in this action has certainly not loaded its reseller channel cost, being the lowest in the entire territory.

Trial Examiner Ballinger: Do you consider this material to your case?

Mr. Austin: I do, your Honor. I don't know that I can be called upon to make argument on evidence before I get the evidence but I think it is material.

Trial Examiner Ballinger: The Examiner overrules the objection, reserving to the counsel for Respondent the right to renew the objection and motion to strike, until we see what it is.

Witness: May I have the question, please.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. To state all of the reasons for a differential of that nature would be impossible from the witness stand, your Honor. The markets simply are not comparable in terms of size of outlets, in terms of distance between outlets, in terms of cost of the original construction, your representation, and in many other respects.

By Mr. Austin:

Q. Well, can't you state certain of the chief differences which account for the differences in marketing costs?
5657

A. I have. In that answer I stated several.

Mr. Austin: May I have the answer read.

(The answer referred to was read by the Reporter.)

By Mr. Austin:

Q. Well, isn't the chief difference between the western territory and the Detroit and Chicago territory the fact that the western territory is largely a rural territory whereas the Detroit and Chicago fields contain large metropolitan areas?

A. Well, there can be no question but what your statement is inherent in the answer that I gave.

Q. Is that a correct statement?

A. That is a contributing factor. There is no question about it.

Q. And has it been your experience in a study of the company's costs, that the company's costs are generally higher in fields which are comprised principally of rural areas than in fields which contain large metropolitan areas?

A. No, I wouldn't say that that were true.

Q. Well, where is the exception to that rule?

A. Well, you have asked for a very general statement. I am of the opinion that we will find the costs in the Minneapolis Field quite high and yet there is a large metropolitan area in that field.

5658 Kansas City is a good-sized metropolitan market and yet those costs are high.

St. Louis is a large metropolitan center and yet its costs are high.

Q. Aren't the higher costs in Kansas City and St. Louis due largely to cut-rate competition from the Oklahoma oil fields nearby?

A. I couldn't testify that that was true, at all.

Q. Aren't your prices lower for the prices which you receive for your products through the same methods of distribution—are they not lower in those fields than they are in other fields of the company farther removed from Oklahoma?

Mr. Hanley: If your Honor please, if it were two hours earlier I wouldn't renew my objection but I am going to renew it.

It is not material and has no probative value in this case.

Trial Examiner Ballinger: The Examiner is unable to perceive its value.

Mr. Austin: Well, if your honor please, the witness—

5659 Trial Examiner Ballinger: Unless you intend to take up conditions existing in each one of these separate divisions, it wouldn't be productive of any good and then, when you get through with that, I can't see that it would have any—

Mr. Austin: Well, I don't propose to that but—

Trial Examiner Ballinger: (Continuing) —effect upon this case.

Mr. Austin: (Continuing) —the purpose of the exhibit, I have no doubt, as is easily perceived, is that the company has submitted in support of its price differentials in the City of Detroit a cost justification based upon its costs in the entire Detroit Field which is composed of a very considerable amount of rural territory plus a very considerable amount of metropolitan territory.

I think from this exhibit it appears that the company's costs are generally higher in rural territory than they are in metropolitan territory and if that be true, then I think it may be fairly inferred that the company's costs of marketing gasoline are higher in its rural territory in the Detroit Field than the costs are in the City of Detroit.

Trial Examiner Ballinger: Mr. Austin, isn't it self apparent that there may be many contributing factors?

Mr. Austin: There may be, but this exhibit indicates a generally higher cost throughout the large areas.

5660 Trial Examiner Ballinger: Hasn't the witness already conceded that the cost is higher in the rural sections than it is in the more thickly populated?

Mr. Hanley: If your Honor please, in answer to counsel's statement of "yes," I submit that the witness has not stated anytime during this record that the costs in that portion of the Detroit Field, outside of the metropolitan field, is any higher—

Mr. Austin: He hasn't.

Mr. Hanley: (Continuing) —than it is in Detroit and there isn't any proof on that question.

Trial Examiner Ballinger: There is no contention he has but he is speaking generally about rural sections.

Mr. Hanley: If he is speaking generally about rural sections we submit that that is totally immaterial.

Mr. Austin: Well, I have no further questioning on that point—

Trial Examiner Ballinger: If you will confine it strictly to this district, you may proceed.

By Mr. Austin:

Q. Has any cost study been made by the Standard Oil Company to determine the per gallon cost of marketing gasoline to tank wagon reseller customers in the Detroit metropolitan area only?

A. No, sir.

5661 Q. Has any cost study been made by the Standard Oil Company to determine the per gallon cost of marketing gasoline to tank wagon reseller customers served by "A" stations in the Detroit Field?

A. No, sir.

Q. Or has any such a cost study been made to determine the cost to the company of marketing gasoline to tank wagon reseller customers by "B" stations in the Detroit Field?

A. No, sir.

Q. Has the company made any cost study, the results of which furnish or provide a comparison of unit marketing costs between "A" stations in metropolitan areas and "B" stations in surrounding territory?

A. Not to my knowledge.

Mr. Austin: That's all.

Mr. Hanley: I have a little cross examination, Judge. It is very short.

Trial Examiner Ballinger: Proceed.

Cross-Examination by Mr. Hanley.

Q. Mr. Boatwright, on the series of questions that you have just been asked by counsel concerning whether or not you or the Respondent has made any studies relative to certain costs, one distinguished from another, is it or is it not true that you have testified fully in this case as 5662 to your views of the possibility and feasibility of making all and any one of such costs?

A. It is my recollection that I have testified at considerable length on the feasibility of any one of the three types of cost studies enumerated by the counsel for the Commission.

Q. And just so we may have it definite, now: I won't ask you the reasons, but is it your considered opinion and judgment that it is impossible to make any accurate cost studies of that kind or even a reasonably accurate one and entirely infeasible and impracticable to attempt any such cost study?

A. Well, I don't see how we could make a cost study of that nature; in retrospect. I don't believe it would be practicable from any records that we have or now maintain.

Q. Is it or is it not your judgment and opinion that if any such study were attempted that it would involve the use of so many arbitraries and, literally, so much guesswork, as to render the results of it entirely valueless for any purpose?

A. I fear that it would.

Mr. Hanley: That's all.

Trial Examiner Ballinger: Is there anything further?

Mr. Austin: No.

Trial Examiner Ballinger: Mr. Boatwright, you are excused.

(Witness excused.)

Mr. Austin: I move that we adjourn until ten 5663 o'clock tomorrow morning.

Trial Examiner Ballinger: The motion is granted and now, at 6:20 p. m., the hearing is adjourned to reconvene at 10:00 a. m. February 25, 1942, in room 859, Federal Building, Detroit, Michigan.

(Whereupon, at 6:20 p. m., the hearing was adjourned to reconvene on Wednesday, February 25, 1942, at 10:00 a. m.)

5664

Room 859 Federal Building,
Detroit, Michigan,
February 25, 1942.

Met, pursuant to adjournment at 10:00 A. M.; War Time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5665

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, in the matter of the Standard Oil Company of Indiana, is reconvened in Room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 25, 1942. The last hearing was in the same room in the same city, February 24, 1942.

You may proceed.

Mr. Hanley: You may take the stand, Mr. Boatwright.

JOHN W. BOATWRIGHT was thereupon recalled as a witness for the respondent and, having been previously first duly sworn, testified further, as follows:

Direct Examination (Recalled) by Mr. Hanley.

Q. Mr. Boatwright: I call your attention to the word "legal" in the second line of the transcript at page 4885 in your testimony and will ask you if that is the word that should be there?

A. The word that should be there is leg.

Q. Instead of legal?

A. Instead of legal.

Mr. Hanley: We ask permission to have the transcript so corrected. It is an error that changes the sense, somewhat, so I thought it necessary to ask the witness to correct it.

5666 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I call your attention to the second line of the transcript of your testimony at Page 5100 and will ask you if there is any correction you care to make in that answer, Mr. Boatwright?

A. Yes. There should be a period after the word "no". A new sentence starting with the word "Commissions".

Mr. Hanley: That's all. You may be excused, Mr. Boatwright.

Trial Examiner Ballinger: The witness is excused.

(Witness excused.)

Mr. Hanley: The Respondent was requested to produce if it had and could locate any form 461, gasoline contracts with Ned's Auto Supply Company.

A search has been made and we are unable to find any such contracts.

The Respondent was requested to make an explanation of certain differences that counsel for the Commission thought existed between Commission's Exhibit 86 and 109. That explanation has been obtained and is now produced by the Respondent.

I am going to ask, if I may, your Honor, that the 5667 Reporter take this sheet and just copy it into the record. It has a lot of proper names and street addresses and one thing and another.

I will say for your Honor's benefit that the discrepancies that counsel thought existed arose, as we suggested at the time might be, out of the fact that between the time that the two exhibits were supplied there had been changes of operators at certain addresses so different names appeared on the exhibits. There is no difference in the outlets.

Trial Examiner Ballinger: The Reporter will copy the contents of the paper into the record at this point.

"G. Scanlon, 19906 Fenkel succeeded M. Joiner during

1937 as the operator of this Station and the sales for this location are included on Exhibit 86 under the name of H. Joiner. They are tabulated on Page 7 of Exhibit 86, 16th item from the top of the page.

J. Dudley, 20300 Grand River did not start the operation of this Station until 2-7-38. Prior to that time (November 1937 to February 1938) it was operated by B. P. Burbank and the sales for same are shown on Page 7 of Exhibit 86, fourth item from the bottom. Mr. G. W. Butler also
5668 operated this station until May 1937 at which time
we lost the business to a competitor until Mr. Burbank took it over in November 1937. The sales while Mr. Butler was operating same are tabulated on Exhibit 86, Page 8, 29th item from the top.

A. J. Ginella, Fenkel and Welland, was succeeded by Wm. C. Engler on May 26, 1937. Sales for this location are all shown under Mr. Engler's name on Page 3 of Exhibit 86, 25th item from the bottom.

W. Sokol, 9442 Wyoming, was succeeded by F. E. Hughes on 2-12-37. Sales for this location are all shown under the name of F. E. Hughes on Page 4 of Exhibit 86, first item.

C. A. & W. J. Walsh, Grand River & Rutherford, started dual operation of this station on 12-1-37. Prior to that time it was operated by C. E. Walsh. Sales for the year 1937 are listed under the name of Chas. E. Walsh, Exhibit 86, Page 4, 12th item from top of page."

5669 Mr. Hanley: If your Honor please, that completes compliance with all of the requests that have been made by the Commission at this time so far as the Respondent is aware.

Mr. Austin: If I may say so, there was just one thing that was somewhat in the nature of a request, although not particularly specific, and that was in regard to the number of contracts used between the company and tank wagon reseller outlets. I think on at least two occasions I questioned Mr. Boatwright about that and Mr. Blough the other day also, and that has never been answered definitely, and I think I suggested to you, Judge Hanley, yesterday that I might ask a couple of questions of that kind of Mr. Raupagh before we leave.

Mr. Hanley: I have asked Mr. Raupagh to be available tomorrow morning as you suggested.

Mr. Austin: I would like to have him be able to give some definite statement about contracts that are used or were used during 1937 to 1940 with tank wagon reseller outlets in the Detroit Field.

Mr. Hanley: You mean you want the number of the contracts that were in effect?

Mr. Austin: No, the different forms of the contracts that were used.

Mr. Hanley: I see. For what period of time?

5670 Mr. Austin: Well, 1937 through 1940.

Mr. Hanley: You are talking about sales contracts?

Mr. Austin: What?

Mr. Hanley. Gasoline sales contracts?

Mr. Austin: Anything that has to do with the cost of sale of gasoline. For instance, the equipment loan agreement contract is a contract between the company and the reseller customer and a copy of that is already in the record. We also have the 461 in the record, and we have the lease.

Mr. Hanley: Mr. Austin, I believe you have everything in the record that existed.

Mr. Austin: Well, perhaps. The question was raised by, as you know, Mr. Boatwright's testimony that he thought there were about six different reseller contracts.

Mr. Hanley: Well, Mr. Boatwright, I have just learned, had in mind the Form 461, Form 385, and four different forms of service station leases. They are all Form 342, the only difference being the manner of paying rent as to whether it is gasoline rental or part gasoline and part cash or all cash. You have already in the record forms of the lease. You have the 385, which is the equipment loan agreement, and you have a copy of the 461.

Mr. Austin: Yes.

Mr. Hanley: So those are all the forms that we have.

5671 Mr. Austin: Then I am perfectly satisfied with that statement, so that takes care of that request.

Mr. Hanley: I call Mr. Warmack.

WILLIAM J. WARMACK was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Hanley.

Q. Mr. Warmack, will you please give your name, residence, and occupation to the Reporter?

A. William J. Warmack.

Trial Examiner Ballinger: Speak a little louder, please.

A. William J. Warmack, 5025 42nd Street, NW, Washington, D. C.

I am employed as accountant by the Federal Trade Commission in Washington, D. C.

Q. How long have you been an accountant, Mr. Warmack?

A. Oh, I would say since about 1925.

Q. And for what length of time have you worked with the Federal Trade Commission in that capacity?

A. About twelve years.

5672 Q. Mr. Warmack, since the inception of the cost features of this present lawsuit, at least, you have been representing the Federal Trade Commission as an accountant in this case, have you not?

A. Yes, sir.

Q. And have had an intimate connection with the progress of the case and the events that have taken place in it with reference to the cost phases?

A. Well, I have followed it for the Commission. There is some parts that I may not have had exactly what you might term an intimate knowledge of step by step procedure but I followed it at least in a general way.

Q. Did you attend hearings in the case late in June which were terminated on June 27, 1941, in Washington?

A. Yes, I attended the hearings in June, 1941, in Washington.

Q. Do you recall that at that time an arrangement was made by counsel representing the parties for discussions between the accounting staff of the Commission and the accounting staff of the Respondent with a view to outlining some method of presenting cost figures?

A. I remember that a discussion was made, I believe, on the record at that time and, if my memory serves me,—of course, the record will show—the Commission's attorney I believe volunteered—

Mr. Austin: Well, I object to the witness answering that question any further, your Honor, on the ground 5673 that the record shows what is there.

Mr. Hanley: I submit to the objection.

By Mr. Hanley:

Q. All I want to know, Mr. Warmack, is if some arrangement was made at that time?

A. Well, I remember about the—if you want to come right down to the point of an arrangement, Judge, I don't know what that might mean specifically from the arrangement standpoint, but I do remember that it was discussed and we were available for any further discussions.

Q. Well, that is all. I am not asking you what the arangement was in detail.

Now, subsequently to that time did the accountants for the Commission and the Respondent meet and discuss cost features of this lawsuit?

A. Yes, sir.

Q. And when was the first of those conferences held?

Mr. Austin: Your Honor, if it is proposed to go into any discussions or statements made or matters talked over at any of these conferences, I object upon the ground that it is immaterial and irrelevant because it has already been admitted on the stand by Mr. Boatwright in response to questions by his own counsel that those were informal conferences and that nothing was said on behalf of any—or nothing was said by any of the Commission represen- 5674 tatives at those conferences which was in anyway binding upon the Commission, and that being true and conceded by the Respondent, I don't believe that testimony in detail as to discussion at those conferences is material.

Mr. Hanley: That isn't the purpose. There isn't going to be any evidence to alter that position. We understand that, and I am going to make that statement again. That isn't the purpose.

Mr. Austin: Well, may I inquire, then, as to what the materiality is or would you prefer to ask questions?

Mr. Hanley: I would rather ask the questions, and I think it will be apparent what it is.

Mr. Austin: All right. I won't press the objection at this time.

By Mr. Hanley: Q. Are you prepared to answer what date that first meeting was held, Mr. Warmack?

A. I believe that was on August the 12th, 1941, Judge, and went over—

Q. Where was it held?

A. In my office in Washington, room 252 of the Federal Trade Commission Building.

Q. Who was present at that time?

A. Mr. Boatwright of the Standard Oil Company, and Mr. Lundvall from the Federal Trade Commission, 5675 and Mr. Austin of the Federal Trade Commission, and myself. Now, I won't say that Mr. Austin and Mr. Lundvall were in there all of the time. The conference was held in my office and I am sure Mr. Boatwright and I were there.

Q. That isn't important. Did it last two days, as you recall?

A. I believe that's true.

Q. At that conference was there a discussion as to the time period that could be agreed upon that would be used if the Respondent undertook to make a cost study?

A. Will you explain just what you mean by time period?

Q. I mean the period of time which would be contemplated by the study if the Respondent undertook that task.

A. I remember this, and that is my ideas as to the time. Now, whether there was consensus of opinion—

Mr. Austin: Just a minute. May I ask, Judge Hanley, that you explain whether you mean the period during which the costs would be—

Mr. Hanley: Don't bother. I will make it very simple.

Mr. Austin: Or do you mean a period to be covered by time studies or anything of that sort?

Mr. Hanley: I will make it very simple.

By Mr. Hanley:

Q. At that meeting was there a common under- 5676 standing between you people as accountants that if a cost study were undertaken by the Respondent that it should cover the year 1940?

A. To answer that question yes or no, Judge, would not be a complete answer.

Q. Well, was there a concurrence of thinking among you that that would be a satisfactory and a proper period of time to be used?

A. I might ask you in answer to that, and I don't mean to be presuming, how could you make a study for 1940 when it was already 1941 when the conference was held?

5677 Q. Well, I can't answer that. I don't know. I just am asking you if there was a concurrence of thinking on the part of your people in that conference that the year 1940 be used as a basis for a cost study if the Respondent undertook such a cost study.

Witness: Your Honor, may I make a statement for the record as to what my feeling was, then, with reference to this cost study?

Trial Examiner Ballinger: Can't you answer the question, Mr. Warmack?

Witness: Will you read it?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. As I previously explained, there could not be a concurrence of opinion as far as I would be concerned to use wholly and only costs for 1940 in the making of the study, Judge, for the reason that measuring factors would have to be established. They couldn't be established on something that was passed and gone unless they were established during the year 1940.

By Mr. Hanley:

Q. I don't want to be technical about it. You understand, certainly, that the cost study as reflected in Exhibit 100, Respondent's Exhibit 100, covers the year 1940?

A. Yes.

5678 Q. Is based upon and reflects Exhibit 101, which is a special Form 189 for the year 1940. You have seen these many times.

A. Yes, sir.

Q. Now all I am asking you, Mr. Warmack: If there wasn't a concurrence of thinking that it would be upon that time period that the Respondent might center its efforts? There had to be some kind of a time period, however they might measure; either former years or later.

A. If I may answer your question, which was my opinion then, and which is my opinion now, and then it might be judged whether it was—

Mr. Austin: Well, your Honor, I object to that question. I don't think this is a question of opinion, it is a question of fact. It is simply what was said or what was agreed upon at the time.

Mr. Hanley: Really, that's all I am asking. I wish Mr. Warmack could answer.

Trial Examiner Ballinger: You can answer whether there was or wasn't.

Witness: Consensus of opinion?

Trial Examiner Ballinger: Yes. That's all he has asked for.

Read the last question.

(The question referred to was read by the Reporter.)

5679 Trial Examiner Ballinger: Can't you answer that yes or no?

Mr. Hanley: I will make it easier for Mr. Warmack.

By Mr. Hanley:

Q. Was it your understanding that there was a concurrence of thinking to that effect?

A. Well, I don't know how to answer your question, Judge. I will tell you what was my understanding.

Q. That's what I have now asked you. If it was not your understanding that there was a concurrence of thinking to the effect indicated?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

By Mr. Hanley:

Q. You know that, Mr. Warmack. There isn't any mystery about this or any other question I am going to ask you. You needn't be a bit scared.

A. Judge, I am not frightened, I don't think, but I want to state this: That I have never agreed to picking up the costs for 1940 and making any separation or segregation or using the allocations as made unless the factors for those allocations were properly proven. The only way they could be proven, if there was no information available with which to prove them, would be on a current cost study and after that, factors secured and obtained by some facts and
5680 objective cost study at the current time which would mean following this conference because factors could then be related back to the costs of 1940, assuming that conditions remained the same, and measure 1940. Now if that was consensus of opinion, there is my answer.

Q. That's what you thought?

A. That was my opinion then and that's my opinion now.

Q. But you were willing that the time period that was used as a reflection of the costs, however, they might be arrived at by the Respondent, could be the year 1940?

Mr. Austin: Well, your Honor—

Mr. Hanley: I am not asking Mr. Warmack to agree, at all.

Mr. Austin: Judge Hanley, will this help any—

Mr. Hanley: I don't know. I wish somebody would help us.

Mr. Austin: I remember stating on the record telling Mr. Boatwright that I thought the year 1940 would be a sufficient period for use for the cost study, if one was made.

Mr. Hanley: I know it is in the record a hundred times by your admission and just by the whole force of the record. All I want to get is just this preliminary answer. I don't want to argue the technicalities of our cost study.

Trial Examiner Ballinger: Off the record.

5681 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

A. I believe that it was stated at the conference that the Respondent would establish measuring factors and apply them to the costs of the year 1940.

By Mr. Hanley:

Q. There was a good deal of discussion about, Oh, just accounting questions, wasn't there?

A. That is correct.

Q. And at that time was there not some discussion as to the method of handling the individual expense classification on Respondent's Form 189?

Trial Examiner Ballinger: He asked you if there was some discussion.

By Mr. Hanley:

Q. That's all. I am asking you if there was a discussion, not what it was or your opinion about it?

A. Yes sir.

Q. Did you discuss the items of expense that are reflected on Form 189?

A. I answered "yes sir."

Q. Do you have knowledge of the fact that the Respondent did undertake making a cost study shortly after that conference?

A. Yes sir.

5682 Q. And did you come to Detroit during the period that that cost study was under way?

A. Yes, sir, I did.

Q. And what time was that?

A. I was in Detroit on another assignment and I was directed by office—

Trial Examiner Ballinger: What time was it?

A. (Continuing.) —on October 2, 1941, to call at your office.

By Mr. Hanley:

Q. And at that time did you have a conference with Messrs. Boatwright and Houghton?

A. I did.

Q. And was that in connection with the cost study that was being undertaken by the Respondent?

A. Yes, sir.

Q. And did you at that time discuss possible methods of procedure that might be used in connection with making up the cost study?

A. May I have that question?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: All he is asking you is whether or not you discussed methods of procedure in making up the cost study.

5683 A. We did.

By Mr. Hanley:

Q. And at that time did Messrs. Boatwright and Houghton present and review the procedure followed in allocating field expense accounts?

A. They did.

Q. There was a conference following that, was there not?

A. Yes, sir.

Q. And when and where did that occur?

A. I believe that was on November the 10th in Chicago in the offices of the Standard Oil Company and it carried on to the 11th and part of the 12th.

Q. And who was present at that conference?

A. Mr. Boatwright, Mr. Houghton, Mr. Russell, Judge Hanley for the Respondent, Mr. Landvall, and Mr. Warmack for the Commission.

Q. Now at that time did the Respondent have a cost study prepared which was exhibited to you?

A. Yes, sir.

Q. And was it reviewed and discussed by the persons present?

A. At great length sir; yes, sir.

Q. You recall that shortly thereafter, I think on or about November 17th, there was another hearing in Washington?

A. Yes.

Q. And that cost study was then presented by the
5684 Respondent. Do you recall that fact?

A. That is correct.

Q. Now at the Chicago conference to which you have referred was it not pointed out that some further detailed explanation would be of assistance to you and your staff and the Commission in following the procedure used and in the analysis of many of the accounts?

The Witness: May I have the question?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

A. Yes, sir.

Q. And that was pointed out by you and Mr. Lundvall, was it not?

A. That is correct.

Q. And is it not true that the representatives of the Respondent indicated that they would make some further detailed explanation but that it would be determined as to the manner after further conference and after the hearing in Washington?

A. Yes, sir.

Q. Now was there a subsequent conference held after the Washington hearing and, if so, when and where was that, and who was present?

A. That was held in Washington in my office on December 22nd and 23rd.

5685 Mr. Boatwright, I remember, for the company, was there. I think that Judge Hanley, for the company, was also there.

Q. At least a part of the time?

A. Mr. Lundvall, Mr. Austin, Mr. Warmack, for the Commission.

Q. At that time was there a general discussion and review of the results of the special cost study made by the Respondent in Detroit relative to this year, 1940?

A. Yes, sir.

Q. And was that an amplified or revised form of the cost study report or conclusions that you had seen in Chicago?

A. I believe that's true, yes, sir.

Q. Was it not, in fact, what has now become Respondent's Exhibits 100 and 101?

A. I believe that is correct.

Q. Now was it your understanding at that time that that revision of the report of the cost study had been made at the request of yourself and Mr. Lundvall to supply the additional detail that you pointed out as being of probable assistance to you as early as the Chicago meeting in November?

The Witness: May I have that question again?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

A. I would rather say, Judge, that we suggested that we
could understand it a little better if there was a little
5686 bit more detail in the report and, in accordance with
that, why, that additional detail was added.

Q. I will put it this way: After you asked for the additional detail, or suggested it would be helpful to you if you had more additional detail, were not the present exhibits 100, and 101, the results?

A. That is correct.

Q. You got that, didn't you?

A. Yes.

Q. Did you come to Detroit some time in January of this year, Mr. Warmack?

A. Yes, sir.

Q. What date?

A. January 12th, I believe.

Q. And what was the purpose of your visit here?

A. It was to make a review and study, to some extent, of the cost data that had been put in by the Respondent in Respondent's Exhibits 99, 100 and 101.

Mr. Austin: Your Honor, I still fail to see the materiality of this line of questions.

Mr. Hanley: It may be a little difficult to explain the purpose. I propose to use it in a motion in Washington which I am going to have to make directly to the Commission.

Mr. Austin: I would like to have my objection recorded and passed upon.

5687 Trial Examiner Ballinger: The objection at this
time is overruled with the right reserved to counsel

for the Commission later to renew the objection and move to strike.

Mr. Hanley: I don't believe Mr. Warmack had an opportunity to finish his answer.

By Mr. Hanley:

Q. Had you, Mr. Warmack?

Trial Examiner Ballinger: Read the answer.

(The last answer referred to was read by the Reporter.)

By Mr. Hanley:

Q. Have you been in Detroit ever since the 12th of January?

A. Yes, sir.

Q. And working on this assignment?

A. That is correct; except, of course, the time I have been attending these hearings?

Q. But your time has all been spent in connection with this case, hasn't it?

A. Practically so, Judge. I had to call on one company but that was for practically a half-day.

Q. Now you have, since your sojourn in Detroit, examined many books and records and data in the office of the Respondent, located here, haven't you, Mr. Warmack?

A. Yes.

Q. And you have examined the work sheets that 5688 were prepared in connection with the Respondent's cost study as reported in Exhibit 100, haven't you?

A. I have examined several of them, not all of them, Judge.

Mr. Austin: I understand I have a continuing objection to this line, now?

Trial Examiner Ballinger: You have.

By Mr. Hanley:

Q. Has the Respondent made available to you all records and files, data, accounts, work sheets of any nature that you wanted, since you have been here?

A. Everything that I have requested has been made available to me in the way of records.

Q. Has the Respondent made available to you qualified accountants to facilitate your work?

A. Yes, sir.

Q. And have the personnel that has from time to time been furnished for your use facilitated your work since you have been here?

A. They certainly have and they have been most cooperative.

Q. Has there ever been a time when you have been denied or refused access to any record that you wanted?

A. No, sir.

Q. Are you still engaged in the assignment of examining the records and books, accounts, work sheets, and 5689 anything else you want to look at, belonging to the Respondent?

A. Yes, sir, I am still engaged in the study; I might say, as soon as we can get through with these hearings.

Mr. Hanley: You may take the witness.

5690 *Cross-Examination by Mr. Austin.*

Q. Mr. Warmack, was any outline of the procedure proposed to be followed by the Respondent in its cost study which it was considering making last Summer submitted to you either at the conference in Washington last August or at any other time prior to the commencement of the cost study?

A. No, sir.

Q. Did you ever approve any outline of procedure for such a study of the Respondent's costs for the year 1940?

Trial Examiner Ballinger: Mr. Austin, there is no claim that he did.

Mr. Austin: Well, I think it is proper cross-examination because the question was asked whether these various matters were discussed, so I want to be sure that the record is clear that none of them were shown in advance.

Mr. Hanley. If your Honor please, I think I made a promise to restate this.

Trial Examiner Ballinger: Mr. Boatwright's statement is very definite and certain with reference to that.

Mr. Hanley: I will state it on the record as a statement of the Respondent, if it is desired. We make no claim that the Commission is bound by anything said at these conferences as to whether our work was right or wrong.

Mr. Austin: I will withdraw the last question.

5691 By Mr. Austin:

Q. When did you first become aware of or obtain information as to the method of procedure being used by the Respondent for its cost study covering the year 1940?

A. I believe that was October the 2nd, 1941.

Q. Was the cost study already under way at that time?

A. Yes, sir.

Q. Did you both in June of last year in Washington and also at the conference in August which you have referred to make certain suggestions to Mr. Boatwright regarding the advisability of making a separation of the costs for the purpose of the cost study as between Commission business and "A" station business?

A. I did, and I urged that that be done.

Q. Did you specifically make that suggestion at the conference in August before the cost study was started?

A. Yes, sir.

Mr. Austin: That is all.

Mr. Hanley: That is all.

Trial Examiner Ballinger: That is all. You may be excused.

(Witness excused.)

Mr. Abbott: At this time, the Respondent makes offers
of proof as follows: Offer of proof No. 1. Respond-
5692 ent's Exhibit 102 having been offered in evidence and
having been excluded by the Examiner upon objection
interposed by the attorney for the Commission, Respondent
therefore now offers to prove as follows: That the amount
expended by Ned's Auto Supply Company for all classes of
advertising in the calendar year, 1940, was as follows:

A. Newspaper advertising, $66,877.69.

B. Radio advertising, $16,280.

C. Outdoor advertising, $5,580.

D. Magazines, engraving, art work, and telephone directory, $9,208.

Mr. Austin: If your Honor please, I object to reading in the amounts. I think for the purpose of an offer of proof it is sufficient if counsel states that he offers to prove the nature and amount of advertising and, certainly, if he reads the types of advertising, it is unnecessary to put in the dollar amounts for the purpose of an offer of proof.

Mr. Abbott: I have to, if the Court please, in order to make the offer complete. I have a right to show the amount which was expended for each class of advertising; otherwise, there is no offer of proof. That is what we offer to prove.

Trial Examiner Ballinger: You can offer to prove the aggregate. It is unnecesary to include the separate 5693 items.

I state to counsel that the Examiner would be very glad to have somewhere in this record the advertising expense account but he knows of no way by which that can be included in the record, so the Commission may see it.

Mr. Austin: I don't object to the statement of the items but I thought that encumbering the record with the amounts. individual amounts is unnecessary. The total amount, perhaps, at the end—

Trial Examiner Ballinger: The Examiner thinks it would be very helpful to the Commission if they could see the complete itemized statement, and if there was any way by which the Examiner could include that in the record, the Examiner would do so, but the Examiner sustains the objection with reference to including in this statement the separate items that make up the total amount.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Abbott: At this time, then, the Respondent offers Respondent's Exhibit 102, for identification.

Trial Examiner Ballinger: All right, Mr. Austin. Any objection?

Mr. Austin: I object to the introduction in evidence of Respondent's Exhibit 102, for identification, upon 5694 the ground that no sufficient basis or measuring factor has been established by which the measure of benefit, if any, received by the Respondent from this sort of jobber advertising can be determined, and upon the ground that the amount, if any, of such benefit accruing to the Respondent from miscellaneous advertising by jobbers is so uncertain and so speculative and so incapable of computation that it renders the exhibit void of any evidentiary value.

Trial Examiner Ballinger: The objection is sustained. The exhibit is again rejected.

Mr. Abbott: The Respondent reoffers Respondent's Exhibit 104-A, B, C, D, E, F, G, and H, in evidence.

Mr. Austin: As to Respondent's Exhibit 104-A to H, inclusive, for identification, I believe that these same exhibits were previously offered by the Respondent, at which time I objected to their introduction into the record upon the ground, among others, that they were not the best evidence and that the original records were the best evidence and should be produced. The Examiner, however, sustained the objection upon other grounds but did not rule upon the objection based upon the non-production of the original records. Therefore, in order to facilitate the offer of proof which the Respondent is now making and also to facilitate further rulings by the Examiner, I have decided to withdraw my objection both to this exhibit and to 5695 any other similar advertising figures of jobbers similarly identified based upon the contention that the said exhibits were not the best evidence and that the original records should be produced, and, of course, will not renew that objection either to Respondent's Exhibit 104 or to Respondent's Exhibit 105, or any other such exhibit which may be offered upon similar identification.

Of course, I do not waive any right of cross examination in the event that any of these exhibits should be admitted in evidence.

Trial Examiner Ballinger: But the Examiner understands that you do now expressly waive the production of the original documents?

Mr. Austin: I do.

Trial Examiner Ballinger: And also that you insist upon all of your other objections?

Mr. Austin: That is right, your Honor, and I waive the production of the original documents, as I said, in connection with the Respondent's exhibits now being offered and any others similarly identified.

Trial Examiner Ballinger: For the same reasons upon which the previous ruling is based, the exhibit is rejected.

Mr. Abbott: Respondent at this time reoffers Respondent's Exhibit 105-A, 105-B, and 105-C, for identification.

5696 Mr. Austin: I also object to the introduction of these exhibits, your Honor, and everything that I have stated on the record with regard to Exhibit 104 may be read as also applying to Respondent's Exhibit 105, for identification.

Trial Examiner Ballinger: The same ruling.

Mr. Austin: And so that it is perfectly clear, I made an objection on the record to Respondent's Exhibit 102, for identification, this morning which I intend now to renew as to Respondent's Exhibits 104 and 105, for identification. I did not previously state that objection in connection with the offer of Respondent's Exhibits 104 and 105.

~~Trial Examiner Ballinger: It is upon~~ the grounds stated by counsel that the Examiner ruled on the admissibility of the documents and excluded them.

Mr. Abbott: Now, the Respondent was proceeding to dictate an offer of proof with reference to Ned's Auto Supply Company when I was interrupted and objection made to the reading of the amounts as to classes of advertising for which Ned's Auto Supply Company expended money in the calendar year 1940, and I understand that the Examiner takes the position that it is not admissible to read the amounts so spent?

Trial Examiner Ballinger: No. That would have the same effect as though the exhibit had been included in the record.

5697 Mr. Abbott: That being my understanding of you Honor's ruling, I would like to have a recess for five minutes at this time.

Trial Examiner Ballinger: Take a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Abbott: The Reporter advises me that the statement I made taking an exception to the ruling of the Court on the refusal to receive these three exhibits, Respondent's Exhibit 102, 105-A to C, inclusive, and Exhibit 104-A to H, inclusive, is not in the record, namely, with reference to the exception taken. I understand that is covered by a general stipulation.

Trial Examiner Ballinger: To every ruling made by the Examiner there is an automatic exception reserved to both counsel for the Commission and the Respondent and that applies to every ruling made since the inception of this case.

Mr. Abbott: That is what I understood.

Now, off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5698 Trial Examiner Ballinger: On the record.

Mr. Abbott: I ask to have this marked as an exhibit for identification on behalf of the Respondent.

Trial Examiner Ballinger: The Reporter will mark

these documents Respondent's Exhibit 106-A and B, for identification.

(The documents referred to were marked "Respondent's Exhibits 106-A and 106-B," for identification.)

Mr. Abbott: I ask to have the paper just handed to your Honor also marked for identification as a Respondent's exhibit.

Trial Examiner Ballinger: The Reporter will mark the documents Respondent's Exhibits 107-A and 107-B, for identification.

(The documents referred to were marked "Respondent's Exhibits 107-A and 107-B," for identification.)

Mr. Abbott: Next I ask to have this single sheet marked as a Respondent's exhibit, for identification.

Trial Examiner Ballinger: The Reporter will mark the document Respondent's Exhibit 108, for identification.)

(The document referred to was marked "Respondent's Exhibit 108," for identification.)

Mr. Abbott: Now the Respondent's Exhibits 106-A and B, 107-A and B, and 108 are the offers of proof in question, number 106-A and B being the offer of proof
5699 proposed to be made on behalf of the Respondent
with respect to advertising costs of Ned's Auto Supply Company in the year 1940; number 107-A and 107-B being the proposed offer of proof with reference to advertising costs of Wayne Oil Company in the year 1940, and Respondent's Exhibit 108 being the proposed offer of proof with respect to the advertising cost of the Citrin-Kolb Oil Company in the year 1940.

In order to have these offers of proof on the record, the Respondent now offers them in evidence.

Mr. Austin: May I ask how that is different from Respondent's Exhibit 102, 104 and 105?

Mr. Abbott: They are substantially the same with just a few additions.

Trial Examiner Ballinger: Point out the additions.

Mr. Abbott: The only addition on Respondent's Exhibit 106-B, which is identified as paragraph 5, that being in connection with the advertising costs of Ned's Auto Supply Company in the year 1940. Otherwise, I understand they are the same as Respondent's Exhibits 105-A, 105-B, 105-C, 104-A to 104-H, inclusive, and 102.

Mr. Austin: Is this Exhibti 106-A and 106-B the one you started to read this morning before I entered an objection?

Mr. Abbott: That's right.

5700 Mr. Austin: Now, your Honor, these papers which have been marked for identification as exhibits are really offers of proof. They include material in the three rejected exhibits but these are really statements which have been typed up apparently in form for reading into the record as an offer of proof and that is indicated by the fact that Mr. Abbott did start to read the one regarding Ned's Auto Supply Company, that is, Respondent's Exhibits 106-A and 106-B, for identification, this morning.

If the Respondent desires to make an offer of proof I have no objection to stating the offer of proof so that it will appear on the record as to what it is that is offered to be proved without going into details as to dollar amounts, and so forth. In other words, I think that perhaps it should appear on the record that the Respondent is offering to prove the advertising expenditures of each of these three jobbers and to also prove an analysis of their sales showing the proportion of their sales which represent sales of gasoline and refined oils or whatever it is that the Respondent offers to prove. I am not trying to make the offer but I would object to admission of Respondent's Exhibit 106-A, 106-B, 107-A, 107-B, and 108 for identification, as exhibits, and also as offers of proof, because I think for an offer of proof to be made, it should be made orally and within such limitation as the Examiner may impose 5701 regarding the extent of detail that ought to go into such an offer so that if, as is now proposed, these three exhibits for identification are offered as exhibits, I object to them on the ground that they are objectionable for the same reasons which I stated in objecting to Respondent's Exhibits 102, 104 and 105.

Mr. Abbott: The only purpose of this, your Honor, is to have the offers of proof on the record so that the Commission will know what they are and I might suggest, also, just repeating what I said a moment ago, that it might be gotten in this way—because I know that neither Mr. Austin nor your Honor wants to be technical—to have them read into the record and then have a motion to strike made, in which event if the motion were granted the offers would still remain in the record.

Mr. Austin: I object to those exhibits as exhibits for the reasons before stated and as offers of proof, because I think if they were put in as offers of proof they are going into unnecessary detail and would, in effect, amount to putting in the exhibits themselves and the statement of the detail is unnecessary for the purpose of making a complete and sufficient offer.

Trial Examiner Ballinger: The Examiner is ready to rule, unless you desire to be heard further.

Mr. Abbott: No, we have nothing further to say.

5702 Trial Examiner Ballinger: Respondent's Exhibits 106-A, 106-B, 107-A, 107-B, and 108 for identification are rejected both as exhibits and as offers of proof.

(Thereupon Respondent's Exhibits 106-A, 106-B, 107-A, 107-B, and 108, for identification, were rejected.)

Mr. Hanley: At this time, if your Honor please, the Respondent being about ready to rest its case, renews each and all of the several motions pertaining to a dismissal of this case or to any other matter which the Respondent has made during the course of the trial.

Trial Examiner Ballinger: As previously announced by the Examiner, he has no power other than to deny the motion.

Mr. Hanley: The Respondent rests and again renews all of its motions for dismissal and ~~for other~~ purposes heretofore made; any of which have been denied.

Trial Examiner Ballinger: The renewal of the motions is addressed to the Commission and not to the Trial Examiner.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: Your Honor will recall that you admitted pages 34 to 37, inclusive, of Respondent's Exhibit 100 at the hearing in Washington in January, subject to the 5703 material on those pages being substantiated by additional evidence which was to be subsequently introduced in Detroit by the Respondent and that you reserved for me the right to move to strike those pages from the record in the event that the material therein was not substantiated or if, in the light of evidence subsequently offered, the material therein did not appear to be competent, relevant, or material.

I now move to strike from the record pages 4 to 37, inclusive, of Respondent's Exhibit 100, all of the testimony of Mr. B. S. Kott, appearing at pages 4801 to 4888, inclusive; the testimony of Mr. Elmer E. Ledbetter, appearing at pages 5398 to 5420, inclusive, and all of the testimony of Mr. Max Biber, appearing at pages 5420 to 5429, inclusive of the record.

The motion is made upon the ground that it does not appear that any of the testimony in question has been sufficient to support and justify the retention in the record of the matter set forth on pages 34 to 37, inclusive, of Respondent's Exhibit 100, and that in view of all of the testimony so far received in evidence upon the question of advertising expenditures of jobbers it does not appear that the material on pages 34 to 37, inclusive, of Respondent's Exhibit 100, is relevant or material or has any evidentiary value.

Mr. Abbott: Does this motion include the graphic
5704 matter on the last page referred to?

Mr. Austin: Yes. That is on the aadvertising.

Mr. Abbott: I understand that that relates, however, to other cities than Detroit?

Trial Examiner Ballinger: Page 37 of Respondent's Exhibit; is that included in your motion?

Mr. Austin: Oh, yes. That has no relevancy whatever except in connection with pages 34, 35, and 36, and the arguments based thereon.

Mr. Hanley: I might say this is all Boatwright's opinion and has to do mostly with our advertising: except certain figures in here which are obtained from the jobbers. This is our cost study you are trying to strike, now. We have a right to put in our cost study.

Mr. Austin: Well, this follows—you are right as to the first paragraph on 34. I had better go over this again a little bit more carefully.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5705 Mr. Austin: May I go on the record?

Trial Examiner Ballinger: On the record.

Mr. Austin: The foregoing motion is now modified to the extent that the motion was for the striking of pages 34 to 37, inclusive, of Respondent's Exhibit 100. With respect to Respondent's Exhibit 100, I move to strike all of page 34 after the first paragraph ending with the word "reasons:".

I move to strike all of page 35, the material on page 36 through the end of the paragraph at the top of that page and ending with the word "market." The motion does not apply to the last two paragraphs on page 36. And I move to strike the graph which constitutes page 37.

Trial Examiner Ballinger: The ruling on the motion of counsel for the Commission will be deferred until counsel for Respondent has opportunity to carefully inquire into the matter embraced in the motion and can be heard fully with reference thereto.

Mr. Austin: Now, your Honor, I move that we adjourn until 10:00 o'clock tomorrow, Thursday morning.

Trial Examiner Ballinger: In the absence of objection, the motion is granted and now, at 12:30 o'clock p. m., February 25, 1942, the hearing is adjourned to reconvene at 10:00 a. m., February 26, in room 859, Federal Building, Detroit, Michigan.

5706 (Whereupon, at 12:30 p. m., the hearing was adjourned to reconvene on Thursday, February 26, 1942, at 10:00 a. m.)

5707

Room 859 Federal Building,
Detroit, Michigan,
February 26, 1942.

Met, pursuant to adjournment at 10:00 a. m., War Time.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois; and

Arthur J. Abbott, Esq., of the firm of MacMahon, Abbott & Roberts, 2230 Buhl Building, Detroit, Michigan; appearing for the Respondent.

5708

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing of Docket No. 4389, in the matter of the Standard Oil Company of Indiana, is reconvened in Room 859 Federal Building, Detroit, Michigan, at 10:00 a. m., Eastern Standard Time, February 26, 1942. The last hearing was in the same room in the same city, February 25, 1942.

You may proceed.

Mr. Hanley: While we were making copies of the exhibits which were loaned to us, we discovered that in Commission's Exhibit No. 76, which is the Taggart survey, that there exists no page 16. It is a bound volume. This is the first we have known of it and I thought I should call the attention of the Court to that fact. I think I should object, perhaps. At any rate, we wouldn't want any so valuable and precious a document as that to be lacking in any respect.

Mr. Austin: What is Commission's Exhibit 75? Is there any such thing?

Mr. Hanley: I don't know.

Mr. Austin: That is your survey, according to this, and 76 is also a survey. I don't see any 75 here in this binder. Maybe that is one of those that is being photostated. Apparently there are two surveys and I don't know the difference between them at the moment.

5709 Mr. Hanley: Well, there was one for Detroit and one for some larger territory.

Mr. Austin: They are both in evidence, are they?

Mr. Hanley: I think they are.

Mr. Austin: You say there is no page 17 in this?

Mr. Hanley: 16.

Mr. Austin: Yes, 16. Whether there ever was one or not, I don't know. I can check it with our copies.

Trial Examiner Ballinger: Does it read along connectively?

Mr. Austin: There are tables on both of these pages, and the whole page is taken up by a table so that you can't tell.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I would like to know whether the Respondent has certain records regarding the rates charged by transport truck haulers for hauling gasoline from the River Rouge terminal to jobber bulk plants in 1940.

I understand that Commission's accountant after looking at the records in Respondent's office requested that certain of the records be copied and produced.

Mr. Hanley: The Respondent now produces and hands to counsel for the Commission four files chosen by Mr.

Warmack after an investigation of many files which
5710 files represent bills to the Standard Oil Company by
tank truckers for deliveries of gasoline to the four
jobbers named in this action and to certain other customers
of the Respondent, consumer customers at locations other
than in Detroit. The reason for that latter is that the
method used by Ogden & Moffett is to group their charges
in one bill no matter what the destination may have been.

In connection with proffers to counsel I would like to make the same statement heretofore made in connection with freight bills. These are original records and our people have gone to the trouble of making a recapitulation and breakdown of them which shows all of the essential information that the bills themselves show. After they have been compared we would like to have that recapitulation used in place of the original bills and the originals returned to us.

Mr. Austin: Yes, I am sure that will be satisfactory, Judge Hanley.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5711 Trial Examiner Ballinger: On the record.
We will have a short recess.

(A short recess was taken.)

Mr. Austin: If your Honor please. Respondent has handed me certain original bills from their records which were submitted by Ogden & Moffett, heavy hauling contractors, of Port Huron, Michigan.

These bills indicate that Ogden & Moffett, during 1940, transported gasoline for the Standard Oil Company from the River Rouge terminal to the respective bulk plants of the four jobbers concerned in this case and the bills show various shipments made and the amounts charged during four different periods during 1940.

In addition to the bill showing the dates of the shipments and the amounts of the individual shipments, there is a recapitulation covering either the first half or the last half of the month, as the case may be, showing the total amount of the gallonage hauled from the River Rouge plant to the bulk plants of each of the four jobbers by name, giving the total and indicating the price per gallon charged for the hauling.

If it is agreeable to counsel for the Respondent the reca pitulation and not the itemized statement will be sufficient for the Commission's purposes and copies having been made of the original record—rather, the original 5712 recapitulated bills, it is my proposal to offer the copies in evidence rather than the bills so that the bills need not be separated from the Respondent's records.

Will the Respondent waive the formal identification of these documents by the witness?

Mr. Hanley: Oh, yes.

Mr. Austin: That is, the Respondent is familiar with them?

Mr. Hanley: Oh, yes.

Mr. Austin: And do you understand that my description is correct?

Mr. Hanley: I so understand.

Mr. Austin: I will offer in evidence at this time, your Honor, a typewritten statement which I understand will be stipulated is a copy of a bill submitted by Ogden & Moffett dated July 16, 1940, covering hauling charges on gasoline shipped from the River Rouge Terminal to the four jobbers during the period from July 1 to July 15, 1940, and the original bill containing stamps which indicate that the bill was paid.

There is a notation on the sheet I am offering in evidence that the original bill was stamped paid July 24, 1940, and I therefore, offer this sheet as evidence of the gasoline hauled from River Rouge to the respective bulk plants of the four jobbers from July 1 to July 15, 1940, and 5713 showing the price per gallon which the hauler, Ogden & Moffett charged the Standard Oil Company.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Four documents will be marked "Commission's Exhibits 124, 125, 126 and 127, for identification."

(The documents referred to were marked "Commission's Exhibits 124, 125, 126 and 127," for identification.)

Mr. Austin: I have already indicated the nature and contents of Commission's Exhibit 124, for identification.

Commission's Exhibit 125 is a similar copy of a recapitulated bill covering shipments of gasoline hauled by Ogden & Moffett from the River Rouge Terminal to the bulk plants of the respective jobbers during the period August 1 to August 15, 1940.

Commission's Exhibit 126, for identification, is a similar recapitulation of the Ogden & Moffett bill for similar services for the period September 16 to September 30, 1940.

Commission's Exhibit 127, for identification, is a similar bill covering hauling charges for the period October 15 to October 31, 1940.

I now offer all four of these papers in evidence, being Commission's Exhibits 124 to 127, for identification,
5714 inclusive.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5715 Trial Examiner Ballinger: On the record.

Mr. Austin: I am offering these bills or true copies thereof in evidence to show the cost to the Respondent of transporting gasoline from the River Rouge terminal to the bulk plants of the four jobbers during 1940 or such period of 1940 during which the hauling was done by transport truck.

Furthermore, I note that on these four bills there are certain items which represent charges for hauling from the River Rouge terminal to points other than the bulk plants of the four jobbers, and in so far as there is any material on these four exhibits, for identification, which refers to the transportation of gasoline to destinations other than the bulk plants of the four jobbers, that material is not considered to be of any relevancy and is not included in the offer of proof.

Trial Examiner Ballinger: Any objection?

Mr. Hanley: The Respondent objects to each of the four exhibits, 124, 125, 126, and 127, for all of the reasons heretofore assigned in objections to freight bills introduced in this hearing and for the reasons assigned in objections made upon the offer of Commission's Exhibits, for identification, 94 to 99, inclusive, at the Washington hearings.

Trial Examiner Ballinger: The objection is over-
5716 ruled. The documents are admitted in evidence.

(The documents referred to, heretofore marked for identification "COMMISSION'S EXHIBITS 124, 125, 126, and 127," were received in evidence.)

Mr. Austin: I am now returning to Respondent the original bills together with the copies of each of the exhibits.

Mr. Hanley: Thank you

P. A. RAUPAGH was thereupon recalled as a witness for the Commission, and having been previously first duly sworn, testified further as follows:

Direct Examination by Mr. Austin.

Q. Mr. Raupagh, Commission's Exhibit 91 is a statement of the number of reseller service stations accounts of the Standard Oil Company in the Detroit metropolitan area in 1937 by types of outlets. This exhibit shows 229 company owned service stations leased out, nine service stations leased by Standard Oil Company and re-leased to individuals, and 192 form 461 accounts, making a total of 430 reseller service station accounts of the Standard Oil Company in 1937.

Now, on March 10th of last year, when you testified in this proceeding, I asked you how many retail stations
5717 there were in the Detroit area at that time to which
the Standard Oil Company sold gasoline, and your answer was that there were 336 including both contract stations and leased stations, and then you further said that there were—that is, on page 10 of the record—there were about 200 leased stations and about 136 owned by the operators or leased by them from some other source, which I assume would mean 461 stations. But you further stated at that time that the number of stations in 1941 was about the same as it was, say, two years previously, quoting exactly from the answer.

Now, if there was, as indicated by the record, 430 stations in the Detroit area which were reseller accounts of the Standard Oil Company in 1937 and only 336 in 1941, I would like to have you explain that difference and state whether it is a fact that the Standard Oil Company lost 94 outlets; that is, whether the total outlets served by the company declined to that amount between 1937 and 1941?

A. I am unable to give you any explanation as to the difference in those figures. The figures given in any testimony is correct.

You also I believe in your question asked whether or not we may have lost about 100 accounts during that period. I doubt very much if we did, Mr. Austin. That would be very unusual.

5718 Q. Do the records of your office here in Detroit show the number of reseller outlets to which the Standard Oil Company sold gasoline in 1940?

A. Yes.

Q. In the Detroit area?

A. Yes. You said 1940?

Q. 1940.

A. Yes, sir.

Mr. Austin: If your Honor please, this is a matter which I think ought to be cleared up. The testimony is not entirely consistent, and if there was a loss of between twenty and twenty-five per cent of reseller outlets to the Respondent in Detroit between 1937 and 1940, I think that, as now appears from the record, that might be a material fact in view of the large amount of testimony in this case regarding the business of not only the Respondent but of its competitors and alleged competitors. Since we have a list of names and addresses of service stations in 1937 in the record, I would like to have the Respondent prepare a similar list for 1940 so that we can have an accurate check of the condition of the Standard Oil Company and the extent of its operations in the Detroit Field or in the Detroit area in 1940.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

5719 Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. There was one other point that you testified on briefly last year, Mr. Raupagh, that I would like to get a little more information on. You stated at Pages 22 and 23 of the record that some deliveries are made directly from the River Rouge Terminal and not over ten or fifteen percent of your deliveries to dealers were being made from the River Rouge Terminal at that time. I suppose by "dealers" you refer to tank wagon reseller outlets?

A. Yes sir.

Q. And were those deliveries direct from the River Rouge Terminal made by company-owned tank truck?

A. Yes sir.

Q. Do you know how many service stations were served directly from the River Rouge Terminal?

A. I can't say, offhand, how many were but my estimate was ten to fifteen percent of the dealer business that we were serving in that territory; from all sources.

Q. Do you mean by "that territory" in the City of Detroit?

A. Yes sir.

Q. And when you say ten to fifteen percent of the dealer business, do you mean the number of dealers, or by gallonage?

A. I mean by gallonage.

Trial Examiner Ballinger: Does that practice still 5720 continue?

Witness: No, that's entirely changed, your Honor.

By Mr. Austin:

Q. That's what?

A. That's changed.

Q. Well, what change has been made?

A. Well, we are making more extensive deliveries direct from River Rouge to the dealers than we did at that time.

Q. And by that time do you mean when you testified last year?

A. Yes sir.

Q. And how would that practice be if you went, say, into 1939 and 1940? Was it about the same then as when you testified last year?

A. Yes, it was about the same then.

Q. And you would say that at that time about ten to fifteen percent of the tank wagon reseller gallonage was delivered directly from River Rouge?

A. Yes sir.

Trial Examiner Ballinger: Approximately what percentage today?

Witness: Well, it is somewhat of a guess, but I would judge about thirty-five to forty percent, today.

By Mr. Austin:

Q. Does that mean that correspondingly less of 5721 the gallonage going to the tank wagon reseller outlets, goes through the bulk plants, today?

A. Yes sir.

Trial Examiner Ballinger: Was the capacity of your tank wagons increased during that period?

Witness: Yes, we have increased the capacity of the tank trucks, or tank wagons that make deliveries from the Rouge direct to the dealers.

By Mr. Austin:

Q. Do they run up to about three thousand gallons, now?

A. Yes sir.

Trial Examiner Ballinger: Is that the primary reason for the increased deliveries direct to the retail outlets from the Rouge plant?

Witness: That, and we supply more dealers, also.

By Mr. Austin:

Q. You mean you supply more dealers from the River Rouge plant?

A. Yes sir.

Trial Examiner Ballinger: Are all the deliveries to the four jobbers made direct from the River Rouge terminal storage?

Witness: Yes, your Honor, with the few exceptions which have been given in the previous testimony.

Trial Examiner Ballinger: And that condition has
5722 existed throughout the entire period since 1937?

Witness: Yes sir.

By Mr. Austin:

Q. By the exceptions, you mean those few direct shipments from Whiting or from Muskegon, is that right?

A. That's right, sir.

Q. Do you know just when you put in that change regarding the direct deliveries from the River Rouge Terminal; that is, when you increased the amount of gasoline delivered directly?

A. I don't know the dates, definitely, on that.

Q. I wondered whether it was just recently or whether it was a year ago?

A. Well, it has been comparatively recent.

Q. Would you say three months, six months?

A. About six months?

Q. During 1941?

A. Yes.

Mr. Austin: That's all.

Cross-Examination by Mr. Hanley.

Q. I think your last examination requires me to ask one question just as a clarification question.

Did you say, Mr. Raupagh, that the jobbers had been

supplied out of River Rouge since 1937, in answer
5723 to some question Mr. Austin just asked you?

A. Yes.

Q. I call your attention to the fact that Ned's was on a tank wagon basis of delivery up until the beginning of 1938.

You did not mean by your answer to indicate, I presume, that there was any change in the situation as it is reflected by the record in that connection.

A. No, I did not.

Q. The fact is that the gasoline delivered to Ned's, as well as to the other jobbers, all originated at the Rouge, isn't that right?

A. That's right.

Redirect Examination by Mr. Austin.

Q. Of course, Ned's wasn't considered a jobber while he was on a tank wagon delivery basis, was he, Mr. Raupagh?

A. No.

Q. But during 1937 and up until March of 1938, do you know whether the deliveries to Ned's at that time were made directly from the River Rouge Terminal or were they made from a bulk plant?

A. They were made from the bulk plants.

Mr. Austin: That's all.

Trial Examiner Ballinger: Mr. Raupagh, during the
period from September, 1936, to March 7, 1938, when
5724 Ned was receiving one-half cent differential, was that
allowed him both on Ethyl and Red Crown?

Witness: ~~Yes sir.~~

Trial Examiner Ballinger: Or, was there a greater differential on Ethyl?

Witness: No, just one-half cent and the time is from September 6, 1936 to March 1, 1938. I think you said March 7.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Is there anything farther, gentlemen?

Mr. Hanley: At the close of the hearing yesterday, Mr. Austin made a motion to strike from the Respondent's Exhibit 100, pages 34 to 37, inclusive, and all of the testimony of Mr. B. S. Kott appearing at pages 4801 to page 4888; Mr. Elmer E. Ledbetter, appearing at pages 5398 to 5420, inclusive, and Mr. Max Biber, appearing at pages 5420 to 5429, inclusive, which motion was later modified to the extent of limiting its attack on pages 34 to 37, inclusive, to certain paragraphs specified by Mr. Austin on page 5705 of the record.

In respect of Mr. Kott's testimony, the record discloses that that testimony only runs from page 4801 to the middle of page 4845 when the witness was finally 5725 excused and, I assume, that it was just an error to include the additional pages. Do you agree, Mr. Austin, that the testimony to which you were referring, the Kott testimony, is that which appears from Page 4801 to the middle of Page 4845?

Mr. Austin: I do so agree and my motion may be considered as amended in that respect.

5726 Trial Examiner Ballinger: The motion as now amended strikes all of his testimony, does it?

Mr. Hanley: Yes, sir.

Mr. Austin: Yes, it still does. It is merely a restriction of the pages, that is, a correction of the description of the pages where the testimony appears.

Mr. Hanley: The motion as it now stands, your Honor, attacks all of the testimony of each of these three named witnesses. These witnesses testified to the fact, first, that the jobbers did do advertising. They explained how it was done, where it was done, what media was used, what the different types of advertising were and testified further that this advertising was paid for by the jobbers in full, and they then identified in each instance the exhibits which were excluded by your Honor which exhibits were statements prepared by the jobbers indicating in detail the amounts expended for the various types of advertising which these witnesses said had been done by the various jobbers.

Now, your Honor, there are no figures in the testimony of the witnesses with the one possible exception, there may be some reference to one figure or one figure may be stated in Ledbetter's testimony, but because the exhibits were relied upon for the figures, there was no oral testimony naming the figures.

If your Honor please, this testimony as well as 5727 the portion of Exhibit 100 sought to be stricken is a basic and primary defense so far as the Respondent is concerned. Your Honor, unfortunately, of course, from our standpoint, elected to disbelieve our experience and our evidence and our witnesses in respect to this advertising question, and your Honor excluded the exhibits prepared by the jobbers on the theory that they included a number of things that were not directly gasoline advertising or Standard Oil Company advertising, and I think I understood your Honor to make some indication in a ruling that they were not readily measurable. Am I right in that last statement?

Trial Examiner Ballinger: Counsel is correct in his statement of the position of the Examiner.

Mr. Hanley: I submit, your Honor, that it is a very different thing, indeed, to exclude as evidence an exhibit such as these exhibits were than it is to strike a primary and basic defense, and that is what this testimony amounts to. It is a definite contention in this case on the part of the Respondent that this advertising was done, that it was done by the jobbers at their own expense, and with no contribution from the Respondent, that a definite value was received from that advertising. So far as the Exhibit 100 portion of the matter is concerned, that is not an exhibit prepared by some other party; that is a record and a prepared exhibit by the Respondent itself, and 5728 we believe our jobbers when they say they spent this money. Indeed, we know it. We follow what they are doing and know what kind of advertising they do from time to time. We know that there is a definite value in that advertising and take it into account as a part of our basic defense on this cost proposition.

One of the reasons for the differential that is accorded a jobber in Detroit or any place else lies in the fact that he assumes to do and does perform certain functions that otherwise would have to be performed by and at the expense of the supplying company. That is the reason for the one and a half cent differential in Detroit. Among those functions, of which there are a number, consideration is given to the fact that they do take over a part of the burden of distributing by advertising. That I think your Honor must have clearly in mind is one of the primary contentions of the Respondent in this case. Those differentials differ in different localities. I think the record discloses here that the usual one is two cents in most parts of the middle west. In the Rocky Mountain district —I believe I am right when I say that; the record discloses

that although I may be in error in the latter—the fact is that it is as much as two and a half and higher in that Rocky Mountain area. Those differentials find their competitive and economic levels. They don't just hap-
5729 pen. It is a cent and a half in Detroit because time and experience and function as performed by the jobber and all of the circumstances and conditions make it appear from experience that that is the right place for it to be. Likewise, where it is two cents, the same competitive and economic factors bear upon it and they just find their levels. They are not arbitrary and guesswork. The reason they find that level is because of these things that I have been talking about, namely, the function that is performed of which the supplier is relieved.

Now, this is definitely a basic thing, this evidence, which we have taken into account in our Exhibit 100. That is a defense. That isn't a matter of evidence primarily; that is a contention and a defense in this case. That is what we say justifies the charge of violation of the Robinson-Patman Act. It may be that your Honor in listening to the long cross examination of Mr. Boatwright on Form 189 that has transpired here has concluded that perhaps there is a better way to make certain allocation than Mr. Boatwright made; it may be that that is Mr. Austin's viewpoint. But it would be in these circumstances just as logical, for Mr. Austin to make a motion to strike all of the testimony relative to the accounting system used by the Standard Oil Company as to make this motion.

We come into court and we say we keep accounts a certain way, as we have now demonstrated; these ac-
5730 counts show that we were justified in making differentials of which you complain. Just as much of our defense lies in what we have prepared in this cost study in Detroit and which is supported except for the figures which your Honor excluded from the exhibit, which is supported by the testimony of these jobber witnesses who were called.

It is absolutely essential that we have that contention before the Commission. It is just no answer to say to us that "If I strike this, you have a right to go and make a motion to the Commission." This isn't just purely an evidentiary matter; this is one of the issues in the lawsuit, and we can't try the case piecemeal on many, many motions. We would just be frittered away in little pieces after awhile and we would just have to make motion after motion to present the merits and the issues in the case.

Your Honor has excluded the figures in the exhibit but the basic offer we are making to justify our action is a thing that is a definite primary contention and defense in the case and may not be excluded. Your Honor has told me many times when I have made motion to dismiss the whole or some part of the case or some party in the action, that your Honor was not authorized to rule on such action other than to deny it inasmuch as it was necessarily directed to the Commission. This is exactly the same type of motion.

5731 This motion seeks to dismiss and eliminate from this lawsuit a definite contention and defense of the Respondent. I submit, your Honor, that it should remain in the record as a foundation for our presentation of the case to the Commission so that we may not be subjected to the necessity of trying the merits of the case piecemeal and on motion before the Commission.

Trial Examiner Ballinger: If the Examiner should sustain the action, the physical pages embraced in the motion would still remain in the record and be before the Commission for examination to the same extent as if the Examiner overruled the motion.

Mr. Hanley: Suppose this, your Honor. Supposing you sustain this motion and suppose that we do not appeal to the Commission for a ruling admitting the rejected exhibits, or suppose that we do and that the Commission agrees with your Honor that there was a sufficient reason of some sort for excluding those exhibits as exhibits. It would still be our purpose to urge this defense. You prove a defense in many, many ways; it may be one piece of evidence or another or it may be many kinds of evidence. Issues in a case while they are ultimately dependent upon the evidence for determination, the evidence may flow: Some gets in, some is rejected, but that doesn't mean that a court prior to the time that the whole case is submitted on its merit is deciding anything on the merits
5732 by rejecting or accepting any evidence. In either of the suppositious cases that I have indicated as to those exhibits, you would certainly not relinquish the contention which we propose to make to the Commission. Mr. Boatwright's exhibit is our exhibit; it is our figures. We believe them. We get them someplace else, that is true, but we

believe these figures and we assert to the Commission that we derive this much benefit or that there was this much money spent. We don't undertake to measure; we can't measure. We have always conceded that we can't measure the reciprocal benefits that may flow from this advertising. It was well explained by the economists testifying, an advertiser can't even measure the benefits of his own advertising, that for which he pays. But we want the foundation in the record that will permit us to urge our contention.

The figures are gone so far as the jobbers are concerned if these exhibits are rejected, and they may continue to be rejected, but even so we are still entitled to present our defense, the Standard Oil Company's conception of what we believe to be the benefits which we have received from this class of advertising; and in order to do that, we are still dependent upon the evidence of these three witnesses, all of which even their names the motion seeks to strike from the record.

Trial Examiner Ballinger: Judge, the Trial Ex-
5733 aminer has attempted to put you in exactly the position you indicate you would like to be in. When Respondent's Exhibit 100 was offered in evidence, the question arose as to the admissibility of certain portions of it. The Examiner admitted the exhibit in evidence upon the distinct understanding that factual foundation to support certain pages would be later supplied. Now, an attempt has been made to supply that factual foundation, and the Examiner has ruled that it was inadequate and has denied the admission of certain documents purporting to show the result of the books of four jobbers.

The Examiner having sustained motions or sustained objections to the admission of those documents in evidence, it would be utterly inconsistent to overrule this motion and leave the matter in the exhibit which was admitted upon the distinct understanding that it was to be properly supported.

Mr. Hanley: Do you think even that goes beyond the figures themselves?

Mr. Boatwright has used in Exhibit 100 at page 34 the figures which were derived from the exhibits which have been rejected, but Mr. Austin's motion goes much further than to strike that. He seeks to strike all of page

35 which has to do with our advertising and the figures on our advertising. He seeks to strike all except the latter two paragraphs on page 36 and he seeks to strike page 37 of our exhibit which is an advertising graph which our
company keeps currently and has kept for years and
5734 relies upon in its analysis of advertising.

Trial Examiner Ballinger: Does page 35 relate to advertising by the Respondent company?

Mr. Hanley: Surely. During the same period, total advertising expenditures in the Detroit Field, tank wagon reseller channel by Standard Oil Company, including sub-accounts, and then they are set out, and then the amount of money is set out, and the cents per gallon is set out, of the Respondent, not the jobbers.

Mr. Austin: Those figures appear elsewhere, Judge.

Mr. Hanley: If your Honor thinks that it is inconsistent to leave in the figures that Mr. Boatwright drew from the exhibits of the jobber, or I will say from the books of the jobbers because that is where they came from, then your Honor might strike that on the theory of consistency but I don't think your Honor can strike properly any of the other material that we have asserted by way of defense here in our exhibit, nor can your Honor properly strike, in my judgment, the testimony of the witnesses who have testified that the jobbers, in fact, did this advertising of various kinds.

We are still entitled to the defense irrespective of whether
we can show the exact figures or whether we can't.
5735 Trial Examiner Ballinger: For presentation to
the Commission, it is wholly immaterial whether the motion should be sustained or rejected with reference to the striking of the testimony, for the reason that if it should be stricken it will still be in the record and subject to examination by the Commission to the same extent as though the motion was overruled.

Mr. Hanley: But that is subject to the examination of the Commission on motion.

Trial Examiner Ballinger: Yes.

Mr. Hanley: Not on final presentation of the case.

Trial Examiner Ballinger: But unless the Examiner completely reversed all of his rulings with reference to this evidence, it would be necessary for you to file a motion with the Commission.

5736 Mr. Hanley: Well, I will say to your Honor it is my present purpose to request the Commission to receive those exhibits and to receive our exhibits where it recites those figures, but my primary point in trying to illustrate this thing is to suggest that we might decide not to do that, or if we did do it, the Commission might rule against us on the admission of those exhibits. That wouldn't mean that the Commission was ruling against our defense—

Trial Examiner Ballinger: Oh, no.

Mr. Hanley: —and there won't be anything in this record to permit us to urge that defense.

Trial Examiner Ballinger: I would like to hear from Mr. Austin with reference to the extent of his motion to strike from Respondent's Exhibit 100. Why the necessity of striking beyond the first paragraph on Page 35?

Mr. Austin: Because, your Honor, as far as the second paragraph on Page 35 is concerned, its account numbers, the titles of the accounts and the amount of expense in the accounts all appears on Respondent's Exhibit 101 and also appears elsewhere in Respondent's Exhibit 100 so that that is mere repetition in so far as its relation to the Respondent's figures and the only purpose of it here is to make a comparison as appeared below the list of accounts.

This Page 35 says: "The per gallon advertising
5737 expenditures on the part of the jobber, therefore,
are almost identical," and so forth, and the whole purpose and purport of that paragraph and the one at the top of Page 36 is to claim that the benefit from advertising expenditure—the benefit to the Respondent from advertising expenditures of the jobbers, the nature of which does not appear, was the same as the similar expediture per gallon by the Respondent. That's material on the bottom of Page 35 and top of Page 36; nothing but supporting argument by comparison of the per gallon expenditures of the jobbers which is here allocated to gasoline as compared to the total advertising expenditures of the Respondent and the figures on Page 34 not having been supported by any showing of any sort of an advertising expense, or any sort of advertising similar to the Respondent's advertising, or any advertising of the Respondent's products and it being—it now appearing that these expenditures cover everything from radio advertising down to contributions to community chests and aluminum thimbles, I think it is exceed-

G

ing everything that was testified to by Mr. Boatwright on this subject and certainly recognizing that the Respondent claims that they did obtain some reciprocal benefits from this sort of advertising to jobbers, there is absolutely nothing in the record on which the amount of such reciprocal benefit can be computed or to indicate that it was in any respect substantial as to the large part of the 5738 advertising included in these expense figures shown on Page 34.

Trial Examiner Ballinger: Now about Page 37, the chart?

Mr. Austin: I would have no objection to 37 staying in, in general, if it was offered for any other purpose than this, but it is in here as a part of the arguments—or, rather, in support of the argument that the Respondent probably spends less money for advertising in the Detroit Field than it would if these jobbers were not also doing some advertising here.

Trial Examiner Ballinger: Is that the primary purpose of the exhibit?

Mr. Austin: If your Honor will look at the bottom of Page 35 and top of Page 36 there is a reference there to what advertising expenditures would be required in Detroit if it were not for the benefit of the advertising on the part of the jobbers, and at the top of Page 36 there is a comparison of the advertising expenditures of the Detroit and Denver Fields, compared with similar expenditures in other fields and as related to the total gallonage of the company in the respective fields and I think that the chart on Page 37 is introduced simply for the purpose of illustrating that argument on Page 36 which certainly relates directly to the claim of the effect of the 5739 jobbers' advertising on the advertising expenditures of the company. That is the purpose of the chart.

Trial Examiner Ballinger: Is that the purpose, Judge?

Mr. Hanley: It is my judgment that that is the purpose. May I have just a moment more, your Honor, and then I will be prepared to accept whatever ruling the Court makes?

Trial Examiner Ballinger: You may.

Mr. Hanley: I think the remarks of Mr. Austin, just made clearly demonstrate the fallacy in his motion. He is undertaking to set himself up, here, and make it stick by using the power your Honor has as the arbiter of the sufficiency and the adequacy of a defense which this Respondent is putting in. Now I think we just all understand that the Trial Examiner admits evidence that will—I will say admits all evidence that he doesn't regard as palpably inadmissible as a fact-finding inquiry and that he does not undertake at the time to pass upon the adequacy or sufficiency of that evidence, nor does he at the time undertake to determine ultimate issues in the case. Mr. Austin's motion seeks to do that.

Mr. Austin says of Page 38 that it is an argument in favor of our contention, and it is. That is the reason
5740 we put it in there.

Now he is undertaking to have your Honor kick it out because he doesn't think it is adequate or sufficient for the purpose. Your Honor's power to do that, as I understand it, even though it is a very slight bit of evidence, if it supports a contention in a case; that is, such a contention as is an issue; then the evidence, the weight of the evidence is not for your Honor on a question of whether it is retained in the case or not. It may be, ultimately, when you review the whole case and are concerning yourself with merits, but not on the question of admissibility or inadmissibility.

Mr. Austin: If your Honor please, I don't think it is quite correct for Judge Hanley to state that—rather, I don't think he was quite correct in stating that I am attempting to obtain a ruling striking the chart on Page 37 because, in my opinion, it simply doesn't have weight or it doesn't prove what the Respondent contends for it. The point, there, is that the chart on Page 37 is concededly put in in support of an argument based upon the figures on Page 34. All I say is if the figures on Page 34 are stricken, that then the pages 36 and 37 fall with it. If 34 stayed in, then we would have the question as to how much weight there was on the argument on pages 36 and 37.

I am simply saying the chart on 37 and the argument
5741 on 36 falls with the figures on page 34, if they are excluded.

One more point: What Respondent is attempting to do, here, is to create a sort of a set-off against advertising expense. It is trying to charge the benefits which it claims it received from the jobber advertising against its own advertising expense and I think it is very similar to a case where a party goes into Court on a damage suit and has to prove the measure of damages and if the plaintiff or the defendant on a counter-claim, claiming damages against the other party, is unable to prove his measure of damages, the Court will then dismiss the complaint or the counter-claim, as the case may be and it doesn't go to the jury. It is a case for the Court to decide whether or not a proper basis for computation of damages has been established but I think it is the same sort of a question here and one which the Trial Examiner may very properly determine.

Mr. Hanley: Let me ask one question: Does your Honor regard this law suit and the Robinson-Patman Act administration in the same light as you would regard a case at law where damages were being sued for and a fixed amount of money had to be proved?

Trial Examiner Ballinger: No, but in this kind of a proceeding there must be some reasonable approximation for costs claimed and unless there is some sufficient foundation laid so as to take it out of the realm of
5742 pure speculation, why, the evidence should be excluded.

In passing upon this question the Trial Examiner is only performing the usual duties he is called upon to perform and among those duties is the question of ruling upon the admissibility of evidence. The Trial Examiner wishes that the matter be as easy as learned counsel for the Respondent has pointed out. It would make it much easier upon the Trial Examiner.

The Trial Examiner sustains the motion to strike the testimony of the witnesses indicated in the motion and also that portion of Page 34 commencing with the paragraph reading: "The Respondent's supplying company secures a reciprocal advertising advantage from jobbers," etcetera. All the remainder of Page 34 and all of page 35, all of Page 36 down to and including the first paragraph ending on that page and all of Page 37 of Respondent's Exhibit 100.

Is there anything further, gentlemen?

Mr. Austin: I have nothing further.

Mr. Hanley: No.

Mr. Austin: I now move, your Honor, that the hearings in this matter be adjourned to convene again at the Federal Trade Commission Building in Washington on March 31, 1942.

Mr. Hanley: May we go off the record a moment?

5743 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: The Respondent resists the motion to adjourn until March 31st and objects to any adjournment in this case for the reason that it is not justified, would add onerous burdens to the Respondent which are unnecessary and unjust.

Informally, in Washington, it was indicated by counsel for the Commission that he intended to close his case in Detroit and it is indicated by counsel for the Respondent that Respondent would close his case, and Respondent has done so.

Had both cases been closed it would have finished the taking of testimony and have placed the case in such condition as to permit either of its being more conveniently and readily handled or for postponing without prejudice to either party or their counsel.

Since arriving in Detroit, counsel for the Commission has indicated that he proposes to use an accounting witness, presumably Mr. Warmack of the Commission's accounting staff. Mr. Warmack has been in contact with this litigation substantially ever since the cost phases of the case were initiated and for most of the time those contacts have been intimate ones. Mr. Warmack 5744 attended conferences for many days in the months of August, October, November and December of 1941, which were also attended by accountants and representatives of the Respondent, all for the purpose of outlining and discussing the costing procedures and discussing the character of bookkeeping records of the Respondent.

Since the 12th of January, 1942, Mr. Warmack has been continuously in Detroit and has devoted his time to an examination of the books and records of Respondent in so far as he may regard them pertinent to this litigation.

In addition to the various conferences referred to and the independant studies made by Mr. Warmack on his trip to Detroit, in January, 1942, and his trip to Detroit in October, 1941, he has attended most of the hearings in this litigation at which evidence was being received on the cost phases of the case and on many occasions has attended such hearings in company of Mr. Lundvall whom Respondent understands to be the Chief of the Commission's accounting staff.

Mr. Boatwright, the accounting witness of the Respondent used in this case, has testified at hearings held in both Washington and Detroit during the months of April, June, November and December, 1941, and during the month of February, 1942, and at said hearings, most of which were attended by Mr. Warmack, Mr. Boatwright
was on the stand for a period of some twenty-three
5745 days and during that period of time practically all
of the same was consumed in cross-examination on
the part of the Commission, only some three days, or
thereabouts, being used on direct examination.

5746 And in addition to that, the Commission was given
the opportunity to cross examine by interpolation
during the direct examination conducted by Respondent and during such period of time almost, if not as many questions were asked by counsel for the Commission as by counsel for the Respondent.

The accounting features of this case have been receiving the consideration of all parties; at least, since April, 1941. All parties are fully informed concerning the same. The Respondent has supplied to the Commission or its representatives all records, books, figures, data, files, reports, etcetera, of every kind and character requested by the Commission and the Commission has always had access to any records of the Respondent which they desired to examine or inquire into. In addition thereto the Respondent has supplied and continues to supply to the Commission both personnel and facilities to aid the Commission representatives in their investigations.

Both counsel for the Commission and accountants for the Commission have had more than ample time to prepare for any testimony that the Commission may desire to offer. The Respondent requests that if the Commission has a witness to be used in this hearing that such witness be called forthwith without any adjournment and that the proceeding be conducted to a close as rapidly as con-
tinuous taking of testimony will permit. To do other-
5747 wise will add burdens and expense in the matter of
time, effort, and money to Respondent which are
out of all proportion to either the necessities of the situation or to the importance of this litigation, all as is more particularly referred to in a motion for dismissal of this case made by Respondent on February 16.

The Respondent appeals to the Commission and the Trial Examiner to promptly speed this case and the taking of testimony therein to a close by either denying the motion for a continuance made by counsel for the Commission and requiring the Commission to continue with its witnesses or to declare that the taking of testimony in this case is now concluded. It is urged that to do otherwise is not necessary and would inflict injustice upon the Respondent.

Trial Examiner Ballinger: Does counsel care to make any explanation of his motion?

Mr. Austin: Yes, if your Honor please.

First, as to the facts, Mr. Warmack didn't make any cost studies on this case out here last October and, as a matter of fact, the present cost studies of the Respondent were not in existence at that time, although I believe they were being prepared. Of course, there was a conference held here and one in Chicago at that time.

Trial Examiner Ballinger: What is the purpose of the delay, Mr. Austin? To enable the Commission to do what?

Mr. Austin: Well, the next point I am going to 5748 mention is that the Respondent consumed about four and a half months on this cost study which greatly delayed the case and has been the chief cause of delay up to the present time. The evidence was practically concluded last June except for rebuttal evidence on costs on behalf of the Commission, and I presume at that time it would have been necessary to take the small amount of additional testimony on the question of injury to competition or meeting competition which we have taken here now, but in any event the case was as far along last June as it was in January, and the delay from August until January was due to the request of the Respondent which was granted by the Commission that it be allowed several months to prepare this cost study, and there is no question at all but what it needed all the time that it was allowed for the purpose of the cost study and that they worked very hard during that period. Nevertheless, that was and is the cause why the hearings have covered as long a period as they have, and the very complicated cost study having been made, it just wouldn't be practical for us to go right ahead and attempt to study it and answer it and rebut it within the period which has elapsed between the time it was introduced in January and the present time.

Mr. Warmack hasn't quite completed the cost study that he is making and if it had been intended to use him at this hearing, this hearing would have had to be 5749 scheduled for a later date than it was.

However, I don't think that Judge Hanley is correct in stating that I have indicated an intention to close the Commission's case here in Detroit. He undoubtedly has that impression and I don't know whether there is anything in the record on it.

Mr. Hanley: I said informally that I checked with Mr. Boatwright, and we both had that distinct impression.

Mr. Austin: I know that I never had any such intention and I can't believe that I would have ever said so in response to any question asked either by yourself or by the Examiner. I recall the Examiner asking me—

Trial Examiner Ballinger: Evidently, that was a misunderstanding.

Mr. Hanley: It isn't important, anyway.

Trial Examiner Ballinger: It isn't important.

Mr. Austin: No. For the very good reason that I expect to call not only Mr. Warmack but at least one or two other witnesses on the same subject and it certainly was never my intention of bringing them out here to Detroit. I always intended to call them in Washington. Now, getting down to the present moment, I have also understood that it will be impossible to call our witnesses in rebuttal until after I have cross examined Mr. Boatwright and had time to study the Respondent's 5750 Exhibits 99, 100, and 101 in the light of the facts adduced upon Mr. Boatwright's cross examination. We think we know what is wrong with the cost study, and I can say this, that I personally put a great deal of time on it, all the time I could possibly put on it since it was introduced in January and, as Judge Hanley says, Mr. Warmack has been here most of the time working also. I don't believe the Commission has wasted a minute in attempting to analyze this thing and to prepare to answer it. We just will have to have some time to take the record as it stands now and the exhibits and figures adduced on Mr. Boatwright's cross examination, to have an opportunity to prepare rebuttal testimony. You can't put a witness on the stand or you can't ask questions of a witness on this kind of a technical matter without thorough preparation, and I think Judge Hanley knows that perfectly well because he has had intimate connection with the cost study too.

lf it would help counsel for the Respondent any to t this forward a week and make it the 24th instead of the st, possibly we could meet it. I prefer the 31st unless it makes some material difference to counsel for the espondent. But I don't see how it is at all possible to get ady any sooner than that and I don't think we have sted any time since this cost study has been available January.

Mr. Hanley: Judge, I should have added some 51 other thing to that objection that, seemingly, I have omitted. Mr. Austin has alluded to the time that was necessary to prepare the cost study made by the espondent and which resulted in some delay by us. It i't a question of time, Judge, that we are concerned th about this motion. Indeed, if we could be rid of is burden entirely for a year or two years or the duration the war, the delay in getting an ultimate final result not what is concerning us. It is the terrific burden of e continuing effort while the record is open and while ere are hearings being scheduled and while investigans are being made and demands made—they are interinable, these demands for documents and other data hich we have to build up. So it isn't a question of time the matter of getting the ultimate result or a final conusion in the case at all. As I say, we think the case ould be suspended. That is really what I think should appen to it. I think it should be suspended for some ery long period of time until there can be a readjustent in such a way as to make the burden somewhat sier to carry but if it is necessary to close the record a preliminary to anything of that kind, then I feel it is st as essential in the interests of my client to insist at we do not have this continuation of the taking of stimony any longer than we have got to, to get rid all of these investigations and all of these demands.

We have got to get our own accountants back in 52 their own offices and at their own desks doing their own jobs, and we are just beaten down now to a oint where we have got to do some of our work. That is e way we feel about that.

Trial Examiner Ballinger: The case is a very importt one. It is what may be termed a leading case. The tion taken by the Commission in this case may effect e marketing situation throughout the entire oil industry.

In view of the importance of the case, the Examiner does not feel that the request of counsel for the Commission is unreasonable. The Examiner has endeavored to afford ample opportunity to counsel on both sides to present fully all of the facts pertaining to the matter obtainable. The motion is granted and now, at 12:25 p. m., the hearing is adjourned to reconvene March 31, 1942, at 10:00 a. m., in the hearing room of the Federal Trade Commission, Washington, D. C.

(Whereupon, at 12:25 p. m., the hearing was adjourned to reconvene March 31, 1942, at 10:00 a. m., in the hearing room of the Federal Trade Commission, Washington, D. C.)

5753

Room 532, Federal Trade
Commission Building
Washington, D. C.,
Tuesday, June 30, 1942.

Met, pursuant to notice, at 10:00 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

5754

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

Pursuant to notice, hearing of Docket 4389, case entitled "In the Matter of Standard Oil Company of Indiana," is reconvened at 10:06 a. m., Eastern Standard Time, June 30, 1942 in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held February 26, 1942, in Detroit, Michigan.

The Reporter will note counsel for the Commission and respondent present.

You may proceed.

Mr. Austin: If your Honor please, I have here a letter dated March 18, 1942, from counsel for the respondent which states the number of retail outlets served by the respondent and by respondent's jobbers in Detroit in 1937 and in 1940, as of December 31 of each of those years.

Judge Hanley suggested in this letter that it might be considered on the record, and I assume that therefore he will have no objection to introducing it as evidnce for the purpose of clearing up the question of the number of outlets served by the Company in those years in Detroit.

I therefore would like to offer this letter of March 18, addressed to the Federal Trade Commission from H. R. Hanley, attorney for the respondent, as evidence.

5755 Mr. Hanley: There is no objection to that, your Honor.

Trial Examiner Ballinger: The Reporter will mark the document Commission's Exhibit 128, and the same is, without objection, admitted in evidence.

(The document referred to was marked COMMISSION'S EXHIBIT No. 128-A and 128-B, for identification, and received in evidence.)

Mr. Hanley: I take it, your Honor, that in offering no objection to this letter, which is a clarification of Commission's Exhibits Nos. 91 and 96, that if respondent made any objection to those exhibits, the same will pertain to this clarification letter.

Trial Examiner Ballinger: It is so understood.

WILLIAM J. WARMACK was thereupon called as a witness for the Commission in rebuttal, and, being first duly sworn, testified as follows:

Direct Examination by Mr. Austin.

Q. What is your present employment, Mr. Warmack?

A. Accountant for the Federal Trade Commission.

Q. How long have you been on the staff of the Commission?

A. Since May, 1929.

Q. Will you outline your—before I ask you that, are you a certified public accountant?

5756 A. Yes, sir.

Q. What state?

A. Florida.

Q. And when were you certified as a public accountant there?

A. In June, 1933.

Q. Will you outline your training and experience as an accountant, with particular reference to distribution cost accounting?

A. In 1922 I attended the Walton Business College in Lakeland, Florida.

From 1924 to 1930 I studied and completed the accounting courses prescribed by the Walton School of Commerce, Chicago, Illinois.

From 1937 up to the present day, and especially up to 1941, I did considerable research work in the field of distribution cost accounting.

Of course, I stated that in June, 1933, why, I successfully passed the accountant examination of the Florida State Board, which is also the American Institute of Accountancy examination, and was issued the certificate of Certified Public Accountant by the Florida State Board.

From 1935 to 1940, why, I completed most of the courses of law as prescribed by the Blackstone College of Law, Chicago.

5757 It might be noted that my studies in this connection were also—I studied at the Walton School of Commerce, just enumerated above. These accounting studies were home study courses.

I believe that covers the educational qualifications, Mr. Austin.

Q. Where did you have your first employment as an accountant?

A. In Florida.

Q. And will you carry on from there and tell us what your training and experience has been?

A. Back in 1924, why, I entered accounting work in Florida, and during 1924, '25, why, I did some public work. In 1926, 1927, why, I was on a public accounting staff in Jacksonville, Florida.

Trial Examiner Ballinger: Is that connected with the state?

The Witness: No, sir. I worked for the firm of Cooper, Goodrich and Forney, a firm of certified public accountants, and I was engaged during that time in a supervisory capacity as public accountant.

In 1929, I entered the employment of the Federal Trade Commission, and since that time I have been continuously engaged in accounting work for the Commission.

During the period from about the middle of 1929
3758 up until about the end of 1935 I was engaged almost
wholly and entirely in accounting work in connection with the investigation of utility companies natural gas companies. There was an investigation made by the Federal Trade Commission pursuant to a Senate resolution.

By Mr. Austin:

Q. What was the nature of your work in that investigation?

A. Supervising accountant.

Q. I mean what sort of accounting work?

A. Accounting work in connection with the study of corporate structures, capital assets, capital liabilities, surplus, and various other matters which would naturally be involved in an accounting investigation.

I think we made a rather thorough accounting and economic investigation of the principal utility groups in the entire country.

I in 1934 and 1935 had full charge of the investigation of a large natural gas company. I would say that was the Lone Star Gas Corporation and its subsidiary companies, mostly in the State of Texas. I had general charge of the engagement and worked under no field supervisor. I was charged with the responsibility and duty of organizing, planning, directing, and conducting the investigation, prepared reports on that, which I put into the record in the latter part of 1935, and one of the reports went in in January, 1936. I would say at least one or more of those
3759 reports were prepared by another examiner working
under my direction and supervision, because he put his own report into the record.

From January, 1936, up to December, 1936, I was engaged to some extent in several of the investigations made by the Trade Commission. One of them is the Agricultural Income Investigation, and that involved securing of information with respect to costs from records of various manufacturers and dealers in farm products, such as tobacco companies, packers, milk products producers, millers, bakers, and several other industries.

At the end of the year I was appointed examiner in charge of the textile inquiry, which was just being wound up at that time by the Federal Trade Commission.

Following that, in December, 1936, I was assigned to accounting work in connection with the administration of the Robinson-Patman Act of the Federal Trade Commission, and my duties since that time have been on the lines of accounting work in connection with the administration of that Act.

Q. What was the first case which the Commission had, do you know, in which the questions of distribution cost accounting arose as to cost justification of price differentials?

A. You mean Robinson-Patman case?

Q. Yes.

A. This was the Bird-Ward case.

5760 Q. And did you have anything to do with that case?

A. Yes, sir. I handled the accounting work for the Commission on that case.

Q. And has it been part of your duties to keep in touch with Robinson-Patman accounting questions as they have arisen for the Commission?

A. Yes, sir.

Q. Have you been constantly familiar with the accounting questions as they have arisen in the cases that have been heard before the Commission involving cost accounting under the Robinson-Patman Act?

A. I have. Most of them I am sure I have.

Q. I do not mean that you worked on all of them personally, but have you been familiar with the accounting questions that have arisen before the Commission under the Robinson-Patman Act?

A. Yes, sir.

Q. And what cases have you personally taken part in in either making an analysis of cost accounting problems or in testifying as a witness, or preparing reports, or anything of that sort?

A. Well, in testifying as a witness the Bird-Ward case was the first, and next, which I believe was the largest cost case to come before the Commission as a Robinson-

Patman case in which cost was involved, was the Standard Brands case.

5761 Q. What do mean by the largest? You mean from the standpoint of cost accounting problems?

A. That is right; cost accounting problems. Various and sundry—

Q. What work did you do on the Standard Brands case?

A. Various and sundry questions of separation of costs. I made the field study—at least it was made under my supervision and direction—following the putting in of the company's cost exhibit, after which I prepared a report which went into the record, and I testified in that case.

There was another case that I might call to your attention, the Curtis case up in Rochester, New York. I do not remember the exact name of the company. That was a cost case which came before the Commission. There was no testimony made on that case. It was handled almost wholly and entirely between the company's accountants and the Commission's accountants, although the Commission had issued a complaint, and we covered the cost situation.

Trial Examiner Ballinger: In what business were they engaged?

The Witness: They were engaged in the canning business, your Honor.

By Mr. Austin:

Q. Is distribution cost accounting a subject which has been developed more in recent years, since the Robinson-Patman Act came into existence, then previously?

5762 A. Yes, sir. It is still in the pioneering stage of development.

Q. Have you read any books or treatises on that subject?

A. Many.

Q. Can you name some of them?

A. I can name several. I may leave out the most important ones when I start out to name them, because we have endless ones in the library.

Q. Well, are they mostly new works, because you said it was more or less a recent development?

A. New, yes.

Q. I am surprised to hear there are so many of them.

Trial Examiner Ballinger: Mr. Warmack, it is a simple question. He has asked you if you have read them and, if so, what?

The Witness: Would you like the names of the authors, sir?

By Mr. Austin:

Q. Yes, if you can give them.

A. I have covered with great interest the work of the Department of Commerce, especially under Dr. Wrue Alderson. There was a considerable amount of that. I could not go into every bit of it. There are many, many publications.

5763 Dr. Taggart has gone into questions of distribution costs, and I have read what Dr. Taggart had to say about that.

Albert Sawyer has gone into distribution cost accounting. I have read what he had to say.

Our Dr. Walker who is former chief economist, went into it to some extent. I have read what he had to say about it.

Dr. W. H. S. Stevens, who used to be with this Commission, has gone into distribution cost accounting. I have read what he had to say about it.

I attended a forum in Chicago in 1938 where Robinson-Patman matters were discussed at considerable length, and, of course, I have read what was published on that meeting by the National Association of Cost Accountants, and there were several papers put in at that meeting which dealt particularly with Robinson-Patman matters.

I have read work by English accountants. I was rather impressed by an article by a Mr. Magee, which came out prior to the passage of our Robinson-Patman Act; still it went into the question of distribution cost accounting. I have also read others of the British accountants.

Is that as many as you desire, or do you want me to go on?

Q. I think that will be enough.

A. I could probably be all morning on that question.

Q. There is a pamphlet entitled "Distribution Cost Accounting," which was issued by the Federal Trade
5764 Commission. Who is responsible for the preparation of that?

A. Well, the Chief Economist, of course, was responsible for the preparation of it. We on the staff of the Chief Economist had something to do with parts of it.

Q. Did you contribute in any way to the material going into that publication?

A. I did to some extent.

I might call your attention to this, Mr. Austin. As I said at the outset, in the ones that I named I am afraid that I have left out maybe some that had gone into distribution cost accounting to a much greater extent maybe than those that I have named. Many of the accounting schools have gone into distribution cost accounting in one degree or another, and I have covered considerable of the literature.

Trial Examiner Ballinger: Is there substantial difference between the different authors?

The Witness: That would be a pretty hard question to answer, Judge. Generally, one man will talk much about one point: for instance, selling cost or salesman's salaries. Another will deal or maybe devote most of his time to advertising cost. Another man will talk more about some other part of distribution cost accounting which he may be more or less particularly interested in. So it might be said that since this is a field of cost accounting that up to relatively recent years had not been explored to
5765 any great extent by accountants, why, one man would
be more interested in one thing than another.

Way back in 1925 Mr. Kastenholtz went into distribution cost accounting to some extent, and some of the British accountants did.

Trial Examiner Ballinger: Have any two of them focussed on the same subject matter?

The Witness: Yes, sir; I think they have.

Trial Examiner Ballinger: Is there substantial disagreement between them on the same subject?

The Witness: I think that, looking at the situation broadly, that they all are—I would not say all, but a good number of them went to the same feelings.

Trial Examiner Ballinger: They are in agreement, substantially?

The Witness: Reasonably.

By Mr. Austin:

Q. Well, they have not all covered the same points?

A. No. No. But we are talking about a general situation.

Q. Now, Mr. Warmack, you have been present at a great many of the hearings, I believe all the hearings at which Mr. Boatwright has testified in this case, have you not?

A. Well, not all of them, but most of them. It was at the Detroit hearing there that I did not attend a few of the hearings. I was working at the company's office.
5766 But I have read the testimony.

Q. Well, my recollection is that you were present at the time Mr. Boatwright testified in Detroit?

A. Most of the time.

Q. And are you familiar with the Respondent's Exhibit 31-A to Q and with the Respondent's Exhibits 99, 100, and 101?

A. Yes, sir.

Q. You read and studied all those exhibits?

A. Yes, sir.

Q. And also Commission's Exhibit 119, which is form 189 for 1940?

A. Yes, sir.

Q. And have you had occasion to read parts of Mr. Boatwright's testimony from time to time and had that testimony available before you in recent months?

A. Yes, sir.

Q. And have you since the first of this year made a study of the Respondent's exhibits which I have just mentioned from the standpoint of analyzing the material which is contained in those exhibits, and which was offered to support cost differentials set forth in those exhibits?

A. Yes, sir.

I would like to qualify that a little. I did not cover in my studies every single account. I did make a study
5767 of the underlying material in many of the accounts.

Q. Did you not spend a considerable amount of time in the company offices in Detroit and Chicago in January and February?

A. Yes, sir.

Q. And what was the purpose of the time that you spent there?

A. To study the records of the company and review the methods that the company had employed in the separation of its costs as set forth in Respondent's Exhibit 101 and Respondent's Exhibit 100 and Commission's Exhibit 119.

Q. I would like to call your attention now to Respondent's Exhibit 31, particularly to page 31-H. On that exhibit there are listed certain items of expense which, it is stated, are expense items of an overhead nature not influenced by Ned's Auto Supply Company business. Are you familiar with the nature of the business of Ned's Auto Supply Company in 1937 as brought out in the testimony?

A. Yes, sir.

Q. And with the general nature of the company's business in Detroit in that year as disclosed by the testimony, with particular regard to the fact that Ned's Auto Supply Company was a so-called tank wagon station?

A. Yes, sir.

Q. The first item listed on Respondent's Exhibit 31-H
is an item of $4,550.06 in account 1001, the title of
5768 that being "Salaries—Supervision—Others." Have
you read the testimony of Mr. Boatwright regarding
the nature of the expense going into that account?

A. Yes, sir.

Q. What is your opinion as to whether any of the expense going into that account in 1937 was properly chargeable to the cost of sale of gasoline in Ned's Auto Supply Company?

Mr. Hanley: Just a moment.

If your Honor please, may I ask the witness a few questions on his qualifications?

Trial Examiner Ballinger: You may.

Voir Dire Examination by Mr. Hanley.

Q. Mr. Warmack, I do not care to go into the question of general qualifications at all at this time, but I wish you would answer this question on that phase: Up until 1936 were you engaged at all in distribution cost accounting? If you had any experience up until that time, please just briefly state what it was.

A. Practically none.

Q. All right.

Subsequently to 1936, which is the year in which the Robinson-Patman Act went into effect, you have stated that you worked on certain cases that were under con-
sideration by the Commission. You recall that testi-
5769 mony?

A. Yes, sir.

Q. Will you please state briefly just what those cases were, what you did in connection with them, and whether or not they involved any question of distribution cost accounting?

A. If I understand your question, Judge—

Mr. Hanley: Will you read it, please?

(Question read.)

The Witness: May I ask that the previous question be read?

(Record read.)

Mr. Austin: Now, the witness has already referred to the Bird-Ward case and to the Standard Brands case and stated that they involved such questions. Do I understand counsel wants some more complete statement? I have no objection, but—

Mr. Hanley: I think the witness did say that he worked on those cases. As to what extent he worked on them, and as to whether they did involve questions of cost distribution, and whether or not this witness worked on those particular questions, I am not at all clear. I just want to have him summarize exactly what he did on distribution cost accounting.

By Mr. Hanley:

Q. I may help you a little, Mr. Warmack, by stating that I wanted as briefly as you can give it exactly
5770 what your experience as a distribution cost accountant has been.

Mr. Austin: Just start out with the Bird case, Mr. Warmack, what the case involved, and what you did, and any other cases.

The Witness: I might call your attention, Mr. Austin and Judge Hanley, to this: I worked on the Bird case in December, 1936, and January, 1937. As to one single particular item of cost, or how the company kept its records, if you will give me time to go get the record, I can go into each one of them and tell you exactly what I did on those things.

By Mr. Hanley:

Q. Well, I do not require that degree of specification, Mr. Warmack. Just give us the best you can out of your recollection.

A. I took the cost exhibit which was put into the record by the Bird Company and I went to the company's office in East Walpole, Massachusetts, and I picked up each item of cost that had been used by the respondent company to arrive at a cost differential, and I made an analysis of each of these items of cost, as to what went into the item and as to how it had been separated for the purpose of arriving at the cost differential.

Mr. Austin: Well, it was distribution cost accounting, was it not? 5771

The Witness: Yes, sir.

I might state that there was no item of manufacturing cost involved in that cost justification.

That is the Bird case. Is that sufficient on the Bird case?

Mr. Hanley: I think so, if that is generally what you did, Mr. Warmack.

The Witness: Yes, sir; that is right.

Mr. Austin: Did you make a report on it?

The Witness: I did, but that report did not go into the record. It was my opinion that the company had justified its price differences, and my opinion went into the record.

Trial Examiner Ballinger: Did or did not go into the record?

The Witness: It did go into the record, your Honor.

Trial Examiner Ballinger: What is the next case?

The Witness: Well, the next case on which I testified was the Standard Brands case, which I believe was the principal cost case that came before the Commission at that time.

Mr. Austin: Did you work on any other cases in the meantime?

5772 The Witness: Oh a great number.

Mr. Austin: Can you mention some of those?

The Witness: I might call your attention, Mr. Austin, to this. You are talking about cases. We make investigations in many instances which never develops into a case, and I am prohibited from disclosing the names of any of those investigations.

By Mr. Hanley:

Q. I won't ask you to do so, Mr. Warmack, but just tell us, please, whether in the interim between the Bird case and the Standard Brands case, which you did try, you were engaged on studies involving distribution cost accounting, and, if you were, to what extent you were using your time in that line of work.

A. I was engaged continuously in the studying of distribution costs arising in various investigations which were being made by the Commission, studies of distribution cost statements that were submitted by companies, possibly at the suggestion of the Commission, or maybe of their own free will, to ask this Commission if we could offer any suggestion as to further developments of distribution cost accounting that they might go into—well, just various questions, Judge, of distribution cost, especially salesmen's salaries and expenses, warehousing cost, advertising cost, and—well, all costs involved in distribution of a company's products; sometimes explored to 5773 some extent the possibility of using manufacturing costs or certain parts of manufacturing costs for the purpose of proving a cost differential, but it was mostly the distribution cost.

In the Standard Brands case the company followed the similar procedure as just outlined in the Bird case. They had three principal broad classifications under which they placed their distribution costs, the costs which they urged in their cost differential.

Q. Did you have charge of the accounting work for the Commission in that case?

A. Yes, sir.

Q. And likewise in the Bird case?

A. Yes, sir.

Mr. Hanley: You may proceed.

Trial Examiner Ballinger: Now, read the question pending.

(The question referred to was read as follows: "Q. What is your opinion as to whether any of the expense going into that account in 1937 was properly chargeable to the cost of sale of gasoline to Ned's Auto Supply Company?")

Mr. Hanley: Now, I would like to ask counsel, if I may, your Honor, if the purpose of the inquiry as to the propriety of Respondent's Exhibit No. 31 is by way of 5774 getting an opinion from this witness?

Mr. Austin: Yes, as to the propriety of the charges shown on 31-L and other matters which we will get to.

At the present time the question is devoted to determine whether or not Exhibits 31-H properly establishes differentials between Neds' Auto Supply and other stations.

Mr. Hanley: I would like to ask one further general question and then some specific questions, your Honor.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Have any of your studies or investigations relative to distribution cost accounting involved the sale and distribution of petroleum products of oil companies other than this one now on trial?

A. Not in any particular case, Judge, that is, a case before this Commission. There was none.

Q. I am referring either to a case that actually came before the Commission or an investigation which has not ripened into a case but which you may have studied, anything of that kind?

A. Yes. I do remember of an investigation of an oil company. I do remember that we in making our distribution cost survey, that is, generally over the country, that we contacted and I think maybe studied some of the oil companies.

Q. I see.

5775 A. I do not know just how extensive that was, and of course, I would not be permitted to give the names of the companies.

Q. I am not asking that.

Now, adverting to the question which Mr. Austin has asked you, and referring you to Exhibit 31-H, have you at any time made a study of all of the figures, records, data, and information of the respondent company which either go into these accounts or is omitted from these accounts?

A. Judge, may I inquire as to your question this: Do you mean did I review every voucher, every item of cost that entered each one of these accounts during the year 1940?

Q. Yes.

The Witness: During 1937?

I did not, and I might call your attention that, according to the record, I believe the record will show that Mr. Boatwright did not either.

By Mr. Hanley:

Q. Well, did you review everything that he did?

A. I could not answer that, sir.

Q. Well, if you did not review everything that he reviewed, are you willing to express an opinion as to the propriety of the results that he found?

A. In connection with account 1001 that has just been—

5776 Q. Or anything else in the entire exhibit.

A. I am willing to express an opinion with reference to the propriety of—may I change that?—with reference to the way the separations have been made of many of the accounts by the respondent.

Q. Did you review all classes of accounts as reflected by the record, data, figures, and information of the respondent company that are treated in Exhibit 31?

A. No.

Q. You did not?

A. I did not.

Q. Then you do not know, Mr. Warmack, what went in and what was left out, first, in connection with specific vouchers, and, secondly, in connection with classes of accounts.

A. I have the testimony to go by, what is in this record to go by, and I made certain test checks as to what went into these sufficient to satisfy myself reasonably as to what went into most of these accounts, and that is particularly true for the year 1940.

Q. We are talking about Exhibit 31, which treats the year 1937.

Now, are you willing to say that you reviewed vouchers and classes of accounts that were either included or omitted in Exhibit 31 and upon which inclusions and omissions Mr. Boatwright expressed the conclusions as reflected
5777 by Exhibit 31?

A. I did not review every voucher; no sir.

Q. All right. One more question.

Have you discussed with any person connected with the Federal Trade Commission, other than Mr. Austin, or Mr. Lundvall, your conclusions relative to any studies that you have made in connection with any of the accounting procedures of the respondent company?

A. I have discussed with my chief—

Q. Well, who is he?

A. —Col. W. H. England, chief economist, many points in connection with the accounting in this case. I have also—

Q. Is that the only other person?

A. I have also discussed with the chief statistician.

Q. Anyone else.

A. Mr. Lundvall; and, of course, I have the privilege to discuss with any of the accountants questions. I do not remember any particular discussion. However, I may have had discussions on some points with other accountants.

Q. Is that all?

A. That is all, sir.

Q. Did you make any test check of respondents' accounting in 1937? I want to emphasize 1937, Mr. Warmack. That is the period covered by Exhibit 31.

A. The test checks that I made I believe were for the year 1940.

5778 Q. Well, then, is it true that you did not make any for the year 1937?

Mr. Austin: If your Honor, please, I do not know whether this is alone the line of the objection to the question or whether—

Mr. Hanley: I have not made any objection yet.

Trial Examiner Ballinger: He is merely leading up to one.

Mr. Hanley: Yes. I propose to make an objection to the question as soon as I get through.

Mr. Austin: On voir dire I do not object to it, although I think it is immaterial as far as the question is concerned.

Trial Examiner Ballinger: Is there a pending question? Read it.

(Last question read.)

A. I would not say that I did not make any test check for the year 1937. I would say this, Judge, that my study of the company's records went almost entirely into questions of cost, the separations of those costs, in the Detroit field for the year 1940, for the reason that I believe that it has been admitted in evidence in this case that practically the same methods were used for the separation of these costs in 1937 that were used in 1940 and practically the same items of cost went into the respective accounts in 5779 1937 as in 1940.

By Mr. Hanley:

Q. Mr. Warmack, I will just ask you this one question, and I wish you would give me a definite answer, and then I am through.

Did you or did you not make any test check of the matter underlying Respondent's Exhibit 31 for the year 1937?

A. Well, Judge, you ask me did I make any, or did I make none, or did I make one, or did I make a hundred. I don't know whether I made one or made a hundred. I say that I went into this matter, and I don't know if I made test checks for 1937 positively as such. In our studies we made hundreds of test checks.

Q. Just answer my question. Perhaps you have. You said you don't know. Have you any work sheets on 1937?

Mr. Austin: The witness said his studies were chiefly on 1940, but he has investigated—

Mr. Hanley: Well, let the witness testify, please, Mr. Austin:

By Mr. Hanley:

Q. Have you any work sheets on 1937?

A. Judge, I don't think that we have. I would just have to look and see if we have.

Mr. Hanley: The questions propounded to the witness in connection with Item 1001 on Exhibit 31-H is objected to for the reason that the witness has now shown
5780 himself not qualified to express any opinion relative
to that specific item of cost distribution and, in fact, not qualified to express any opinion as to the propriety of any cost separations and distributions appearing in the entire exhibit 31.

The objection does not go to the general qualifications of the witness as an accountant. It goes specifically to the fact that the witness by his testimony has demonstrated that he has not made any sufficient study of Exhibit 31 reflecting matters arising out of the year 1937 to warrant the expression of an opinion by him or to give any opinion that he might express any value.

Trial Examiner Ballinger: I will hear from counsel for the Commission.

Mr. Austin: Well, I do not think the objection is well taken, your Honor. Each one of these accounts and each

one of these expense items was gone into on cross-examination of Mr. Boatwright. The nature of the expense items was brought out in the testimony and to some extent in Respondent's Exhibits 99 and 100. Any differences in the quoted accounts between 1937 and 1940 are in the record. The expense items are the same, as Mr. Warmack says, and the methods of allocation used by the respondents have been developed in the testimony and in Exhibit 99, the methods used in 1937. The testimony and the opinions which the witness will be asked to give will be based upon—
5781 certainly as in 1937, I think, they will be based very largely, if not entirely, upon what is in the record. I won't say entirely because the witness did make studies in Detroit and he knows the nature of many of these expense items from his 1940 examination, and he knows how they are handled, and they were handled the same way in 1937. The testimony shows that.

Trial Examiner Ballinger: The Examiner will ask counsel a question.

Was Respondent's Exhibit 31 used as a basis for any of the computations or conclusions reached in respondent's Exhibit 100 or 101?

Mr. Hanley: No, your Honor.

I just wanted to add to my objection this further statement, which will answer your Honor's question.

The testimony sought to be elicited is further objected to for the reason that it appears from the statements of the witness and laterally by the statements of counsel that the witness concentrated his studies largely on the year 1940 and the separation and distribution of cost as set up by the respondent for the year 1940 in this case, which is reflected, I think, in Respondent's Exhibits 99, 110 and 101, if these are the right numbers.

The fact of the matter is that the 1937 cost study, Exhibit 31, was designed to separate out of the reseller group
5782 of customers and the reseller channel one individual reseller buyer, namely, Neil's Auto Supply Company, which was receiving deliveries under the general plan of the company in distributing its petroleum products through the reseller channel.

In 1940, and in connection with the studies that have been made, there was a cost distribution as between, not members of the same genesis or group, but between members of one group and members of a distinctly different group, namely, retail resellers, on the one hand, and jobber or wholesale jobbers, on the other hand. Consequently, there was not any consideration given in our study based on 1940 to the figures reflected in Exhibit 31. It was for a distinctly different purpose and based on an entirely different type of study. Hence, anything that the witness may attempt to relate to Exhibit 31 by his studies in 1940 just doesn't fit, and we insist, your Honor, that, unless this witness has made a definite study of the underlying data upon which Exhibit 31 is based, he is not entitled to express an opinion.

I wish to repeat, of course, that this goes specifically to his knowledge of this subject, and it is not a general objection to his qualifications as an accountant.

Mr. Austin: If your Honor please, even if the witness had not made any studies in Detroit at all, he would still be perfectly capable to testify as an accountant to the 5783 conclusions reached and the methods used in respondent's Exhibit 31. The nature of all these expenses has been brought out in the record through Mr. Boatwright's testimony, and the regular accounting procedure of the company is brought out in Exhibit 99, which is the regular procedure, not the 1940 cost study. Mr. Boatwright's testimony shows just how these accounts were handled and how the differentials were arrived at. Now, Mr. Warmack, I think, amply qualified as an accountant to testify as to whether the methods used were correct, and as to whether the results reached were correct as shown in Respondent's Exhibit 31, based on testimony in the record. He will give the opinion; he will give the basis for his opinion, and I think in every case he will support his opinion by facts which appear in the record.

Trial Examiner Ballinger: The objection is overruled with the right reserved to counsel for the respondent to renew the objection at a later date.

Just off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

Direct Examination (Resumed)

Mr. Austin: Now, go back and read this question. Do you remember it?

Trial Examiner Ballinger: Read the question.

5784 (The question referred to was read as follows:

"What is your opinion as to whether any of the expenses going into that account in 1937 was properly chargeable to the cost of sale of gasoline to Ned's Auto Supply Company?")

The Witness: Shall I answer that question?

Trial Examiner Ballinger: Answer the question.

Mr. Austin: Yes. It is account 1001.

Trial Examiner Ballinger: 1001, Commission's Exhibit 31-H.

A. In my opinion, a part of that cost is properly applicable to serving all customers. Of course, Ned's is one of those customers.

By Mr. Austin:

Q. What is the basis for your opinion in that regard?

Mr. Hanley: Just a moment.

Your Honor, may it be understood that respondent's objection stands to all of the inquiry in connection with Exhibit 31?

Trial Examiner Ballinger: Continuing objection.

A. Under the Company's code of account, the account in question, 1001, which is "Salaries—Supervision—Others," that portion of those salaries which is allocated to tank wagon reseller channels in the company under the code of account, why, this total class of expense is shown to be separated between tank wagon reseller 5785 channel, tank wagon consumer channel, other methods channel, on the basis of a ratio of gallons sold by each method to total gallons sold for all methods; in other words, on a gallonage basis. It seems to me that that recognizes the fact that this is a class of cost that is applicable to each channel on a gallonage basis, and I don't see any particular reason why part of it is not applicable to Ned's when Ned's gallonage is a part of the gallonage used here.

Mr. Hanley: The respondent moves to strike that portion of the witness' answer beginning "it seems to me that that is a recognition," on the ground that it is not responsive. It is not an expression of his opinion, as he was requested for an opinion, and because—

Trial Examiner Ballinger: The motion is granted.

Mr. Hanley: The respondent now moves to strike the entire answer of the witness on the ground that it appears from his statement that he is basing his conclusion and opinion on something that he sees in the company's code of accounts and is not something based on his study of Exhibit No. 31, and the actualities, as to what may have transpired in the company's costs in serving Ned's Auto Supply Company as distinguished from the company's costs in serving other reseller buyers.

5786 Mr. Austin: Did your Honor grant the motion to strike out the last answer of the witness?

Trial Examiner Ballinger: Not the answer.

Mr. Austin: What was stricken out?

Trial Examiner Ballinger: Read the record, please.

(Record read.)

Mr. Austin: Now, do I understand the last part of that is stricken?

Trial Examiner Ballinger: After listening to the entire answer, the Examiner reverses himself and overrules the motion to strike.

By Mr. Austin:

Q. Mr. Warmack, what is the—

Trial Examiner Ballinger: One moment.

There is also, I believe, another motion pending to strike the entire answer. That motion is denied.

By Mr. Austin:

Q. What is the nature of the expense going into this account 1001 as shown by the testimony?

Mr. Hanley: What testimony, if your Honor please?

Mr. Austin: Well, Mr. Boatwright's testimony.

Mr. Hanley: Well, that is objected to as calling for the conclusion and opinion of the witness.

Trial Examiner Ballinger: Well, the witness will undoubtedly refer to the particular testimony of Mr. Boatwright.

5787 The Witness: I don't have that particular testimony before me. I believe it has been testified to, however, that this is largely expenses of a clerical nature, the stenographers of the supervisors, and some—

Mr. Austin: Haven't you any notes, Mr. Warmack, to which you can refer which will help you in some way to take up these questions? I think it is a great deal to attempt to rely on your memory, unless you do have some notes. I was under the impression you did have some.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: The testimony shows that this account—

Trial Examiner Ballinger: Now, what testimony are you referring to?

The Witness: The testimony of Mr. Boatwright in connection with this account 1001, your Honor.

Trial Examiner Ballinger: Can you give any citation in the record of it?

Mr. Austin: We can't do that off hand. It will take an awful lot of time and encumber the record. I can look it up at any time. I believe that most of these general statements will be questioned.

Mr. Hanley: The question is general, if your Honor please, and we do object to that method of examining this witness. He has made studies. He says he has
5788 read the record. He ought to be able to say from
his knowledge what goes into account 1001 or into any other account on which he is going to express an opinion. Your Honor has said, over our objection, that he is entitled to express that opinion on his study of the record, but the respondent is entitled to have this witness testify from his own knowledge, however acquired, and not make some broad, wild guess as to what the testimony shows on the part of Mr. Boatwright or anybody else.

By Mr. Austin:

Q. Well, you can state, Mr. Warmack, what you know what goes into these accounts, whether you have acquired the knowledge from Mr. Boatwright's testimony, or otherwise.

Trial Examiner Ballinger: He should state the source of his knowledge.

Mr. Hanley: Surely we are entitled to that, at least, Judge.

A. Well, as I started to say, the testimony shows that this account is made up chiefly of salaries of clerks and stenographers of the supervisory officials, whose salaries are entered in account 000, and that was also the information given me from my inquiry into this account for the year 1940.

5789 The Witness: In the Detroit office.

Trial Examiner Ballinger: You mean the Detroit office of the respondent?

The Witness: Yes, sir.

By Mr. Austin:

Q. What is the regular accounting procedure of the respondent in allocating salaries of these clerks and stenographers in preparing their regular form 189 for the various fields?

A. The allocation of these salaries of clerks and stenographers follows the same allocation of the salaries of the respective supervisory officials for whom they work.

Q. And in response to Exhibit 31, referring particularly to Respondent's Exhibit 31-Q, were part of the salaries in account 000 treated as being chargeable to Ned's Auto Supply Company?

A. Yes, sir.

Trial Examiner Ballinger: Will you read that last question?

(Last question and answer read.)

By Mr. Austin:

Q. Then, what is your opinion, Mr. Warmack, as to whether the expense in Account 1001 should not follow the expense in Account 1000?

Mr. Warmack, it is going to be very difficult unless

5790 you go ahead and give the reasons for your opinion. I am trying to ask you questions to lead you to state your reasons for your opinion which you gave in the first place, and if you have any further reasons for that opinion, why, I would like to have them; if you have not, why, we will go on to something else.

The Witness: May I have that question?

(Question read.)

A. Well, I think that the expenses in account 001 follow the expense in the 000 account, and, in my opinion, in view of the fact that the expenses in the 000 account are in some parts applicable to the serving of Ned's then surely the expenses in the 001 account, which under the company's regular methods of allocation are allocated on the basis of the 000 account, are properly chargeable in part to the serving of Ned's.

Q. Do I understand that that is the company's regular accounting procedure, that the expense going into the account 001 follows the distribution of the account in the 000 account?

A. That is correct.

Q. What is your opinion as to whether from an accounting standpoint there is any basis for a distinction or separation of the expenses in accounts 000 and 001 as between gallonage sold to Ned's Auto Supply Company
5791 and gallonage sold to other reseller outlets in 1937?

A. In my opinion, from an accounting standpoint no distinction or separation can be made as to the expenses entered by respondent in its accounts 000 and 001 between gallonage sold to Ned's Auto Supply Company and gallonage sold to other reseller outlets in 1937 which would afford a cost differential.

Trial Examiner Ballinger: Can you state your reasons for that conclusion?

The Witness: Yes, sir. Respondent's Exhibit 31-Q shows account 1000, what we have been referring to as the 000 account. There is a statement at the top of that page which reads "Schedule of Marketing Expense Items Incurred on both Ned's Auto Supply Volume and Regular Reseller Channel, but to a Lesser Extent on Ned's Volume than on Regular Tank Wagon Reseller Business."

The 000 account is one of the expenses shown there to which that statement applies. Inasmuch as in the company's regular accounting procedure account 001 is treated in the identical manner that the 000 account is treated, then I see no reason why it does not follow the 000 account in its allocation both as to Ned's and to other customers.

By Mr. Martin:

Q. This is a supervisory account, isn't it?

A. Yes.

5792 Q. 001 as well as 000.

A. Yes, sir. That is correct. The 001 represents the clerical assistants to supervisors.

Q. Does Respondent's Exhibit 31 or does the record anywhere contain any evidence of any cost study for the purpose of distributing the amount of expenses in those accounts between Ned's, on the one hand, and other stations, on the other hand?

The Witness: May I have that question read?

Mr. Austin: Read it.

(Question read.)

A. No, sir.

By Mr. Austin:

Q. What, in your opinion, would be necessary to arrive at a separation of the expense going into such a supervisory account in ascertaining the cost chargeable to a particular customer?

A. To separate that account would require a thorough cost study, what you might call a factual and objective cost study to determine where the cost falls.

Q. Can that be done with a supervisory account of this kind?

A. Well, there is always a question in my mind as to whether it can. If it can, that is I believe the only way it can be; otherwise it would, in my opinion, have to be on a gallonage basis.

5793 Mr. Austin: May we take a few minutes recess?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: We will recess for five minutes.

(Whereupon a short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. On Respondent's Exhibit 31-H, Mr. Warmack, the second item of expense listed there as not influenced by Ned's Auto Supply business, there is an item of $8,912.32 for account 1215 which is entitled "Expense—Salaries—Others." The testimony shows that the expense in that account, and also in accounts 1216 and 1217 listed farther down on that page, are the expenses of the real estate and tax department of the respondent in the Detroit field. What is your opinion as to whether those three items of expense are properly chargeable in their entirety to the tank wagon reseller business of the company other than that of Ned's Auto Supply Company?

A. My opinion is that they are chargeable to all of the business of the company including Ned's business.

Trial Examiner Ballinger: Will you state your reasons for that conclusion?

Mr. Austin: May I ask, Your Honor, whether the 5794 witness makes any differentiation as to any different parts of the expense going into that account?

Trial Examiner Ballinger: Answer Mr. Austin's question.

By Mr. Austin:

Q. If I may clarify that, Mr. Warmack, it appears from Mr. Boatwright's testimony that a large part of the expense going into that account is expense incurred in the operation of leased service station properties of the company.

In your opinion, is the portion of the expense of the real estate and tax department in connection with leased service station properties properly chargeable to tank wagon reseller stations?

A. No, sir. I think that it should be separated, and the part chargeable to the leased service station group should be so charged, which would be applicable to the gallonage sold through leased service stations, to operators of leased service stations, sir.

Q. Are you familiar with the fact that the lessees of the leased service stations pay rentals to the company?

A. Yes, sir.

Q. In determining what portion of this expense and other leased service station expense is chargeable to leased service stations is it necessary to offset the rentals received against the expense to determine whether there 5795 is a net expense?

A. Oh, sure, that is necessary.

Q. Has that been done here?

A. No, sir. There is no recognition given here to the question of leased service stations at all.

Q. And what is your opinion as to whether it is proper to include on Respondent's Exhibit 31-H the portion of the expense in accounts 1215, 1216 and 1217 arising from the leasing operation as chargeable to non-lessee stations as well as to lessee stations?

A. I don't think it is proper to make any such charge as that. I think that the portion applicable to the leased service station should be so charged to the leased service station business, and that portion applicable to serving nonleased service station business should be so charged. In other words, I think the two should be separated.

Q. Might that not result in a different per gallonage charge on expense in this account to non-lessee stations than would result in being charged to lessee stations?

A. It might.

Mr. Hanley: Just a moment, please.

That is objected to in that it calls for a conclusion of the witness on a matter of fact concerning which the witness has testified he has made no special study. Further, that he has now testified that in his opinion leased service 5796 stations as distinguished from other service stations should be separated as groups for distribution cost purposes, and it appears from the record that Ned's Auto Supply Company is not a leased service station, and the Exhibit 31-H excludes from cost against Ned's the item which is allocable to leased service stations, which is in exact conformity with the expressed opinion of the witness, notwithstanding he says that account 1215 ought to be in part allocated to Ned's Service Station.

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. First, Mr. Warmack, let me ask you whether the portion of the expense in accounts 1215, 1216, and 1217 which is leased service station expense is properly chargeable to the gallonage going through non-lessee service stations?

A. In my opinion, it is not.

Q. So, do I understand you to say that that part of the expense would not be chargeable to Ned's or to any other non-lessee.

A. It should not.

5797 Q. Now, as to the balance of the expense in that account, is it your understanding—first, I would like to ask whether in your investigation in Detroit in the spring of this year you made any investigation as to the nature of the expense going into the account 215 and as to where that expense arises.

A. Yes, sir; I made an investigation of that account, and I believe that I have a worksheet that will show the complete analysis of that account for the entire year; that is, account 215.

Q. The year 1940?

A. For the year 1940.

Q. Now, Mr. Warmack, assuming that the nature of the expense going into this account was the same in 1937 as in 1940, was a part of the expense going into that account incurred in connection with the company's bulk plant properties and the main office building?

A. Yes, sir.

Q. In your opinion, would a part of that expense be chargeable to Ned's Auto Supply Company?

A. In 1937, you mean?

Q. Any year, yes.

A. Yes, sir.

I would like to explain that. In 1940 Ned's was not
served through bulk plants; therefore that portion
5798 applicable to bulk plants in 1940 surely should not
be charged to Ned's—

Q. Yes.

A. —in 1940.

Q. I believe my question was directed to Ned's.

A. In 1937 Ned's was served through bulk plants; then the cost of operating the bulk plant is in part, some part, applicable to the serving of Ned's.

Q. Is there anything in this exhibit, or from the testimony which you found as the result of your study which indicates which portion of that expense is chargeable to Ned's Auto Supply Company?

A. No, sir; I don't believe that there is.

Mr. Hanley: In view of the witness' answer just made, it is moved by the respondent that his testimony in connection with account 1215 be stricken inasmuch as, since he is unable to answer as to the factual result, his conclusions as to the propriety of accounting are rendered valueless.

Mr. Austin: Well, if Your Honor please, the respondent has the burden of proof here, and if the witness has testified that some of this expense is chargeable to Ned's, and there is no showing in the cost study made as to what part is chargeable to Ned's, that I think is as far as the
Commission has to go. I think the burden is on the
5799 respondent, if they claim that no part of this ac-
count or an insignificant part is chargeable to Ned's,
to establish that. In any event, I have simply brought

out by that question the fact that there has been no proof of that as far as the accountant is able to determine in the record.

Mr. Hanley: If Your Honor please, the fallacy of counsel's statement is clearly obvious in this, that he says the respondent has the burden of proof. We brought into court Exhibit 31. Now, the Commission puts Mr. Warmack on the stand and he says, "I don't think you have proceeded properly in your accounting of account 1215. Part of that ought to go to Ned's." And counsel says the burden is upon us to undertake to enlighten the court as to what theory, or plan, or program, or notion, or view Mr. Warmack has in his head as to what part he thinks ought to be allocated to Ned's. That is an impossible burden, Judge. We do not know what Mr. Warmack thinks about it unless he testifies to it. And I assert that there are some obligations on the part of the Commission. When they criticize this account they should enlighten the court.

Trial Examiner Ballinger: The witness' testimony is of no greater value than the reasons assigned to support it.

The motion to strike is overruled.

By Mr. Austin:

5800 Q. Now, Mr. Warmack, bearing in mind the nature of expense going into account 1215, and referring now only to the portion of that incurred in connection with the company's properties through which Ned's as well as other tank wagon stations were served in 1937, is that expense an expense of such a nature as to afford a cost differential, in your opinion, as between Ned's on the one hand, and other tank wagon reseller stations, on the other hand?

Trial Examiner Ballinger: Read that question, will you please?

(Question read.)

Mr. Hanley: That is objected to as unintelligible.

Trial Examiner Ballinger: Do you understand the question?

The Witness: Yes, sir; I understand the question.

Trial Examiner Ballinger: You may answer it.

You may answer it.

Mr. Hanley: I do not make the inquiry if the court understands the question. I confess I don't.

Mr. Austin: Well, I want the witness to state whether or not the expense in this account is of such a nature as to afford a cost differential, and, if so, what is necessary to establish such a differential.

Mr. Hanley: Well, if that is the question, then go ahead.

5801 Trial Examiner Ballinger: You may answer it.

A: There is a question in my mind as to whether or not this expense is proper expense to be used in the establishing of a cost differential. If it is to be used, the only way to separate it would be through a factual and objective cost study, if it could be separated at all, and if it could not be separated on such a basis it would of necessity have to be separated on a gallonage basis, and that would not afford a cost differential, Mr. Austin.

Mr. Austin: I think we better have an adjournment for lunch, Your Honor, before taking up this next account, which is Account 1066, and which may take some time.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger. The motion of counsel for the Commission is granted, and now at 12:30 p. m. the hearing stands in recess until 2 p. m.

(Whereupon a recess was taken at 12:30 p. m. until 2:00 p. m. of the same day.)

5802 Afternoon Session.

2:00 P. M.
Room 388.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Resumed).

Trial Examiner Ballinger: Come to order. Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. One more question regarding the account 215, Mr. Warmack, and also 216 and 217 which appear on Respondent's Exhibit 31-H. It was brought out in your testimony this morning the fact that part of the expense going into those accounts is expense incurred by the company in connection with the operation of leased service station properties. Is there indicated on Respondent's Exhibit 31-H or elsewhere in the exhibits or testimony the amount of the expense going into accounts 1215, 1216, and 1217 for 1937 which was incurred otherwise than in connection with leased service station properties?

A. No, sir.

Q. Mr. Warmack, the third item on Respondent's Exhibit 31-H is expense from accounts 1243 and 1244, Federal Insurance and Unemployment Taxes. What is the nature of that expense as related to the two accounts above it?

A. That is portions of Federal Insurance and Unemployment Taxes that the company pays to the respec-
5803 tive government agencies with respect to the salaries of the employees, including—

Q. And is that item of $403.87 the Federal Insurance and Unemployment Taxes on the two amounts above, two top amounts in the column?

A. I believe that is true, yes, sir.

Q. Does everything that you have said with regard to accounts 1001 and 1215 apply equally to that item for Insurance and Unemployment Taxes?

A. The item of $403.87 is Federal Insurance and Unemployment Taxes paid by the company on the amounts shown in Respondent's Exhibit 31-H as being applicable to account 1001 and account 1215, and what has been said with respect to those two accounts applies equally to the item of $403.87.

Q. Will you now, please; direct your attention to account 1066, as shown on Respondent's Exhibit 31-H entitled "Miscellaneous Operating Expense," the amount being $40,142.68?

Commission's Exhibit 81 gives a breakdown of the various types of expense or various classes or expense entering into this account. Are you familiar with that exhibit and with the testimony regarding this account?

A. Yes, sir.

Q. I would like to call your attention also to Respondent's Exhibit 99, pages 24 and 25, where a list of some of the typical items of expense going into account 066 are listed.

5804 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Q. (Continuing) In your opinion, are the items of expense making up the miscellaneous account 066, as illustrated by these two exhibits and described by Mr. Boatwright's testimony, of such a nature as to afford a cost differential as between Ned's Auto Supply Company and other tank wagon stations in 1937?

A. For the most part these items are of a very general nature, and, in the absence of specific information which a factual cost study may afford on some of the items, it appears to me, and it is my opinion, that account 1066 could be separated only on a basis of gallonage which, of course, would afford no cost differential.

Mr. Hanley: Now, off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Well, what is your opinion as to whether all of the expense of this various nature going into account 066, as shown by these exhibits, is properly chargeable to the tank wagon reseller business or the company in 1937, excluding the business of Ned's Auto Supply Company?

A. Oh, in my opinion, surely some part of this expense applies to Ned's—serving of Ned's Auto Supply Company.

Q. And why do you say that?

5865 A. For the reason I have just stated, that, for the most part, this expense is of a very general nature applicable to all of the tank wagon reseller gallonage.

Q. And was Ned's gallonage a part of the tank wagon reseller gallonage in 1937?

A. It was.

Q. And if there is any part of the expense going into this account which is susceptible of allocation on other than a gallonage basis, how would such an allocation have to be made?

A. It would have to be made on the basis of measuring factors which could only be established by a factual and objective cost study.

Q. And has any such study been made insofar as is shown by the record in this case?

Mr. Hanley: That is objected to as a conclusion and opinion of the witness which he is not qualified to give. There is no objection to the witness testifying as to whether or not he made any such factual and objective cost study.

Trial Examiner Ballinger: The Judge is confined to what the record in this case shows.

Mr. Hanley: Well, Judge, it is still a conclusion. We insist that the witness is not permitted to say from the record in this case as to whether anybody in the world has or has not made a factual and objective cost study. 5806 That is a pure conclusion which the witness is not qualified to make. We have no objection to the witness testifying as to whether or not he made such a study.

Mr. Austin: Well, the question is whether or not the proof or explanation of the alleged differential which has been put in this record constitutes a factual or objective cost study, in his opinion; whether this differential, as shown on Exhibit 31-H, is supported by a factual or any kind of a cost study within the meaning of Mr. Warmack's previous answer.

Mr. Hanley: Judge, that is objected to for the reason that it still constitutes a conclusion and opinion of the witness which he is not competent to answer. How may this witness know what was done by Mr. Boatwright and/or his associates—

Trial Examiner Ballinger: Objection sustained.

Mr. Hanley: —that went into this study?

Trial Examiner Ballinger: Objection sustained.

Mr. Austin: Let me answer what Judge Hanley has just said. It is entirely immaterial to the Commission itself what Mr. Boatwright did except as shown on this record. I have asked this witness whether the differential is supported by any factual and objective cost study. Now, I don't care and the Commission doesn't care what Mr. Boatwright has done. It is only what is shown here that is 5807 important. Now, Mr. Warmack has said that in order to determine whether any part of this expense going into this account can be allocated on other than a gallonage basis you have to have a factual and objective cost study. I am asking whether that has been shown by any factual or objective cost study.

Mr. Hanley: Well, Judge, it is most embarrassing—

Trial Examiner Ballinger: Was any question asked Mr. Boatwright when he was on the witness stand as to whether or not a cost study had been made to determine that question?

Mr. Austin: This is what the respondent has introduced. We are only concerned with their proof, not what they may have done on their own account or somewhere else.

Mr. Hanley: Judge—

MATTHEW BENDER & COMPANY
MB

Trial Examiner Ballinger: Their proof goes no further than the factual background supporting it.

Mr. Austin: That is right.

Trial Examiner Ballinger: And if there is no evidence that it is predicated upon a cost study, it would have but very little weight.

Mr. Austin: Well, I am not entitled to have that brought out by a qualified accountant, that their conclusions are not based upon a cost study?

Trial Examiner Ballinger: How can you do that?

Mr. Hanley: How do you know?

5808 Mr. Austin: I think Mr. Warmack knows, don't you, Mr. Warmack?

Trial Examiner Ballinger: Could that be determined in any possible way other than by calling Mr. Boatwright and asking him?

Mr. Austin: Why, of course, the result—the thing shows for itself.

Mr. Hanley: Judge, if Mr. Warmack is willing to answer the question which Mr. Austin just now propounded, I am not going to make any objection to it, and that question was: "Mr. Warmack, do you know whether or not Mr. Boatwright and his associates—" that is the implication—"made any factual and objective study before they made this report?"

Now, if Mr. Warmack wants to take the responsibility of answering that question, I am not going to make any objection to it.

Mr. Austin: Well, I don't think that is the question, Judge. Let us have the question reread.

Mr. Hanley: All right. You read it.

Mr. Austin: If that is what it is, I will change it.

Trial Examiner Ballinger: That is the purport of the question as the Examiner understood it.

(Previous record read by the Reporter.)

Mr. Hanley: Now, that is the point, Judge. He is
5809 asking this witness whether this conclusion of Mr. Boatwright's is supported by a factual and objective study, and I am saying to Your Honor if Mr. Warmack wants to answer that, there is no objection on my part. I can take that—

Trial Examiner Ballinger: The witness may answer.

Mr. Austin: Well, I want the witness' answer directed to the question which I asked, which is directed solely to what this record shows. We just reread it a minute ago. I would like to have the question reread again before the witness answers.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Mr. Warmack, have you read and are you familiar with Mr. Boatwright's testimony as to the method in which his conclusions as to the alleged cost differential based upon respondent's Exhibit 31-H was arrived at?

A. Yes, sir.

Q. And are you familiar with the methods of allocation used or method of separation of expense used in arrived at the figures on Respondent's Exhibit 31-H, as testified to by Mr. Boatwright?

A. Yes, sir.

Mr. Austin: Does that answer Your Honor's 5810 question as to whether this was gone into?

Trial Examiner Ballinger: Now, this is still off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. You may ask the question.

Voir Dire Examination by Mr. Hanley.

Q. Mr. Warmack, you have used the term "factual and objective cost study" a number of times in the course of your testimony. What do you mean when you use the term "factual and objective cost study"?

A. I mean a cost study made with a definite objective in mind, arrived at by an analysis in accordance with sound and accepted accounting principles and procedure in order to arrive at that objective.

Q. One other question: When you say "sound and accepted accounting procedures" do you mean sound and accepted accounting procedures, in your opinion, or, if not, in whose opinion?

A. In the opinion of accountants, generally.

Mr. Hanley: That is all, Your Honor. I would like the question again.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

5811 (Previous question read as follows by the Reporter:

"Q. And has any such study been made insofar as is shown by the record in this case?")

Mr. Hanley: Now, respondent will add to the objection to that question that it is not only a conclusion of the witness as to whether any study was made by Mr. Boatwright and his associates, but it now becomes a conclusion of the witness as to whether any such study was made by the witness' own definition of what he means by a factual and objective cost study.

Trial Examiner Ballinger: Objection sustained.

By Mr. Austin:

Q. Mr. Warmack, you said you had read Mr. Boatwright's testimony regarding account 066. Did Mr. Boatwright's testimony show that the differential shown on Respondent's Exhibit 31-H and I was not the result of any factual or objective cost study?

Mr. Hanley: That is objected to as calling for the conclusion and opinion of the witness. The testimony of Mr. Boatwright is in the record, Your Honor. It shows what it shows.

Mr. Austin: That is just the point, Your Honor.

Mr. Hanley: This witness is not entitled to testify as to what Mr. Boatwright testified to.

Mr. Austin: I think the witness is entitled, cer-
5812 tainly, to testify as to his opinion of the methods
used.

Mr. Hanley: If Your Honor please,—

Trial Examiner Ballinger: That is—

Mr. Hanley: This may be off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Well, Mr. Warmack, will you state in your own words just what methods were employed in the preparation of Respondent's Exhibits 31-H and I whereby all of the expense in the accounts listed on 31-H was charged to tank wagon stations other than Ned's Auto Supply?

Mr. Hanley: That is objected to as calling for a conclusion of the witness. He is now asked to state what methods were employed. In the first place, insofar as the record discloses, the methods employed are outlined in Mr. Boatwright's testimony. The present witness has testified that he did not make a check of the underlying and basic data, records, and facts which went into the conclusions reflected by Mr. Boatwright in Exhibit No. 31, and we insist that the record speaks for itself on the testimony of Mr. Boatwright as to what he did and his conclusions as reflected in Exhibit 31.

Mr. Austin: Well, I think I am entitled to have the witness comment—if he has read Mr. Boatwright's
5813 testimony, to have him comment as to the nature of the method used. I don't think the record speaks for itself.

Mr. Hanley: Suppose you ask him a question of that kind, Mr. Austin?

Trial Examiner Ballinger: Unquestionably you are.

Mr. Austin: That is just what I asked him.

Trial Examiner Ballinger: I don't so understand your question.

Mr. Austin: Well, I suggest that Your Honor question Mr. Warmack. I am sure I can't do it any better. We have talked this over for weeks.

Trial Examiner Ballinger: Mr. Warmack, are you familiar from the record with the method, accounting method, adopted and used by Mr. Boatwright? Are you familiar with that?

The Witness: Yes, sir.

Trial Examiner Ballinger: Now, in your opinion, was that the correct method to have adopted, and if not in what respects is it erroneous?

The Witness: In my opinion, this Exhibit 31-H—and the result is shown at the top of the exhibit, that is, Respondent's Exhibit 31-I—has not been arrived at in accordance with sound and accepted accounting principles, and most certainly the record will show that it has not been arrived at by any factual and objective cost study.

5814 Trial Examiner Ballinger: Well, what is the basis used in arriving at it? And wherein was it in error, in your opinion?

Off the record.

(Discussion off the record.)

Mr. Hanley: The respondent moves that that portion of the answer of the witness beginning "and most certainly the record shows" be stricken as a conclusion of the witness, a voluntary statement, and a sheer attempt to read the mind of the economists and the accountants of the respondent who have positively testified that they did make a factual and objective cost statement, and the—

Trial Examiner Ballinger: Cost study, you mean.

Mr. Hanley: Cost study. —and the answer of the witness and the voluntary statement therein included is an argumentative denial of the positive sworn testimony of the witnesses for the respondent.

Mr. Austin: I object to—or I would like to oppose that.

Trial Examiner Ballinger: Well, now, just a moment. Let me get this.

Mr. Hanley: Will you please read what Mr. Warmack said?

Trial Examiner Ballinger: Yes. Read Mr. Warmack's answer.

3815 (Previous answer read by the Reporter.)

Trial Examiner Ballinger: Motion is granted.

Mr. Austin: Now, Your Honor—

Trial Examiner Ballinger: Just a minute. Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Now, go ahead. Point out.

The Witness: May I inquire, Your Honor, is it your desire that I pick up these items, account by account, and point out what I think should have been done in order to make a proper separation?

Trial Examiner Ballinger: You have testified with reference to those various items on Commission's Exhibit 31-H. You were then asked the question as to whether or not from the record you are familiar with the accounting method employed by Mr. Boatwright. You answered that you were. The Examiner now asks you if you disagree with that method to point out wherein error was made by Mr. Boatwright.

The Witness: Well, let us take, for example, in answer to that, account 1066, miscellaneous expense, $40,142.68, as shown by Respondent's Exhibit 31-H. That was put into the record as Respondent's Exhibit 31-H without one bit of explanation whatsoever here. As a result of a request for information, talking about information, 5816 we have got—respondent supplied the Commission with information set forth on Commission's Exhibit 81 which represents a whole multitude of different charges, many of which are of a very general nature, Your Honor, which go to make up this account.

Now, there are some of these charges in this account—many of them—which I don't see how in the world under any theory of probabilities could be applied except on a gallonage basis.

I will call your attention to an item called "Club dues, Chamber of Commerce, Subscriptions, and so forth," $1,286 is shown by this exhibit, and here it said right at the top of this exhibit "There are certain other marketing expense items of an overhead nature not influenced by Ned's Auto Supply business."

Trial Examiner Ballinger: Reading from Respondent's Exhibit 31-H.

Now, Mr. Warmack, does the Examiner understand that your main objection to the conclusions reached by Dr. Boatwright is that he didn't predicate his accounting upon a gallonage basis?

The Witness: Not necessarily, no, sir. No, sir. My contention is, Your Honor, that if a study were properly made of each of these accounts, if they were properly analyzed, and we knew for a fact what studies they were, what costs they were, what influenced those costs, 5817 then we would know where to apply them, and of those costs—for instance, this item of Club dues, Chamber of Commerce, subscriptions and so forth, had—

Trial Examiner Ballinger: What item does that form a part—

Mr. Austin: I would like to have the witness—if he is on the record there—finish his answer.

The Witness: (Continuing.) —which are a part of this item of $40,142.68, as shown by Respondent's Exhibit 31-H which Mr. Boatwright says does not apply or is not influenced by Ned's business, how is it influenced by any business? It applies in the absence of a showing to every gallon of gasoline that is sold by this respondent and should be so applied in a factual and objective cost study if it is going to be used.

I have given you now an example, only one.

Mr. Hanley: If Your Honor please, at this time—

Trial Examiner Ballinger: Well, now, just a moment, and you can interpose your objection to all of it. Will you point out the various items entering into the item opposite account No. 106 that you think are improperly included in making up the total of that item?

Mr. Austin: I object to that question, Your Honor, because I don't think it is—I think your would have to modify it in order to say what you intended to say,
5818 if I may be at liberty to say so. Do you mean for
Mr. Warmack to point out items which he considers were not properly chargeable in toto to Ned's account, or which—I don't know exactly, but it isn't a question of what is included in this account 066 in the regular accounting procedure. It is a question of how it is allocated here, and I assume that is what you were referring to.

Trial Examiner Ballinger: Now, there was an allocation of $40,142.68 in expense to the company in connection with the sale of gasoline to Ned's; is that correct?

Mr. Hanley: No. Just the reverse of that, I think, Judge.

Trial Examiner Ballinger: Well, I was in doubt.

Mr. Austin: That $40,142.68 is a figure taken from the form 189 for 1937 tank wagon reseller channel. It is charged in the company's regular accounting procedure to all tank wagon reseller gallonage including Ned's. On this account the figure—on this exhibit the figure is divided by the total tank wagon reseller gallonage, and the resulting cost per gallon is charged to all stations but Ned's, and none of that expense is charged to Ned's in this cost study.

Mr. Hanley: No, if Your Honor please, I would like to make just a record motion.

Trial Examiner Ballinger: Proceed.

Mr. Hanley: The witness now on the stand has
5819 undertaken to testify as to the propriety of certain
accounting procedures used by respondent in connection with respondent's Exhibit 31. The witness has indicated that, in his opinion, the procedures used by the respondent and the results thereof as reflected in Exhibit 31 are erroneous. The witness has refused to disclose in what particulars he believes the procedures to be wrong and to what degree the results would be modified if his recommended procedures, if any, were used as distinguished from the procedures used by the respondent.

In view of the fact that the witness refuses to disclose what sort of a division or allocation or distribution of cost he would make, in his opinion, as an accountant as distinguished from the procedures used by the respondent, the respondent moves that any testimony relative to Exhibit 31 given on the part of this witness be stricken wherein such testimony is directed to any account wherein the witness has failed, neglected, or refused to indicate what procedure should have been used and what amount should have been allocated differently than that used and allocated respectively by the respondent.

For the attention of the court it is indicated that this entire examination is directed to an exhibit offered by the respondent to justify a differential offered to Ned's Auto Supply Company for the period from the fall of 1936 to the spring of 1938, which differential and the practice of
5820 offering the same or granting the same, was abandoned in the spring of 1938, has never been resumed, and is not now in use.

Further that the total amount of money involved on Respondent's Exhibit 31-H, which has been under discussion in the examination since the convening of the court this morning, amounts in terms per gallon of gasoline sold to .084 cents as against a differential sought to be justified on the part of the respondent of .529 cents.

Trial Examiner Ballinger: Mr. Austin, do you care to be heard?

Mr. Austin: Now, where do we stand? Is there an objection or—

Trial Examiner Ballinger: There is a motion.

Mr. Austin: What is the motion?

Trial Examiner Ballinger: Read the motion.

(Motion read by the Reporter.)

Mr. Austin: Well, I don't think the witness has refused to do anything, so I think that the motion is baseless because the premise of it is that the witness has refused to explain something or give something. I don't quite follow it but—

Mr. Hanley: Well, I have in mind this—this may be off the record if it isn't desired on.

Trial Examiner Ballinger: Off the record.

5821 (Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I move we adjourn until 9:30 Wednesday morning.

Trial Examiner Ballinger: The motion is granted, and now at 3:50 p. m., the hearing stands adjourned to be reconvened at Washington, D. C., in Room 388, Federal Trade Commission Building, July 1, 1942, at the hour of 9:30 a. m.

(Whereupon, at 3:50 o'clock p. m., June 30, 1942, the hearing in the above entitled matter was adjourned.)

5822

Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, July 1, 1942.

Met, pursuant to adjournment, at 10 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

5823 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

Hearing of Docket 4389, entitled "In the Matter of Standard Oil Company of Indiana," is reconvened pursuant to adjournment, at 9.30 a. m., July 1, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

The last hearing was held June 30, 1942, in the city of Washington, District of Columbia.

You may proceed.

Mr. Hanley: If your Honor please, toward the close of yesterday afternoon's session, respondent made a motion, beginning at page 5818 of the record, and running to the middle of page 5820.

It is respectfully requested that the Court make disposition of such motion.

Trial Examiner Ballinger: The Court reserves ruling on the motion until counsel for the Commission is afforded further opportunity to examine the witness, particularly on the matters embraced within the motion.

Proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Resumed) by Mr. Austin.

5824 Q. For the purpose of predicating an opinion, Mr. Warmack, will you describe the method used by the respondent in allocating the expenses listed on Respondent's Exhibit 31-H, as between Ned's Auto Supply Company gallonage and the gallonage of other tank wagon reseller stations in 1937?

A. Yes, sir. The items listed on Respondent's Exhibit 31-H, aggregating $59,486.15, were taken from the reseller channel of Respondent's Form 189 in the Detroit field for the year 1937, and this total of $59,486.15 was divided by the total gallonage, reseller gallonage, in the Detroit field for 1937, the total gallonage amounting to 70,629,027 gallons, whereby a cost figure of .084 cents per gallon was arrived at.

Q. Was that resulting figure .084 cents per gallon charged to all of the gallons used as a divisor?

A. No, sir; that is regarded as being applicable only to the gallons of all tank wagon resellers, excluding Ned's.

Q. And how much, or what part, of this expense, if any, was charged to Ned's gallonage?

A. None.

Q. Is that a complete statement of the method used in apportioning these expenses?

Mr. Hanley: Objected to as calling for the conclusion and opinion of the witness as to whether or not it is a complete statement. The exhibit speaks for itself.

5825 Mr. Austin: I will withdraw it.

By Mr. Austin:

Q. Did that complete your answer as to the method used by respondent?

A. Well, I could amplify that a little if you like. It seems to me that it is—

Q. Well, just a minute. Is that a description of the method used?

A. I believe it is, yes, sir.

Q. Now, in your opinion, Mr. Warmack, from the standpoint of sound accounting practice, is that method which you have described sufficient to establish, or does it establish the differential of .084 cents per gallon, as stated on Respondent's Exhibit 31-I as existing between the expense chargeable to Ned's and the expense chargeable to other gallonage?

The Witness: I would like to have that question read, please.

(The question referred to was read by the reporter.)

Mr. Hanley: If your Honor please, the respondent objects to that question for the reason that the witness has discussed only accounts 1001, 1213, and 1066, and has not discussed any of the many other accounts which appear on Exhibit 31-H; and as to the accounts referred to specifically by number which the witness has discussed, he has said that in his opinion only certain of the expense—
5826 without specifying the amount of such allocation—
should be made to Ned's Auto Supply Company.

Trial Examiner Ballinger: Before ruling on the motion, counsel for the Commission may propound further questions to the witness.

By Mr. Austin:

Q. Was the same method of apportionment of expenses which you have described used for apportioning the expense entering into all of the accounts listed on Respondent's Exhibit 31-H?

A. In order to arrive at the .084 figure you are speaking of?

Q. Yes.

A. That is correct. They were used.

Q. You mean the same method was used?

A. The same method was used.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. Now will you answer the question? The question was whether the same treatment which you have described is sufficient, from the standpoint of sound accounting principles, to establish the differential of .084 cents for these accounts?

A. From the standpoint of sound accounting, in my opinion it is not sufficient to establish a cost differential.

5827 Q. Any cost differential?

A. Any cost differential.

Q. In your opinion do the method which was used by the respondent in apportioning these expenses, and the result reached by that method, establish that no substantial portion of the expense going into these accounts is chargeable to Ned's Auto Supply Company gallonage?

Mr. Hailey: Just a moment. Objected to for the reason that the question is not confined to any particular accounts. If counsel is talking about Exhibit 31-H and the accounts that thereon appear, that is one thing; if counsel is talking about the differential sought to be supported by the respondent in the entire Exhibit 31-A to Q, that is a distinguishable thing.

Mr. Austin: Yes, I am referring only to the differential of .084 cents, which we have just been discussing, and the expense items listed on Respondent's Exhibit 31-H.

Trial Examiner Ballinger: Confining your answer now to Respondent's Exhibit 31-H, you may answer, and the objection is overruled.

A. In my opinion it does not.

By Mr. Austin:

Q. Will you state your reasons for the opinion that you have given, that the method used is not sufficient to establish either the differential or the fact that no 5828 substantial part of these expenses is chargeable to Ned's?

A. Yes, sir. In the first place, all the costs were taken as a whole, as I have previously explained, from the tank wagon reseller channel on Form 189 in the Detroit field for the year 1937, and divided by the total gallonage, including Ned's gallonage, and arriving at .084 cents per gallon, as shown by the Respondent's Exhibit 31-I.

In my opinion, from the standpoint of sound accounting, that is or could be considered a rough estimate, and in Mr. Boatwright's own testimony he has stated in many instances, with respect to many of these accounts, that some parts of those accounts, some costs included in those accounts, are applicable to the serving of Ned's business.

In view of the fact that a part of these costs are applicable to Ned's business—and whatever part that is, has not been so segregated—then in my opinion a thorough cost analysis would be required to show what parts are applicable to Ned's and what parts are applicable to other tank wagon reseller business before any cost differential between the two could be established.

Further, in my opinion, I do not believe it is sound accounting to pick up all of the costs in this tank wagon reseller channel—that is, those costs as shown on Respondent's Exhibit 31-H—and divide them by the total gallonage, including Ned's gallonage, to arrive at a figure which purports to be the difference between what it
5829 costs to serve Ned's station and what it costs to serve the other tank wagon resellers; and carrying that further, on Respondent's Exhibit 31-A we have—

Mr. Hanley: Just a minute. That is objected to as not responsive to the question. He was asked about 31-H.

A. Well, I am only carrying—

Mr. Hanley: Just a minute—let the Court rule, please.

Mr. Austin: 31-A, your Honor, is simply a summary of the figures from 31-H carried over to 31-A. If you will just look at it, you will see he is not taking up any new subject.

Trial Examiner Ballinger: Objection overruled.

A. That estimate cost figure of .084 cents per gallon, as shown on Respondent's Exhibit 31-I, is carried over to Respondent's Exhibit 31-A and shown under the column entitled "Regular Reseller Business," and which means, as I interpret Respondent's Exhibit 31-A, that this particular class of expense is applied wholly and entirely to the regular reseller business, inasmuch as the column entitled "Ned's Auto Supply Company" carries none of that cost.

From the standpoint of sound accounting, it is my opinion that the cost of serving regular reseller business, excluding Ned's, should, for this particular class of expense, have the cost calculated for the same class
5830 of costs. It should be calculated for the serving of Ned's. Taking one of those costs from the other would show the difference between what it costs to serve Ned's per gallon and what it costs to serve the other reseller business per gallon.

Mr. Hanley: Have you finished?

The Witness: I have.

Mr. Hanley: Your Honor, the witness now having finished his answer the respondent objects to the question and moves that the answer thereto be stricken for the following reasons:

First, it is objected to unless and until the witness discloses what testimony he refers to, and unless and until the witness fairly discloses the conservative features of Exhibit 31 which are disclosed primarily on page 31-Q;

For the further reason that the witness has alluded to the rough estimate without defining what he means by a rough estimate, and without defining what "rough estimate" may be;

Further that the witness has argumentatively denied the factual existence of a cost study as the same appears in the affirmative testimony of the respondent;

Further that the witness by his own admission has indicated that he himself has made no factual or objective cost study concerning the underlying facts and figures supporting Exhibit 31-A, whereas it appears affirma-
5831 tively on the record that the respondent did make a factual and objective study of the actualities of cost in respect to Ned's Auto Supply Company;

Further that the witness declines, refuses, and neglects to disclose what kind of allocations he thinks in his opinion as an expert accounting witness should be made to Ned's Auto Supply Company out of the accounts appearing on Exhibit 31-H;

Further that the Court refuses and declines to compel the witness to testify in that respect. That such being the fact there is no basis in fact for the allocation or any determination of the influences upon the differential established by Respondent's Exhibit 31 resulting from any testimony of the witness heretofore given in connection with Exhibit 31, or given in the answer to the present question.

Trial Examiner Ballinger: By Respondent's Exhibit 31 I take it you mean Respondent's Exhibit 31-A to 31-Q, both inclusive.

The objection is overruled. The principal grounds of objection are proper questions for cross examination.

By Mr. Austin:

Q. Mr. Warmack, perhaps you can tell us just what you meant by using the words "rough estimate" in refer-

ring to the method used in allocating the expenses listed on Exhibit 31-H. You do not need to go over again
5832 what you have said before, but maybe you can tell us just what you meant by the phrase "rough estimate"?

A. From an accounting standpoint a rough estimate of a figure, or a figure which would be considered as a rough estimate is a figure arrived at by calculation, the calculations of which have never been proven from the standpoint of sound accounting.

It might be regarded as a guess figure. Naturally, in this instance you have a certain figure as a denominator—

Q. (Interposing.) Meaning what?

A. —or a divisor—meaning the total gallonage in the reseller channel at 70,000,000 plus gallons in 1937. And that is divided into the total cost, divided into knickknacks and what have you and what not. I use the word knickknacks because it was called "knickknacks" by Mr. Boatwright, never having been positively analyzed as to what this figure is, or what it is or where it goes.

In one or two instances Mr. Boatwright's testimony—to go a little further with that—Mr. Boatwright did not know what was in this figure, and in one or two instances he did not know where they were allocated and—

Mr. Hanley: (Interposing.) Just one moment—

The Witness: (Interposing.) And furthermore—

Mr. Hanley: (Interposing.) Just one moment, please, Mr. Witness. I want to make an objection.

5833 The Witness: Excuse me. I did not hear you.

Mr. Hanley: That is objected to as calling for a conclusion of the witness as to what Mr. Boatwright meant and as to what Mr. Boatwright testified to. In fact, the witness has now gone far beyond what Mr. Boatwright testified to, and now assumes to say what Mr. Boatwright was thinking and did not testify to.

Mr. Austin: Is there a motion to strike?

Mr. Hanley: I am objecting to and move to strike out the entire answer of the witness.

Mr. Austin: I would like to hear the answer of the witness read.

Trial Examiner Ballinger: Read the answer of the witness.

(The answer referred to was read by the reporter.)

Mr. Hanley: I am objecting and move to strike the entire answer of the witness.

Mr. Austin: I will consent to a motion to strike the last characterization of Mr. Boatwright's testimony.

Trial Examiner Ballinger: Commencing at what point?

Mr. Hanley: You understand my motion is to strike the entire answer of the witness.

Trial Examiner Ballinger: Yes. There is a consent to strike part of the answer. That I desire to dis-
5834 pose of at this time.

Mr. Austin: Commencing with the words "in one or two instances in Mr. Boatwright's testimony."

Trial Examiner Ballinger: That portion of the answer beginning with the words "in one or two instances in Mr. Boatwright's testimony" and continuing to the end is stricken.

The motion as to the remainder is overruled.

Mr. Hanley: I would like to add to my motion to strike that the respondent moves that the remaining answer of the witness be stricken on the grounds and for the reasons that he assumes that Exhibit 31-H is what he defines in his opinion as a "rough estimate" when in point of fact the positive testimony in the record is that it is a careful, factual, and objective cost study;

Further that he refers to testimony of Mr. Boatwright—or less than that, merely refers to his statement attributed to Mr. Boatwright—that Mr. Boatwright said "knick-kacks" were included in items of expense, not identified by the witness Warmack, and the entire answer is too indefinite, uncertain, obscure, and unclear to stand for any value if permitted to stand, and if permitted to stand, furthermore, results in unfairness and prejudice to the respondent, and particularly to the witness Boatwright.

Trial Examiner Ballinger: The objection is over-
5835 ruled.

By Mr. Austin:

Q. One more question regarding your rough and ready estimate, Mr. Warmack. When you referred to a rough and ready estimate, when referring to any of the figures on Respondent's Exhibit 31-H or when referring to the differential .084 cents were you referring to the figures appearing on Respondent's Exhibit 31-H or 31-I?

A. I was referring to the figure .084 on Respondent's Exhibit 31-I resulting in the calculations and amounts on the top of Exhibit 31-H.

Q. What does that figure of .084 cents purport to be? Is it a differential, or just what is it?

A. Well, it purports to be, in my opinion, the difference between what it cost to serve Ned's and what it cost to serve any of the others, but it is shown to be—

Q. (interposing) Just a minute. I only asked you what it is.

A. I thought you asked me what it was and I was going to tell you that.

Mr. Austin: So the record will be clear as to what the witness is answering I will ask that the question be read.

Trial Examiner Ballinger: Read the question last put.

5836 (The question referred to was read by the reporter.)

The Witness: It is shown to be other marketing expense items not influenced by Ned's Auto Supply Company.

By Mr. Austin.

Q. I would like to call your attention now, Mr. Warmack, to certain testimony of Mr. Boatwright appearing on pages 3960 and 3961 of the record as follows:

"Q. Referring to these last two items we have discussed, the one beginning with 'Forms 187' and the next one 'Charges from Account 9944' suppose you were asked to allocate or prorate those total charges as between individual service stations, would you consider that would be possible?"

Before reading the answer to that it is necessary to identify the subject matter of that question for the benefit of the record and of the witness. The question is, as appears from the preceding pages of the record, refers to Commission's Exhibit 81, which is a breakdown of the items of expense by classification entering into Account 1066 Detroit field 1937.

The two classifications referred to in the question just read are, first, "Forms 187 and sample bottles and cans, replacement packages, general supply items under five cents, etc."

5837 The second classification of expense referred to in the question just read from page 3960 of the record is, "Charges from Account 9944—gauging tanks—transfer equipment, cleaning and rearranging, checking equipment—etc."

Now, the answer to the question, again quoting from page 3960 of the record, is as follows:

"A. It could not be done with a high degree of accuracy between individual accounts. It is a physical impossibility.

"Trial Examiner Ballinger: Well, would it be practical?

"The Witness: No. It would not be.

"By Mr. Austin:

"Q. In other words, are not those two accounts charges of such a general nature that it would be impossible to allocate them between servicings?

"A. Between individual outlets?

"Q. Yes.

"A. It would just be an impractical thing to attempt."

Now Mr. Warmack, will you turn to Respondent's Exhibit 99—

Mr. Hanley: (interposing) Your Honor—is this the same question, still the same question, Mr. Austin?

Mr. Austin: It is.

5838 Mr. Hanley: Go ahead.

By Mr. Austin:

Q. Turning to Exhibit 99, and to pages 24 and 25, I direct your attention to the last group or list of items at the bottom of page 24 and the list at the top of page 25 which—and I believe there will be no objection if I state that those are listed as examples or types of expense going into Account 1066 in the respondent's regular accounting procedure—

The question now is this: Mr. Warmack, bearing in mind Mr. Boatwright's testimony assuming that if all of those items of expense; that is, expenses of the nature of the items listed at the bottom of page 24 and listed at the top of page 25, that it would not be practical to attempt to allocate expenses of that nature to single service stations, or to allocate the expense between service stations, and that such an allocation could not be made with a high degree of accuracy, as testified to by Mr. Boatwright—and Mr. Boatwright's testimony did not go to all of these items here, he was referring to two specific classifications which I checked from Exhibit 31—

Mr. Hanley: (interposing) I object to that further addition to the question. You are now trying to recite what the testimony was, if your Honor please, without referring to it.

5839 Trial Examiner Ballinger: Just a moment. Let counsel finish his question. Then you can object to any portion of it.

Mr. Austin: I will start the question over again.

By Mr. Austin:

Q. I have called your attention to the fact, Mr. Warmack, that Mr. Boatwright testified as to certain general classifications of expense going into Account 1066, that it was impracticable to make an allocation of that expense between certain servic stations.

A. Yes.

Q. Assuming that that is true as to all expenses ~~such~~ as those listed at the bottom of page 24 and the top of page 25 of Respondent's Exhibit 99, how their are such expenses to be allocated as between service stations? In other words, if it is not practical to make such an allocation of expense between individual stations, then what alternative is open to the accountant in attempting to allocate such expense in a cost study such as attempted by respondent in its Exhibit 31?

Mr. Hanley: Have you finished, Mr. Austin?

Mr. Austin: Yes.

Mr. Hanley: If your Honor please, the respondent desires to make a short objection first to that question and accept the ruling of the Court.

The question is objected to as utterly unintelli-5840 gible, as confusing, as bemusing, as befogged to such a degree as to prevent anyone from understanding the question, and no witness can make a responsible answer thereto; and if one was made no one would know what it was after the answer were attempted.

If your Honor disagrees with that viewpoint the respondent would then like to have the question re-read and make a further specific objection to it.

Trial Examiner Ballinger: The reporter will re-read the question.

The Reporter: "Q. I would like to call your attention now, Mr. Warmack"—

Mr. Austin: One moment. The question was prefaced with a recitation of certain parts of the record.

Trial Examiner Ballinger: I understand that is merely a recital.

Mr. Austin: That is correct. The actual question begins at the end of that recital.

Mr. Hanley: If your Honor please, am I to understand that counsel can make a recital without it being a part of the question? I am objecting to the question in its entirety. Counsel has been talking for ten minutes. I am objecting to the whole recital.

Trial Examiner Ballinger: The question is based upon the recital?

5841. Mr. Austin: That is right.

Trial Examiner Ballinger: Read the question.

(The Reporter read beginning with the words, "I have called your attention to the fact, Mr. Warmack" and continuing to the end thereof.)

Mr. Hanley: Respondent reiterates its objection that the question, having been read in part, and not in full, but so much thereof as was read is self-serving, and that the reading of a part of it has served only to confuse further and that now no witness can fairly answer such a compound and involved question; furthermore, that the question assumes testimony on the part of Mr. Boatwright which is not referred to specifically, and which assumes things that Mr. Boatwright did not testify to.

Trial Examiner Ballinger: The preface to the question was read from the record with citations to the record.

The Examiner now inquires of the witness: Do you understand the question?

The Witness: Yes, sir. I believe that I do.

Trial Examiner Ballinger: Not that you believe you do, do you know that you do? Is it clear to you?

The Witness: I can endeavor to interpolate it.

Trial Examiner Ballinger: No, the Examiner does not desire that. Do you understand the question sufficiently to answer it?

5842. The Witness: In my opinion I do, your Honor.

Trial Examiner Ballinger: The objection is overruled. You may proceed.

5843. A. On the assumption that these costs as enumerated by counsel for the Commission, it would not be.

Mr. Hanley: While he is looking, I will make an objection, if your Honor please. It now appearing from the answer of the witness that thus far he is proposing to answer the question on an assumption of his own not stated in the question, the answer is objected to.

Mr. Austin: The question did state the assumption definitely.

Mr. Hanley: What assumption?

Mr. Austin: The assumption that, as testified by Mr. Boatwright, it is not practical to allocate expenses of this nature between individual service stations with any degree of accuracy.

Trial Examiner Ballinger: The objection is overruled, preserving to counsel the right to renew the objection, and motion to strike, after the answer is in.

By Mr. Austin:

Q. Will you start your answer again?

A. On the basis of that assumption, I see no other way to allocate these costs as between tank-wagon resellers except on a basis of gallons.

Q. When you say on a basis of gallons, do you mean all gallonage?

Mr. Hanley: Just a minute, Mr. Warmack, may 5844 I make my motion, please, if you have finished your answer?

The respondent moves to strike the answer of the witness for all of the reasons set forth in the objection to the question, and for the further reason that the witness could not possibly know what question he was answering.

Trial Examiner Ballinger: The motion is overruled.

The Witness: Was there a question?

Mr. Austin: I will ask you a question now, Mr. Warmack.

By Mr. Austin:

Q. In describing the method used by respondent in allocating these expenses, you pointed out that on respondent's Exhibit 31-I there is a computation by which the total expense listed on Exhibit 31-H is divided by total tank wagon reseller gallonage in 1937?

A. Yes, sir.

Q. Is that what you mean by allocation on a gallonage basis that you just referred to?

A. Yes, sir.

Q. When you referred in your answer just a moment ago to an allocation on a gallonage basis, did you mean an allocation of expense on a gallonage basis to all tank-wagon gallonage or to all gallonage excluding Ned's?

A. I should like to explain that in this way—.

Q. I would like to get an answer to that. Just 5845 a minute, I would like to be sure that the witness understands my question.

Trial Examiner Ballinger: Read the question.

Mr. Austin: No, I would like to explain it. May I, your Honor?

By Mr. Austin:

Q. A moment ago you said that where there is no other —in effect—I am not trying to paraphrase what you have said—but in your answer a moment ago you said it might be necessary, on the assumption made in my previous question, to make an allocation on a gallonage basis.

A. Yes, sir.

Q. Did you mean an allocation to all gallons, or did you mean such an allocation as was made by the respondent here?

A. I mean an allocation in this manner, Mr. Austin: the total tank-wagon gallonage for 1937 was 70,629,027, consisting of the gallons sold to a large number of customers.

An allocation on a gallonage basis means that the prorata part of that total gallonage purchased by any one customer, as related to these costs, would be assigned to that one customer, irrespective of whether he was Ned's or somebody else, in the absence or on the assumption that those costs could not be analyzed.

Q. Would such an allocation, then, result in an allocation of part of this expense to Ned's Auto Supply Company?

5846 A. It most certainly would.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(Whereupon a short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. I refer to Mr. Boatwright's testimony to the effect that the respondent's regular accounting procedure was changed between 1937 and 1940, ~~in~~ that in 1937 miscellaneous operating expenses incurred in connection with leased service stations were included in Account 066, whereas in 1940 the portion of the miscellaneous operating expense incurred in connection with the leased service stations was entered in the leased service station column on Form 189 opposite Account 066-A, 066-B and 066-C.

Will you turn to Commission's Exhibit 119, Mr. Warmack, and state the amount of expense listed under this Account 066 in the Tank-Wagon Reseller channel?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

(The question referred to was read by the Reporter.)

A. $21,281.63.

Q. What is the total leased service expense entered on Commission's Exhibit 119 in Accounts 066-A, -B and -C? You can state it approximately, if you wish?

5847 A. Approximately $50,430.00.

Q. Does it follow that in 1940 that more than two-thirds of the miscellaneous operating expense in the Detroit field entering into these accounts was a leased service station expense?

A. Yes, sir.

Q. Now, turning to Respondent's Exhibit 31-H, Mr. Warmack, and assuming that approximately the same proportion, or, at least, a large proportion of the expense of $40,142.68 there listed for Account 1066 was leased service station expense, in your opinion is the respondent correct in charging all of that leased service station expense, or, rather, equally to the gallonage of all service stations, both lessees and non-lessees, other than Ned's Auto Supply Company?

Mr. Hanley: Just a moment. That question is objected to as an improper hypothetical question because it does not include the factual feature testified to and evidenced by the record in this case, that both income and outlay on the part of the respondent in connection with the leased services are closed into and given consideration in the so-called Reseller channel on Respondent's Form 189, being Commission's Exhibit No. 119.

Mr. Austin: That is just the point or one of the points. I would like to say, your Honor, that, as I see it, no recognition is given here to any rental offset. This
5848 is just an expense item as treated in Respondent's
Exhibit 31-H.

Trial Examiner Ballinger: Proceeding on that theory, the objection is overruled and the witness may answer.

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

A. In my opinion, the answer is no.

Q. How should the leased service station expense entering into Account 066 in 1937 have been treated in your opinion?

A. It should have been applied to leased service station business—the gallonage of leased service station business—and offset by the revenues received by the company, the net revenues received by the company in its landlord activities.

Q. Has any such treatment been made by the respondent anywhere in this Exhibit 31?

A. I have seen none.

Q. In order to determine whether there is a leased service station expense which would enter into Account 066 or any other account, is it or is it not necessary to determine first whether there was a net expense of leased service station operation, after crediting rentals?

A. It would be so necessary.

Q. And if there is such a net expense, should it be charged only to the gallonage on the leased service stations or might it be charged to the gallonage of both lessee
5840 and non-lessee stations?

A. It would be charged only to the leased-service-station business.

Q. And on Respondent's Exhibit 31-H, is the expense opposite Account 066 charged to non-lessee stations as well as to lessee stations?

A. Yes, sir, it is charged to all of them combined.

Q. Now, will you turn to Respondent's Exhibit 31, pages J, K, L and M, referring to Schedule 4 of Exhibit 31, which is entitled "Selling Costs" on Respondent's Exhibit 31-L, a computation is made of the alleged selling cost of the respondent in connection with the sale of gasoline to Ned's Auto Supply Company in 1937. In making this computation, the salary and expenses of the three salesmen who called upon Ned's outlets in 1937 are used. The cost is arrived at through estimates stated to have been made by Mr. Raupagh and Mr. Blough of the portion of their time which these salesmen spent at Ned's outlets on gasoline.

Are you familiar with the contents of this exhibit and the testimony of Mr. Boatwright and Mr. Blough in relation thereto?

A. Yes, sir; I am.

Q. What is your opinion as to the method used in arriving at this cost figure, particularly the estimates of 5850 time spent on gasoline by these three salesmen at Ned's and as to the soundness and reliability of such an estimate from an accounting standpoint?

A. In my opinion the method is unsound and unreliable.

Q. Will you state the reasons for that opinion upon which you base it?

A. The computation is an estimate which is not supported by any basis of fact; in other words, it is guesswork. No tests have been made of any kind, as far as I have been able to find out, which may support the guess figures.

Q. You say it is guesswork. Will you explain that or explain what was done, as you understand the testimony? Let me ask you this, Mr. Warmack, if it will help you get started: Were estimates made of all of the activities of these salesmen or of all salesmen, or just tell us what was done and what is wrong with it, if anything?

A. The statement as to what was done is shown in Respondent's Exhibit 31-L.

One of the principal things wrong was the failure of making estimates for all of the activities of the salesmen covering their selling activities in connection with every product or group of products.

I am speaking about these three salesmen that are in question: Mr. Meulenberg, Mr. Robinson and Mr. Coutchie, as shown on Respondent's Exhibit 31-L.

5851 In my opinion, before an estimate can be of a great deal of use in a situation of this kind, the total time of the individual concerned must be accounted for by the use of estimates and, even in an instance of that kind, I would still think that no accurate figure could be arrived at by the use of estimates made two or three years after the fact.

Trial Examiner Ballinger: You mean after the occurrence?

The Witness: Yes, sir. Does that cover your question?

Mr. Austin: If you think so, I think so.

Mr. Hanley: Have you finished, Mr. Warmack?

The Witness: Yes, sir.

Mr. Hanley: The respondent moves to strike the answer of the witness to the question just propounded on the ground that the witness has heretofore testified that he has made no study and no analysis of the inclusions or omissions of records, facts, data, and figures which went into Respondent's Exhibit No. 31-L or 31 as a whole, and that the witness is not qualified to testify as to anything in the way of a conclusion as expressed in Respondent's Exhibit 31, particularly in view of the fact that the positive testimony uncontradicted in the record is that there was a detailed, factual and objective cost study made as a preliminary to Respondent's Exhibit 31 and the results of which Respondent's Exhibit 31 reflect.

5852 Trial Examiner Ballinger: Respondent's Exhibit 31-L shows on its face that the results therein portrayed with reference to the time of the three salesmen is merely an estimate. The motion to strike is denied.

By Mr. Austin:

Q. At the top of Respondent's Exhibit 31-M there is a computation of the Respondent's selling expense in 1937 for reseller gallonage in the Detroit field exclusive of Ned's Auto Supply Company, or what is alleged to be that.

The entries for selling expense are taken directly from Respondent's Form 189 for 1937, according to Mr. Boatwright's testimony.

In your opinion, are these expense figures, which total $52,491.09, proper expense figures to be used for this purpose of comparing selling expense of tank-wagon stations generally with the selling expense to Ned's?

Mr. Hanley: An objection is made on the same grounds as the motion was made to the last question.

Trial Examiner Ballinger: Read the question, will you please?

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: The objection is overruled.

The Witness: In my opinion, these expense figures 5853 are not the proper figures which should be used in this instance.

By Mr. Austin:

Q. When you say "in this instance," do you mean for this purpose?

A. That is correct.

Q. What are your reasons for that opinion?

A. Mr. Austin, there are several reasons which I could enumerate, if you desire.

The figures opposite each of the four accounts listed on Respondent's Exhibit 31-M represent total figures from the tank-wagon reseller channel in Respondent's regular accounting Form 189.

These figures are arrived at by applying the composite percentages from the salesmen's quarterly distribution sheets or time schedules to salesmen's expenses during each month.

The salaries of all salesmen are included in the figures, such as industrial salesmen, lubricating engineers, automotive engineers, city salesmen, reseller salesmen, B-station salesmen, heating-oil salesmen, and others.

I believe that it has been testified that only the reseller salesmen called on Ned's Auto Supply Company during 1937 in the course of their regular duties, therefore it is the salaries and expenses of these reseller salesmen which should be used in determining the cost differ-
5854 ential of this class of expense and not the salaries and expenses of all of the other salesmen on a composite of the estimate of time of the salesmen.

That is one reason, Mr. Austin. Do you want others?

Q. Yes.

Trial Examiner Ballinger: State all the reasons that you have.

A. I question the manner in which the salesmen's salaries and expenses are assigned to the reseller channel, as well as to all of the other channels in the company's regular accounting procedure.

Trial Examiner Ballinger: Upon what basis is your challenge?

The Witness: Because of the fact that these allocations are made on a composite basis and not upon the basis of the time spent by any individual group of salesmen, your Honor.

Trial Examiner Ballinger: Were time records kept?

The Witness: Not that I have ever been able to find out.

Trial Examiner Ballinger: Did you make inquiries for them?

The Witness: It is stated here in Respondents' Exhibit 99—

5855 Mr. Hanley: May we have an answer to the Examiner's question?

Trial Examiner Ballinger: Did you make inquiry for the records?

The Witness: Yes, sir.

Trial Examiner Ballinger: Were they furnished you?

The Witness: It was stated to me by officials or competent people in the Detroit office, that no such animal existed.

Trial Examiner Ballinger: You mean any such record?

The Witness: That is correct.

Mr. Hanley: May we interpolate, your Honor, as to whether he made such inquiry relative to 1937?

The Witness: I did. As a matter of fact, I asked if any had ever been made at any time.

By Mr. Hanley:

Q. Who did you ask about 1937?

A. I asked Mr. Houghton, I asked Mr. Hamer, I asked Mr. Bath, and I rather think that I discussed it with several others.

Q. You are talking about 1937?

A. I am talking about all the years.

Q. Are you talking about 1937?

5856 A. I am talking about 1937 and every other year.

Q. All right. Did you ask Mr. Raupagh and Mr. Blough?

A. Yes, sir.

Q. Did you?

A. I discussed it with Mr. Raupagh and of course he sent me in to see Mr. Hamer. As for Mr. Blough, I don't remember having discussed it with Mr. Blough.

Mr. Hanley: All right.

By Mr. Austin:

Q. Continue your answer Mr. Warmack, I think that you mentioned something about composite calculations of time.

A. Starting there, in this connection I might refer to Commission's Exhibit 88, which shows the composite calculations of time for all of the salesmen. I believe that it has been testified to that this is a representative form of the composite used for a separation of salesmen's salaries and expenses for the year 1937.

The composite figures arrived at in Commission's Exhibit 88 represent estimates and do not represent daily tabulations of time by the respective salesmen. The estimates do not actually represent these salesmen's estimates, but they represent the estimates made by the salesmen's supervisors, and there was no documentary evidence of any kind in the company's records in Detroit, as far as I was able to find out, which would support this calculation of the salesmen's time, or any other calcu-

5857 lations of salesmen's time.

Another reason—

Trial Examiner Ballinger: Before you go any farther, when you say there were no records, do you mean to say that there was no record in their office showing the time of each of the salesmen when he visited Ned's or these other places, and how often they visited them?

The Witness: That is what I am saying. They have some records back to a certain date.

Mr. Hanley: What date, Mr. Warmack?

Mr. Austin: Let's let the witness finish his answer.

Mr. Hanley: May I ask that question, your Honor?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. What date? You looked at the records, I understand.

A. Judge Hanley, I think I could answer your question by referring to my working papers and if I may do that, or have that done, maybe I could answer your question. I don't remember in my mind what date.

Trial Examiner Ballinger: You may proceed and answer the question now, and at a later time examine your work sheets and advise Judge Hanley for the record of the time.

5858 Mr. Austin: I would like to have the Trial Examiner's question read back and see whether that was answered. I think the witness was in the process of answering that.

(The question and answer referred to were read by the Reporter.)

By Mr. Austin:

Q. Continue that, will you? Did you finish that answer to the Trial Examiner?

A. Yes, sir.

Q. Before you go on with the other, I would like to ask you this, whether or not the salesmen do have records which you did see showing the calls on Ned's and other stations, that is, the customers called on and, if your answer to that is yes, do those records show the amount of time spent at each place?

A. I examined many—

Q. Just answer my question. Are there any such records showing what calls are made on particular customers?

A. Yes.

Q. Do those records show the amount of time spent?

A. No.

Q. Do those records show the apportionment of the time of salesmen as between channels of distribution?

A. As to time, no.

5859 Trial Examiner Ballinger: When you speak of those records, you mean daily records, do you?

The Witness: Yes, sir. Your Honor, they show the name of the customer called on.

Trial Examiner Ballinger: Only?

The Witness: They have several columns in which the salesmen enter information with respect to tank-wagon reseller, tank-wagon consumer, other methods or other information, and there is nothing with respect to time spent with any one customer or on any one product.

By Mr. Austin:

Q. Now, will you continue? You said you had another reason why the figures at the top of Respondent's Exhibit 31-M were not proper for use?

A. Yes.

Q. For the purpose for which they are there used?

A. Respondent's Exhibit 31-M not only includes a portion of the expenses and salaries of the various classes of salesmen, but also ~~includes a~~ portion of the salaries and expenses of reseller salesmen operating in commission agent territory as well as in the metropolitan area of Detroit.

A valid comparison of this class of expense in my opinion would require a comparison between the selling costs at Ned's and the selling costs in connection with the sale of gasoline to other reseller outlets in Detroit, since 5860 the time and expenses of Detroit reseller salesmen only were used in computing the selling expense applicable to Ned's.

I still have a further objection. Commission's Exhibit 109-B shows that the territory assigned to the salesmen who called on Ned's Auto Supply Company outlets in 1937 included also some 27 other service stations which were assigned to these salesmen; that in addition thereto it was the duty of these salesmen to call upon some 50 service stations supplied by competitors of the respondent.

The testimony further shows that one of the regular duties of respondent's reseller salesmen is to call upon outlets in their territory served by competitors.

All of the time of the three salesmen who called upon Ned's, and all of the other salesmen which was spent in soliciting business from outlets which were not customers of the respondent is included in the time represented by the salaries and expenses charged to reseller gallonage, exclusive of Ned's.

None of this time spent at outlets which were not customers of the respondent is charged against selling cost to Ned's.

In my opinion the cost comparison made on Respondent's Exhibit 31-L and 31-M is incorrect and invalid, for
the reason that this time was not eliminated or that
5861 it was not charged equally to Ned's as well as the
other customers on a gallonage basis.

I have one other objection.

Q. Well, now, before you go any farther, Mr. Warmack—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Austin: I would like to have the reporter mark this sheet for identification.

Trial Examiner Ballinger: The reporter will mark the document handed up by counsel for the Commission as Commission's Exhibit 129 for identification.

(The document referred to was marked Commission's Exhibit 129 for identification.)

By Mr. Austin:

Q. Now, Mr. Warmack, will you turn to Commission's Exhibit 109-A and -B. I call your attention to the fact that that exhibit shows the name of reseller outlets included in the same territory with Ned's Auto Supply Company outlets in 1937. I believe 109-A is the map showing the territory and 109-B gives the list of other reseller outlets in the same territory and also refers to the fact that these same three salesmen called upon approximately 50 other reseller accounts handling petroleum products?

A. Yes, sir.

Q. Taking from Commission's Exhibit 86 the
5862 gallonage for those outlets listed on Exhibit 109-B,
is it possible to make a computation of the selling
cost per gallon of gasoline to the stations other than Ned's
in the same territory, using the same method of computa-
tion that was used by the respondent in Exhibit 31?

A. It is.

Q. Have you made such a computation?

A. I have.

Q. I show you Commission's Exhibit 129 for identification and ask if you will state what that exhibit represents.

Mr. Hanley: Did you make copies for the respondent?

Mr. Austin: Yes (Handing exhibit to Mr. Hanley).

Mr. Hanley: Thank you.

By Mr. Austin:

Q. Will you just state generally what that is, first, Mr. Warmack?

A. It is a calculation which shows average salesmen cost per gallon other than Ned's.

Q. And will you now explain how that computation was made?

A. Yes, sir.

From Commission's Exhibit 109-B I took the names of
the reseller outlets included in the same territory with
Ned's outlets in 1937, and which were called upon by the
same salesmen who were assigned to call on Ned's.
5863 I took the gallonage for each of these outlets from
Commission's Exhibit 86, salaries and expenses of
the three salesmen on Respondent's Exhibit 31-L, and the
percentages shown on Respondent's Exhibit 31-L were re-
lated thereto to determine the time spent on business
other than Ned's business.

Calculations made from Commission's Exhibits 88, 89, 102 and 103 show that approximately 52.8 per cent of reseller salesmen's time was devoted to naphtha and gasoline, and by relating this percentage to the time other than time spent on Ned's business produces a cost applicable to the sale of gasoline which amounted to $1,384.77, according to my calculation.

By relating this figure to the total gallonage of gasoline sold to stations other than Ned's served by the three salesmen produces a figure of .06¢ per gallon. This figure of .06¢ per gallon, of course, may be compared with the figure of .079¢ per gallon as shown in the middle—

Mr. Hanley: Do you mean .079?

The Witness: Yes, sir, I believe so.

Mr. Hanley: Yes, surely, I am sorry.

The Witness: In the middle of Respondent's Exhibit 31-M.

By Mr. Austin:

Q. In computing the amount of these three salesmen's time spent at stations other than Ned's, would you 5864 accept for the purpose of that computation the estimates made by Mr. Raupagh and Mr. Blough of the time spent at Ned's as shown on Respondent's Exhibit 31-L?

Just refer to Respondent's Exhibit 31-L.

My question is in effect, Mr. Warmack, on this exhibit for identification, how did you arrive at these percentages of 65 per cent, 75 per cent and 75 per cent?

A. I made use of the estimates made by Messrs. Blough and Raupagh in arriving at those percentages.

Q. So you did accept their percentages?

A. I had no alternative. I had to accept them.

Q. In determining the amount of time spent by the salesmen on gasoline at the other stations, did I understand you to say that you used the quarterly distribution of time reports for the year 1940?

A. Yes, sir.

Q. And did you use the percentage of time of reseller salesmen only spent on gasoline as shown on those reports?

A. Yes, sir.

Q. Are you familiar with Mr. Boatwright's testimony regarding the distribution of time reports, salesmen's distribution of time reports, which are in evidence for 1940, and as to whether those distribution of time reports indicate a distribution of time varying substantially from 1937?

Mr. Hanley: Just a moment, Mr. Austin, please. I 5865 didn't object to the questions relative to the contents of Commission's Exhibit 129, on the supposition that counsel was going to offer it. He seems to be leaving the subject now.

Mr. Austin: Oh, no.

Mr. Hanley: And I now move to strike the testimony of the witness relative to the contents of an exhibit which has not been offered in evidence.

Mr. Austin: I am going to offer it in evidence, but I am still referring to it.

Trial Examiner Ballinger: The ruling on the motion to strike is reserved until counsel for the Commission concludes his testimony with reference to the exhibit marked for identification.

By Mr. Austin:

Q. Bearing in mind Mr. Boatwright's testimony just referred to, I call your attention to the fact that on Respondent's Exhibit 31-L the proportion of time spent by these three salesmen on gasoline at Ned's is arrived at by an estimate as previously testified to by you?

A. Yes, sir.

Q. Whereas in your computation on Commission's Exhibit 129 for identification you used the percentage of reseller salesmen's time spent on gasoline in 1940, which you have also stated to be an estimate?

A. That is correct.

5866 Q. Both estimates were, I believe, made in 1940. Which in your opinion is the more accurate, or can you express an opinion on that?

Mr. Hanley: That is objected to for the reason that the witness has stated in his testimony that he has made no analysis or study of the inclusions or omissions of records, facts, data and figures pertaining to the year 1937 and is consequently unqualified to make any comparison between 1937 and any other year.

Mr. Austin: The question is, your Honor, as to what estimate, both made by the respondent in 1940, that is, in 1940 Mr. Raupagh and Mr. Blough got together and estimated how much time these salesmen spent on gasoline at Ned's in 1937; then in 1940 the quarterly distribution of time reports were made up for that year purporting to show how much time was spent on gasoline by reseller salesmen generally. I am asking Mr. Warmack which is the more reliable for the purpose of this 1937 computation.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Mr. Austin, I question both estimates, but naturally an estimate made nearer the fact or the closest time after the facts in my opinion is more reliable than an estimate made two or three or four or any years after the facts.

5867 Trial Examiner Ballinger: When you use the word "fact" you mean occurrence, don't you?

The Witness: That is correct, yes, sir.

Mr. Hanley: Respondent moves to strike the answer of the witness on the ground and for the reason that he is now expressing an opinion as to the reliability of the memory of men and not as to a question of any fact concerning the records, data, figures and accounts of the respondent company.

Trial Examiner Ballinger: Motion is denied.

Mr. Austin: I now offer in evidence Commission's Exhibit 129 for identification.

Mr. Hanley: The exhibit is objected to on the ground that it is an attempt on the part of the witness to make an independent calculation of a segregated and independent part of a whole which was considered by the respondent's accountants in compiling Respondent's Exhibit No. 31 and is totally unreliable as an independent segregated computation, for the reason that it fails to give consideration to all of the facts, circumstances, data and records that were considered by the accountants of respondent in compiling Exhibit No. 31, and further that the witness who now asserts that he made the calculation reflected on Commission's Exhibit for Identification 129 says that he did not make a factual and objective study of the facts, 5868 records, data, and figures underlying Respondent's Exhibit No. 31.

Trial Examiner Ballinger: The objection is overruled and Commission's Exhibit No. 129 is admitted in evidence.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 129 was received in evidence.)

Mr. Austin: I would like to say, perhaps I should have said in offering this exhibit, that this exhibit is offered, as probably appears on its face, to show the respondent's cost of sale to other reseller customers in the territory served by salesmen who called on Ned's Auto Supply Company in

1937, whereas Respondent's Exhibit 31-M purports to show selling cost for reseller stations other than Ned's in the entire Detroit field. It is submitted that the cost of selling to stations nearby to Ned's in Detroit in 1937 is more reliable and more material to this case than a computation made for the entire Detroit field.

Mr. Hanley: Upon the statement of counsel, there is added an objection, that there is now an attempt on the part of the Government, through the introduction of Exhibit 129 to arbitrarily limit geographically the area which this case involves, and no effort is made on the part of the Government to define or indicate what such geographic limits are; and there is no basis in fact or law to so 5869 limit the inquiry in this examination; further, that all of the records of the respondent and its evidence in justification of cost differential are based upon a field expense known as the Detroit field and that any effort to segregate any part of such expense out of such field is improper and unfair until and unless it be demonstrated that consideration has been given to every element which would make such segregation a proper and equitable one.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: The foregoing is now added to the objection made to the introduction of Exhibit 129, and the foregoing plus the objection, is now made as a motion to strike Exhibit 129.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. Mr. Warmack, in preparing Commission's Exhibit 129, did you make any segregation or allocation of the time spent between these three salesmen in calling on 50 outlets which were not customers of the Standard Oil Company?

A. The answer is yes, for the reason that I do not know how much time was so devoted and therefore I couldn't eliminate it.

Q. I asked you whether you made any segregation or allocation of the time spent by them in calling on the 5870 other stations or non-customers?

A. Made any what?

Q. Segregation or allocation of their time as between Ned's and other stations?

A. No, I didn't make any segregation of it. I included it.

Q. Was all of that time devoted by these salesmen in calling on 50 non-customers of the Standard Oil Company included in the time which you have charged to customers other than Ned's in this exhibit?

The Witness: May I have that read?

(The question referred to was read by the reporter.)

The Witness: Mr. Austin, I don't understand that.

By Mr. Austin:

Q. Well, in obtaining the amount of time spent on business other than Ned's, in the second column there where you have percentages—

A. Yes, sir.

Q. —you first took the total hours of the salesmen, did you not, and deducted a certain percentage?

A. Yes, sir.

Q. And in arriving at the time which you used for the purpose of this exhibit, what time did you deduct?

A. I only deducted the estimated time that had been made of what these men spent at Ned's.

5871 Trial Examiner Ballinger: You say the estimated time. What estimated time are you referring to? Who was the estimate made by?

The Witness: The estimates, your Honor, as shown in Respondent's Exhibit 31-L.

By Mr. Austin:

Q. Those were the estimates made by the respondent, were they not?

A. Yes, sir.

Q. Does it follow, therefore, Mr. Warmack, or does it not—tell me whether or not all of the time spent by these salesmen in calling on customers other than Standard Oil Company customers is included in the time which you have apportioned in Commission's Exhibit 129?

A. Yes, sir, it is.

Q. In your opinion, should any portion of that time be charged to Ned's Auto Supply Company?

A. Surely it should, if we know how much it is.

Q. What is the result, then, as affecting your figure of .06¢ per gallon shown at the bottom of Commission's Exhibit 129?

A. It means that it is overstated.

Trial Examiner Ballinger: Overstated where?

By Mr. Austin:

5872 Q. What is overstated?

A. The average salesman's cost per gallon other than Ned's amounting to .06¢ per gallon, as shown by Commission's Exhibit 129 is an overstated figure; in other words, it is too high, too large.

Mr. Hanley: What is, Mr. Warmack? I still don't understand.

The Witness: This thing right here, Judge, (indicating) .06¢ per gallon on Commission's Exhibit No. 129 is too high.

By Mr. Austin:

Q. You may again state why it is too high, so as to make it clear. Apparently there is some doubt.

A. The reason that it is too high is because all of the promotional activities, the time spent by these salesmen in calling on prospective customers, customers of other oil companies, is not accounted for in the calculation as applying to all of the rest of the time that they have.

The calculations were made by Messrs. Raupagh and Blough to show the time they estimated that these men spent in calling on Ned's. They didn't include in this any portion of the promotional activities, as far as I have been able to learn; therefore, inasmuch as a considerable amount of time appears to have been spent in pro-5873 motional activities, I see no reason from an accounting standpoint that that should not be applied in part to Ned's as well as in part to the other customers called upon.

Inasmuch as all of that time is assigned to customers other than Ned's and we had no means of taking it out, the calculation of .06¢ per gallon representing average salesmen's cost per gallon other than Ned's is in my opinion overstated.

Mr. Hanley: May I ask a question, Judge, to clarify in my own mind the meaning of this exhibit?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Did you arrive at the figure on Exhibit 129 of .06¢? Is that your calculation, Mr. Warmack?

A. Yes, sir.

Mr. Hanley: The respondent now again moves to strike Exhibit 129 from the record, for the reason that the witness now states that he has made an independent calculation reflected on Exhibit 129 which in his judgment is an overstatement of fact and which reflection of figures has never been testified to or reflected in the evidence offered by the respondent.

Trial Examiner Ballinger: The motion is denied.

Mr. Austin: Your Honor, I move [illegible] for lunch until 2 o'clock.

5874 Trial Examiner Ballinger: Without objection, the motion is granted, and now at 12:47 p. m. the hearing stands in recess until 2 p. m.

(Whereupon, at 12:47 p. m., a recess was taken until 2 p. m. this day.)

5875 Afternoon Session.

2 p. m.

Trial Examiner Ballinger: We will come to order. You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (resumed) by Mr. Austin.

Q. Will you turn to Respondent's Exhibit 31-M, Schedule 5, Dispensing Equipment Loaned. On Respondent's Exhibits 31-M and N the company maintenance, depreciation and tax expenses in connection with ELA equipment at Ned's Auto Supply outlet in 1937 are compared with what is called the "Average Reseller's Equipment Costs" of the company at stations other than Ned's. The expense figure used in obtaining the average cost are taken from Respondent's Form 189, Accounts No. 1070, 1111, and 1513. Is the comparison of equipment costs which is here made a correct or valid comparison, in your opinion?

A. I rather think it is not.

Trial Examiner Ballinger: What do you mean by that?

The Witness: In my opinion, Judge, it is not a valid comparison.

5876 By Mr. Austin:

Q. Now you will note, Mr. Warmack, and no doubt have noted, that the total expense taken from Form 189 for 1937, for the three accounts listed at the top of Respondent's Exhibit 31-N, after deducting the expense charged directly to Ned's, is divided by the gallonage of gasoline moving only to the non-lessee group of service stations. Do you see that, Mr. Warmack, at the middle of Respondent's Exhibit 31—rather, at the lower part of that page?

A. Yes, sir.

Q. The exhibit says: "This expense was incurred on accounts signed on agreement numbers 461 and 385."

A. Yes, sir.

Q. Which are non-lessee outlets. And what is the gallonage figure which was used for a divisor into the cost of $24,074?

A. 26,987,652 gallons.

Q. And what is the differential which is claimed by the respondent on Exhibit 31-N, as between ELA cost for Ned's, and ELA cost for other stations?

A. .076 cents per gallon.

Q. Is that the differential carried over to Respondent's Exhibit 31-A?

A. Yes, sir.

Q. Now, I want to ask you whether that differential is claimed by the respondent on Exhibit 31-A 5877 to exist as between all reseller stations, exclusive of Ned's, and Ned's on the other hand, or is it claimed only to exist between the 461 service stations and Ned's?

Trial Examiner Ballinger: Does that complete your question?

Mr. Austin: Yes.

Mr. Hanley: Now I ask to make objection, if your Honor please, that the question inquires of the witness as to the claims of the respondent, and that the witness is not entitled to answer by way of opinion, factually or otherwise, inasmuch as he has not, by his own admission, made any study or analysis of the facts, data, figures and information underlying Exhibit No. 31, and particularly that he is not entitled to assume to testify as to what the claims of the respondent are, the same being recorded in the pleadings of this case, and in the testimony of the respondent's witnesses.

Trial Examiner Ballinger: Objection overruled.

Mr. Austin: If your Honor please, if I may, I think I will withdraw that question. I would like to clarify it.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

5878 Q. Now, Mr. Warmack, on Respondent's Exhibit 31-A there is a differential of .076 cents shown opposite "Dispensing Equipment Loaned," which is included in the total differential of .529 cents, stated to be the differential in marketing expense items incurred by distributing through regular reseller outlets, versus distributing through Ned's. In view of the fact that the ELA cost shown on page 31-N is divided only by the non-reseller gallonage other than Ned's, is it proper or consistent, in your opinion, to claim that resulting differential as existing for—rather, to claim that resulting differential as applying to all stations, including lessee service stations?

A. In my opinion, that should not be done.

Q. And how should that expense be treated?

A. That expense should be allocated to all stations other than lessee stations, and to follow that, all other expenses should be so separated between lease stations and non-lease stations, in order to be consistent.

Trial Examiner Ballinger: Is that your only reason, consistency?

The Witness: I rather think that is the principal reason, Judge. It is my contention that lease station expense applicable to lease stations should be assigned to lease station gallonage completely and entirely, and that expense, of course, should be offset by revenues re-
5879 ceived from the lessee.

Trial Examiner Ballinger: That is a rather different reason than the one you stated, "to be consistent."

The Witness: I rather think that is an explanation of it, sir.

By Mr. Austin:

Q. In these three accounts listed on Exhibit 31-N, is there any expense incurred in connection with the operation of leased service stations?

A. The document shows that there was none.

Q. And if the expense of $24,708.35 were divided by the total reseller gallonage, excluding Ned's Auto Supply Company, would that give you—wouldn't that result in large or smaller differentials than the sum of .076 cents, shown at the bottom of the page?

A. Of course, that would mean the divisor would be larger, and the resulting figure would be smaller.

Q. The answer is it would be smaller?

A. Oh, sure.

Q. I am not suggesting, Mr. Warmack, that that is the correct way to do it. I am just bringing out the difference that would result if that were used.

In computing the respondent's ELA cost for Ned's outlet, Exhibit 31-M charges depreciation at 4 per cent of
the actual capital investment in ELA equipment for
5880 gasoline at Ned's. I will ask you whether the depre-
ciation charge of $4,305.86, charged under "Average Reseller Equipment Costs" on Exhibit 31-N, is based upon actual investment in ELA equipment at tank wagon reseller stations?

Mr. Hanley: That is objected to, if your Honor please, for the reason that calls for a conclusion of this witness as to the method and factual data used by those who prepared and calculated the results reflected in Exhibit 31, and this witness has testified that he does not know what the factual data is underlying Exhibit 31, and particularly he can not know what was taken into consideration by the accountants who prepared Exhibit 31.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: Has there been any testimony introduced in the record that it was?

Mr. Austin: There has been testimony introduced in the record as to where these figures came from and as to how the expense in these accounts is allocated in the respondent's regular accounting procedure.

Trial Examiner Ballinger: Are you familiar with that testimony?

The Witness: Yes. And I have made quite a little study of this account, and I was just looking up my notes
on that.

5881 The Witness: May I take the time to read my
notes on this, your Honor?

Trial Examiner Ballinger: You may.

The Witness: Thank you.

(The witness refers to his notes.)

Trial Examiner Ballinger: The objection is overruled.

Mr. Hanley: As I understand it, if your Honor please, the witness is now testifying as to what was in the minds of the accountants who prepared Exhibit 31.

Trial Examiner Ballinger: The Examiner does not so understand.

Mr. Hanley: Well perhaps I am mistaken. I am sorry if I am, but I understand that to be what the question means.

Mr. Austin: I do not understand it, Judge Hanley, to be that way.

Mr. Hanley: The question has gone so perhaps it would be just as well to pass it. Let us pass it and I will accept the ruling of the Examiner.

The Witness: The depreciation charge of $4,305.86 as shown on Respondent's Exhibit No. 31-X is not based upon an actual investment in ELA equipment used for gasoline only at tank wagon reseller stations.

Trial Examiner Ballinger: Now do you know what 5882 it was based on?

Mr. Austin: I will bring that out, your Honor, if I may proceed. Thank you.

Trial Examiner Ballinger: You may disregard the Examiner's question, Mr. Witness.

The Witness: Yes, sir.

By Mr. Austin:

Q. Where did that item of $4,305.86 come from, according to Mr. Boatwright's testimony, if you know, Mr. Warmack?

A. It was taken from Farm 189, Detroit field for the year 1937.

Q. What does that figure of $4,308.86 represent?

A. It represents that portion of this class of expense which the respondent company assigned to the tank wagon reseller channel in the Detroit field for the year 1937.

Trial Examiner Ballinger: In one instance you said $4,305.86 and in another instance you said $4,308.86.

Mr. Austin: I will clear that up.

By Mr. Austin:

Q. First, you say it was assigned; how was it assigned as between channels?

A. On a gallonage basis.

Q. Incidentally, what is this account, Mr. Warmack? What kind of expense are we talking about here?

A. May I refer to Commission's Exhibit No. 119?

5883 Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. Here, I have a carbon. I think this will be easier for you to use than the one in the docket. I assume there is no objection to his using that?

Mr. Hanley: No.

The Witness: Yes.

By Mr. Austin:

Q. I am asking you what type of expense that is, Mr. Warmack, not the amounts.

A. Depreciation of equipment loaned, according to these records.

Q. Now, you stated that this item of $4,308.86 is a tank wagon reseller entry on Form 189 for 1937, and that the disposition of the depreciation expense going into this account is allocated between channels on a gallonage basis.

A. That is correct.

Q. Does the amount of that expense entered in any one of the three channels on Form 189—

Mr. Hanley: (Interposing.) May I hear that read?

Mr. Austin: I will change that from "does" to "is."

By Mr. Austin:

Q. Is the amount of that expense entered in any one of the three channels on Form 189 computed on the 5884 basis of capital investment in ELA equipment allocable to the channel?

The Witness: May I review my notes, your Honor?

Trial Examiner Ballinger: You may.

Mr. Austin: Perhaps it would be more precise to say "to the respective channel."

Mr. Hanley: I would like to have the question read as it has been amended.

Trial Examiner Ballinger: Read the amended question.

(The reporter read the amended question as follows:)

"Q. Is the amount of that expense entered in any one of the three channels on Form 189 computed on the basis of capital investment in ELA equipment allocable to the respective channel?"

Mr. Hanley: The question is objected to as being unintelligible, compound, and confusing, furthermore unanswerable by the witness intelligently.

Trial Examiner Ballinger: The Examiner is of the opinon that the question can be clarified by dividing it.

Mr. Austin: I can not divide it, but I will try to restate it.

By Mr. Austin:

Q. Is the amount of that expense which is entered in any one of the three channels on Form 189 computed on the basis of capital investment in ELA equipment allocable to the respective channel?

Mr. Hanley: I think I want to restate the objection. It is the same objection and on the further ground or perhaps I should say further objection that the witness is not competent to answer the question, in view of the fact that he himself has testified that he did not make an analysis and study of the underlying bases of Exhibit 31.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. Do you have an answer to that question, Mr. Warmack?

A. Yes, sir. The answer to the question is "no." The answer is fully set forth on page 13 of Respondent's Exhibit 99 under Account 111, Depreciation Expense, Plant, ELA.

Mr. Hanley: If your Honor please, may I ask one question?

Trial Examiner Ballinger: You may.

Mr. Hanley. Do you regard the reference to Respondent's Exhibit No. 99 as a proper answer to the question which was just propounded to you, Mr. Warmack?

Mr. Austin: I object to that question, your Honor. I do not think that the witness is properly being asked whether his answers to my questions are proper. I do not think that is a proper form of examination by counsel for the respondent.

Mr. Hanley: He has certainly been giving a great mass of conclusions here, and it seems to me this would be a proper line of interrogation.

Trial Examiner Ballinger: I will direct the reporter to read the question and answer.

(The question and answer referred to were read by the reporter.)

Trial Examiner Ballinger: This part of the Exhibit, Mr. Warmack, to which you make reference, is your answer, is it?

The Witness: It is a full and complete answer, yes; and the answer is "no."

Trial Examiner Ballinger: These parts of the Exhibit to which you have made reference constitute your answer as expanded?

The Witness: That is correct.

Mr. Hanley: That calls upon me to ask further questions along that line.

Trial Examiner Ballinger: You may ask a few more questions.

Mr. Hanley: Do you realize, Mr. Warmack, that the answer which you have given to the question propounded by counsel for the Commission only relates to 1937, and
this document is an answer prepared by the respond-
5887 ent in connection with operations for the year 1937?

The Witness: I would like to hear that again, please.

Trial Examiner Ballinger: Read the question again.

(The question referred to was read by the reporter.)

The Witness: Yes, sir.

Mr. Hanley: You understand that?

The Witness: Yes, sir.

Mr. Hanley: Do you also understand that there was a change in the accounting methods between 1937 and 1940?

Mr. Austin: I object to that your Honor, unless the respondent is willing to concede or claim that there was a change in the accounting method of the company in connection with this account.

Mr. Hanley: The respondent relies on the record so far as that testimony is concerned.

Trial Examiner Ballinger: The witness has testified from the record what the record discloses. His testimony is based largely upon that?

Mr. Austin: That is right.

Trial Examiner Ballinger: The witness can now testify as to whether or not that record discloses if there was a change in the accounting system during that period.

Mr. Hanley: If he knows.

Mr. Austin: I think that should be reserved on
5888 cross-examination. I do not know on what basis
these questions are coming in, without my consent.

Trial Examiner Ballinger: The question has been propounded, and the Examiner will allow the witness to answer it. Then there will be no further interruption.

Mr. Austin: I object to it further upon the ground that I think it is improper at this time, if the purpose is to test the witness' knowledge of changes made by the respondent, unless the respondent is willing to concede that there has been a change.

Trial Examiner Ballinger: The question is merely informative and affords the witness an opportunity to make an explanation of his testimony at this time.

Any objection is overruled to the question and the witness may answer.

What is the question now? Read the question, Mr. Reporter.

(The question referred to was read by the reporter.)

The Witness: Yes, sir. There were also changes during 1940.

Trial Examiner Ballinger: Proceed, Mr. Austin.

By Mr. Austin:

Q. In view of the fact, Mr. Warmack, as I understand your testimony that the depreciation charge to Ned's on Exhibit 31-M is computed at 4 per cent of actual
5889 capital investment, whereas the depreciation expense charged to other stations on Exhibit 31-N is based upon a gallonage allocation to tank wagon channel, is the depreciation figure on Exhibit 31-N properly comparable with the depreciation figure for Ned's on 31-M for the purpose of arriving at the cost differential, Mr. Warmack?

A. In my opinion it is not.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Austin: I wish to refer to the depreciation expense [illegible]ceeding Account 1111 on 31-N and on 31-M, I wish to refer to the item $115.14, which does not come from any account.

Mr. Hanley: Thank you. My trouble was that I could not find out what you were speaking of.

Mr. Austin: The item of $115.14 being computed at 4 per cent of the figure of $2,878.60 and stated to represent capital investment in equipment at Ned's.

Mr. Hanley: If your Honor please, the respondent moves to strike the answer of the witness on the ground that the comparison asked for in the question by counsel

for the Commission is between two accounts apparently, but in fact is erroneous essentially in view of the fact that one of the compared accounts does not exist as now
5890 evidenced by the statement of counsel.

Mr. Austin: I do not think I said anything about any two accounts. I talked about ~~two different~~ figures here, Judge Hanley, if that will clarify matters any.

Mr. Hanley: If the record may be read I think it will clarify it.

Trial Examiner Ballinger: Read the question and answer and the colloquy which followed it.

(The reporter read the question and answer and colloquy referred to.)

Trial Examiner Ballinger: Mr. Austin, what do you mean by your statement in reference to the fact that one of these items did not come from any account?

Mr. Austin: It is shown on Exhibit 31-M, which is what we are talking about.

Trial Examiner Ballinger: That is an account, is it not?

Mr. Austin: No, one of the accounts on Form 189, that is what we have been referring to here as the accounts of the company, one of these numbered accounts on Form 189. This one to which I refer does not appear on one of those.

Trial Examiner Ballinger: It was not one of the items regularly carried on the books of the company?

Mr. Austin: That is right.

Trial Examiner Ballinger: In different accounts?

5891 Mr. Austin: That is right. It is an item computed here from some figures for Ned's Auto Supply Company.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. Mr. Warmack, please look at the bottom of the page 31-N, Respondent's Exhibit. There is a figure there in the lower paragraph of $107,646.50 which is the result of expanding the depreciation figure of $4,305.86 which we have just been discussing, to 100 per cent.

On Exhibit 31-N you will see that this figure of $107-646.50 is again used for the purpose of computing personal property taxes on ELA equipment which are charged to stations other than Ned's.

A. Yes, sir.

Q. Does or does not that figure of $107,646.50 represent the respondent's investment in ELA equipment at tank wagon reseller outlets?

A. In my opinion it does not.

Q. Will you explain why it does not?

A. Because that figure was arrived at by expanding the amount of $4,305.86 which purports to represent 4 per cent of the investment in the tank wagon reseller column.

Inasmuch as this class of expense is separated between the three channels; tank wagon reseller, tank consumer,
and other methods, on the basis of gallonage it was
5892 necessary to take the amount that had been thus as-
signed to the tank wagon reseller channel and expand
that on the assumption that that would afford a figure which would be the exact figure of the capital investment in the equipment being used by the tank wagon reseller.

Q. What do you mean that it was necessary when you say that it was necessary?

A. Well, if you are going to arrive at it then it would be necessary; if you had to have a figure that it would be necessary to expand this.

Trial Examiner Ballinger: Do you mean that would be the correct method?

The Witness: It would be the only method if you did not have a figure on your records.

It would probably entail quite a bit of work to run out and separate these properties by channels and, of course, this would be a quick method of arriving at the figure.

By Mr. Austin:

Q. Mr. Warmack, is it a correct method for the purpose of the use which is made of it here?

A. It is a good method to make a guess.

Trial Examiner Ballinger: Well now, Mr. Warmack, what do you mean by the statement that it is a good method to make a guess?

The Witness: Well, Judge—

5893 Trial Examiner Ballinger: (Interposing.) Do you
mean that it affords some basis for an approximation?

The Witness: Yes, sir. It forms a basis, Judge, for making an estimate.

By Mr. Austin:

Q. That is not the point. I am not so much interested, Mr. Warmack, in that, as to whether it forms a basis for estimate as to whether or not it is proper to use it as a proper basis to make calculations as they have been made here.

A. Mr. Austin, it is my opinion that it is not sound accounting to use this actual figure in one case on which to arrive at a depreciation and use an estimated figure in another case on which to arrive at a figure and then compare the two figures for the purpose of arriving at a price differential or cost differential.

Q. Referring specifically to Exhibit 31-N, the expanded figure of $107,646.50 is used for the purpose of determining personal property taxes?

A. Yes, sir.

Q. Do you see that?

A. Yes, sir.

Q. Does that figure of $3,245.11 represent, in your opinion—what does it represent, in your opinion?

A. $3,245.11?

Q. Yes.

5894 A. It represents an estimate of how much the personal property tax was applicable to reseller stations in the Detroit field other than lessee stations, and on the other hand Ned's stations for 1940—1937.

Q. Do you know where their personal property tax is entered in Form 189?

Trial Examiner Ballinger: When you refer to that, to what particular exhibit are you referring?

Mr. Austin: Commission's Exhibit No. 119.

Trial Examiner Ballinger: Proceed.

The Witness: Not right offhand. I suppose I could locate it.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

The Witness: I think it is in Account 086.

By Mr. Austin:

Q. What is the title of that account?

A. Taxes, real estate, and the personal property.

Q. Are the taxes entered in 086—answer this if you can based on your study of the company's regular accounting procedure—are the taxes entered in 086 actually taxes paid, or are they based on a percentage of an expanded depreciation figure?

5895 A. They are actual taxes paid.

Q. They are actual taxes paid?

A. Yes, sir.

Mr. Hanley: May I have that question and answer read?

Trial Examiner Ballinger: Read the question and answer.

(The reporter read the question and answer.)

Mr. Hanley: May I ask a question of the witness?

Trial Examiner Ballinger: You may.

Mr. Hanley: As I understand the question and answer you have made to it, Mr. Warmack, you are now assuming to say without limitation as to time the taxes, as you have defined them, going into and are paid as you have indicated under Account 086 on Form 189 of the Standard Oil Company—am I right in that understanding of your answer?

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Judge, I did not review the tax bills for the year 1937.

As a matter I did not review them for any year. I did not look up the checks to see just exactly when you paid the taxes, or how the taxes were paid. These taxes
could be accruals of taxes, but it is my understanding
5896 that these represent taxes actually paid or should be
paid for the periods or the years designated by the account on these forms 189.

Trial Examiner Ballinger: By the way, on what is that understanding based?

Mr. Austin: Your Honor, I think we are entirely justified in assuming that the expenses entered on Form 189 are actual expenses and not assumed expenses, and if there is any contention that they are estimates we are interested in knowing it, if there are any expenses not actual expenses I would not know the basis for them. On the other hand, if they are actual expenses I see no basis for this question.

Trial Examiner Ballinger: The witness may answer the Examiner's question.

Mr. Austin: I was not objecting to your question, your Honor.

Trial Examiner Ballinger: Mr. Witness, what is your basis? Upon what is your understanding based?

The Witness: What?

Trial Examiner Ballinger: Do you understand the Examiner's question?

The Witness: Yes, sir.

Trial Examiner Ballinger: Then tell us upon what is your understanding based? What is the answer?

The Witness: From a general knowledge which I obtained in the Detroit office as to the methods employed
5897 by the company in accounting for its costs in the Detroit field.

Trial Examiner Ballinger: Do you mean, what you were told there?

The Witness: Yes, sir, what I was told, and also as a result of a review of many, many actual vouchers covering expenses and payments therefor.

As I say, I did not review any tax bills, and I did not review any checks or vouchers showing where the taxes had been paid, or when they had been paid. I certainly did not question the fact that they were taxes and were paid or had to be paid.

Trial Examiner Ballinger: Proceed, Mr. Austin.

By Mr. Austin:

Q. Mr. Warmack, I will refer you to Mr. Boatwright's testimony with which you say you are familiar, regarding the method used by the respondent in loaning dispensing equipment to non-lessee service stations, and also to the fact, as shown by Respondent's Exhibit 31-M, that some twenty-eight hundred dollars worth of such equipment was at Ned's outlets in 1937.

Remembering or keeping those matters in mind, is it your opinion that the amount of respondent's capital investment in dispensing equipment loaned to any service station or group of service stations depended upon or resulted from differing methods or quantities in which gasoline was sold or delivered to those stations.

5898 Mr. Hanley: That is objected to for the reason that it calls for a pure conclusion of the witness. There is nothing in Exhibit 31 that answers that.

Trial Examiner Ballinger: Objection is overruled.

The Witness: May I have that question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: You are referring there to a reference to Mr. Boatwright's testimony.

Mr. Austin: Yes. I called your attention to the subject generally, that was all.

Mr. Hanley: In view of the question by the witness to the examiner it is requested that the specific testimony of Mr. Boatwright be referred to.

Mr. Austin: I will be glad to do that. I was referring to testimony at pages 2570 to 2574, 2157 to 4172, 4444 to 4446.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. If it will help you any, Mr. Warmack, you might take up first whether the capital investment in different stations depended upon different methods, and second, as to quantity.

5899 Mr. Hanley: Now I ask what question is being answered? We apparently have about three.

Trial Examiner Ballinger: Read the entire question so we will be clear.

(The reporter read the entire question.)

The Witness: I will try to answer that. I think that I am sufficiently familiar with this situation to answer it. I believe that the testimony will show that some stations may have a certain quantity of equipment, other similar stations may have a different quantity of equipment, other stations may have no equipment.

By Mr. Austin:

Q. Do you mean has no loaned equipment?

A. That is what I am referring to.

Some stations, according to my understanding, I believe according to the testimony, may borrow all or almost all of their equipment from the respondent company, while other stations may borrow relatively little or none. That would indicate to me that on the basis of quantity sold, why, at least there would be a question as to whether quantity would be an influencing or definitely influencing factor or basis for that.

Q. What is your opinion? Have you got an opinion on the subject? We know there is a question, at least I hope there is or I would not have asked you about it.

5900 Trial Examiner Ballinger: What is your opinion on that, Mr. Warmack?

The Witness: Well, you are asking an accountant for an opinion which is a legal or economic question. I may be able to give you an answer, I can tell you what I think about it, but I want to call that to your attention.

Trial Examiner Ballinger: You do not care to express an opinion then?

The Witness: My opinion is that there is a question. It is a question in my mind about it.

Mr. Hanley: I certainly do not want that to stand.

Mr. Austin: The respondent feels it should go out?

Mr. Hanley: The respondent moves to strike the entire question and the entire answer on the ground that it is improper, Mr. Examiner.

Trial Examiner Ballinger: Referring to the last question?

Mr. Hanley: Strike the entire question and entire answer to the question just propounded, inasmuch as the witness is unwilling to express any opinion to the question.

Mr. Austin: I will not oppose that. The witness has said he does not think he is competent to answer that.

Trial Examiner Ballinger: The motion is granted and the question and answer is stricken.

We will now take a recess for five minutes.

5901 Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. Will you now, please, refer to Respondent's Exhibit 31-O and 31-P dealing with advertising costs for the year 1937. What was the total amount of advertising costs applicable to the tank-wagon reseller channel in Detroit for 1937 as shown by Respondent's Form 189 for that year?

A. $159,096.17.

Q. What portion of that expense is assigned to the cost of sale to Ned's Auto Supply Company on Respondent's Exhibits 31-O and -P?

A. $1,065.42.

Q. Subtracting that from the total expense, what is the remainder?

A. $158,030.75.

Q. Is that deduction shown on Respondent's Exhibit 31-O?

A. Yes, sir.

Q. Now, referring to the first four items of expense at the top of the list on 31-O, those four items are stated to be the expenses of the advertising department in the Detroit field, and they total $4,461.13. Is any part of that expense assigned to the cost of sale to Ned's Auto Supply Company in this cost study?

A. The respondents did not assign any part of the salaries or expenses of the advertising manager in the Detroit field to Ned's business in this study.

5902 Q. Is it your opinion that no part of that expense of the advertising department is allocable to Ned's business?

A. What is the question?

Trial Examiner Ballinger: Read the question.

(The previous question was read.)

The Witness: No, sir, that is not my opinion. It is my opinion that some part of it is properly assignable to Ned's business.

By Mr. Austin:

Q. And on what is your opinion based?

A. My opinion is based on the fact that it has been shown, I believe, in the testimony that the advertising manager's responsibility in the broad sense runs to the selling of gasoline, especially at reseller stations. Of course, this company sells gasoline to Ned's and, in view of that, I have seen nothing to convince me that a part of this expense, some part of it, should not be assigned to Ned's.

Trial Examiner Ballinger: You think some portion is incurred as a result of Ned's?

The Witness: Yes, sir, I think that.

I would like to add to that that I think some portion of it is assignable to any station that is served if advertising activities are carried on through and by that station and advertising material is furnished to that station, 5903 for which this manager is responsible, which he has some say-so over.

I believe that the cost should be thought of in that manner.

By Mr. Austin:

Q. There is considerable testimony in the record to the effect that the advertising manager in the Detroit field had charge of installation and maintenance of point-of-sale advertising at tank-wagon reseller stations. The point-of-sale advertising, of course, includes signs, globes, displays, banners, maps, and so forth.

It is also shown on Respondent's Exhibit 31-P that point-of-sale advertising was supplied to Ned's Auto Supply outlets in 1937.

In your opinion, what portion of the advertising department expense should be assigned to Ned's business, if any?

A. Mr. Austin, I couldn't tell you what portion should be assigned to Ned's business without making an independent cost study and analysis.

Q. Do you refer to any particular kind of a cost study?

A. I have used the term "factual and objective cost study," and that is what I mean in this instance, and I don't mean to use the term loosely. I mean make an analysis of your costs and a study of what influences them.

5904 Q. In your opinion, would such a cost study result in the charging of a part of this expense of the advertising department to Ned's Auto Supply business?

Mr. Hanley: That is objected to, unless it is shown as a matter of foundation that the witness made such a study and knows whether or not such a factual and objective cost study as he is talking about would have an influence on the figures.

Mr. Austin: Well, I withdraw that question, Your Honor, because I expect that it is based on a wrong premise. I assume that the purpose of making the cost study would be to determine the amount and, therefore, perhaps the witness's previous answer covers the subject.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. Will you now refer to Account No. 1075 on Respondent's Exhibit 31-O marked "Advertising Costs — Othe Costs (including E. L. A.)" Was any part of that item of $154,635.04 charged as a cost of serving Ned's outlets

A. Yes, sir.

Q. How much?

A. $1,065.42.

Q. Will you now refer to Commission's Exhibit 84-A which I believe shows a separation of classes of costs going to make up that item of $154,035.04?

5905 A. Yes, sir, I have that before me.

Q. How much of that amount of $154,000.00 represents newspaper advertising?

A. $76,120.34.

Q. Are you familiar with the testimony in this case by Mr. Boatwright setting forth the reason for respondent's not assigning any portion of that newspaper advertising cost to Ned's business?

A. Yes, sir.

Q. What is the nature of that newspaper advertising?

A. General newspaper advertising, sir. That is for the most part amounts paid to newspapers for general advertising of respondent's petroleum products.

Q. What was the nature of the advertising for which this expense was incurred?

A. For consumer acceptance of the company's products.

Q. And what do you mean by "consumer acceptance"?

A. I mean bringing to the attention of the consuming public the fact that the Standard Oil Company has gasoline and various other petroleum products for sale, is manufacturing them, and that it has good products and it wants to sell them to the public and wants them to know that they have the products available, I suppose in hopes that they will come in and buy them.

That is rather a rough statement but—

5906 Q. From the standpoint of sound accounting practice and procedure, what, in your opinion, is the effect or significance of the respondent's failure to assign any portion of this advertising to Ned's business?

A. It is my opinion that the failure to assign any portion of this cost to Ned's business is wholly and entirely erroneous from the standpoint of sound accounting.

Q. If any part of it were to be assigned Ned's business, what portion of such advertising costs—still referring to newspaper advertising—should be assigned?

A. I know of no other measuring factor that could be used, other than a per gallon unit factor.

Q. If such a method of apportionment were used, would that afford any cost differential between the gallonage moving through Ned's stations and the gallonage moving through other stations?

A. No, sir, it would not.

Q. What is the next item on Commission's Exhibit 84-A?

A. Printed matter and direct mail, $18,937.87.

Q. Have you read Mr. Boatwright's testimony dealing with that item of expense?

A. Yes, sir, I have.

Q. What is your opinion with regard to the charging of all of that expense to business other than that of Ned's Auto Supply Company?

5907 A. It appears to me that this is still advertising for consumer acceptance. The only way that I believe it could be properly separated, from the standpoint of accounting, would be on the gallonage basis.

Q. And would that basis result in assigning part of that expense to the business of Ned's Auto Supply Company?

A. Yes, sir, it most certainly would.

Q. Would your opinion be any different as to the next item on Commission's Exhibit 84-A which is "Motion Pictures, $12,371.72"?

A. The same opinion would hold true in that instance, that is, in connection with that item.

Q. Would your opinion be the same as to the item of "Outdoor posters, $11,256.99"?

A. Yes, sir, it would.

Q. And how about "Dealer trade papers and magazines, $6,468.92"?

A. The same opinion would hold true with respect to that item.

Q. What would your opinion be as to signs at dealer outlets, $2,920.89?

A. That item of cost in my opinion is susceptible to separation, possibly based upon cost of signs or the proportion of cost of signs of each dealer's outlet to the total cost of such signs.

5908 In the absence, of course, of specific information naturally gallonage would have to be used, as I see it, but if more specific information were available or could be developed, if a more accurate measuring factor could be established, then that more accurate measuring factor should be used by all means.

Q. What is your opinion with regard to the last item on Commission's Exhibit 84-A, "Miscellaneous Items too small to show by separate classifications," the amount o which is $26,558.31, and I wish to call attention to the fact that that item may contain some point-of-sale advertising, according to Mr. Boatwright's testimony.

A. If it is point-of-sale advertising, why, that portion that is point-of-sale advertising could be studied and allocated in accordance with the finding of such study.

Q. And what is the nature of the expense in that item?

A. You mean that Miscellaneous Expense item?

Q. Yes.

A. It just looks like a grand group of small miscellaneous items.

Q. Are you familiar with the testimony regarding it?

A. Yes, sir, I have read it.

Q. And, in your opinion, how should a separation of that expense be made as between different tank wagon reseller stations, if other than on a gallonage basis?

5909 A. Well, taking out the point-of-sale advertising that is shown in there, or any advertising that could be directly applied, then the remainder would have to either be separated on the basis of gallonage or else on the basis of the previous separation of all other items of cost. It might be an alternative. Or it might be—

Q. You mean other items of advertising cost?

A. Yes, sir.

That follows the scheme of letting the indirect follow the direct in accounting, which is, I believe, generally accepted in many instances, maybe in most instances.

If you can find out what direct costs you could follow—it is a rather difficult problem in a situation of this kind, because which are direct? That is the question.

Q. Is one advertising cost more direct than another, leaving out point-of-sale advertising?

A. I certainly couldn't hardly say. I would rather think that most of those costs would turn largely to what you might call or what we have just termed advertising for consumer acceptance, and I don't think that could be considered as direct costs.

You see, Mr. Austin, just to amplify that just a bit, we have direct costs and indirect costs in manufacturing, but in distribution cost accounting sometimes you have a problem finding out what the direct costs are—many problems.

5910 If you can find out what they are in one particular group, like this advertising, then your indirect cost might follow, assuming that the direct costs are not of a small amount and the indirect costs of a very large amount.

Q. In other words, you wouldn't want the tail to wag the dog?

A. No, sir.

Q. Do signs and banners at a service station have some general consumer acceptance value?

A. I should hope so, if I were in the place of respondent.

Q. Would it be your opinion that the total expense of point of sale advertising would be a cost which could be assigned directly?

A. Point-of-sale advertising?

Q. Bearing in mind the consumer acceptance value of banners and signs which other people see as they drive by.

A. You are going into fine technicalities. If you can establish what portion of that cost is consumer acceptance and what portion isn't, then I might go along with that idea of making a separation, but first you have to make that separation, and I doubt if it could be made, Mr. Austin.

Q. Giving effect to the opinions that you have just stated regarding the portion of the expense going into this account 675 and also the expenses of the advertising department, and if all of that advertising expense 5911 other than point-of-sale advertising were allocated between tank-wagon reseller gallonage on a gallonage basis, how would that affect the cost differential of .213¢ per gallon shown at the bottom of Respondent's Exhibit 31-P?

A. Well, sir, I think that that cost differential would be reduced materially. I have not made that calculation, but I would rather think that it would be reduced almost to nil.

Q. You mean by that—

Mr. Hanley: Just a moment. Respondent moves to strike the answer of the witness, unless the witness is prepared to state in figures what he means by "Material Reduction." I may say to your Honor that I think that the respondent is entitled to have some figurative basis upon which to analyze the testimony of this witness.

Trial Examiner Ballinger: The reporter will read the latter portion of the witness' statement.

(Whereupon the last part of the witness' answer was read.)

Trial Examiner Ballinger: What do you mean as a statement that you think it would be? Is that your best judgment?

The Witness: Yes, sir.

By Mr. Austin:

Q. Don't you know, Mr. Warmack, approximately what percentage of the differential would be eliminated
5912 if this advertising that you have described as consumer acceptance advertising were allocated on a gallonage basis?

A. I know of my own knowledge that if this were done, this figure of .213 cents per gallon would be almost wiped out.

Trial Examiner Ballinger: In view of the witness's subsequent answers, the motion to strike is overruled.

Mr. Hanley: May I ask one farther question, your Honor, to clarify the answer of the witness?

By Mr. Hanley:

Q. Do I understand your answer now to be, Mr. Warmack, that you say that the differential or "saving on advertising expense" equalling .213 cents as appears on the bottom of Exhibit 31-P would be wiped out, in your judgment, if a proper allocation, as you determine a proper allocation, of expense were made?

A. In my opinion it would be almost entirely wiped out, yes, sir.

Q. Then, Mr. Warmack, what did you mean by your answer when you said that the differential asserted by the respondent would be reduced to nil, inasmuch as the differential asserted by the respondent is .529 cents?

A. Judge, I wasn't referring to that differential as shown on Respondent's Exhibit 31-A. I was referring to the differential in advertising costs as set forth on Respondent's Exhibit 31-P, which is .213 cents per gallon.

5913 Q. All right, then, your thought is that there is a part of that .213 cent that is properly allocable to other business than Ned's. Is that true?

Let me say this to you before you answer: I am trying to find out what you mean by reducing the differential to nil, which to my mind means nothing, Mr. Warmack.

A. Yes, sir. Let me try to explain that, Judge Hanley. If you were to take these classes of advertising costs, the most of them which make up the $154,635.14 on Respondent's Exhibit 31-O and allocate them to all tank wagon reseller stations, including Ned's, on the basis of gallonage sold to each of those stations, including Ned's, the cost of serving Ned's—

Trial Examiner Ballinger: Alone.

A. (Continuing.) —alone, would be materially increased, and the cost of serving other tank wagon reseller stations, speaking of advertising costs entirely as shown on Respondent's Exhibit 31-O, would be materially decreased. The difference between those figures would not be .213, but would be a very, very much smaller figure.

Mr. Hanley: Just one more question, Judge, and then I think from there on it is properly cross-examination.

By Mr. Hanley:

Q. Is it your position, Mr. Warmack, that under your theory of allocation of these expenses that there
5914 would be a figure, some figure, replacing .213 cent on Respondent's Exhibit 31-P.

A. Oh, I have no doubt that there would be some figure.

Q. Have you made that calculation?

A. I have not.

Mr. Hanley: I see. That is all, thank you.

By Mr. Austin:

Q. In order to make such a calculation, Mr. Warmack, would it be necessary to know the expense of point-of-sale advertising of the respondent in 1937 at stations other than Ned's?

A. Yes, sir, it would be necessary to have that information and, if that information is not shown on these sheets, it would be a little difficult to make the calculation.

Q. Do you know whether, if these advertising costs were reallocated, as you have stated they should be, that there would be any resulting differential in favor of Ned's Auto Supply Company?

A. I don't know it to be a fact, Mr. Austin. I haven't made the calculation. I couldn't know it, but there might be, but I am certain of one thing that if you take the greater portion of those costs and allocate them on a gallonage basis, bearing in mind that any allocation on a gallonage basis affords no cost differential, that this difference of .213 cent per gallon would be reduced not only
5915 materially but would be almost wiped out.

Mr. Hanley: The respondent moves to strike the volunteer answer of the witness beginning with "of one thing I am certain" for the reason that it is a volunteered statement and not responsive, and for the further reason that it is apparent from the statement itself that it is a pure guess and not based upon any calculation by the witness.

Trial Examiner Ballinger: The motion is denied.

(There was a discussion off the record.)

Mr. Austin: I move that we adjourn until Thursday morning at 9:30.

Trial Examiner Ballinger: The motion is granted. It is now 4:25 p. m. The hearing stands adjourned, to be reconvened in Room 388, Federal Trade Commission Building, at 9:30 a. m. July 2, 1942.

(Whereupon, at 4:25 p. m., July 1, 1942, the hearing in the above-entitled matter was adjourned.)

5916

Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, July 2, 1942

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

5917 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening of Docket No. 4389 of the case entitled In the Matter of Standard Oil Company of Indiana, at 9:30 a. m., July 2, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in Washington, D. C., July 1, 1942.

The reporter will note counsel for the Commission and respondent present.

You may proceed.

(There was a discussion off the record.)

Mr. Hanley: Counsel for the Commission having indicated that he has concluded his examination of the witness in relation to Respondent's Exhibit 31, the respondent now moves to strike all of the testimony of the witness in respect of said Exhibit 31, for the reasons and upon the grounds as follows:

Exhibit 31 is responsive on the part of the respondent company to that charge in the complaint which complains relative to a differential of one-half cent according to Ned's Auto Supply Company. At the time that such one-half cent differential was accorded, as admitted by the respondent's answer herein, Ned's Auto Supply Company was receiving delivery by tank wagon, as were
many other service station resellers. The differ-
5918 ential of one-half cent was granted to Ned's Auto
Supply Company for a fixed and determined period, as is disclosed specifically in the record, from some time in the fall of 1936 to the spring of 1938, at which later date the practice of according such differential was abandoned; that the abandonment of such practice occurred prior to the time that the Federal Trade Commission filed any complaint against the respondent in respect of a claim of unlawful price discrimination in the Detroit metropolitan area; that any order issued by the Commission must of necessity be prospective in character rather than retrospective; with the result that the inquiry into the question of the one-half cent differential accorded Ned's Auto Supply Company is a purely moot question, the same having been abandoned in the spring of 1938; that since such question is a moot question any inquiry into it at this time is entirely immaterial and irrelevant and no order could be predicated upon any testimony in relation thereto.

Further, the respondent, being in duty bound to reply to the complaint of the Commission, answered the charge relative to the one-half cent differential accorded Ned's Auto Supply Company, and in support of respondent's position, respondent made a cost study of a factual and objective character which was introduced in evidence in this case and is now in the record as Respondent's 5919 Exhibit No. 31, composed of a number of pages.

That all of the testimony offered by the Government in rebuttal against said Exhibit No. 31 has been vague, indefinite and uncertain, in that the witness Warmack has indicated positively in his testimony that he never did make a study of the records, data, and facts relative to respondent's business in connection with the year 1937, upon which year respondent's Exhibit No. 31 is based.

Further, that the witness Warmack has consistently failed, neglected, refused to and refrained from indicating in figures or in dollars and cents the effect of any procedure of accounting which he might have recommended as distinguished from the system of accounting that was employed by the respondent. Further, the witness moreover has merely complained about and criticized indefinitely and without specification the accounting procedures employed by the respondent, and the effect of the witness' testimony is merely a quarrel and a complaint without specification as to result, influence, or effect, in connection with the results reached by respondent's accountants.

Further, that the Court over and against the objection of respondent has failed, refused and neglected to and refrained from compelling the witness, after request by the respondent, to specify in figures and in dollars and cents the influence of his recommended accounting 5920 procedure, if any, as distinguished from that used by the respondent. It is urged by the respondent that the effect of the testimony of the witness Warmack in connection with Exhibit 31 in its entirety is of no probative value and can not be fairly considered by this Court or by the Federal Trade Commission, for the reason that there is nothing in the testimony of the witness which would enable any person, and specifically this Court and the Federal Trade Commission, to determine from such testimony what influence, if any, his criticisms of the accounting procedures of the respondent would have upon the asserted differentials in cost as reflected by Respondent's Exhibit 31.

Trial Examiner Ballinger: With reference to the first portion of the motion dealing with the discontinuance of the practice of according Ned's Auto Supply Company a differential of one-half cent per gallon under the price accorded to the tank-wagon customers of the respondent, the record is clear that such differential was accorded Ned's Auto Supply Company from some time in September, 1936 to about March 1, 1938; that it was then discontinued and has not been resorted to since.

At this point the Examiner pauses to inquire of counsel whether he can give the Commission any assurance that such practice has been and will be permanently discontinued by the Standard Oil Company.

5921 Mr. Hanley: You are referring to Ned's Auto Supply Company, I understand, your Honor?

Trial Examiner Ballinger: Yes.

Mr. Hanley: Yes, your Honor, counsel for the respondent is willing to assure the Examiner that the practice of giving Ned's Auto Supply Company a one-half cent differential off the regular tank-wagon price and serving Ned's under the regular tank-wagon system of delivery has been discontinued as of the spring of 1938 and will not be resumed by the respondent company.

Trial Examiner Ballinger: The Examiner has made the inquiry of counsel solely for the purpose of the record.

The portion of the motion thus far dealt with is a matter over which the Examiner has no discretion, but addresses itself to the sound discretion of the Commission. Accordingly, that portion of the motion is overruled.

As to the remainder of the motion, the Examiner is of the opinion that it also presents a matter which should be passed upon by the Commission, and accordingly overrules the motion.

Mr. Hanley: In view of the statements of the Trial Examiner subsequent to the answer of counsel for the respondent as to the past and proposed practice of according a one-half cent differential to Ned's Auto Supply Company, counsel for respondent now desires to
5922 withdraw all statements made by counsel for the respondent in connection with the matter except the statement that respondent did in fact discontinue the practice of according a one-half cent differential off tank-wagon price to Ned's Auto Supply Company in the spring of 1938.

This statement is made in view of the fact that the Examiner has in effect denied the entire motion made by the respondent in connection with the testimony of the witness Warmack concerning Exhibit No. 31, and respondent now declines to be bound by any statement heretofore made by counsel for respondent—and all such statements by counsel are now withdrawn—except the statement of fact relative to the discontinuance of the allowance of the differential in the spring of 1938.

Trial Examiner Ballinger: In view of the statement of counsel, the motion in its entirety is overruled without any reservation.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination by Mr. Austin.

Q. Mr. Warmack, you spent a considerable amount of time in the offices of the Standard Oil Company in Detroit in January and February, did you not?

5923 A. Yes, sir, of this year.

Q. What were you engaged in doing at that time?

A. I was making a study of the records of the company which supported Respondent's Exhibits 100 and 101 and making a study of the methods employed by the respondent in separating its costs as set forth in those exhibits.

Q. You spent about how much time in Detroit and Chicago on that work?

A. Right close to two months, Mr. Austin.

Q. Did you make a study of the company's regular accounting procedure which they used in allocating their marketing costs on their field Forms 189?

A. Yes, sir.

Q. By "Field Forms" I didn't mean the form only used in the field. I mean a form which is prepared for each field.

A. Yes, sir.

Q. Are you generally familiar with the methods used by the company in its regular cost accounting procedure which are used in arriving at the results portrayed on Form 189?

A. Yes, sir.

Q. I would like to have you describe generally the methods used by the respondent in its regular allocation of its marketing costs, referring now to the allocations which are briefly described in Respondent's Exhibit 99 and which result in the distribution of expense made on

the Company's Form 189, a copy of which is in
5924 evidence as Commission's Exhibit 32, and I don't
ask you to go minutely into the cost procedure of
the company.

What I have in mind is that since the regular accounting procedure of the company has been referred to repeatedly in both Respondent's Exhibits 99 and 100, particularly in 99, and is in part a basis for the cost study, the results of which are shown on Respondent's Exhibit 101, I would like you to describe the Respondent's regular accounting procedure sufficiently and only in so far as you consider that an understanding of that procedure is relevant in connection with and necessary to a discussion of the cost study made by the respondent last summer for the purposes of this case.

Mr. Hanley: The question is objected to, for the reason that no proper foundation has been laid, and for the further reason that the question inquires of the witness as to his conclusion relative to the legal relevancy of his answer, leaving it within the judgment of the witness as to what is relevant and what is not.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Mr. Hanley: I would like to add to the objection on
the part of the respondent that the question is compound
and too long to be understandable and intelligible
5925 to any witness.

Mr. Austin: If your Honor please, the regular accounting procedure of the company is involved in the 1940 cost study, which we are about to take up, and the witness is prepared to testify upon it, and that being true, I am only asking him to describe the regular accounting procedure of the company in so far as in his opinion it is necessary to an understanding of Respondent's Exhibits 99, 100 and 101. I think that the witness should be allowed to give the general background for the testimony which he is about to give, factual testimony—it won't be entirely factual. I will withdraw that. It would naturally be his opinion in large part.

Trial Examiner Ballinger: The witness has previously testified that he has examined the testimony of Mr. Boatwright appearing in the record; that in addition thereto he has spent much time in the office of the respondent examining i[illegible] books and records. In the opinion of the Examiner the question is understandable and proper, and the objection is overruled. You may answer.

5926 A. The form used in the respondent company's regular accounting procedure in the Detroit field used in the preparation of this accounting form 189, which purports to include all distribution costs in connection with the sale of petroleum products, automobile supplies, was prepared—the sheet, Form 189, which is a columnar sheet accounting for costs involved in distribution channels named on the sheet as "tank wagon reseller channels, tank wagon consumer channels, other methods channels, automobile supply channels"—and there is a column in addition to those provided on the sheet, entitled "Income and Expense, leased service station."

Trial Examiner Ballinger: Mr. Warmack, you refer to form 189. What is the exhibit number?

Mr. Austin: Respondent's Exhibit 32, your Honor.

Mr. Hanley: Respondent now moves to strike the answer of the witness.

The Witness: I haven't even started.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: If I may now be permitted, your Honor, I would like to resume the objection to the question asked the witness and to the answer which it is now apparent the witness is giving, the grounds for which are that the witness' answer to the question is simply a re-hash and a reading from exhibits which already appear in the
5927 record, and the answer of the witness has no probative value that the exhibits themselves do not disclose.

Trial Examiner Ballinger: The witness has not finished his answer, and the objection will be stricken from the record, not physically. The witness may proceed to give his answer.

A. In the left column of Form 189, which is Commission's Exhibit 119 and Respondent's Exhibit 32, it shows the expense classification or expense items, with their respective account numbers. Respondent company prepared one of these forms each month. I received each of these forms made for these various months in 1940 in the Detroit office.

By Mr. Austin:

Q. You are speaking now of the Detroit field only?

A. The Detroit field only. The forms were prepared on a cumulative basis, that is, the first form is prepared as of January 31st, the next is the last of February, and that includes the business for the two months. The next is at the end of March, and that includes the business for three months, and so on through the year, so that the form at December 31st shows the business for the full year, and that is Commission's Exhibit 119 for the year 1940. The first item of cost as shown on the form is numbered 000, and entitled "Salaries supervision."

Trial Examiner Ballinger: Off the record.

5928 (Discussion off the record.)

Mr. Hanley: The respondent now objects to the witness reading into the record the contents of exhibits which have heretofore been admitted in this case.

Trial Examiner Ballinger: The witness has not completed his answer. The Examiner thus far is unable to determine whether the witness is merely making a preliminary statement on which he will rely for the subsequent portion of his answer. The Examiner considers the motion premature, accordingly, overrules it, reserving to counsel the right to renew the motion when the witness has completed his answer.

The Witness: May I have the answer read down to where I was?

(The reporter read the answer of the witness as follows:)

"The first item of cost, as shown on the form, is numbered 000 and entitled 'Salaries supervision'."

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Go ahead.

A. I am reciting this, or explaining this as an example, your Honor. This particular account is spread then across the sheet in the channels, a part into the tank wagon reseller channel, a part into the tank wagon consumer channel, no part into income and expense, leased 5929 stations column, or channels, as shown; a part into another methods channel, and no part into automobile supplies channel.

I went into that particular item rather thoroughly in my field study.

Mr. Hanley: Now, this is Exhibit triple naught?

The Witness: Yes, sir.

Mr. Hanley: And you went into that thoroughly?

The Witness: Yes, sir. And I found from my studies, the methods employed in the allocation of those accounts between channels. What I am saying is that I actually took some of the costs and traced them out, as to how they had moved across and been allocated to the channels, and those allocations were made on a gallonage basis.

Trial Examiner Ballinger: Throughout?

The Witness: All of the allocations were made on a gallonage basis.

By Mr. Austin:

Q. You are referring now to Account triple naught?

A. Triple naught, yes. I would like to call attention now to Account 004, Salesman's salaries. I am only speaking of a few of the larger accounts.

Mr. Hanley: This is objected to as not responsive to the question.

By Mr. Austin:

Q. Are you illustrating some general characterization of the accounting procedure? 5930

A. Yes, sir.

Q. Well, I think you ought to make your general statements first, perhaps, and then give your illustrations. You are now going to specific accounts without telling what it is that you are showing, or illustrating. I don't want you to take up each one of these accounts separately as such, but I am very glad to have you take them up to illustrate any general point that you care to make regarding them.

Trial Examiner Ballinger: The objection of counsel for respondent is sustained. The witness will confine his answer to a general statement.

A. Very well. As explained, the respondent company, in accounting for its field costs in Detroit, prepared Form 189, on which there are five separate columns which are designated by the respondent as "Distribution channels."

Trial Examiner Ballinger: What exhibit does that form appear in?

A. Commission's Exhibit 110. And the channels are recited on page 2 of Respondent's Exhibit 100. And along the left side of the Form 189 there appears the separate accounts of the company, Account numbers and the names of the accounts, and each of these accounts is then spread across these channels according to various methods of allocation.

That brings us back to what I explained with 5931 respect to the triple naught account. There are several accounts here representing rather large amounts, and I believe that, in view of the fact that there are various and sundry methods of allocation, in order to answer the question properly it would be well to give two or three examples. There are a few examples of the larger accounts which are spread on different methods.

By Mr. Austin:

Q. Examples of what, Mr. Warmack? If you are going to give an illustration you have got to have something to illustrate. You haven't told us what it is.

A. Didn't I illustrate with "Salaries supervision," the triple naught account?

Q. That isn't what I mean. I didn't ask you for any particular accounts. I asked for a general statement. If you have some general opinion to give or statement to make regarding the accounting procedure you can illustrate that, if you wish, by certain accounts.

A. I think I have given an illustration of the accounting procedure. Form 189, which is a columnar sheet, sets the accounts over on the side and distributes the items that go through the columns. Now, if you want to know how they distribute them through the columns, that follows carrying through the procedure.

Q. I don't want to know that now as to specific 5932 accounts. I thought you wanted to make some description of the accounting procedure as a whole. Perhaps you have finished that.

A. I have done so, but I should like again to call attention to—

Mr. Hanley: Objected to, if your Honor please, as no longer responsive.

Trial Examiner Ballinger: Objection sustained.

By Mr. Austin:

Q. You refer to Account 000, Mr. Warmack?

A. Yes, sir.

Q. As being allocated between channels on a gallonage basis?

A. Yes, sir.

Q. Are there other accounts—rather, are there other accounts on Form 189, besides 000 that are allocated on a gallonage basis?

A. Yes, sir; many of them.

Q. And you say various methods of allocation were used for the various accounts. Can you state what some of those methods of allocation are, other than the gallonage method?

A. Yes, sir.

Q. And again, I wish you would refer to the present method used, rather than going down through the entire accounts. You may refer to the accounts if you wish.

Mr. Hanley: May I say this off the record?

5933 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: May it go on the record that—well, Judge, I think perhaps you had better state it on the record, if you grant me the objection.

Trial Examiner Ballinger: Continuing objection is reserved to counsel for respondent, to the entire examination of the witness. Is that sufficient?

Mr. Hanley: I think so. It goes to the qualifications specifically on these particular subjects, not general qualifications.

Mr. Austin: Is there a question pending?

Trial Examiner Ballinger: Read the question.

(The reporter read the pending question.)

Mr. Austin: I will withdraw the pending question.

By Mr. Austin:

Q. Mr. Warmack, you stated that a very considerable amount of the expense going into the various accounts on Form 189 was allocated between channels on a gallonage basis. Is that correct?

A. That is correct.

Q. When you referred specifically to Account 000 as being one of those accounts which was allocated between tank wagon reseller and tank wagon consumer and
5934 other methods channels on a gallonage basis, referring to that account as an example for the purpose

of this question, what report or substantiation did you find in your studies of that account for the gallonage allocation of the expense going into it?

Mr. Hanley: Objected to as not the best evidence.

Trial Examiner Ballinger: Objection overruled.

A. That was one of the things, Mr. Austin, that I asked for specifically in the Detroit office.

Mr. Hanley: Objected to as not responsive.

Trial Examiner Ballinger: Objection overruled.

A. (Continuing.) And I did not get any information of any kind. As a matter of fact, I was told in the Detroit office, especially by Mr. Gillis, that as far as he knew, no study had ever been made to support this method or the accuracy of figures obtained by using this method. Mr. Houghton from the Chicago office was there. I asked Mr. Houghton to furnish me with any and all information that had ever been developed through a cost study to support his gallonage allocation of this account and all other accounts that are allocated on a gallonage basis, and the company had none—or at least, that is what I was told.

Mr. Hanley: Have you finished?

The Witness: Not quite.

Mr. Hanley: I was afraid of that. Go ahead and finish. I have a motion when you get through with your answer.

5935 Trial Examiner Ballinger: Proceed with your answer if you have not completed it.

The Witness: Yes, sir.

By Mr. Austin:

Q. You did want to add something further?

A. Yes, sir.

Q. Proceed.

A. This is a part of the same answer. In requesting separate data, in fact, any kind of data, but supporting data to support these methods used in the allocation of all other accounts, this was requested, and with the exception of Account No. 200 of the company, all the other accounts which were allocated on the basis of measuring factors; that is, except Account No. 200 of the company.

Trial Examiner Ballinger: What is that, the gallonage?

Mr. Austin: No; Account No. 200 is the advertising department.

Mr. Hanley: No, it is not the advertising department.

Mr. Austin: Pardon me. I mean the accounting, the field—the accounting of field work. I can look it up if you wish.

Trial Examiner Ballinger: Go ahead, Mr. Witness.

The Witness: I was not given any information of
5936 any kind; that is, documentary information, in the
Detroit field, to support the accuracy of these methods
or the results to be obtained from the use of these methods.

And that goes to all of the accounts accounted for in Form 189 in the Detroit field.

Trial Examiner Ballinger: You say you were not furnished any information to support?

The Witness: Yes, sir.

Trial Examiner Ballinger: Do you mean that you were not furnished any information either documentary or oral?

The Witness: I was not. I would get a lot of arguments, Judge, but what I wanted to know was if the gallonage allocation is sufficient, either gallonage between tank wagon reseller, tank wagon consumer, and other methods or if a part of the costs are allocated in them what part of them between tank wagon reseller and tank wagon consumer, which I believe will be the case of this triple naught account.

"Well, why?"

"Well, why? We do it that way." —

"Well, why? What did you ever do to prove that that is the right way to do it, from a cost accounting standpoint?"

Mr. Hanley: Prove it to you.

The Witness: "And if you did do anything where is the documentary evidence of what you did?"

5937 And I got nothing.

By Mr. Austin:

Q. Have you finished your answer?

A. I believe so.

Mr. Hanley: You have finished your answer now?

The Witness: Yes, sir.

Mr. Hanley: At this time the respondent moves to strike the entire answer of the witness to the last question on the following grounds.

First, on the ground that it is argumentative, and a vague, wandering and unsupported diatribe against the respondent.

Further, that it is hearsay in that it appears from the answer by the witness that he bases his conclusion upon what two named men namely, Mr. Gillis and Mr. Houghton told him. And the respondent in this case is not entitled to be bound by some remark that may have been made by somebody, inasmuch as the witness himself, by his own testimony has indicated that he spent two months at least in an independent, personal investigation into the records, data, and accounts of respondent company.

Further, that despite the study which the witness says he made, he does not offer in this answer and he has not offered in any answer any calculation which would enlighten this Court, or the Commission, or any court 5938 relative to the nature of his theories, if any, as opposed to the actuality of respondent's accounting.

At this time, and as a part of this motion to strike, and also independently thereof, the respondent requests this Court to compel the witness or the Commission to divulge facts and figures relative to the opinions upon the differentials in question wherever this witness questions the propriety of the accounting procedures of the respondent company.

Further, the respondent objects to the unconscionable waste of the time of the Court, the Commission, and the respondent in an examination which does not enlighten or elucidate any issue in the lawsuit.

Trial Examiner Ballinger: The motion is denied. The matters with which counsel is dealing and which counsel has requested the Examiner to strike the testimony of this witness are matters which may properly be inquired into on cross-examination.

The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order. Proceed.

By Mr. Austin:

Q. As a result of your study and investigation of the respondent's accounting methods, Mr. Warmack, is it your opinion that none of the expenses which are allocated 5939 between channels in the various accounts on Form 189 on a gallonage basis, or rather as to those instances, that none of those gallonage applications is supported by any factual study or analysis?

Mr. Hanley: That is objected to as too general a question, and no answer that may be given by the witness will be illuminative to the Court, or to the Commission, unless and until the witness is asked specifically in relation to what accounts he is testifying to.

Mr. Austin: The witness stated that there are many accounts on Form 189 where the factor of expense was allocated between channels on a gallonage basis.

He said that he asked for and was unable to obtain any statement of any study or analysis of the expense in that account which justified the gallonage allocation. I am asking him whether in his opinion the gallonage allocation in these accounts is made without any such study or analysis.

Trial Examiner Ballinger: Objection is overruled, but the witness in his answer may specify the particular accounts for the benefit of counsel for the respondent, although that is a matter that may properly be inquired into on cross-examination.

The Witness: In my opinion the gallonage basis is unsupported in every instance by any factual or objective cost analysis.

5940 Mr. Hanley: May I have the reporter read the question, please?

Trial Examiner Ballinger: Read the question which the witness has just answered.

(The reporter read the question referred to.)

Mr. Hanley: The respondent objects to the question upon the ground that it does not specify in the question as to whose factual study, if any, is referred to in the question.

Further, that if any factual study was made, it is not shown that the witness has knowledge thereof.

Mr. Austin: Mr. Examiner, the witness has already answered the question, and as I understand it the Examiner asked something in regard to it and then Mr. Hanley asked that the question be read, and I also explained it a little further.

Trial Examiner Ballinger: It is not necessary to encumber the record with any further statements. The objection is overruled.

The Witness: Your Honor, may I explain my answer?

Trial Examiner Ballinger: Read the witness' answer.

(The reporter read the answer referred to.)

By Mr. Austin:

Q. Do you wish to make any further amplification 5941 of your statement?

A. I wish to state this, that the reason for my opinion is this: that I requested the people that I contacted in the Detroit office for information which would support any such measuring factor; that is, the gallonage measuring factor, and I received none, and I was told that there was none.

Q. That being true, Mr. Warmack, does it follow that in connection with some accounts and expenses that the gallonage basis may not be the best available method of allocation?

A. It may not be.

Q. It may not be?

A. It may not be, or it may be.

Q. Can you name or give us an example of an expense of a nature which may, in your opinion, properly be allocated on a gallonage basis between channels for the purpose of a cost study such as that prepared by respondent in this case, covering 1940?

Mr. Hanley: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Mr. Hanley: That is objected to as speculative and entirely outside of the issues in this case. There is enough involved in this case without going outside of it.

Trial Examiner Ballinger: Objection overruled.

Mr. Austin: I am referring to this cost study.

5942 The Witness: Certain classes of managerial cost may be allocated there; they may be. Certain classes of advertising cost may be allocated there, properly, and it may be the very best allocation that you can arrive at regardless of how many studies you may make.

By Mr. Austin:

Q. What I wanted to bring out, Mr. Warmack, if it is a fact, that in describing the gallonage method of allocation, and the lack of support for it, which you have stated to be the case, are you or are you not necessarily attacking the use of a gallonage basis in every instance in accounts where that basis was used in the compilation of Respondent's Exhibit 101?

A. I most certainly am not.

I would like to add to that that what I question is the support for the use of the gallonage as a measuring factor. If we have a study, a time study made of men's time, and the result of that intensive study shows that it comes out the same as the gallonage basis would come out; that is, the figures would result the same, I certainly would say then the gallonage factor was supported at least at that time.

Trial Examiner Ballinger: Mr. Warmack, as I understand your testimony is to the effect that your investigation failed to disclose any inquiry to determine any proper measuring factor; is that correct?

5943 The Witness: Not any one, Judge; I did say that in Account No. 200 the company does go to a good extent in establishing the measuring factor, but there are some of these measuring factors such as the gallonage measuring factor which is just a figure that is used.

And what I am trying to say is that I want to see some support somewhere by some study that will support the usage of that factor.

Mr. Hanley: If your Honor please, in view of the answer of the witness just now made the respondent at this time again offers, as it has offered many, many times during the course of this litigation, all of its data, facts, accounts, and records.

It was understood by the respondent that Mr. Warmack, the witness now testifying, had made available to him all of the record, facts, and data of the respondent company. Indeed, there was a man sent from Chicago to Detroit with the specific assignment of aiding Mr. Warmack in his study of such respondent records.

The implication and the inference in the testimony of this witness is that he was unable to find any supporting documentary evidence or data underlying the exhibits which this respondent has offered in evidence. It appears on this record that this witness himself has spent at least two months in Detroit, and the respondent's informa-
5944 tion is that he spent more time than that in Detroit
with nothing at all to do except to analyze the records and accounts of the respondent company. What he did the respondent is of course unable to say. But the respondent does say that he was given every opportunity to examine every record that this company had. And in order that it may not be misunderstood by anybody, any

time, the respondent now reiterates this offer of any record, data, or account, or fact relative to any of the cost accounting exhibits involved in this case.

Trial Examiner Ballinger: Well, is it contended by counsel for the respondent that prior to the adoption of the factors used by respondent in its accounting system that the respondent made a careful study or investigation to determine that the factor used was the best method of arriving at a correct calculation?

Mr. Hanley: Your Honor, the respondent contends that its method of accounting and that its offers of exhibits in this case are the soundest methods of accounting that may be applied to the issues in this case.

The respondent is objecting to and is disturbed by your Honor's rulings in permitting this witness to testify to what he states is a fact that there is no supporting data for the conclusions reached by the respondent.

The respondent does not object specifically to this witness testifying as to the propriety of accounting
5945 methods used by the respondent company except that
the respondent preserves its objection that this witness does not know anything about the underlying figures, facts, data, and records going into its exhibit 31 and 119. But the point is this, if your Honor please, this witness is just categorically saying that we did not keep books. Now, we object to your Honor permitting this witness to make a record of that kind.

If he objects to or differs with us in our methods of keeping books, as I understand your Honor's ruling, over our objections, you are prepared to permit this witness to testify to his divergent view. But we do insist, your Honor, that he is not entitled to testify to the fact categorically that there are no records that support the contentions as advanced by the respondent in this case.

Trial Examiner Ballinger: The Examiner understands—

Mr. Hanley (interposing): Well, it is the witness—

Trial Examiner Ballinger: Wait a minute. The Examiner understands the testimony of the witness to be to the effect that the books and records of account were kept by the company, but that so far as he can ascertain from both an examination of the records available and inquiry of the officers of the company to whom he was referred that he can find no evidence of any study or investigation by the company before the adoption of the factors used

in and for determining the result, and his testimony,
5946 as I understand it, goes no further than that.

Mr. Austin: May I make a statement, your Honor?

Trial Examiner Ballinger: You may.

Mr. Austin: I just want to say that the Commission is not concerned with the respondent's accounting methods, procedure, or allocation—

Mr. Hanley (interposing): I wish we believed that.

Mr. Austin: —in so far as the respondent does that for its own purposes, your Honor, for its own enlightenment and information, but we do contend that many of those methods of application and distribution of expense are not sufficient for the purpose of proving the cost differential such as is attempted to be proved by the cost study put in evidence as Exhibit 100 and 101, and we will say that as to the various accounts, I just want to make it clear that we are not trying to tell the respondent how to keep its books or information, but that Mr. Warmack has gone into the respondent's accounting procedure for the purpose of being able to determine whether the differentials built up in these various accounts of Respondent's Exhibit 101 are properly separated.

Mr. Hanley: Judge, there probably is no point to arguing the matter, a matter which may be properly arguable before the Commission or any court, but I do want to
make it clear now, which I am sure is clear in my
5947 mind but which I am not sure is clear, in view of
what Mr. Warmack is saying, that any record, any account that the respondent has has always been and is now available to the Commission and to this particular witness. And if he did not look at them, that is something over which we do not have any control.

Trial Examiner Ballinger: There is no question presently nor has there been at any time about the respondent having failed or refused to furnish every document that has been requested, or to make it available to the officers and agents of the Commission.

Mr. Hanley: So long as that is distinctly understood by the Court and the Commission I am satisfied.

Trial Examiner Ballinger: There is no question about that.

Mr. Hanley: There seems to be, from the testimony of the witness.

Trial Examiner Ballinger: The Examiner is under the impression that you have been laboring under a misapprehension.

Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. I would like now to have you direct your attention to Respondent's Exhibits 99, 100, and 101, which may be referred to as the 1940 cost study.

5948 A. Yes, I have that.

Q. I assume that you are familiar with those exhibits?

A. Yes, sir.

Q. Have you analyzed those exhibits to determine the accounting methods, and the methods of allocation used in preparing them?

A. Yes, sir.

Q. Can you describe the underlying method of procedure, or the premise upon which Respondent's Exhibits 100 and 101 are prepared?

Mr. Hanley: That is objected to as a conclusion of the witness. The exhibits speak for themselves, and the witness is not entitled to testify as to what operations of mind took place in the witnesses of the respondent who have testified, and whose testimony is in the record of this case.

Trial Examiner Ballinger: Objection is overruled.

The Witness: Respondent's cost analysis and survey in the Detroit field for the year 1940 as set forth in Respondent's Exhibit 100, and the ultimate results thereof as set forth in Respondent's Exhibit 101 were based primarily upon the premise that the respondent's regular accounting procedure is sufficiently accurate and thorough to afford information sufficient to prove cost differentials.

5949 The study is based primarily upon the premise that this respondent's Form 189 for the year 1940, which is Commission's Exhibit 119, had been prepared in accordance with sound and accepted accounting principles and afforded information therein without any further study as far as cost of serving tank wagon resellers was concerned, to afford a cost differential between the cost of serving resellers and the cost of serving jobbers, which costs had to be pulled out of the cost as originally placed in Form 189 for the year 1940.

Mr. Hanley: Have you finished your answer, Mr. Warmack?

The Witness: Just a minute.

Mr. Hanley: Then respondent moves—

The Witness: Just a minute.

Trial Examiner Ballinger: Just a minute. The witness has not finished his answer.

Mr. Hanley: I am sorry. I thought he said he had.

Trial Examiner Ballinger: He said "Just a minute."

The Witness: In respondent's cost surveys studies were made for the purpose of isolating costs of serving the direct shipment business and classes of customers thereto, that latter part of the term meaning jobbers of naphtha and gasoline, and jobbers of other products and other customers; and the remaining costs previously assigned to the distribution channels were left intact for the most part in the exact manner in which they had been previ-
5950 ously assigned to channels in respondent's regular accounting procedure in its preparation of its Form 189.

I believe that covers that.

Mr. Hanley: The respondent now moves to strike the entire answer of the witness just made on the ground and for the reason that the witness assumes to say that in cost studies, or rather that no cost studies have ever been made by the respondent company supporting its accounting procedure as reflected by respondent company's Form 189, which accounting procedures have been in substantial effect and in use for upwards of fifty years, longer than this witness has been alive, and the witness can not possibly know what studies have been made which go into the formulation of the respondent's accounting procedures.

Further, the answer of the witness is not specifically in figures and in dollars and in cents and is merely a vague generalization in the way of a criticism of the accounting procedures of respondent company which have been in use upwards of fifty years, without any specific indication as to how such accounting procedures should be changed, if indeed the witness in his opinion believes they should be changed.

Trial Examiner Ballinger: If the accounting system of

the respondent has been used for fifty years un-
5951 changed, it appears that some inquiry with reference
to the system probably is very appropriate.

The motion of counsel for the respondent is overruled.

Mr. Hanley: For the purpose of the record, if your Honor please, it appears on this very record this morning that it was changed between 1937 and 1940. It is constantly undergoing a change to meet the current conditions. That testimony came out on yesterday.

I also object to the witness' answer with regard to the isolating of cost of serving direct shipment business on the ground that it is so confused that it does not mean anything, and can not serve any useful purpose on this record, but can only serve to confuse. I listened to it carefully and it simply does not mean anything.

By Mr. Austin:

Q. Mr. Warmack, I assume that you are familiar with the fact that the differentials sought to be justified by the respondent through its cost study is a differential between the cost of selling and delivering gasoline to so-called jobbers in the Detroit metropolitan area and to tank wagon reseller and service stations in the metropolitan, Detroit metropolitan area?

A. Yes.

Q. In order to support that differential, and to estab-
lish differences in the cost of sale and delivery to
5952 these two classes of customers the respondent has
offered in evidence and has introduced into evidence Exhibits 99, 100, and 101 which set forth and use the respondent's costs in the entire Detroit field, including rural areas and other cities than Detroit.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Austin: I would like to have the question read so far as it has been stated.

Trial Examiner Ballinger: Read it.

(The reporter read the question.)

Mr. Austin: I will proceed.

My Mr. Austin:

Q. In your opinion, Mr. Warmack, are the respondent's costs in the entire Detroit field sufficiently representative of the costs in the Detroit metropolitan area to be used for the purpose of establishing a cost differential in that Detroit metropolitan area in the absence of any showing that the respondent's marketing costs in the area outside of Detroit are not greater than in Detroit?

Mr. Hanley: Just a minute. That is objected to by the respondent as a compound question, and as assuming facts not in evidence.

5953 For the further reason that there is no foundation laid for an answer to the question in that it is not shown that this witness has ever made any study of the marketing costs of the respondent as to what counsel for the Commission calls the "Detroit field."

Furthermore, the question is silent in respect of any definition as to what is meant by the "metropolitan area of Detroit."

Furthermore, there is no indication and no foundation has been laid in respect of the fact as to whether or not this witness has ever made any cost study in connection with any territory which he or anybody else denominates as the "metropolitan area of Detroit," and he could not possibly know what counsel means by such a statement unless and until the same is defined.

Mr. Austin: Well the metropolitan area has been defined repeatedly throughout this record as the city of Detroit, Dearborn, Hamtramck, and Highland Park.

Mr. Hanley: If that is what you are asking him, ask it so it will show in the record, Mr. Austin.

Mr. Austin: It has been stated so many times on the record that I think it would be unnecessarily encumbering the record to put it on it. In my opinion it would be repetitious.

5954 Trial Examiner Ballinger: Do you understand the question?

Mr. Austin: I would like to—

Mr. Hanley: What is the ruling on the objection, if Your Honor please?

Trial Examiner Ballinger: There is an objection. What is the ruling?

(The statement made by the Trial Examiner was read by the reporter.)

Trial Examiner Ballinger: There was an explanation by Mr. Austin and no ruling. I understand now the question is going to be withdrawn?

Mr. Austin: No, but I would like to say this, after hearing the question read: I am not asking the witness whether he knows the costs in commission territory are or are not greater than the costs in the metropolitan area as a result of any cost study. I am asking him whether those costs may properly be used, that is, the costs for the whole field may properly be used, from an accounting standpoint, as representative of costs in the Detroit area or as a basis for establishing a cost differential in the Detroit area.

Mr. Hanley: Respondent adds to its objection, in view of the statement of counsel, that any answer given by the witness would be utterly valueless, in view of the fact that the statement of counsel assumes that no cost studies 5955 were made of the field as a whole and what counsel now denominates as the metropolitan area, and no distinguishing features are indicated in the question.

Trial Examiner Ballinger: The objection to the question, as clarified by the subsequent statement of counsel for the Commission, is overruled.

By Mr. Austin:

Q. And, Mr. Warmack, I want you to answer that question in view of the testimony, of which there is a considerable amount in the record, and with which I assume you are familiar, regarding the nature of so-called A station business and B station business, and the nature of the territory and the conditions in which and under which those respective classes of business are conducted.

Mr. Hanley: The respondent objects to that statement of counsel as to telling the witness how he shall answer the question. If counsel desires to testify, he should take the stand, and the respondent is entitled to have the witness testify in response to the questions that are propounded to him.

Mr. Austin: I might very well have asked him, for example, whether he had read that testimony, Judge Hanley.

Mr. Hanley: You may have been talking to him about it for six months, that is all right, but don't put it on the record.

5956 Trial Examiner Ballinger: There is considerable substance to the objection of counsel for the respondent to the statement made by counsel for the Commission to the witness, but it is present. Apparently no good can be accomplished by sustaining the motion.

You may proceed.

Mr. Hanley: I think you are right, Judge.

The Witness: I believe that the area of the Detroit field has been shown in the record at least once or more than once, and it covers the territory including Detroit, Michigan, and environs, up to Lansing, Michigan, I believe about 100 miles away.

By Mr. Austin:

Q. The record will show that.

A. I appreciate that, Mr. Austin, but that is coming to what I am fixing to say.

Q. Go ahead.

A. That area includes a large amount of rural territory. That rural territory, Mr. Austin, is served for the most part by commission agents.

Q. May I interrupt just a minute? Can you give me an answer to my question, and then state the reasons for your opinion, if you have an opinion. I don't believe you have answered the question, and I would rather have you answer the question first.

5957 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

The Witness: In my opinion they can not.

By Mr. Austin:

Q. Now, if you will go ahead and, if you wish to state the reasons upon which that opinion is based, we will be glad to have you do so.

A. That is, at least 40 per cent, I believe, of the company's tank-wagon business in the Detroit Field is carried on through commission agents of the company, that is, for the most part employees of the company who operate small bulk stations, usually in rural communities, and who perform for the most part the same services in the distribution of the respondent company's products as are performed by the company's regular salaried stations in cities or rather densely populated areas such as Detroit.

The commission agents are compensated on the basis of quantities distributed by them and, of course, that is based upon classes of customers served—different pay gallons to different classes and groups. For example, deliveries of gasoline to retail service stations carry a smaller commission per gallon distributed than deliveries of gasoline or other petroleum products to various rural consumers, that is, consumer-customers.

As far as I have been able to determine in the 5958 company's recent cost survey, no effort was made to segregate the commission agent business from the other business in the Detroit field. If any effort was made, why, I didn't find any information with respect to it while on my studies in Detroit. For this reason, it would appear to me that if costs of serving in areas outside of Detroit are going to be used right along and combined with the cost of serving in the Detroit field, then it would be necessary to make a study to see if those costs were identical.

Mr. Hanley: Have you finished?

The Witness: I believe that is sufficient.

Mr. Hanley: May I ask one question, if your Honor please.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Mr. Warmack, did you make any objective, factual cost study of costs in the metropolitan area of Detroit as distinguished from the rest of the Detroit field?

A. I didn't, but I should like to amplify that.

Mr. Hanley: That is sufficient. If you didn't, that is all I want to know.

I now move to strike the answer of the witness for the reason that he has indicated that he is incompetent to express the opinion which was expressed in his answer, inasmuch as he has never made any cost study relative 5959 to the Detroit metropolitan area as distinguishd from that portion of the Detroit field outside the metropolitan area.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. Mr. Warmack, when you were in Detroit in January and February, did you ask the respondent's accountants who assisted you and with whom you conferred in the Detroit office whether the respondent had made any cost study to determine costs in the area surveyed by the commission agents or to determine the relative amount of its costs in commission agent territory and in A-station territory?

Mr. Hanley: Just a minute. I don't often request it, Judge, but may I have a yes or no answer to that question, please?

Trial Examiner Ballinger: You may.

The Witness: May I have the question read, please?

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: You can answer that yes or no and then explain your answer if it is necessary.

The Witness: Thank you. The answer is that I did ask, yes, is the answer, and then I would like to amplify that a little, if I may.

Trial Examiner Ballinger: You may.

The Witness: I asked Mr. Houghton, accountant for the Standard Oil Company who was sent to Detroit
5960 to confer and assist me, as far as he could, in making the study, and he certainly did do a good job. I appreciated it very much. He expedited the work plenty. I asked Mr. Houghton to furnish me any information, all information the company had developed, if they had any, in determining what the cost was to serve customers through commission agents as distinguished from what it cost to serve customers through the regular salaried stations.

Mr. Houghton had no information to furnish, so he stated to me, and he furnished none.

I would like to state this, that Mr. Houghton and I borrowed Mr. Gillis' car one day and went out and saw two or three of the stations.

By Mr. Austin:

Q. I was going to ask you that.

A. And we also went and saw this Scotten Avenue Station.

Trial Examiner Ballinger: What position does Mr. Houghton hold, if any, with the respondent company?

Mr. Hanley: In response to the Examiner's question—

Trial Examiner Ballinger: The Examiner would like to have it in the record.

Mr. Hanley: Let it appear on the record that at the time that the witness now refers to, namely in the spring or early part of the year 1931, Mr. Len Houghton was the office manager of the sales research department
5961 of the respondent company and stationed at Chicago. In that capacity he was among the chief assistants of Mr. Boatwright, who was manager of the sales research department of the respondent company.

In order to facilitate the work and the investigations of the Commission, Mr. Houghton was assigned the task of going to Detroit and working with and aiding any accountants or investigators that the Commission might assign to investigate the records of the respondent company in the Detroit office.

The Witness: Could I say a word about Mr. Houghton?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

By Mr. Austin:

Q. What is the nature of the territory in the Detroit field served by commission agents, Mr. Warmack? Is it metropolitan territory or is it rural territory?

A. It is largely rural territory, Mr. Austin.

Q. Do you know whether the volume of the company's sales in that territory, say, per square mile of territory, is as large as it is in the City of Detroit?

A. In square miles?

Q. I am asking you whether in the same amount of territory, in the commission agent territory, does the company sell more or less gasoline than in Detroit?

5962 A. It sells a little less than it does through all of the rest of the salaried stations. I don't know just—

Q. I am not talking about the total. I am talking about whether per square mile of territory the volume is greater or less in commission agent territory; in other words, if you take a square mile in the city and a square mile in the country, where do you sell the most gasoline?

A. Oh, surely in Detroit.

Q. Then, is there a greater volume of business in the City of Detroit compared with the amount of territory served?

A. Oh, sure.

Q. Do you know whether deliveries to individual customers would average higher in the metropolitan area than in the commission area?

Mr. Hanley: That is objected to, as no proper foundation having been laid, not having been shown that any study was made at all in either territory.

Trial Examiner Ballinger: If the witness knows, he can answer.

Mr. Hanley: If he knows, he can answer, I quite agree.

The Witness: That information may be in the records. I don't have it in my mind.

Trial Examiner Ballinger: You don't know, do you?

5963 The Witness: No, I couldn't answer that question without looking.

By Mr. Austin:

Q. You haven't examined, then, to determine whether or not the deliveries to tank-wagon stations by commission agents will average as great as in the city, or as to whether the trucks used are of the same capacity, or anything of that sort?

A. I have not examined into that. At one of the commission agent stations which I called on with Mr. Houghton, I couldn't tell you the size of the truck he had, but just by looking at it I could see it certainly was not nearly as large as some of the trucks that I saw at the Scotten Avenue Station, which is a salaried station.

Q. Can you state whether normally and based upon the experience of cost accountants generally, and not referring specifically to gasoline or any other particular product, but can you state whether distribution costs in a territory where volume is smaller, compared with the area served, are greater or less than in a metropolitan area where you have a larger volume over a smaller territory?

Mr. Hanley: Just a minute. It is objected to as immaterial and, if regarded as material, it is a question that is susceptible of accurate ascertainment in respect of differentials in delivery of gasoline, which is in question in this case. The respondent is not entitled to be 5964 bound by any generalization as to other products, inasmuch as it is possible to accurately ascertain the facts in connection with gasoline deliveries in rural and metropolitan areas, if that be material.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Mr. Austin: I would like to strike that question, your Honor.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: I can restate it, I think, much more effectively and shorter.

By Mr. Austin:

Q. Mr. Warmack, is it normally to be expected that the distribution of a small quantity of a product throughout a large territory will cost more per unit than the distribution of a larger quantity of the same product in a smaller territory?

Mr. Hanley: That is objected to as calling for the
conclusion and opinion of the witness on a matter that
is entirely immaterial and irrelevant to the inquiry. The
inquiry is concerned with the justification of factual and
actual costs in a limited area. As to the esoteric nuances
of cost accounting in some rural community unrelated to
the territory involved in this lawsuit, there can be
5965 no interest on the part of the Court or the Com-
mission.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: Read the question.

(The question referred to was read by the reporter.)

The Witness: That always has been my feeling about it, Mr. Austin, and I think that—

Trial Examiner Ballinger: What do you mean by your feeling about it?

Mr. Hanley: The answer is as good as the question, and that may go on the record.

By Mr. Austin:

Q. I want to know what your opinion is, if you have one, and whether you can support that opinion by any authorities or—

A. That is my opinion. That is a controverted question, I might say, and in some instances it may move back the other way, but I believe that we could show by certain studies that that had been the case in some instances.

I think some cases coming before this Commission
might show that, for instance, in the Rocky Mountain area
of the country, which is a rather sparsely populated sec-
tion, or certain sections are at least, as I understand it,
where the costs per unit of goods sold would be greater
than they would be, we will say, in the metropolitan
5966 areas such as New York City, Philadelphia, Chicago,
Detroit, or some such cities as that.

Mr. Hanley: The respondent now moves to strike the answer to the question, inasmuch as the witness has stated that it is a controverted question and he is unable to state any definite opinion as to whether or not the conditions set forth in the question are or are not true.

Trial Examiner Ballinger: The motion to strike is granted.

By Mr. Austin:

Q. Do I understand, Mr. Warmack, that there is no opinion or that you can cite no authorities to the effect hat the distribution costs of smaller quantities in larger erritories are greater than larger quantities in a smaller erritory?

A. Mr. Austin, the Department of Commerce has made studies of those things, and they would swear up and down that it costs more in a rural territory than in a metropolitan territory. I haven't covered those things.

Mr. Hanley: Just a minute, I move to strike the answer of the witness as an attempt to say what somebody else would attempt to swear to.

Trial Examiner Ballinger: The motion is granted.

Mr. Austin: We will come to Detroit.

Mr. Hanley: Off the record.

967 (There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Mr. Warmack, you have visited some of the company's distributing stations, both in the metropolitan area of Detroit and in commission agent territory?

A. Yes, sir.

Q. I think you testified to that. And have you personally observed the nature of the respective territories just referred to and had an opportunity to observe the methods of distribution used by the company in metropolitan Detroit as well as in commission territory?

A. Yes, sir.

Q. As a result of that observation, can you express any opinion, or do you have an opinion as to whether the respondent's cost per gallon of distributing gasoline in commission agent territory would normally be larger than in the City of Detroit?

Mr. Hanley: Just a minute. That is objected to for the reason that it includes a lot of assumptions which it is not shown are true in the experience of the witness. It is not shown that the witness has made any study of any particular territory as distinguished from any other territory. It is not shown that the witness knows what is commission territory and what is something other than commis-
968 sion territory. It is not shown that he knows anything about the costs in relation to any method of de-

livery used by the respondent company. The only thing that so far has been shown is that the witness took an automobile ride and visited two or three bulk stations.

Trial Examiner Ballinger. The objection is overruled.

The Witness: May I have the question read?

(The question referred to was read by the reporter.)

The Witness: Mr. Austin, I would just have to guess on that, the same as the guess work that has gone on here, that it isn't. If you don't make a study, you don't know, that is all. If you make a study, you know, and if you don't make a study you don't know. That is the whole thing.

(At this point a statement by Mr. Austin and an objection to it by Mr. Hanley were physically stricken from the record by direction of Trial Examiner Ballinger.)

(There was a discussion off the record.)

By Mr. Austin:

Q. Mr. Warmack, you stated awhile ago that you did not think that the use of the costs for the entire Detroit field was proper for the purpose of determining the cost differential in the Detroit metropolitan area, and that you
5969 inquired whether the company had made any study to determine the cost of distribution through B—station agents, and that you were unable to find that any such study had been made. I don't think that you stated why you asked for such a study and why you felt that the costs for the entire Detroit field should not be used for the purpose of determining costs in the city alone.

Mr. Hanley: Just a minute; that is objected to as a compound question and calls for the conclusion and opinion of the witness, in that it asks him why he did something that he did. The objection does not go to the question of fact as to whether he did or did not do something, but as to the question of why he did this or that the respondent objects.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: The objection is sustained.

Mr. Austin: Upon what ground, your Honor?

Trial Examiner Ballinger: Upon the ground that it calls for the reasons which motivated the witness in calling for the records, and not for any fact.

By Mr. Austin:

Q. What is the basis of your opinion, Mr. Warmack,
that a separate study of costs in commission-agent
5970 territory would be necessary to determine whether
those costs may properly be used to determine costs
in the Detroit metropolitan area.

Mr. Hanley: May I have that question?

(The question referred to was read by the reporter.)

Mr. Hanley: That is objected to, in that it assumes facts not in evidence, it not being established that the witness knows or that it is the fact whether the witness knows it or not that there is a particular territory that is just commission-agent territory as distinguished from the salaried-driver territory, if that is what is meant by the question—in the metropolitan area of Detroit.

Trial Examiner Ballinger: The record abundantly establishes that there are two areas. There is the Detroit district, which has been well defined and delineated by maps introduced into the record. There is also the Detroit area, which has likewise been well defined and delineated by maps in the record. The witness must know the exact territory embraced in both descriptive terms.

The objection is overruled.

Mr. Hanley: If your Honor please, the objection does
not go merely to geographical delineations but goes to the
question of what is commission-driver area as distinguished
from something else not indicated in the question. It does
not appear that it is the fact or the witness knows anything
about the fact of whether or not the geographical ter-
5971 ritory out of the metropolitan area of Detroit is solely
or only in part commission territory.

Trial Examiner Ballinger: The portion of the Detroit district in which the commission merchants operate has been, as the Examiner recalls, clearly defined by the testimony of Mr. Boatwright, and the Examiner thinks that the question is proper and the objection is overruled.

The Witness: In my opinion the respondent company employs two separate and distinct methods of operation, as far as the serving of customers is concerned. They are very closely related, it is true, but they are still separate.

It seems to me, as I read the evidence and the testimony in this case, that to call these commission agents commission drivers, as I see it, is a kind of a misnomer.

I understand that there are commission drivers who operate out of some of the stations in Detroit, but I am not talking about that. I am looking over that. I am comparing A-station business with B-station business.

A stations are the large bulk plants generally in the metropolitan areas. The drivers of the trucks, as I understand it, are paid on a salary basis. Various and sundry personnel are paid to operate those large plants; while at a B-station there may be one man running it, he is the whole thing, he does it all, and his compensation is based upon how many gallons of the company's product he delivers to

5972 customers.

Of course, there is, I think, a certain amount that he will have to earn. If he doesn't earn that much, he will get that much, see, but it is essentially a commission-agent business. What he does depends upon how much money he gets and, even if he were paid on a salary basis, I would wonder if that could be comparable, when twenty miles away from a large city, in a small rural area, with his plant clear out of sight of the town—or we will call it a plant—it is a spot on the side of a railroad track, with a couple of tanks setting up there, as compared with a large bulk plant that is really doing business and where a large personnel is employed which maybe dispenses many, many times more units of the company's product than this one little plant that I have just spoken of.

Now, when we take all of these little plants together and throw them together and set them up against the costs of serving, that is, the costs of the little plant against the costs of serving through the big plants and then to say arbitrarily, in my opinion, that the costs of serving here are the same as the costs of serving here, that is, the A plants and the B plants, to me that is conjecture, Mr. Austin.

You can find that out, if you make a study, and it can be done.

5973 Mr. Hanley: Are you through?

The Witness: That is the reason for my opinion.

Mr. Hanley: I move to strike the entire answer of the witness on the ground that it is unresponsive to the question, that it is conjectural, that it has nothing to do factually with the metropolitan area of Detroit or the Detroit field, that it is simply a wandering statement on the part of the witness in which he theorizes on conjectural costs based upon hypothetical situations, none of which have been established as existing in fact in this lawsuit.

Trial Examiner Ballinger: Do you desire to say anything, Mr. Austin?

Mr. Austin: Yes. I think the question is very responsive and it brings out the difference between the methods of distribution.

(There was a discussion off the record.)

Mr. Austin: The answer, in my opinion, is wholly responsive and it brings out the differences, as seen by the witness, between the A-station business and the B-station business of the company in the Detroit field and the reasons why the witness is of the opinion that a cost study based on the territory of the entire field may not be representative of the costs in the Detroit metropolitan area.

Trial Examiner Ballinger: Read that answer, please.

5974 (The answer referred to was read by the reporter.)

Mr. Hanley: May I make a statement?

Trial Examiner Ballinger: The Examiner doesn't care to hear anything further from counsel for respondent. Is there anything from Mr. Austin?

Mr. Hanley: If you are going to overrule the objection—

Trial Examiner Ballinger: I don't care to hear anything further from counsel for respondent. I will hear from Mr. Austin if he has anything.

Mr. Austin: I think that is a graphic description based upon the personal investigation of the witness who visited these plants and which brings out the difference in nature of distribution, the main point being that there are two widely differing methods of distribution, and that is the basis for the witness' opinion that the cost of one method is not proper to be combined with the cost of another method to show costs in the territory where only one method is used.

Trial Examiner Ballinger: The motion is granted. The testimony is stricken.

(There was a discussion off the record.)

Mr. Austin: I move that we adjourn for lunch until 2:30.

Trial Examiner Ballinger: The motion is granted

5975 and now at 1 p. m. the hearing stands in recess until 2:30 p. m.

(Whereupon, at 1 p. m., a recess was taken until 2:30 p. m. this day.)

UNITED STATES COURT OF APPEALS

For the Seventh Circuit.

I, Kenneth J. Carrick, Clerk of the United States Court of Appeals for the Seventh Circuit, do hereby certify that the foregoing printed pages contain a true copy of Volume IV of the printed transcript of the record, filed in this office on July 12, 1948, in:

Cause No. 9215

Standard Oil Company,

Petitioner,

vs.

Federal Trade Commission,

Respondent,

as the same remains upon the files and records of the United States Court of Appeals for the Seventh Circuit.

In Testimony Whereof I hereunto subscribe my name and affix the seal of said United States Court of Appeals for the Seventh Circuit, at the City of Chicago, this 25th day of May, A. D. 1949.

Kenneth J. Carrick,
Clerk of the United States Court of Appeals for the Seventh Circuit.

(Seal)

No. 47—Letter Apr. 30, 1941, Red Indian Oil Co., to Ned's, confirming proposed price on Fleet Wing gasoline of discount off tank wagon price and additional advertising and hauling allowances.......... 4869

No. 48—Letter Dec. 23, 1940, from Ned's to Standard at Detroit, confirming quotation from Gulf Refining Co., on their brand name gas delivered at Ned's bulk plant 4870

No. 49-A—Letter Mar. 23, 1940, from Ned's to Standard Oil at Detroit requesting opportunity to discuss situation at earliest convenience.................. 4871

No. 49-B—Promotional letter from Langer's Auto Supply enclosing two pennies and offering saving of 2¢ a gallon 4871

No. 52-B—Statement of dealer tank wagon prices—jobber retail prices—retail wagon margins, on Standard Red Crown gasoline from 1-1-37 to Mar. 6, 1941 4872

No. 53—Chart showing total gasoline sales volume in gallons and ratio of retail and wholesale sales to total sales of each of the four Standard Oil jobbers for the years 1936 to 1940, inc. 4873

No. 54—Chart showing volume of gasoline in gallons of the four Standard Oil jobbers for the years 1936 to 1940 with number of retail outlets supplied by each 4874

No. 55-A & B—Gasoline sales in the Detroit area of wholesale licensed jobbers and distributors of branded gasoline, being a 2 page statement for the years 1936 to 1940, inc., showing the name of the jobber, when he received his wholesale distributor license, his supplier and his gallonage for each of said years 4875

No. 57-A & B—Two page statement showing the gasoline sales in gallons in the Detroit area of licensed wholesale jobbers and distributors handling non-brand gas for the years 1936 to 1940. This is substantially the same type as Ex. 55-A & B, except it covers non-brand instead of branded gas and does not show the source of supply nor the year when the distributor became a licensed distributor...... 4877

No. 58—Chart showing for the years 1936 to 1940, inc., the total sales in the Detroit area, the total Standard Oil in said area and its percentage of total sales, Standard Oil sales exclusive of jobbers and percentage, Standard Oil jobber sales and percentage, sales of licensed jobbers other than Standard Oil handling branded gas and percentage, sales of licensed jobbers handling non-branded and percentage, sales of all licensed jobbers and percentage and sales of all other companies and percentage 4879

No. 59—Table showing yearly increase or decrease in gasoline sales for the years 1937 to 1940, inc., for the State of Michigan and the Detroit area, showing total Standard Oil sales, Standard Oil jobbers, branded jobbers, non-branded jobbers, all jobbers, and all others 4881

No. 60-A to D—Four page statement, each page marked alphabetically in the 60 series, showing continuous record from June, 1936 to November, 1940, of the retail gasoline price situation in Detroit as reflected by Standard Oil Co., surveys in the dates indicated on each of premium, house brand and third grade gasolines, showing for each the prevailing retail service station price, the dealer tank wagon price, the margin, the number of service stations selling below prevailing retail price and the average amount below the prevailing retail market price.... 4883

No. 63-A, B & C—Three page list, each page alphabetically marked as an exhibit in the 63 series, showing the brand names for gasoline marketed in the Detroit area for premium, house brand and third grade by the various companies.................. 4885

No. 96-A—Modification of Ex. 31-A to exclude newspaper and billboard advertising..................... 4886

No. 96-B, C & D—A three page explanation of this modification 4887

No. 99—Supplement to distribution cost analysis, tank wagon reseller channel versus jobber gasoline sales; explaining regular costing procedure in the Detroit field for 1940. This exhibit contains 33 typed pages, explaining and giving examples of the company's regular accounting procedure and method of allocating costs between channels under the following

12 schedules giving account numbers and explanations as to each:

1. Salesmen and Sales Promotion Expense.
2. Advertising Costs.
3. Delivery and Warehouse Cost.
4. Income and Expense Incurred at Leased Retail Outlets Served by Tank Wagon.
5. Marketing Expense Items Incurred at Privately Owned Stations Not Leased But Engaged in the Distribution of Our Products.
6. Credit Information—Bad Debts and Recovery.
7. Field Office and Accounting Cost.
8. Supervision Cost Incurred in Sales Field.
9. Losses—Taxes—Insurance and Additional Salary Considerations.
10. Miscellaneous Marketing Expense Items.
11. Marketing Expense Items on Lubricating Oils.
12. General Office Marketing Costs. 4889

No. 100—Distribution cost analysis, tank wagon reseller channel versus gasoline sales, Detroit field, 1940. This exhibit contains 133 pages showing the actual allocations and figures in carrying out the work explained in Ex. 99 under each of the 12 schedules referred to therein, with numerous sub-schedules under each and explaining exactly what was done in each case 4914

No. 101—Standard Oil Company Form G. O. 189 Long, being the Sales Department Comparative Statement of Expense, Detroit field, year 1940, completely filled out and reflecting the results and processes set forth in Ex. 99 and 100 5043

Designation of Record 5285

Respondent's Designation of Record 5287

5976 Afternoon Session.

2:30 p. m.

Trial Examiner Ballinger: You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Resumed) by Mr. Austin.

Q. I asked you this morning, Mr. Warmack, the following question:

"What is the basis of your opinion, Mr. Warmack, that a separate study of costs in commission agent territory would be necessary to determine whether those costs may properly be used to determine costs in the Detroit metropolitan area?"

Now, instead of referring to the Detroit metropolitan area, perhaps I should refer to "A" station territory, because there are certain salaried station areas outside of the Detroit metropolitan area, but it is true, is it not, that the majority of the territory outside of the Detroit metropolitan area is commission agent territory?

Mr. Hanley: That is objected to, if your Honor please, until and unless the foundation is laid indicating that this witness has made an investigation which informs him as to what is commission territory and what is salaried

5977 station territory, and as to what is "A" station territory and "B" station territory.

I will say to the Court that after some years in the service of the respondent company I myself am not always sure what is an "A" station and what is a "B" station, and I think it is very essential indeed to the Court that it be distinctly understood what the witness is talking about when he refers to an "A" station and when he refers to a "B" station.

Trial Examiner Ballinger: Do you care to examine the witness any further before I rule?

Mr. Austin: It is stated further in the record, your Honor, that there are some 78 "B" stations operated by the commission agents in the Detroit field, and that practically all of the territory in the field outside of metropolitan Detroit, Ann Arbor, Pontiac and Lansing, is served by commission agents through these "B" stations.

By Mr. Austin:

Q. Now, Mr. Warmack, assume for the purpose of my question, first, that the only issue of cost justification in this case relates to costs in the metropolitan area of Detroit; secondly, that the costs which are set forth in this cost study are the costs of the entire field, including the territory served by these 78 "B" station agents. If those assumptions are not supported by the record, the record 5978 will so show that I want the witness to answer the question on those assumptions, and I now will read the question again as it appears on the record and as I quoted it a moment ago:

"What is the basis of your opinion, Mr. Warmack, that a separate study of costs in commission agent territory would be necessary to determine whether those costs may properly be used to determine costs in the Detroit metropolitan area?"

Mr. Hanley: Now, Judge, if we may go off the record a moment?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: Now, let this be on the record. The respondent is perfectly willing to accept the professional statement of counsel for the Commission as to what the record shows in relation to the statement concerning the 78 "B" stations, but counsel for the respondent objects to the question on the ground that and for the reason that it does not appear that the witness has made any study concerning such "B" stations, as defined, or as the term is used by counsel for the Commission, and is incompetent to answer the question as propounded.

Trial Examiner Ballinger: Objection overruled.

A. My opinion was based upon the fact that the company, the respondent company, employed two separate 5979 and distinct methods of operation, that is, between the "A" station on the one hand and the "B" station on the other hand, the "A" station being operated by salaried personnel in the larger cities, and the "B" stations being operated by commission agents in the rural territory of the Detroit field.

In view of the fact that these are two separate and distinct methods of operation; in view of the fact that the

nployees of the two separate classes of stations are com
ensated on entirely different bases, it is my opinion that
efore it could be said that the costs of operating the "B"
tation were the same as the costs of operating the "A"
tations, it would be necessary to make a study to deter
ine the same. By "study" I mean a cost study and anal
sis.

Mr. Hanley: The respondent moves to strike the answer
f the witness, for the reason that the witness has assumed
is own definition of an "A" station and a "B" station,
hich definitions are not supported by anything in the
ecord of testimony in the case; further, that the witness
ssumes that there would be a difference in cost if an analy-
is were made, presuming that such analysis would show
difference in cost, if any; that such an analysis has not
een made by the witness, and that the witness does not
now whether or not there is any difference in cost, and
s answer is a matter of pure conjecture and speculation.

Trial Examiner Ballinger: The motion is denied.

5980 By Mr. Austin:

Q. Now, Mr. Warmack, I would like to ask you to look at Commission's Exhibit 119, which is the respondent's Form 189 for the year 1940 in the Detroit field. You pre viously referred to the column on that form entitled "In come and Expense, leased service stations."

A. Yes, sir.

Q. Will you describe briefly the nature of these expenses which are listed in that column?

A. The expenses appearing in that column represent the cost in the column entitled "Income and Expense, leased service stations" on Form 189, which is Commission's Exhibit 119.

The expenses appearing in that column represent sundry expenses incident to the landlord operation of the company in connection with maintaining service stations leased, and rent paid for the leased service stations which are leased from others and then sub-leased to lessees by the company; taxes on sub-stations, depreciation on properties at the sub-stations and the like.

Is that sufficient, or would you like some detail of it?

Q. Do I understand, Mr. Warmack, that those are expenses incurred by the respondent in connection with the operation of service station properties which are either owned or leased by the company and sub-leased to the service station outright?

5981 A. That is correct.

Q. And are there certain red figures in that column?

A. Yes, sir.

Q. What are those?

A. They represent rent, revenues received from lessees.

Q. At the bottom of the form, the line entitled "Grand Total, all expense," what is the figure given there?

A. $48,506.44.

Q. That is the figure at the bottom of the leased service station column?

A. Yes, sir.

Q. Does that figure represent—well, is that a black figure or a red figure?

A. A black figure.

Q. And what does that indicate?

A. That represents the excess of the expense of operating the service stations over the revenues received from the leasing of the station.

Mr. Hanley: Judge, may the respondent have a continuing objection to the witness testifying to the contents of exhibits, on the ground that the exhibits speak for themselves? I don't care to make a specific objection to these various questions, if I may have that as a continuing one.

Trial Examiner Ballinger: Objection is reserved to respondent.

5982 By Mr. Austin:

Q. Now, Mr. Warmack, you will notice below that expense figure of $48,000 there is another figure of 54,255,291, which represents the "Total Units" of the company's petroleum products marketed through the leased service stations in 1940, and on the last line of the form there is a figure .09 cents, which is arrived at by dividing the total units in the expense items. Do you follow me?

A. Yes, sir.

Mr. Hanley: Just a moment—have you finished?

Mr. Austin: No. I want to explain the basis for the question.

By Mr. Austin:

Q. Now, turn to Respondent's Exhibit 101. Is there any column on Respondent's Exhibit 101, entitled "Income and Expense, leased service stations"?

Mr. Hanley: Just a minute—had you finished your question?

Trial Examiner Ballinger: It is a question within a question.

Mr. Austin: I don't know how to answer that.

Mr. Hanley: I am just trying to make the record here, Judge.

Trial Examiner Ballinger: This is off the record.

(Discussion off the record.)

5983 Trial Examiner Ballinger: Proceed with your question.

Mr. Hanley: The question is objected to because the exhibit is the best evidence of what it shows.

Trial Examiner Ballinger: Objection overruled.

By Mr. Austin:

Q. You may answer.

A. There is not.

Q. Can you state, Mr. Warmack, whether the expenses entered in the leased service station column on Respondent's Form 189 for 1940 are included anywhere on Respondent's Exhibit 101?

A. Yes, sir. They are.

Q. Where are they included?

A. Part of them are included in the column entitled "Tank wagon reseller" on Respondent's Exhibit 101, and part of them are in the column entitled "Other method" on Respondent's Exhibit 101.

Q. Can you state what proportion of those leased service station expenses are included in the tank wagon reseller column on Respondent's Exhibit 101, and what proportion are entered in the "Other methods" channel?

A. Yes, sir.

Q. Please do so.

A. In the tank wagon reseller column there is 5984 $47,724.53, and in the "Other methods" column $781.91.

Mr. Hanley: Now just a minute, if your Honor please. From what exhibit is the witness testifying?

The Witness: This is from page 47, Judge, of Respondent's Exhibit No. 100, Judge Hanley.

By Mr. Austin:

Q. Mr. Warmack, now turn to the bottom of Respondent's Exhibit 101, the line entitled "Total units."

A. Yes.

Mr. Hanley: Total what?

Mr. Austin: Total units.

By Mr. Austin:

Q. You will note that the figure entered in that column of 69,301,586. You will further note that that gallonage figure is divided by the total expense in that same column. I am referring now to the tank wagon reseller column.

A. Yes, sir.

Q. To obtain the per unit cost of 1.67 cents.

A. Yes, sir.

Q. Now if you will refer back to Commission's Exhibit 119, I have already called your attention to the gallonage figure of 54,000,000-odd gallons at the foot of that column.

A. Yes.

Q. As against 69,000,000 gallons in the tank wagon
5985 reseller column on Commission's Exhibit 101.

A. Yes, sir.

Q. Will you tell me first whether the leased service station expense entered in the tank wagon reseller column on Respondent's Exhibit 101; that is, $47,000 is, as you have just stated, is that expense charged in this cost study to the entire tank wagon gallonage of 69,000,000 gallons?

A. It has been so—

Mr. Hanley: (Interposing.) Just a minute. If your Honor please, may I ask a question foundationally?

Trial Examiner Ballinger: You may.

Mr. Hanley: Do you understand it to be the fact, Mr. Warmack, that Mr. Boatwright has testified that the leased station account or landlord and tenant account, or rental account, or whatever you may choose to term it, has been closed into the tank wagon reseller account, on the regular accounting form, Form 189 of the respondent company?

The Witness: Yes, sir. I understand that.

Mr. Hanley: And if you find that to be the fact so far as you have investigated the accounts of the company, or I will ask you have you found that to be the fact so far as you have investigated the account for the company—

Mr. Austin: (Interposing.) I would like to know what period of time you are referring to, Judge Hanley.

Mr. Hanley: I refer to 1940, that is the period
5986 which these expenses appertain to, so I will refer to 1940.

Mr. Austin: Well the form for 1940 has that separated from the leased service station column. Do you mean it does not exist in 1941?

Mr. Hanley: I do not mean that the same figure would exist in 1941, but perhaps I should ask the witness.

The Witness: I will be glad to explain what I have in mind.

Mr. Hanley: What I am trying to learn from you, Mr. Warmack, is: If there is real estate profit and loss, or a real estate profit, or a real estate loss, perhaps we should say, is that reflected in the cost of marketing as cost of marketing is set up in the reseller channel of Respondent's Form 189, whatever year may be involved?

The Witness: It is set up as a separate column in the regular form 189.

In the preparation of Respondent's Exhibit 101 that particular item was omitted in the form 101, or Respondent's Exhibit 101, and separated and placed into—part of it going—placed into the "tank wagon reseller" column and the "other methods" column; does that answer your question?

Mr. Hanley: I am not sure that it does.

Will you please tell the court this, if it is your understanding that it is a fact that any real estate profit or loss on this, whatever it may have been, in the year
5987 1940 was closed into and given consideration in Respondent's Exhibit 101 on the reseller channel, the selling cost.

The Witness: That is correct with this one exception of $781.91, and that item went into "other methods", your Honor.

Mr. Hanley: All right. All right. I will give you that $781.91.

Mr. Austin: That is the matter to which I have been alluding.

Mr. Hanley: I see.

Mr. Austin: Now, Judge, that part that went into the tank wagon reseller column on Exhibit 101 is just the point that I am talking about. I think there is a question pending to which there has been no answer. I will ask that that question now be read.

Trial Examiner Ballinger: Read the question.

(The reporter read the following question:)

"Will you tell me first whether the leased service station expense entered in the tank wagon reseller column on Respondent's Exhibit 101; that is, $47,000 is, as you have just stated, is that expense charged in this cost study to the entire tank wagon gallonage of 69,000,000 gallons?"

The Witness: I thought I started an answer to that.

Trial Examiner Ballinger: Read the answer as far 5988 as has been stated.

(The reporter read the answer as follows: "It has been so—")

The Witness: It has been so charged.

By Mr. Austin:

Q. And in the company's regular accounting procedure on Form 189 to what gallonage is the leased service station expense charged?

A. As shown on Respondent's Exhibit 119, which is the company's form 189, the total gallonage of 54,255,291 gallons in the column marked "Income and Expense, leased service stations."

Q. What is the difference—I do not mean in figures now, but in description—what is the difference between the 54,000,000-gallon figure in the leased service station column on Form 189 for 1940, and the 69,000,000 figure in the tank wagon reseller on Respondent's Exhibit 101?

Mr. Hanley: That is objected to as an arithmetical calculation.

Mr. Austin: I said I did not mean in calculations, I want him to tell us what the difference is; what it results from, Judge Hanley.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Well—

5989 By Mr. Austin:

Q. Here is the point, why is the gallonage figure for the leased service station on Form 189 a smaller figure than the figure for the tank wagon reseller channel in Respondent's Exhibit 101?

Mr. Hanley: That calls for a conclusion of the witness on a matter to which he is not entitled to testify.

The Witness: Why is it a smaller figure?

Mr. Hanley: One moment. I would like to have a ruling on my objection.

Trial Examiner Ballinger: One moment.

Mr. Hanley: These are forms prepared by the respondent and they are submitted in evidence and they speak for themselves, they are accounting forms. Now, Mr. Examiner, as to why they do not add up is for the Court and not for the witness—if they do not.

Trial Examiner Ballinger: That is your answer to the question?

The Witness: I have not answered the question as yet, your Honor. I was just going to answer it as to why it was a smaller figure.

Trial Examiner Ballinger: There have been two questions asked here. The first one has not been answered. There is now a second question. Is it desired to have the witness answer the first question or the second question, or to consider them together? 5990

Mr. Austin: The second query that I made was really an elaboration or explanation of my first question.

Trial Examiner Ballinger: The objection will be overruled. You may answer.

The Witness: This is the answer to the whole thing; in the company's Form 189 for the year 1940 for the Detroit field, the item of 54,255,291 gallons appearing in the income and leased—income and expense, leased service station column—

Trial Examiner Ballinger: (Interposing.) On Form what?

The Witness: On Form 189—is a memorandum figure and is not used in the addition on the gallonage when you arrive at the total tank wagon gallonage. And of course inasmuch as it is a memorandum figure on that Form 189 naturally it is not shown on Respondent's Exhibit 101.

By Mr. Austin:

Q. That does not answer my question, Mr. Warmack, it seems to me.

Mr. Hanley: Well, I have a motion I would like to make but I would like to ask one question; perhaps in that way I may be able to shorten this, Judge, I am sure, if you will give me permission to ask one question.

Trial Examiner Ballinger: You may proceed to do so.

5991 Mr. Hanley: Mr. Warmack, whatever method is employed, whatever the method used, is it not a fact, as developed by your investigation of the records of the respondent company that the profit and loss, whichever it may have been, in leased service stations was closed into marketing expense through the reseller channel for the year 1940 and every other year, wasn't that the usual, general, consistent practice?

The Witness: Well—

Mr. Hanley: (Interposing.) Do you know?

The Witness: Well, Judge, in the preparation of Form 189 you do not put it there—you do not physically put it over in the reseller channel.

Mr. Hanley: I am not asking you that, I am not asking that you tell me about anything in connection with technical forms. I am asking you about accounting principles. Is the profit and loss resulting from the company's ownership of service stations and leased service stations closed into marketing expense in the year 1940 and every other year?

Trial Examiner Ballinger: On the records of the company?

Mr. Hanley: On the records of the company.

The Witness: It is.

Mr. Hanley: Does not that settle it?

5992 Mr. Austin: I do not know, I move to strike both the question and the answer as improperly imposed; and having no relation to anything which I have asked the witness.

Trial Examiner Ballinger: The motion is denied. You may proceed.

By Mr. Austin:

Q. Mr. Warmack, the gallonage figure of 69,301,000 gallons at the foot of the tank wagon reseller channels on Respondent's Exhibit 101 is the total tank wagon gallonage for the Detroit field for 1940; that is my understanding.

A. That is my understanding.

Q. The figure of 54,255,000 at the foot of the leased service station column on Commission's Exhibit 119 is the petroleum products gallonage passing through or sold to leased service stations?

A. That is my understanding, sir.

Q. This 54,000,000 gallon figure does not include the gallonage of the non-lessee service stations?

A. That is my understanding, sir.

Q. But I think the record shows further therefore that the difference between the 69,000,000 gallon figure and the 54,000,000 figure is the non-lessee service station gallonage?

~~A. (There was no answer.)~~

Trial Examiner Ballinger: What is your answer?

5993 The Witness: I did not say anything, sir.

Mr. Austin: I did not ask him anything as yet.

Mr. Hanley: Counsel is testifying. Counsel is doing the testifying, the witness does not need to answer.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Now, Mr. Warmack, I want to know whether in your opinion for the purposes of this cost study the expense or income of leased service station operation, in this case the expense, should be charged against the total tank wagon gallonage of 69,000,000 as is shown on Respondent's Exhibit 101, or should it be charged against only 54,000,000 gallons of leased service station gallonage, as shown on Respondent's Exhibit or rather Commission's Exhibit 119?

Mr. Hanley: Just a minute.

I am going to face this thing right now.

It has got to be done.

The question is objected to by the respondent for the reason that, apparently, this question and numerous previous questions, as disclosed by the record, indicate that counsel for the government is concerned about the distinction between leased service stations and owned service stations. The record discloses that both groups of stations were treated as one group and the marketing cost incident to serving the same was closed into the reseller channel on respondent's accounting form 189. 5994

The issue in this case is that of the right of respondent to make a differential in price between a group buying on the basis of tank wagon deliveries including both operators running a station owned by the respondent and stations owned by the operator himself, as distinguished from a group of buyers who receive tank car or truck transport deliveries into their own storage.

The question of a difference in cost, if there be any, incident to the operations of the respondent company in respect of serving retail operators who run leased stations and retail operators who own their own stations is entirely and utterly immaterial to any issue made in this case.

If there be any question of law violation by reason of the fact that respondent has not kept its books in accordance with the views of accountants for the Commission, it becomes the incumbent duty of the Commission to specifically charge such dereliction. No such charge has been made in this case, and the only charge to which the respondent is answerable is that of a claimed improper differential as between a so-called jobber group or tank car buyer group on the one hand, as assumed from a tank wagon reseller group on the other hand.

And the effort of the government to break down and differentiate individually between the members of either
5995 of said two groups, is outside of the pleadings, is not within the issues of this case, and the respondent is not required and is not obligated to respond to any such attack, and any such attack is immaterial and irrelevant.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: If there be anything wrong in the accounting practices of the respondent—which is not conceded by the respondent—in respect of keeping the accounts of leased service stations and owned service stations as one group, rather than as two, two distinguishable groups, it does not appear from any testimony in this record that such error in sound accounting, if any there be, is not a completely compensating error, and it does not appear from anything in this record that there would be any influence at all upon the figures reflected in the exhibits offered in this case by the respondent if there had been a different method of bookkeeping used by the respondent, and if the respondent had kept books separately in respect of the leased service stations and owned service stations.

Trial Examiner Ballinger: Objection is overruled.

I believe there is a question pending. The reporter will now read it.

5996 (The reporter read the pending question as follows:

"Now, Mr. Warmack, I want to know whether in your opinion for the purposes of this cost study the expense or income of leased service station operation, in this case the expense, should be charged against the total tank wagon gallonage of 69,000,000 as is shown on Respondent's Exhibit 101, or should it be charged against only 54,000,000 gallons of leased service station gallonage, as shown on Respondent's Exhibit or rather Commission's Exhibit 119."

The Witness: The leased service station expense, that is, this $48,000 together with all other costs incident to the servicing of commission agent business—

By Mr. Austin:

Q. (interposing) Do you mean "commission agents?"

A. Not commission agents—of leased service stations customers, should be assigned to the gallonage of that class of business and from that there should be deducted the rent revenue received in order to come to a cost figure for that particular gallonage, and that answer is based upon this, if this landlord expense is to be used in the cost study or in establishing the cost differential; that is, it is my opinion that that is what should be done.

Q. You say if it should be used in establishing the
5997 cost differential?

A. Yes, sir.

Q. And I notice that Judge Hanley referred to it as a real estate profit and loss a few minutes ago.

A. Yes.

Q. Is there any question in your mind, or perhaps I should ask you what is your opinion as to whether or not this expense or profit arising from the leased service station operation as an expense or profit is an expense or profit properly chargeable to the sale of petroleum products by the company?

A. The only way I can answer that, Mr. Austin, is to say that there is some question in my mind as to whether this landlord expense should be used.

Mr. Hanley: In view of the answer of the witness indicating that he is in doubt as to what should be done with the real estate expense or profit or loss items, or whatever it may be termed, the respondent moves that the answer of the witness be stricken.

Mr. Austin: May I say a word?

Trial Examiner Ballinger: You may.

Mr. Austin: Of course, the witness says that his answer is in effect that, testifying as an accounting, or as an expert, I assume that he says that there is some question, from an accounting standpoint as to whether this class of
5998 expense is properly chargeable to the costs of sale.

Now, it may not be helpful to the Commission's case, but nevertheless it expresses the doubtful nature of this type of expense as a cost of sale. I see no reason why this should not be allowed to remain in the record. I do not see that it is harmful. Of course, the witness has not expressed himself positively and has expressed no doubt as to how it should be handled if it is used, on the other hand, and simply says that he does not know whether it should be used at all. I wish to make that clear. That is the substance of his testimony.

Mr. Hanley: Of course, we have repeatedly requested during this litigation that your Honor entertain evidence that your Honor may have had some doubt about as to its weight and value and propriety on exactly the same theory that counsel now offers, namely, that if it can do no good it can do no harm, and that if it is not any good it can be kicked out at the proper time. Your Honor has consistently ruled against the respondent on every request of that kind that the respondent has made.

I say to your Honor now that this witness says that he feels that this is a doubtful thing and he does not know what should be done with it.

Trial Examiner Ballinger: The testimony is to the effect that he is in doubt as to whether or not it should
5999 or should not be used in computing the costs.

Mr. Austin: The witness is testifying as an expert. I asked his opinion. This is his opinion. This is entirely different from asking a witness a question of fact on which he may say that he is in doubt. I do not think it is the same thing at all.

Trial Examiner Ballinger: The motion to strike is denied.

The hearing will stand in recess for five minutes.

(A short recess was taken.)

6000 Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Mr. Warmack, your testimony immediately preceding has related to expenses of the respondent in the sum of some 47,000 odd dollars which were property expenses incurred in the operation of leased service stations, and which appear now in the tank wagon reseller column on Respondent's Exhibit 101.

Are all of those expenses entered in accounts which have the letters A, B or C, after the numbers in the left-hand column on Exhibit 101?

A. Yes, sir.

Q. Are there any other expenses entered in the tank-wagon reseller channel on Respondent's Exhibit 101 which in your opinion are property expenses incurred in connection with the operation of leased service stations and which should be treated in the same manner as the leased service station expenses just referred to?

A. Yes, sir, there are some other expenses.

Q. You say there are some other expenses?

A. Yes, sir.

Q. Will you state what those expenses are and in what accounts they are entered?

A. There are expenses in the 000 account which I think in part are applicable to leased service stations. That 6001 would be a part of the salary and expense of the superintendent of construction and the superintendent of maintenance. Of course, a part of the clerical assistants of these people, that is, these two superintendents, which appear in the 001 account are properly allocable to leased service stations. In Account 215, entitled "Expense, Salaries, Others," that is, the real estate and tax department, a good part of that goes over there according—

Q. What do you mean "over there"?

A. It goes over into the leased service station expense?

Q. Do you mean that it is a leased service station expense?

A. I mean it is there and it is not so shown on the company's regular form 189 and Mr. Boatwright's testimony was to the effect that these men were concerned with real estate and tax problems—at least to some extent, maybe largely, with the leased service station properties of the company.

Q. By "these men", do you mean the men in the real estate and tax department?

A. Yes, whose salaries are shown in Account 215. Now, there is a cost in Account 506 entitled "Losses by dismantling, abnormal, other than E. L. A." I believe that that is an expense that is properly assignable to leased service stations.

Trial Examiner Ballinger: All of it?

6002 The Witness: At least for the most part.

Account 514, the account entitled, "Losses by Dismantling—out of pocket expense—other than E. L. A.," I think that is also an expense which is applicable at least for the most part to the leased service stations of the company. That is probably the most of them, Mr. Austin. What I mean by the most of them is that I believe that those expenses are incident to the landlord activities, that is, of operating or maintaining and leasing this property.

By Mr. Austin:

Q. Are those expenses to which you have referred in accounts 000, 001, 215, 506 and 514 expenses of the same nature in your opinion as the expenses entered in the leased service station column on respondent's regular accounting form 189?

A. The same or very similar, sir.

Q. What do you mean by very similar?

A. Taxes couldn't be identical to salaries.

Q. We haven't discussed taxes, have we?

A. No. We have an item on here of taxes, and I just made that as an illustration when you asked me what I meant by "similar."

Q. Oh, I see.

A. Taxes wouldn't be identical with salaries.

Q. Are those expenses which you have referred to in the five accounts just enumerated expenses which in
6003 your opinion are incurred in connection with the real estate operation of the leased service station properties by the respondent?

A. Yes, sir, I believe that Mr. Boatwright's testimony will bear out that fact.

Q. And let me ask you further whether in your opinion, Mr. Warmack that portion of the five accounts just enumerated, which you have stated to be a leased service-station expense and which is entered in the tank-wagon reseller channel on Respondent's Exhibit 101 is properly chargeable for the purposes of this cost study to the entire 69,301,000 gallons of gasoline in the tank-wagon reseller channel?

A. In my opinion they are not properly applicable to all of that gallonage, no, sir.

Q. To what part of that gallonage, if any, are they applicable?

A. They are applicable only to that part of the gasoline which is sold to leased service stations.

Q. And is any of those expenses properly chargeable in your opinion to the non-leasee service station gallonage?

A. That portion which is properly assignable to the leased service station is not properly assignable to the non-lessee service station business.

Mr. Austin: I would like to have this paper marked for identification, please.

Trial Examiner Ballinger: The reporter will mark
6004 the paper Commission's Exhibit 130 for identification.

(The document referred to was marked Commission's Exhibit 130 for identification.)

By Mr. Austin:

Q. Mr. Warmack, can you identify the contents of Commission's Exhibit 130 for identification? First let me ask you whether you prepared that exhibit?

A. Yes, sir, I had this prepared.

Q. And will you state what it is?

A. It represents or it is a statement showing analysis of charges to marketing expense account of losses by dismantling (other than E. L. A.) for the Detroit field for the year 1940.

Q. I wish you would state with some particularity just how you obtained those figures and what they represent, where they came from?

A. These figures were secured in my field investigation earlier this year in the company's offices, and show the respondent company's designated number of its filling stations in the first column, the location of the filling station in the second column, the original cost of the capital investment which was dismantled in the third column, the amount of depreciation which had been charged off by the company previous to the date of dismantling in the fourth column, the net difference
6005 between the original capital investment and the
amount of depreciation charged off is shown in the last column, which is marked "Net Loss to Marketing Expense," the column aggregating $24,156.57, which is the same figure as shown in the column entitled "Total Petroleum Products" on Respondent's Form 189 in the Detroit field for the year 1940 opposite the account marked Account 506, entitled "Losses by Dismantling—Abnormal—other than E. L. A.".

Trial Examiner Ballinger: Commission's Exhibit 130 for identification covers the year 1940, does it?

The Witness: Yes, sir.

(There was a discussion off the record.)

By Mr. Austin:

Q. What is the nature of this expense which is described on the forms as "Losses by Dismantling—Abnormal—Other than E. L. A.," Mr. Warmack?

A. Various costs of properties at these service stations which were dismantled and replaced in the year 1940, or maybe not replaced.

Q. How was the expense incurred? Tell us what happens? What gives rise to it? What does the company do when they incur that type of expense, if you know and have ascertained that from the result of your investigation?

A. I think that is properly shown at the bottom of the exhibit which reads: "This loss represents loss sus-
6006 tained on Capital Assets at service stations which were entirely dismantled and rebuilt into combination service and greasing stations during the year 1940."

Q. Where do you obtain that information?

A. I obtained that information from the company's office in my field study.

Trial Examiner Ballinger: You mean from the company's books and records?

The Witness: Or from people that I contacted in the office, your Honor. I don't know that I saw this statement on any book. Some of them told me that.

By Mr. Austin:

Q. Did you discuss that expense with some of the company's employees?

A. Sure.

Q. Do you know with whom you discussed it?

A. I can probably tell from my records on this Account 506, Mr. Austin:

Q. Just—

A. I don't have it in my mind. I discussed these things with many, many people—or several people. Mr. Houghton was the principal contact man—Mr. Bath in the Detroit office, Mr. Houghton also in the Chicago office.

Q. Where did the figures in the column entitled "Original Costs of Capital Investment" come from?

6007 A. They came from the records of the company.

Q. Where?

A. Detroit.

Q. And where did the figures come from in the next column which is entitled "Amount of Depreciation Charged Off"?

A. From the company's regards in Detroit.

Q. And the last column entitled "Net Loss to Marketing Expense," how are those figures arrived at?

A. By deducting the amount of depreciation charged off up to the time of dismantling from the original cost of the capital investment in each instance.

Q. Is the Total Net Loss to Marketing Expense shown on Exhibit 130 for identification in the sum of $24,156.57 shown on Respondent's Exhibit 101?

A. Yes, sir.

Q. Where does that appear on Respondent's Exhibit 101?

A. In the column entitled "Total Petroleum Products," opposite Account No. 506 entitled "Losses by Dismantling—Abnormal—Other than E. L. A."

Mr. Austin: I offer in evidence Commission's Exhibit 130 for identification.

Mr. Hanley: If your Honor please, the exhibit is objected to because it is now apparent that it is immaterial. The result of the exhibit, as testified to by the witness, is shown on Respondent's Exhibit 101. It now 6008 appears from the testimony of the witness that Commission's Exhibit for Identification 130 is merely a breakdown of the items which make up a total which go into a figure on Respondent's Exhibit 101, and such breakdown has no probative value of any kind or character so far as is disclosed by any testimony so far in the record.

(There was a discussion off the record.)

Mr. Austin: The witness has testified that in his opinion the expense going into Account 506 is wholly or largely a leased service station expense. The purpose of this exhibit is to show that the expense in that account is entirely a leased service station expense and therefore should have been so treated, instead of being spread between bulk plant channels on a different basis on Respondent's Exhibit 101.

The importance of the exhibit is not in the figures as much as it is in the description of the expense itself and the showing that these expenses were all incurred at service stations, the numbers and locations of which are listed on the exhibit.

Mr. Hanley: To that objection made by the respondent, the respondent now adds the further objection after the statement of counsel for the Commission that Commission's proffered Exhibit for Identification No. 130 merely encumbers the record, that it discloses 6009 nothing except a detailed breakdown of Item 506 appearing on Respondent's Exhibit 101, and the statement of counsel for the Government simply discloses that he is attacking the method of accounting, and Exhibit 130 adds nothing by way of probative value to the factual matter already in the record.

The witness does not indicate and the Government does not undertake to prove the influence in figures and dollars and cents that any different allocation, if any different allocation is recommended by the Government, would have on the differential established in Respondent's Exhibits 101, 99 and 100.

Trial Examiner Ballinger: Objection is overruled and Commission's Exhibit 130 is admitted in evidence.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 130 was received in evidence.)

By Mr. Austin:

Q. Now, Mr. Warmack, you referred a moment ago to Account No. 514 as also containing expense incurred by the company in connection with its real estate operation of leased service stations?

A. Yes, sir.

Q. What relation has the expense in Account 514 to the expense in Account 506, if any?

6010 A. The record shows that those two accounts are very closely related to each other. They are both incident to the dismantling of these properties that we have described.

Q. Is the expense in Account 514, the cash expenditure of the company in connection with the dismantling operations, listed on Commission's Exhibit 130?

A. That is my understanding, Mr. Austin.

Q. In other words, is it a fact that the expense listed on Commission's Exhibit 130 and entered in Account 506 is a write-off of depreciation, whereas the expense in Account 514 is a cash expense, cash outlay?

A. The latter is correct. I wouldn't say the account in 506 is a writeoff of depreciation.

Q. You describe it.

A. It is a writeoff of the excess of the capital investment of the properties dismantled over the depreciation that had previously been taken.

Q. Yes, thank you for the correction.

And, in your opinion, should the expense entered in Account 514 be or be not handled in the same way as the expense entered in Account 506?

A. In my opinion it should.

Q. And should that expense in both accounts 506 and 514 in tank-wagon reseller channel on Respondent's Exhibit 101 be treated in the same manner as you
6011 have stated that leased service station expenses be treated?

A. Yes, sir, it is my understanding that they are leased service station expenses, or expense incident to leased service stations.

There is one other point that I might add to that. This very class of expense, if the company so desired, might be capitalized into the new service stations; otherwise—

Q. Has that been done?

A. No, sir. Otherwise it would move over to the leased service station expense, in my opinion.

Q. If such an expense were capitalized, would it be treated as a cost of sale?

A. No, sir, but the depreciation of the property subsequent to the time of its completion would be a marketing expense.

(There was a discussion off the record.)

Mr. Austin: I move, your Honor, that we adjourn until 9:30 a. m.

Trial Examiner Ballinger: The motion is granted, and now at 5 p. m. the hearing stands adjourned, to be reconvened at 9:30 a. m., July 3, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

(Whereupon at 5 p. m., July 2, 1942, the hearing in the above-entitled matter was adjourned.)

6012

Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Friday, July 3, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

6013

PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening pursuant to notice of Docket 4389 case entitled "In the Matter of Standard Oil Company" at 9:30 a. m., Eastern Standard Time, July 3, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at the same place July 2, 1942.

The reporter will note counsel for the Commission and respondent present.

You may proceed, Mr. Austin.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Austin.

Q. The first account on Respondent's Exhibit 101 is the Account 900 entitled "Salaries—Supervision."

The total amount of costs entered in that account is $51,360.21, and the testimony shows that more than one half of that expense is made up of the salaries of the field manager and the two assistant field managers in the Detroit field.

Mr. Warmack, will you state how the salaries of the

field manager and the two assistant field managers
6014 are allocated between the various channels on Respondent's Exhibit 101? Before you answer that question let me ask you whether you went into this subject during your stay in Detroit?

A. Yes, sir.

Q. In January and February?

A. Yes, sir, I did.

Trial Examiner Ballinger: By "going into it" do you mean that you made an investigation?

The Witness: Yes, sir.

By Mr. Austin:

Q. Did you prepare an outline or description of the methods of allocation used, of these salaries, in collaboration with Mr. Houghton, or did you discuss the matter with him and prepare the outline?

A. I did.

Q. And have you a copy of the outline which was prepared in Detroit?

A. I do.

Q. Was the outline or description approved by Mr. Houghton?

A. It was.

Q. I suggest, then, that your answer to my question, to my previous question as to the method of allocating these salaries, that your answer from your notes or read your notes which you say Mr. Houghton approved.

6015 Trial Examiner Ballinger: If the paper was approved by Mr. Houghton it may be either introduced as an exhibit or the witness may read it into the record.

Mr. Hanley: Of course, your Honor, we object to any offer of the notes which the witness says Mr. Houghton approved, as hearsay as to the respondent.

There is no objection, of course, to the witness using any notes that he may have to make any answer that he may want to make.

Trial Examiner Ballinger: Mr. Houghton was the representative of the respondent assigned to assist Mr. Warmack in his investigation—

Mr. Hanley: (Interposing.) Well—

Trial Examiner Ballinger: —and if Mr. Houghton approved this memoranda it would seem to be proper.

Mr. Hanley: If your Honor please, if it is Mr. Houghton's memoranda I have no objection, but if it is Mr. Warmack's memoranda I do.

Trial Examiner Ballinger: If this is Mr. Warmack's memorandum and if that memorandum was approved by Mr. Houghton, it is of equal dignity as though it had been made by Mr. Houghton?

Mr. Hanley: I agree, Judge. May I ask the witness a question?

Trial Examiner Ballinger: You may.

6016 Mr. Hanley: Did Mr. Houghton approve what you have on these typewritten sheets?

The Witness: He did.

Mr. Hanley: Will you just tell me when and where and how, Mr. Warmack?

The Witness: This document was prepared, Judge Hanley, in the Detroit office during my examination of the office records there in the month of February, 1941, and it was prepared by me, read by Mr. Houghton, and approved by him as being correct.

Mr. Hanley: Just how? Just tell us how it was approved by Mr. Houghton.

The Witness: He took the document and read it, and stated to me that the document as prepared stated the true facts:

Mr. Hanley: In view of the statement of the witness, Judge, I just have no objection.

Mr. Austin: I have not offered anything.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

The Witness: I would like to call attention to this with respect to the document that it encompasses both the methods employed in the respondent company's regular
accounting practice, and also methods employed in
6017 the segregation of costs in the late cost survey, and
the first paragraph having to do wholly with the regular accounting procedure of the company; now, is it desired to have it read into the record with respect to both?

Mr. Austin: I think we are all getting away from the point here which was involved in the question. I simply brought out that he had notes that he might use. I have not asked him to read any document.

Trial Examiner Ballinger: Very well. Point that out to the witness.

By Mr. Austin:

Q. Mr. Warmack, I think you are getting a little away from the point here that was included in my question to you. As stated before, I simply brought out that you had notes that you might use but I have not asked you to read any document into the record. I want you to use those notes to answer my question, which the reporter may re-read.

A. I can answer the question.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Mr. Warmack, the method of allocation used in the first three expense channels of Respondent's Exhibit 101 is the same as that used by respondent in its regular
6018 accounting procedure, is it not?

A. Yes, sir.

Q. Then, if your answer to my question involves a statement of the regular accounting procedure of respondent, in your opinion is that necessary to describe the allocation between channels on Respondent's Exhibit 101?

Mr. Hanley: Just a moment. May we be off the record?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. In other words, do you have to describe the regular accounting procedure in order to describe the allocation procedure on Exhibit 101?

A. Yes, sir. I do.

Q. Well now, can you go ahead and describe how the managers and assistant managers' expenses are allocated between channels on Respondent's Exhibit 101?

A. Yes, sir.

Q. Mentioning the regular accounting procedure if you think it is relevant.

A. Yes, sir.

Trial Examiner Ballinger: Are you confining your answer to the memorandum which you prepared and
6019 had approved by Mr. Houghton?

The Witness: Yes, sir.

Trial Examiner Ballinger: Proceed.

The Witness: Reading:

Standard Oil Company of Indiana, Docket 4389.

Allocation of Manager's compensation and expenses in the Detroit Field.

In the regular accounting procedure of the company, the compensation paid to the manager is included in Account 000, together with the compensation of other supervisors in the field, and the total amount is then proportioned between the tank wagon reseller channel, tank wagon consumer channel, and other methods channel, on company's Account Form 189 at the end of each month on the basis of tank wagon gallonage sold in the respective channels.

An effort was made to segregate that portion of the manager's cost which was applicable to the direct shipment business for the year 1940. In this connection, the company's accountants made a review of the manager's files and expense book for the year 1940, and, as a result it was their findings that 1.355 per cent of the manager's entire working time was devoted to direct shipment busi-
6020 ness, all of which was shown as applicable to sales
of naphtha, gasoline and refined oil to jobbers. The amount arrived at by the use of this percentage was regarded as direct costs or direct time of the manager applicable to said business.

Certain indirect time of the manager in the Detroit field was also regarded by the company as applicable to the direct shipment business, and the costs of this indirect time so applicable were arrived at as follows:

The total number of working hours for all of the employees in the division was determined by multiplying the number of company employees by 2,048 working hours in a year. In addition to this, the number of hours for all of the employees in the division devoted to direct shipment business was determined by time studies and analyses.

This direct shipment time was then expressed as a portion of the total working time according to the three direct shipment channels. By applying this percentage to the residual salary remaining after deducting that portion of the manager's compensation applicable to direct shipment business as explained above, the supervision cost was obtained. The total of these two costs
made up the expense of the manager's salaries appli-
6021 cable to direct shipment business by channel.

After deducting the total direct and indirect costs -that portion of manager's compensation which had been pplied to direct shipment business—the residual amount all of the compensation remained in the regular tank agon reseller channel, tank wagon consumer channel nd other methods channel in the manner in which it had een first applied, that is on a tank wagon gallonage basis. he amounts allocated to the direct shipment business in he company's recent cost survey, were calculated by onths for the reason that the deductions were made from he various tank wagon channels on a gallonage basis by onths.

y Mr. Austin:

Q. I note from your answer, Mr. Warmack, that you escribed only the method of allocation of the field manaer's salary. My original question was devoted both to the llocation of the salaries of the manager and of the two eld managers, so that in order to clarify that point, Mr. Varmack, was there some difference in the way that the alaries of the assistant field managers were allocated?

A. Yes, sir. There was some difference, but it was long the very lines as just indicated.

Q. Well, I will come to that, but your answer was just he record of the salary of the field manager?

A. That is right. Mr. Raupagh.

022 By Mr. Austin:

Q. Will you describe the method of allocation used or the salaries of the two assistant field managers between he expense channels on Respondent's Exhibit 101?

A. Yes, sir. Each of these managers supervises a sepaate group of employees in the Detroit field. In each nstance the allocations of the salaries and expenses of hese two assistant field managers were made in a manner imilar to that of the field manager. In this connection, owever, it will be noted that for the most part the respective salaries and expenses of each assistant field manger applicable to direct shipment business was allocated n the company's recent cost survey on the basis of the ime so spent by the employees immediately under their espective supervision, together with the time of all of the mployees in the Detroit field, that is, the time of emloyees under the immediate supervision of one assistant sales manager, together with the time of all employees in the field (except those employees under the immediate supervision of the other sales manager) devoted to direct shipment business was used as a basis of allocation.

The salaries and expenses of the assistant sales managers as well as the field managers just described were originally allocated to channels in the company's regular accounting procedure on the basis of gallonage, exclusive of direct shipment gallonage.

6023 Mr. Hanley: May I ask one question, Judge, to tie that up further?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Mr. Warmack, the last answer which you have given, as I understand it, is a continuation of your reading of what you say that you and Mr. Houghton agreed to to be the fact in Detroit?

A. Judge Hanley, the last answer was prepared by me. It was prepared, of course, from notes made in Detroit, but I did not prepare this answer in Detroit. I only prepared notes in Detroit. We just did not have time to prepare an answer so that Mr. Houghton could see it after it had been prepared.

Q. What I am trying to learn, Mr. Warmack, is whether or not Mr. Houghton ever approved this?

A. No; sir.

Q. You said he did approve certain things that you have testified to. Now, did he approve the last answer which you have given?

A. He did not ever see the last answer as given.

By Mr. Austin:

Q. In your opinion, are the methods of allocation which you have described as being applied to the salaries of the field manager and assistant field managers for the purpose of distributing their expense between channels
6024 on Respondent's Exhibit 101 proper or consistent methods of allocation, from an accounting standpoint, for the purpose of reaching a comparison of costs as between tank-wagon reseller costs and jobber gasoline costs?

A. In my opinion they are not.

Q. Will you explain your answer?

A. Yes, sir. In the first place, those salaries are distributed between channels in the respondent's regular accounting procedure on the basis of gallonage, exclusive of direct shipment gallonage, while in the respondent's cost study, from which Respondent's Exhibits 101 and 100 were prepared, the portion of the expense which was applied to the direct shipment business was established on a basis of effort; therefore, we have cost applied to the serving of jobbers naphtha and gasoline on the basis of effort, that is, estimated effort of employees working under them, that is under these supervisory officials in the Detroit field, as compared with an allocation of cost which was applied to the tank-wagon reseller business on the basis of gallonage.

Mr. Hanley: If your Honor please, may I ask a question as a basis for a motion.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Mr. Warmack, considering the answer which 6025 you have just given, did you make any calculation which resulted in an answer in figures and dollars and cents as to the influence of the calculation as indicated by you as being proper as distinguished from the calculation made and represented by Respondent's Exhibit 101?

A. Judge Hanley, I have endeavored to make calculations of that kind based on the salaries paid to the personnel working under these respective advisory officials. I had no information with respect to the hours worked by the personnel applicable to the respective channels, therefore I could not tell you what effect an apportionment on the basis of hours would have on this exhibit.

Mr. Hanley: The respondent now moves to strike the answer to the next preceding question, for the reason that the witness has now explained that he has made no calculation resulting in a reflection of the influence of his criticism on the claimed differential and is unable to state in figures or in dollars and cents what, if any, influence his criticism would have upon such differential.

Mr. Austin: Will you read the last part of the answer?

(The last part of the answer was read by the reporter.)

Trial Examiner Ballinger: Have you any opinion as to whether or not a computation on a gallonage basis 6026 would result in arriving at a different conclusion?

Mr. Hanley: Just a moment, that is objected to unless it is established that the witness has made a computation.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

The Witness: Your Honor, I do know this, that if the whole cost of this item were separated—

Trial Examiner Ballinger: Which item?

The Witness: Salaries supervision, the 000 Account in the Detroit field, and more especially the salaries of the field manager and two assistant field managers which are a part of that account.

If these costs were separated as between all channels as shown in Respondent's Exhibit 101 on the basis of all gallonage sold, including direct shipment gallonage, it would materially change the figures as shown.

Trial Examiner Ballinger: The Examiner is prepared to rule.

Mr. Hanley: As shown where? Will you please finish that answer?

The Witness: Yes, as shown under the respective channel columns in the line opposite "Salaries—Supervision" Account 000 on Respondent's Exhibit 101.

Trial Examiner Ballinger: The motion to strike 6027 is denied.

By Mr. Austin:

Q. The Examiner asked you, Mr. Warmack, what the effect would be upon the figures in Account 000 on Respondent's Exhibit 101 if the allocation were made, as I understand it, among all channels on a gallonage basis, and you stated in reply that it would materially change the figures. Did you or did you not by that intend to indicate that you would approve the use of a gallonage basis as a method of allocation of this expense?

A. I certainly did not.

Q. Now, will you refer to Commission's Exhibit 119, which is Respondent's Form 189 for 1940, and will you state what percentage of the expense in any single account would be thrown into the tank wagon reseller channel if the allocation of the expense in that account were made between the petroleum products channels on a gallonage basis?

Mr. Hanley: If your Honor please, I am going to object to that question. That assumes a fact which is not in evidence and is unintelligible. The method of allocating on Form 189 has been testified to at great length. What counsel may mean by his question, if it is different than that testimony which has been already put in the record, is objected to as unintelligible. If it means the same thing that has already been testified to, it is objected to as a repetition and an encumbrance of the record.

6028 I want to say to your Honor I just don't understand what counsel means by his question, and I believe I am entitled to understand what these questions mean.

Mr. Austin: Well, the witness has testified that this 000 Account and other accounts are allocated between the three bulk plant channels on a gallonage basis both on Exhibit 101—

Mr. Hanley: There aren't any three bulk plant channels.

Mr. Austin: I would like to have a chance to finish my statement and, if counsel doesn't agree with me, that is something that is beside the point, I think, for the purpose of explanation.

Trial Examiner Ballinger: There will be no further interruption until counsel has concluded.

Mr. Austin: Will you read my statement as far as I went?

(The statement referred to was read by the reporter.)

Mr. Austin: —and in the company's regular accounting procedure, an allocation on a gallonage basis means an allocation of expense according to the number of gallons in each channel, therefore that means on a gallonage basis a certain portion of the expense in any account so allocated would fall into each channel.

6029 My question to the witness was that when a gallonage basis is used on Form 189 for 1940, what percentage of the expense in any account so allocated is thrown into the tank-wagon reseller channel?

Mr. Hanley: May I now refer to counsel's remarks, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: The respondent directs the attention of the Court to the fact that the premise of counsel is entirely erroneous, in that he refers to three bulk plant channels. There are not and never have been in the accounting procedures of the respondent, or reflected on any accounting exhibits of the respondent, any three bulk plant channels. The respondent has offered its Accounting Form No. 189, which divides products and methods of delivery as between different classes of customers, but never has respondent offered any testimony nor is it the fact that there are three or more than one bulk plant channels.

Trial Examiner Ballinger: The objection is overruled.

(There was a discussion off the record.)

Trial Examiner Ballinger: You may proceed. You may answer.

A. The answer is 65.08 per cent.

By Mr. Austin:

6030 Q. Now, is that answer an approximation based upon the gallonage falling into each of the three bulk plant channels on an annual basis as shown by company Form 189?

A. Yes, sir, for the year 1940.

Q. Would it follow that the actual allocation of expense on a gallonage basis would throw exactly that percentage into the tank-wagon reseller channel?

A. No, sir, it would not, for the reason that the company allocates its costs, that is, those costs which it allocates on a basis of gallonage, by the month. That is the monthly gallonage, and sometimes the costs are a little higher in any one month, but the gallonage varies from month to month.

Q. Would that be substantially the amount that would fall into the tank-wagon reseller channel on an annual basis?

A. On an annual basis—

Mr. Hanley: Just a minute, that is objected to as an indefinite question, in that counsel has not stated what figure he is referring to.

Mr. Austin: 65.08 per cent.

Mr. Hanley: And he has not indicated which channel on Respondent's Form 189 he is referring to, and he has erroneously referred to three bulk-plant channels on Form 189 which do not exist and which the testimony does not support.

Mr. Austin: For the benefit of counsel for the 6031 respondent, Respondent's Exhibit 104 has three channels over which appears the title "Distribution Through Company Bulk Plants." One of those is tank-wagon reseller, another is tank-wagon consumer, and the third is the other-method channel and, if I refer to bulk-plant channels hereafter, I will be referring to those three channels under the title just quoted from Respondent's Exhibit 101.

Trial Examiner Ballinger: And you so referred to them in your previous questions?

Mr. Austin: Yes.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed. The objection is overruled.

(The question was read by the reporter as follows: "But would that be substantially the amount that would fall into the tank-wagon-reseller channel on an annual basis?")

The Witness: Yes.

By Mr. Austin:

Q. Will you turn again to Commission's Exhibit 119, Form 189 for the year 1940, Account 004, "Salaries Salesmen"? What portion of the expense in that account is entered in the tank-wagon reseller channel?

A. 29.19 per cent for the year 1940.

6032 Q. And in Account 021, "Commissions," what percentage of the expense in that account is in the tank-wagon-reseller channel?

A. 26.96 per cent for 1940.

Q. In Account 006, "Salaries—Drivers," what per cent of that expense in that account is entered in the tank-wagon reseller channel?

A. 49.32 per cent for 1940.

Q. And what per cent of "Warehouse Labor Expense" is entered in the tank-wagon-reseller channel?

A. 29.46 per cent for 1940.

Q. What percentage of the—

Mr. Hanley: May I ask a question, your Honor?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Have you calculated the percentages which you are talking about?

A. They were calculated by employees at the Commission's offices who were working under my supervision and direction, sir.

Q. The percentages that you are testifying to do not appear on the exhibit; is that true?

A. That is true, sir.

Mr. Hanley: That is all.

Trial Examiner Ballinger: Did you check the computations made by your subordinates?

6033 The Witness: Yes, sir; I made checks of them.

By Mr. Austin:

Q. What portion of the expense in Account 206 entitled "Office Expense - Salaries, accounting" is entered in the tank-wagon-reseller channel on Commission's Exhibit 119?

A. 38.68 per cent for the year 1940.

Q. Are those accounts that I have just referred to the principal salary accounts on Respondent's Form 189, other than Accounts 006 and 001?

A. Yes, sir.

Q. Then, Mr. Warmack, if the salary expense of the field manager and assistant field managers and their assistants in Accounts 000 and 001 were allocated between all channels on Respondent's Exhibit 101 on the basis of distribution or effort of the employees supervised, would such an allocation, or would it not, materially reduce the amount of that supervisory salary expense going into the tank-wagon-reseller channel?

Mr. Hanley: That is objected to, for the reason that no proper foundation has been laid. It has not been shown that this witness has ever made any calculation of any kind which would enable him to answer the question.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Read that question, please?

6034 (The question referred to was read by the reporter.)

A. It would materially reduce it. That assumes that the percentages as just given of the salaries would properly represent percentages of effort. We have just been talking about percentages of actual compensation paid to employees, and that assumes that the compensation follows the effort.

By Mr. Austin:

Q. In your opinion, does the distribution of salary expense in the salary accounts which you have just referred to between the channels on Company Form 189 for 1940 indicate approximately the distribution of effort between those channels?

A. I should think that it should, Mr. Austin; in other words, I should think that compensation should follow effort.

Trial Examiner Ballinger: What do you mean by "I should think"? Do you mean that is your best judgment?

The Witness: Yes, sir, that is my best judgment.

By Mr. Austin:

Q. Do you think it does, from your study of the company's accounting procedure?

A. Yes, sir, I think that it does.

By Mr. Austin:

Q. But, as I understand it, your answer to my question regarding the effect of a distribution of effort allocation in the top two accounts was based upon the assumption that the distribution of salaries between the
6035 channels in the regular accounting procedure indicates distribution of effort and that effort would follow salaries; is that correct?

Mr. Hanley: Oh, that calls for a conclusion and opinion of the witness as to what the account shows.

Mr. Austin: I am asking specifically—

Mr. Hanley: Or whether it is based upon compensation for effort or otherwise. The exhibit speaks for itself. It indicates what is allocated to each expense.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Mr. Hanley: I will add to that objection, if your Honor please, that now the question of counsel assumes by counsel what the witness had in his mind by way of an assumption when he answered the question.

Mr. Austin: Your Honor, I will consent that the question be stricken, because I was simply trying to paraphrase what I understood the witness had already testified to, and I think his previous testimony is sufficient.

Trial Examiner Ballinger: The question is stricken or withdrawn.

6036 Mr. Hanley: You went just a little bit too fast.

Mr. Austin. I would like to move—

Trial Examiner Ballinger: Just a moment. This will be off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Respondent now moves to strike from the record the testimony of the witness in respect of the several preceding questions, in which the witness has undertaken to indicate the figurative influence of his theories, for the reason that it now appears from the testimony of the witness that he has never made any calculation and has never undertaken to determine what the influence, figuratively, of his theories may be upon the records and accounts of the respondent as offered in evidence.

Trial Examiner Ballinger: The motion is denied. We will take a recess for five minutes.

(Whereupon, at 11:15 a. m. a short recess was taken.)

Trial Examiner Ballinger: We will come to order.

By Mr. Austin:

Q. Mr. Warmack, you have pointed out that the allocation of the salary expense of the field managers and assistant field managers, and their assistants, in Account 000 and 001, on Respondent's Exhibit 101, was allocated to direct shipment channels on the basis of the ratio of the number of hours of all of the employees under
6037 their supervision devoted to direct shipment business,
and against the total hours of those employees. Is that correct?

A. Yes, sir.

Q. In your opinion is the use of hours of service of employees supervised a proper basis of allocation of the salaries of these three top supervisory officials?

A. Well, I question this method of allocation to this extent—

Mr. Hanley: Now, Judge, may the witness just answer that question?

Trial Examiner Ballinger: Can you answer the question and then offer any explanation you may desire?

The Witness: I will have to have the question read.

(The reporter read the question as above recorded.)

A. Well, I will just have to answer it in this way, your Honor.

Trial Examiner Ballinger: Can you answer it yes or no?

The Witness: No, sir.

Trial Examiner Ballinger: Then you may answer it in your own way.

A. The allocation based on number of hours of effort of employees working under the respective supervisory officials, in my opinion, should be studied with the thought in mind that some of the employees may be receiving very small salaries, receiving certain amounts of super-
6038 vision directly or indirectly, while other employees receive very large salaries by comparison, receiving greater supervision, and I think that these factors would have to be gone into through some study before it could be said conclusively that the number of hours for all of the employees working under the respective supervisory officials, could be used as allocation factors.

I believe that answers the question.

Mr. Hanley: May I ask a question now, your Honor?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Mr. Warmack, did you make any study or analysis of the time and effort, and the salaries involved, of the employees working for the supervisory officials concerning whom you testified in your last answer?

A. I made a review of the record, Judge Hanley, in the Detroit office, to determine what the range of salaries of the various employees was, bearing in mind that equal hours were assigned to each employee in each instance.

Q. In dollars and cents and in figures, will you express your criticism of the accounting of the respondent, as reflected by the Respondent's Exhibit 101?

A. I will not. I can not.

Mr. Hanley: That's all.

6039 In view of the last answer of the witness, respondent now moves to strike the answer of the witness to the third preceding question, in view of the fact that he has not made any study and does not know factually what the results of his theory would be figuratively and in dollars and cents, even assuming that the theory of the witness is an acceptable one to the court.

Mr. Austin: Your Honor, on the question of ruling upon that motion, I would like to ask you to defer your ruling until I ask the witness some more questions.

Trial Examiner Ballinger: The ruling will be deferred.

By Mr. Austin:

Q. Does the allocation of salaries of the field manager and assistant field manager between channels on the basis of time of employees supervised, give the same weight to time of clerks, office boys, janitors and so forth, in the lower salary brackets as is given to the time of higher salaried employees, such as the sales promotion manager and the accounting supervisors, with whom the field manager and assistant field managers work directly?

A. Yes, sir.

Q. In your opinion is an allocation of supervisory expense upon the basis of the allocation of salaries of employees supervised, from an accounting standpoint a more or a less acceptable method than an allocation of
6040 such expense upon the basis of the time allocation of
the employees supervised?

Mr. Hanley: Just a moment, please. Will you read the question?

(The reporter read the question as above recorded.)

Mr. Hanley: The question is objected to by the respondent as being entirely unintelligible, and if answered would be answered on the basis of whether or not something or other, not clearly expressed in the question, would be more or less something or other.

Trial Examiner Ballinger: Does the witness understand the question?

The Witness: Yes, sir, I understand the question.

Trial Examiner Ballinger: Objection overruled.

A. I can answer the question best by an example, your Honor, if I may recite one.

Mr. Hanley: Respondent objects to the witness reciting any examples, and requests that the witness answer the question.

Trial Examiner Ballinger: You may first answer the question and then, if you desire to illustrate it, you may do so.

The Witness: Very well, sir.

Trial Examiner Ballinger: Have you the question clearly in mind?

6041 The Witness: I do, yes.

A. Supervisory salaries and expenses, in my opinion, ordinarily should follow the effort of the person supervised. That would mean this, your Honor: Where a salesmanager had a group of salesmen working immediately under him, then it is my feeling and conviction that that salesmanager's salary, expenses, and so forth, should be allocated and apportioned in accordance with the weight that the combined effort of these employees working under him should be apportioned, assuming, of course, that reasonably equal supervision is exercised over the group.

But to carry that one point further in the case of a field manager, who is over every employee, numbering probably hundreds—anywhere from charwomen up to high executives—then I think that a study should be given and weighted factors should be considered in connection with allocating the field manager's costs on the basis of the total hourly effort of every employee in the field.

Therefore it would be necessary, in my opinion, to consider the salary difference of these greatly different classes of employees, that is, salary differences between office boys, charwomen and such classes of employees, as compared with the higher executives, who are working also under the field manager.

By Mr. Austin:

6042 Q. Was any consideration given to differences in salaries of employees supervised, in the allocation to direct shipment channels made of this expense on Respondent's Exhibit 101?

A. I was informed by Mr. Houghton that there was none.

Mr. Hanley: Will you please answer that yes or no, if you know?

Mr. Austin: I object to that, your Honor. I think the answer was responsive.

Trial Examiner Ballinger: The answer, in the opinion of the Examiner, was responsive, the witness stating the source of his knowledge and information.

By Mr. Austin:

Q. One question further, Mr. Warmack. If the expense, salary expense, of the field manager and assistant field manager had been allocated between channels on Respondent's Exhibit 101 on a basis of distribution of the salaries of employees supervised, would that have resulted in a material reduction in the amount of expense going into the tank wagon reseller channel?

Mr. Hanley: That is objected to as no proper foundation having been laid. There is no evidence to the effect that the witness has made any calculation of any kind which would permit him to answer the question.

By Mr. Austin:

Q. Have you made such calculation, Mr. Warmack, 6043 using the principal salary accounts as a basis for the calculation?

A. Yes, we have made a calculation of that kind.

Q. Can you answer thte question—

Mr. Hanley: Just a minute. There is an objection pending.

Trial Examiner Ballinger: Objection overruled.

Mr. Austin: Will you read the question? The second question back.

(The reporter read the question as follows:)

"Q. One question further, Mr. Warmack. If the expense, salary expense, of the field manager and assistant field manager had been allocated between all channels on Respondent's Exhibit 101 on a basis of distribution of the salaries of employees supervised, would that have resulted in a material reduction in the amount of expense going into the tank wagon reseller channel?"

By Mr. Austin:

Q. Can you answer that yes or no?

A. The answer is "Yes."

Trial Examiner Ballinger: Will you read the several questions and answers beginning with Mr. Austin's question on the allocation of supervisory expense?

(The reporter read the questions, answers, and colloquy beginning with:

"Q. In your opinion is an allocation of 6044 supervisory expense upon the basis of the allocation of salaries of employees supervised, * * *" and ending with "would that have resulted in a material reduction in the amount of expense going into the tank wagon reseller channel?"

By Mr. Austin:

Q. Can you answer that yes or no?

A. The answer is "Yes."

Trial Examiner Ballinger: This is off the record.

(Discussion off the record.)

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Austin:

Q. Mr. Warmack, you have also stated that the supervisory salaries in Accounts 000 and 001 on Respondent's Exhibit 101 is allocated between the three bulk plant channels on a gallonage basis?

A. They were.

Q. Now supposing, Mr. Warmack, that all the gallonage basis including direct shipment gallonage had been used to allocate the expense between the six petroleum products channels on Respondent's Exhibit 101, would such an allocation result in affording any cost differential between the expense going into the tank wagon reseller and the expense going in the jobber naphtha and gasoline account?

6045 Mr. Hanley: That is objected to for the reason that there is no proper foundation laid, it not being indicated that the witness has ever made any calculation which would permit him to answer the question. That is all.

Trial Examiner Ballinger: Have you made any calculation?

The Witness: Sure.

Trial Examiner Ballinger: Objection overruled.

Mr. Hanley: In view of the question of the Court and the answer of the witness thereto, may I ask another question, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: You have just stated, in answer to the question of the Court, that you have made a calculation. Will you please produce it?

The Witness: I do not have such a calculation with me right here. I can produce it in a very short time.

Mr. Austin: Your Honor, this question is whether the gallonage method of allocation would afford a cost differential. I submit that that is a question that the witness can answer as to this account or any other account, without any calculation.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

6046 Trial Examiner Ballinger: Proceed.

Mr. Hanley: Respondent insists that if the witness has made the calculation, as he has now indicated he has done, that the same is the best evidence, and respondent insists upon production of such calculation.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Austin: May I add to that question?

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. By "cost differential" Mr. Warmack, I mean would it afford any difference in the unit cost or per gallon cost as between those two channels?

A. No, sir. You—

Mr. Hanley: (Interposing.) Just a moment.

Trial Examiner Ballinger: Just a moment.

The Witness: I beg your pardon.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: I would appreciate a ruling.

Trial Examiner Ballinger: The request by counsel for
respondent for the production at this time of the
6047 calculation, is denied. The Examiner considers it
unnecessary to enable the witness to answer the question.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

The Witness: May I hear the question read?

(The reporter read the question as follows:)

"Q. Now supposing, Mr. Warmack, that the all-gallonage basis including direct shipment gallonage had been used to allocate the expense between the six petroleum products channels on Respondent's Exhibit 101, would such an allocation result in affording any cost differential between the expense going into the tank wagon reseller and the expense going into the jobber naphtha and gasoline account?

"By 'cost differential' Mr. Warmack, I mean would it afford any difference in unit cost or per gallon cost as between those two channels?"

The Witness: It certainly would not.

By Mr. Austin:

Q. Does the use of a gallonage, all gallonage method of allocation of any expense, Mr. Warmack, mean that the same amount of expense is assigned to each gallon sold?

A. Yes, sir.

6048 Q. Is it necessary to make a computation of the allocation of any expense between customers, or products, or channels, to determine that such allocation would afford no difference in unit cost per gallon as between different customers, or different products, or different channels?

Mr. Hanley: Just a moment. Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Do you understand that question, Mr. Warmack?

The Witness: I would like to hear it read again.

Mr. Hanley: First, the question is objected to as unintelligible, asks for a conclusion of the witness as to the necessity of a computation concerning facts, figures, and records, data, and accounts, concerning which he has made no investigation, and assumes to permit the witness to make a conclusion of accounting fact which is without any foundational basis.

Trial Examiner Ballinger: Objection overruled.

The Witness: May I hear the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I will have to ask Mr. Austin to make a little further explanation or to give me a little 6049-50 further information as to just what you want.

By Mr. Austin:

Q. I have asked you that as a general question.

A. I do not understand it.

Mr. Austin: Well, if the witness does not understand the question I will withdraw it.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: I will approach it again.

By Mr. Austin:

Q. Is it necessary for you to make an actual allocation of expense between different classes of customers or products on a gallonage basis in order to determine whether such a computation would result in a difference in cost per gallon?"

Mr. Hanley: Just a moment. That is objected to as a question which propounds to a witness an interrogatory as to what is necessary for him to do in some theoretical situation. The inquiry here is concerned with what the respondent did.

Trial Examiner Ballinger: Do you understand the question?

The Witness: Read it to me.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

6051 The Witness: You say "computation" in one place and now you say "allocation" in another. I do not understand the question.

Mr. Austin: I do not care to press that further. I withdraw the question.

Trial Examiner Ballinger: Question withdrawn.

Mr. Austin: If the Examiner please, it is now 12:30. I move the Examiner that, under the circumstances, we stand in recess until 2 o'clock.

Trial Examiner Ballinger: The motion of counsel for the Commission is granted and now at 12:30 o'clock p. m. the hearing stands in recess until 2 p. m.

(Whereupon, at 2 p. m., a recess was taken until 2 p. m. this day.)

6052 Afternoon Session.

2 p. m.

Trial Examiner Ballinger: You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Austin.

Q. Regardless of what method of allocation or apportionment is applied to the supervision salary expense in Accounts 000 and 001 for the purpose of distributing that expense between the channels on Respondent's Exhibit 101, what is your opinion as to whether the method used should be applied to the entire expense for the purpose of distributing it among the entire six channels?

Trial Examiner Ballinger: Do you understand the question?

The Witness: Yes, sir, I understand the question. In the case of this expense—and if I may, your Honor, I would like to limit it to this expense—

Trial Examiner Ballinger: Answer limiting it to this expense now.

The Witness: To this expense?

Trial Examiner Ballinger: In response to the question.

The Witness: Yes, sir.

6053 I think from the standpoint of sound accounting that there should be a consistency in its allocation to every channel.

That means this, your Honor: if these expenses included in these two accounts are to be assigned and used for the purpose of establishing a cost differential and, if you were going to use, we will say, measuring factors established on a basis of effort, for example, then, that effort factor, that measuring factor based on effort should be applied to the costs in every channel, in order to arrive at a cost differential.

Trial Examiner Ballinger: In other words, if it is used as to one, it should be used as to all?

The Witness: Yes, sir, for consistency's sake, bearing in mind, your Honor, that if you were to use a gallonage factor all the way across, you would have no cost differential and, if a cost differential can be established in this account, then you must follow consistent methods all the way across in every channel in applying the parts or the portions of these classes of expense which should go in each channel.

Mr. Hanley: The respondent moves to strike the answer of the witness on the ground and for the reason that it is immaterial and irrelevant and for the reason that there is nothing in the testimony by this witness or by any witness which indicates that there has been any different 6054 method of accounting employed than that which the witness indicates as in his judgment is a proper method of accounting.

Further, that if the method of accounting indicated by the witness in his testimony is any different than that method employed by the respondent in building its exhibits offered in this case, the differences, if any, are not demonstrated by the testimony of this witness, and his testimony has no probative value.

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Austin:

Q. Would what you have just said regarding the necessity for applying the same method of allocation to the entire expense of an account in distributing it between channels for the purposes of this cost study apply to all of the other accounts listed on Respondent's Exhibit 101 as well as to Account 000 and 001?

A. Yes, sir.

Mr. Hanley: Just a minute. That is objected to as calling for a conclusion and opinion of the witness, it not appearing that the witness has made any study of the separate accounts referred to in the question, and it not appearing that the several accounts referred to in the question are in the same category even in the judgment of the witness.

6055 Trial Examiner Ballinger: Do you desire to ask any qualifying questions?

Mr. Austin: Well, I think, your Honor, that isn't necessary, because this is a general question which asks him whether, as to any account here distributed between six channels of this cost study, Respondent's Exhibit 101, the same method should be applied to all of the expense in that account in allocating it.

While I recognize that different methods might be used in one account than in another, I am simply asking him here whether the method which is applied to an account should be applied to the entire expense and not merely to part of it.

Trial Examiner Ballinger: And his answer is to be based upon the result of his investigation or inquiry into the accounts of the respondent company.

Mr. Austin: No, his answer is to be based upon his knowledge of sound accounting procedure and his study and examination of Respondent's Exhibit 101 and the supporting data; in other words, I am not asking about any particular figures. I am asking him about sound accounting, as to which I think he is qualified.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Yes, sir, would be the answer to that question, with this explanation, that consistency
6056 should be followed in the allocation and separation in apportioning any account to any customer or product classification in cases where joint costs are involved.

It might be found in the case of an intensive cost study in many accounts where joint costs are involved, that some parts of those costs may bear greater to one class of customers, or to one class of products than they would to other classes of customers and other classes of products, but in order, your Honor, to arrive at a proper basis, in my opinion, it is necessary and will be necessary, in analyzing any account where joint costs are involved, to make a detailed study and analysis of that class of expense, of the factors influencing that cost, how much they are influenced by each class of customers or classes of groups of products, and when that is done you will have made a full accounting for everything in the account.

For example, if your account is $1,000 and you have made these studies as I have just outlined you will have arrived at a measuring factor for the allocation of the total $1,000 into the channels or any groupings that you so desire to separate it, but you must give thought always to the fact that a high degree of consistency must be maintained at all times.

Mr. Hanley: Have you finished, Mr. Warmack?

The Witness: Yes.

6057 Mr. Hanley: The respondent moves to strike the answer of the witness for the reason that he has indicated in his answer that it is necessary to make a detailed cost study in order to determine the accuracy of the allocations as made in any of respondent's exhibits, and for the further reason that it appears that the witness has not made such detailed cost study; further that the witness in his answer uses a hypothetical example which is not related to or predicated upon any factual basis arising out of this lawsuit and which could have, had the witness so desired, been predicated upon actualities and actual figures relative to the business of the respondent; further that the answer of the witness is purely speculative, conjectural, and theoretical, and has no probative value whatsoever in this case.

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Austin:

Q. You spoke a moment ago about joint costs. Is there a distinction between joint costs and direct costs?

A. Yes, sir.

Q. In your answers to my two previous questions were you referring only to joint costs or were you referring to direct costs as well?

Mr. Hanley: Off the record.

(There was a discussion off the record.)

6058 Mr. Hanley: The question is objected to for the reason that it does not appear on the record that this witness has ever indicated what, in his opinion, is the distinction, if any, between "Joint Costs" and "Direct Costs."

Mr. Austin: I would like to ask the Examiner whether in his opinion the witness should be required to define those terms before he can answer my question, and I would like to call attention in that connection to the fact that in Respondent's Exhibits 99 and 100 there is repeated reference to certain costs being charged directly and other costs being allocated between different channels. I am sure that Respondent's Exhibits 99 and 100 don't define those terms either, but at the same time I have no objection to Mr. Warmack giving a definition.

Trial Examiner Ballinger: For the purposes of clarity of the record, the witness may state what the distinction is between the two terms "Joint" and "Direct"?

The Witness: A direct cost is a cost which can be positively and directly applied to a product or to a class of products or to a customer; that is, the cost of serving one customer and the cost of serving a group of customers.

I am speaking, your Honor, from the standpoint of distribution cost accounting and not manufacturing cost accounting.

6059 A joint cost is a cost which applies in part to two or more customers, that is, the serving of two or more customers, two or more groups of customers, to the merchandizing activities where two or more kinds of classifications of products are merchandized.

The joint costs, when applied to the separate classes as just enumerated, involve and require the establishing of measuring factors for their separation, whereas the direct costs require no such measuring factors. That is the distinction.

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

Read the question.

(The question was read by the reporter as follows: "In your answers to my two previous questions were you referring only to joint costs or were you referring to direct costs as well?")

The Witness: I was referring to joint costs, Mr. Austin.

By Mr. Austin:

Q. May there be direct costs and joint costs in the same expense account, referring to these accounts on Respondent's Exhibit 101?

Mr. Hanley: That is objected to as speculative, inasmuch as the witness has now defined what in his judg-
6060 ment are direct costs and joint costs, and the costs set up on the exhibit referred to by counsel, being Respondent's Exhibit 101, being definite accounts, it is apparent that they are definite costs, and whatever they are, they are either within or without the definition of the witness in respect of direct or joint costs, and the witness presumably can answer within his own definition as to what such costs are.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: If counsel will change his phraseology by striking the word "may," and asking him whether there is—

Mr. Austin: Yes, your Honor, may I rephrase the question?

Trial Examiner Ballinger; —the Examiner will permit counsel to reframe his question.

By Mr. Austin:

Q. Do some of the expense accounts listed on Respondent's Exhibit 101 contain expenses both of a direct and joint nature?

A. They most certainly do.

Q. And when you referred to the application of methods of allocation to those accounts, were you referring only to the allocation of joint costs, or were you referring also to direct costs?

6061 A. No, sir, I was referring to joint costs. Direct costs are allocated as such, that is, directly.

Q. Now, Mr. Warmack, I will call your attention again to Respondent's Exhibit 101 and to the fact that a portion of the salaries of the sales promotion department in Accounts 002 and 003, the salaries of salesmen in Account 004, the salaries of truck drivers in Account 006, the salaries of warehouse employees in Account 008, and the salaries of accounting clerks in Account 200 are charged to automobile supplies, the automobile supplies column being the next to last column on the right-hand side of Respondent's Exhibit 101. I will call your further attention to the fact that no part of the expense in Account 000 or 001 is charged in the Automobile Supplies column. If the salary expenses of supervisory officials in Accounts 000 and 001 are allocated between petroleum products channels on a basis of effort of the employee supervised, in your opinion should a proportionate part of those salaries also be charged to automobile supplies?

Mr. Hanley: Just a minute. That is objected to for the reason that it is a compound question. The first part of the question is a misstatement of the evidence, in that it assumes that there is no allocation of expense in certain accounts to any other column than that of auto supplies, and the second part of the question, when related to
6062 the first part of the question, which is upon an improper assumption, becomes an improper assumption and question, and the witness is not entitled to answer the same.

Will you please read that question?

I just request that your Honor give attention to the account numbers and to the columns on Exhibit 101 or Form 189.

Trial Examiner Ballinger: The Examiner had Respondent's Exhibit 101 before him when the question was propounded.

Read the question.

(The question referred to was read by the reporter.)

6063 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: I will add this to the objection; the respondent further objects to the question on the ground that the accounts by number, as designated in the question, do show a charge in channels other than the channel "Automobile Supplies," and that the question of counsel is a misstatement of the evidence and of the exhibit.

Mr. Austin: Well, the question doesn't say that. The uestion says "A portion of the salaries."

Trial Examiner Ballinger: The objection is overruled. 'he witness may answer.

A. In the preparation of Respondent's Exhibit 101, eferring particularly to Account 000, "Salaries Supervis- on," and 001, "Salaries Supervision—others," no part of he cost of this class of expense is shown in automobile upplies.

Inasmuch as a large portion of this class of expense— hat is, the two expense items, 000 and 001—have been llocated, to some extent, on Respondent's Exhibit 101 on he basis of the effort of the employees working under hese supervisory officials, then it would seem to me, from he standpoint of sound accounting, in arriving at a cost lifferential, that some part of these expenses, salaries and xpenses of these supervisory officials, would be allocated o the automobile supply business of the respondent company.

5064 Mr. Hanley: The respondent now moves to strike the answer of the witness, on the ground that the vitness has said that "a large part" of supervision expense as been allocated to auto supplies, and again, that the vitness has said that "some part" of supervision expense hould be allocated to auto supplies, and that the witness aving failed, neglected and refused to indicate how much, n figures and in dollars and cents, should be allocated, and as used the indeterminate terms of "large amount" and "some part," that the testimony of the witness is too ndefinite and uncertain to have any probative value.

Further, the respondent now requests that if the Court s going to entertain the testimony of this witness, that he Court compel the witness to specify in figures and in lollars and cents what allocations, in his judgment as an xpert accountant—as he now represents himself to be, as witness—he makes to these various accounts.

Trial Examiner Ballinger: The motion to strike is de nied. If consel desires to inquire of the witness on cross- xamination as to the amount to be allocated, he may do so.

Will you read the last answer for the benefit of the vitness?

(The reporter read the last answer as above re- corded.)

6065 By Mr. Austin:

Q. You said it seems to you, Mr. Warmack. You mean that is your considered opinion?

A. It certainly is.

Q. Heretofore, we have been discussing chiefly the supervisory salaries of the field—that is, salaries of field managers and two assistant field managers, in Accounts 000 and 001. Does the salary of the superintendent of construction and of the construction clerks working under him also find its way into those two accounts, Mr. Wormack?

A. Yes, sir.

Q. Is the salary of the superintendent of maintenance included in Account 000, or part of it?

A. Part of it for the year 1940 is included in that account.

Q. I believe Mr. Boatwright's testimony will also show that there are salaries of a number of other employees of the company included in Account 000 and 001, particularly salaries of a number of plant superintendents and plant supervisors. Referring now to the salaries in Accounts 000 and 001, other than the salaries of the field manager; the two assistant field managers and their clerks and assistants, will you explain how that portion of the expense going into those two accounts is allocated between channels on Respondent's Exhibit 101? You don't need to go into as great detail as you did for the other portions
6066 of the account, but I would like to know what method was applied.

A. The portion that went in the 000 account and Account 001 was separated on the basis of gallonage.

Q. Was separated on the basis of gallonage between all channels on Respondent's Exhibit 101?

May I withdraw that question, your Honor?

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: I will break it down, separate it.

By Mr. Austin:

Q. In the first place, Mr. Warmack, how would that expense be allocated between the tank wagon reseller, tank wagon consumer, and other methods channel on Respondent's Exhibit 101?

A. Mr. Austin: It ws separated on the basis of gallonage. Whether some portions of it went between the tank wagon reseller and the tank wagon consumer, and other portions between the tank wagon reseller and tank wagon consumer and other methods, I don't have the notes right before me to tell exactly by proportions.

Q. Well, you say it was separated on the basis of gallonage?

A. Yes, sir.

Q. That is all I wanted. Now, was a portion of that expense allocated to direct shipment channels on Respondent's Exhibit 101?

6067 A. A portion of that class of expense was assigned to direct shipment business.

Trial Examiner Ballinger: Did I understand you to say that there was or was not a portion of it assigned to direct shipment.

The Witness: A portion of it was.

By Mr. Austin:

Q. And upon what basis was the allocation to direct shipment channels made?

A. On the basis of effort of the employee.

Q. Of what employees?

A. In the case of the superintendent of maintenance, it is based upon the employees working under him. In the case of the superintendent of construction, it is based upon what time he spent on direct shipment business during the year 1940.

Trial Examiner Ballinger: When you say "he" you mean the superintendent alone spent?

The Witness: Yes, sir; as explained on page 83 of Respondent's Exhibit 100—I mean also the assistant superintendent.

Trial Examiner Ballinger: When you use the term "superintendent" you refer to both the superintendent of construction and the assistant superintendent?

6068 A. Yes, sir.

By Mr. Austin:

Q. Was the same method of allocation used for both direct shipment channels and bulk plant channels on Respondent's Exhibit 101 in allocating the expense of this account?

A. Applicable to the class of employees you specifically refer to, no, sir.

Q. I would like to also call your attention to the testimony—not the testimony, but to the top of page 84 of Respondent's Exhibit 100, where it appears that no part of the expenses—where it appears that no change from the company's present method of distribution of the expense of tank wagon superintendents and bulk plant superintendents was made for the purpose of this cost study, and ask you what is the present method of distribution of expense of those individuals?

A. Are you speaking of the superintendent of tank wagons?

Q. Tank wagons and bulk plants.

Trial Examiner Ballinger: You ask him what the "present" method is. You mean what is the present method adopted by the respondent company and used?

Mr. Austin: I am asking if he knows what the respondent's present method is. I think I used the words "present method." That is the expression used on page 84, and I am asking Mr. Warmack whether, as a result of his
6069 study, he can amplify and explain what is meant by that.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Hanley: Respondent has no objection to his answering if the witness knows.

Trial Examiner Ballinger: If the witness does not know of his own personal knowledge, but if he has reliable information from other sources he may state the sources and answer the question.

A. In the case of the tank wagon superintendents—

Trial Examiner Ballinger: What is the source of your information?

The Witness: Page 19 of Respondent's Exhibit 99.

Mr. Hanley: If your Honor please, if the answer is contained in one of Respondent's Exhibits, this question and answer is objected to as repetitious. There is no reason why this witness should read from an exhibit already in the record. We are bound by any exhibit that we have presented.

Trial Examiner Ballinger: Well, the Examiner is in accord with the views expressed by counsel for respondent, but for convenience the witness may answer the question.

Mr. Austin: It is necessary to assemble these facts before I can ask a question based upon them.

Trial Examiner Ballinger: Go ahead.

A. Salaries of tank wagon superintendents are prorated each month by the ratio of tank wagon reseller
6070 gallons to total tank wagon gallons.

By Mr. Austin:

Q. Then, in what channels on Respondent's Exhibit 101 would the salaries of the tank wagon superintendents be distributed?

A. Tank wagon reseller channel, tank wagon consumer channel.

Q. Now, I also ask you how these bulk plant superintendents are allocated?

A. Mr. Austin, we have got notes on all this stuff some place, if I could just get it together.

Trial Examiner Ballinger: Can you answer the question?

The Witness: Not without referring to notes, sir.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. Mr. Warmack, on page 19 of Respondent's Exhibit 99, it appears that the salary costs entering Accounts 000 and 001, with the exception of the tank wagon superintendents, are allocated or prorated on a gallonage basis to the three petroleum products channels in the company's regular accounting procedure. On page 83 of Respondent's Exhibit 100 it further appears that a portion of the salaries of the members of the construction department included in these two accounts, the superintendent of equipment and the superintendent of maintenance
6071 are allocated to direct shipment channels on Respondent's Exhibit 101 on a distribution of time basis, as a result of the cost study made by respondent.

It further appears that at the top of page 84 of Respondent's Exhibit 100, no part of the salaries of the tank wagon superintendents and bulk plant superintendents are assigned to direct shipment channels, but that those salaries remain in the bulk plant channels, as they were placed on Form 189 for 1940.

What is your opinion, as an accountant, as to the consistency and propriety of the method of allocation applied to the expenses referred to in Accounts 000 and 001, for the purpose of distribution between all channels on Respondent's Exhibit 101 for this cost study?

Mr. Hanley: Just a minute. As to all of that portion of counsel's question ~~which is an attempted~~ recital of what is reflected by exhibits already in the record, respondent moves to strike the question of counsel, for the reason that it is an attempted paraphrasing of admitted exhibits, and has no relation to and no bearing upon the question.

As to the question which counsel finally asked, beginning with "In your opinion as an accountant," respondent makes the general objection as to the competence of the witness to answer, and lack of foundation.

Trial Examiner Ballinger: Objection overruled. Read the question.

6072 The Witness: Just read the last part, the part where the question begins.

Mr. Hanley: If your Honor please, if the question is to be read at the request of the witness, the respondent requests that the entire question be read.

Trial Examiner Ballinger: That is within the discretion of the witness. If the witness remembers the recital and desires only the question read, that is all that is necessary. Do you desire the recital preceding the question read?

The Witness: No, sir; just the question.

(The reporter read the question as follows:)

"What is your opinion, as an accountant, as to the consistency and propriety of the method of allocation applied to the expenses referred to in Accounts 000 and 001, for the purpose of distribution between all channels on Respondent's Exhibit 101 for this cost study?"

A. Mr. Austin, you are limiting that question to only these accounts that we have been talking about, or to every ~~account in these~~ accounts?

By Mr. Austin:

Q. I am limiting it to the expenses in those accounts other than the salaries of the field manager and assistant field manager, which we have already covered.

6073 Mr. Hanley: Just a minute. In view of the statement of counsel, respondent further objects to the question on the ground that the particular expenses to which Account 000 and 001 are pointed, are not specified by counsel in his question. He now undertakes to eliminate from the accounts in question certain things that are included in such accounts on Exhibit 101, and until ~~and unless~~ counsel is able to ~~state to the witness~~ exactly what features are involved in the accounts, the witness is not competent to answer.

Mr. Austin: Perhaps the witness knows what salaries are included in those accounts.

Trial Examiner Ballinger: That should be clearly stated in the question.

Mr. Austin: May I then ask a preliminary question of the witness?

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. What salaries are included?

A. Well—

Mr. Austin: (interposing) Your Honor, of course I can ask that, I can ask these questions, but I can say this, that these are already in the record, but I will put it in again if it is desired.

6074 Trial Examiner Ballinger: Very well.

Mr. Austin: The witness has stated that he is familiar with the record, that he has read Mr. Boatwright's testimony, and Mr. Boatwright has stated and has testified to this before in the record. Therefore, I think it follows that the witness knows the subject of my question without my stating it again.

Trial Examiner Ballinger: I know; but does your question relate to all of the items appearing in the account referred to, or does it relate to only a part of the items? That is what I understand to be the basis, in part, of the objection. Am I correct, Judge?

Mr. Hanley: You are correct, Judge, because I think that counsel has stated that he excluded a part of the accounts.

Trial Examiner Ballinger: That is what I understood.

Mr. Austin: I said that I excluded the salaries of the field manager, and the two assistant field managers, and the question was directed to the remainder of the salaries in that account.

Trial Examiner Ballinger: Do you understand the question?

The Witness: If I could hear the question read again, please.

6075 Trial Examiner Ballinger: Read the question to the witness.

(The reporter read the question as follows:)

"Q. Mr. Warmack, on page 19 of Respondent's Exhibit 99, it appears that the salary costs entering Accounts 000 and 001, with the exception of the tank wagon superintendents, are allocated or prorated on a gallonage basis to the three petroleum products channels in the company's regular accounting procedure. On page 83 of Respondent's Exhibit 100 it further appears that a portion of the salaries of the members of the construction department included in these two accounts, the superintendent of equipment and the superintendent of maintenance are allocated to direct shipment channels on Respondent's Exhibit 101 on a distribution of time basis, as a result of the cost study made by respondent.

"It further appears that at the top of page 84 of Respondent's Exhibit 100, no part of the salaries of the tank wagon superintendents and bulk plant superintendents are assigned to direct shipment channels, but that those salaries remain in the bulk plant channels, as they were placed on Form 189 for 1940.

"What is your opinion, as an accountant, as to the consistency and propriety of the method of allocation
6076 applied to the expenses referred to in Accounts 000
and 001, for the purpose of distribution between all channels on Respondent's Exhibit 101 for this cost study?"

The Witness: Yes, sir. I understand that question.

Trial Examiner Ballinger: You may answer. The objection is overruled.

The Witness: It is my opinion from the standpoint of sound accounting an inconsistency has occurred here in Respondent's separation of at least a part of these costs, your Honor, in the instances where the company's late cost study, which was a basis for Respondent's Exhibit 100, and Respondent's Exhibit 101, respondent's accountants made a study and to their satisfaction determined that part of this class of expense was properly applicable to direct shipment business on a basis of effort either expended by the individuals, or by employees working under them, or a combination of the two.

Trial Examiner Ballinger: What do you mean by "employees working under them"; is this on an hourly basis?

The Witness: On an hourly basis, yes, sir.

Trial Examiner Ballinger: Proceed.

The Witness: The amounts that respondent's accountants determined as being applicable to direct shipment business were then removed from the regular 6077
accounts, or the regular channels, rather—

Trial Examiner Ballinger: (Interposing.) And when you refer to "regular channels" do you refer to the gallonage channel[illegible]

The Witness: I refer to the distribution channels on the respondent's form—regular form 189 for the Detroit field for 1940.

These amounts that respondent's accountants found in their study as being applicable to the direct shipment business were then removed on the basis that the amounts had previously gone into or had been allocated to the regular distribution channels on the regular Form 189.

The reason for the inconsistency, in my opinion, is this: That these expenses had previously been separated between the regular channels on the basis of gallonage. It is that basis, your Honor, that I question.

The inconsistency is this:

The costs are separated between channels on a basis of gallonage, first.

In the respondent's study they desired a greater separation of the costs whereby the direct shipment costs would be shown, so, as a result of a time study; a study of effort they established a figure which they considered proper for the direct shipment business without carrying that
6078 study through, your Honor, to determine what portion of this class of expense on a basis of effort which should have been properly assigned to the—in my opinion —to the tank wagon reseller column, the tank wagon consumer column, and the other methods column on Respondent's Exhibit 101.

I should be glad to have the record show here that I do not condemn, as an accountant, from the standpoint of sound accounting the gallonage basis as a measuring factor to be used in the separation of some of these costs, if that factor were established as being reasonably correct by a thorough cost study and analysis.

Trial Examiner Ballinger: Mr. Warmack, let me see if I understand you, sir.

The Witness: Yes, sir.

Trial Examiner Ballinger: Is it your position that, first, no basic costs system should be adopted without a thorough study? Is that your first premise?

The Witness: Your Honor, not exactly.

Trial Examiner Ballinger: Please explain.

The Witness: The purpose for which the costs are to be used is the first consideration.

A cost system which may be sufficient, which may afford
all of the information that the company, or the officials of
the company, the directors, or even the stockholders may
desire, may be considered as one thing. But a figure
6079 which may be desired to be developed, or figures
which may be desired to be developed for another
purpose, that system may not afford those figures.

The management may be quite satisfied with the allocation on a gallonage basis which it considers as proper and sound without ever having gone to the trouble of having a cost study made to determine just how sound it is.

And with respect to my answer to this previous question, if I may add one other thought to that, in the case of some of these accounts that we are speaking about, your Honor, here; that is, the superintendent of maintenance and the superintendent of construction, the company, the respondent company changed its methods during the year 1940 of accounting for these accounts, during a part of the year some of the salaries and expense of these two departments were assigned directly; in November, 1940, the salaries and expenses of the superintendents of these departments were no longer assigned directly, but were assigned to the triple 0 account which was separated on a gallonage basis. That is another reason for my objection to this separation, from the standpoint of consistency.

Trial Examiner Ballinger: Mr. Warmack, what I am
trying to find out is this: I understand you now to state
that the accounting system or practice to be used must
depend in part upon the objective to be obtained; in
6080 other words, if it is for the use of the respondent
company only, one system may be entirely satisfactory, but if you want to find out the exact costs of marketing of respondent's products then another and different system must be employed; is that correct?

The Witness: Your Honor, exactitude is seldom attained in such a situation as you speak of.

Trial Examiner Ballinger: I am speaking now of an approximation.

Mr. Hanley: I am trying to keep track of this, and now we have three different questions going along side by side.

The Witness: Let us do not call it a "system." I doubt very seriously if this company or any company goes to the refinement of their costs even to the extent that Mr. Boatwright went in his study. This is a study, not a system. They are not keeping all of this detailed information under a system.

Trial Examiner Ballinger: Very well, whatever term you may apply.

The Witness: Yes, sir.

Trial Examiner Ballinger: I am not familiar with the exact term, or the correct term.

The Witness: Yes, sir.

Trial Examiner Ballinger: You may supply it, if you will.

6081 The Witness: The company states—

Trial Examiner Ballinger: (interposing) What would be the proper term to use in connection with that, instead of "system" what would be the correct term?

The Witness: It depends upon what you want to use it for. This is the result of an accounting system, or it may be called a "cost system," I mean this—this sheet, Form 189.

Trial Examiner Ballinger: Then the method employed? Is that the point?

The Witness: That is the method employed by the respondent in keeping its accounts.

Trial Examiner Ballinger: Then the method employed is the base?

The Witness: Now, for the purpose of this Respondent's Exhibit 101, that is not a system at all; that is the result of a study of the company's accounts carrying the separations to a greater refinement than it carried in its regular accounting system.

Trial Examiner Ballinger: Very well. I now understand you object to the accounting submitted by the respondent, certainly to certain items, on the ground that they employed different methods in computing the cost of marketing cer-
tain commodities, and employed other and different
6082 methods in computing the costs of other commodities
embraced within the same accounting classification?

The Witness: (There was no reply.)

Trial Examiner Ballinger: Do you understand what I mean?

The Witness: I would like for that to be read again. I was just thinking about it.

Trial Examiner Ballinger: Read it.

(The reporter read the matter referred to.)

Trial Examiner Ballinger: Let me make that more specific.

The Witness: Yes, sir.

Trial Examiner Ballinger: In the same item of accounting such as appears on Respondent's Exhibit 101 opposite the figures 000, portions of that, or of the results obtained were ascertained from the gallonage basis, and a part from a computation based upon their effort or hours of time employed; is that correct?

The Witness: That is the way they did it, yes, sir.

Trial Examiner Ballinger: Is it your contention that they should have used either one or the other system, either the gallonage basis or a computation upon effort or hours employed, throughout?

The Witness: That is my opinion that this—with this amplification or clarification, this account triple 0 6083 contains the salaries of the field manager and several different supervisory officials.

One official's salary and expense may be kept separated one way, your Honor, another's possibly kept separated another way.

A thorough cost study would disclose how any one of the separate items contained within that account should be separated, and it would disclose the inconsistency of first separating the whole account on a gallonage basis, and then pulling out of that on the basis of effort a certain amount and setting it up on an effort basis, and then comparing a portion of that set-up on an effort basis with that portion of that total which was set up on a gallonage basis.

Trial Examiner Ballinger: Then, if that system that you have suggested were adopted you would disregard the system of consistency, would you not?

The Witness: (There was no reply.)

Trial Examiner Ballinger: I will put it this way. I understood in your testimony that one of your grounds of complaint was that they were not consistent. Am I correct?

The Witness: That is my opinion, sir.

Trial Examiner Ballinger: Now then if they had resorted to the other practice that you have just outlined they would have been compelled to have abandoned any theory of consistency, would they not?

6084 The Witness: In my opinion, that would be the most consistent thing in the world that could be, it would be the most proper thing they could do. Your Honor, there are three things to be—or at least there are these things to be considered in accounting, first, expense may be separated properly by one method, and another expense may be separated properly by another method, but a cost study properly carried through—cost analysis giving effect to the influencing factors whereby those costs were incurred—

Trial Examiner Ballinger: (interposing) That would have necessitated an examination of the subject matter by various methods, would it not, which you finally said was the whole question?

The Witness: Before you finally arrive at a figure that you can positively stand on and defend anywhere that would have to be done, in my opinion.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: If your Honor please, if your Honor has finished, I would like to make a motion directed to the last answer made by the witness to the last question propounded by counsel for the Commission, Mr. Austin.

Trial Examiner Ballinger: Proceed. Do you recall 6085 the answer of the witness?

Mr. Austin: I do not know to what answer counsel is referring.

Mr. Hanley: Perhaps it would be better to have the reporter read it and then I could make my objection more clearly anyhow.

Trial Examiner Ballinger: Read the answer that counsel has referred to.

(Discussion off the record.)

Mr. Austin: If you are going to object, I think we ought to know of what you are objecting.

Trial Examiner Ballinger: Read the answer that Judge Hanley has in mind.

Mr. Hanley: I think that would be better, and from that I can form my objection more concisely, perhaps.

(The reporter read the following:)

"It is my opinion from the standpoint of sound accounting an inconsistency has occurred here in Respondent's separation of at least a part of these costs, your Honor, in the instances where the company's late cost study, which was a basis for Respondent's Exhibit 100, and Respondent's Exhibit 101, respondent's accountants made a study and to their satisfaction determined that part of this class of expense was properly applicable to direct
shipment business on a basis of effort either expended
6086 by the individuals, or my employees working under
them, or a combination of the two.

"Trial Examiner Ballinger: What do you mean by 'employees working under them'; is this on an hourly basis?

"The Witness: On an hourly basis, yes, sir.

"Trial Examiner Ballinger: Proceed.

"The Witness: The amounts that respondent's accountants determined as being applicable to direct shipment business were then removed from the regular accounts, or the regular channels, rather—

"Trial Examiner Ballinger: (interposing) And when you refer to 'regular channels' do you refer to the gallonage channels?

"The Witness: I refer to the distribution channels on the respondent's form—regular form 189 for the Detroit field for 1940.

"These amounts that respondent's accountants found in their study as being applicable to the direct shipment business were then removed on the basis that the amounts had previously gone into or had been allocated to the regular distribution channels on the regular Form 189.

"The reason for the inconsistency, in my opinion, is this:
That these expenses had previously been separated
6087 between the regular channels on the basis of gallon-
age. It is that basis, your Honor, that I question.

"The inconsistency is this:

"The costs are separated between channels on a basis of gallonage, first.

"In the respondent's study they desired a greater separation of the costs whereby the direct shipment costs would be shown, so, as a result of a time study, a study of effort they established a figure which they considered proper for the direct shipment business without carrying that study through, your Honor, to determine what portion of this class of expense on a basis of effort which should have been properly assigned to the—in my opinion—to the tank wagon reseller column, and the other methods column on Respondent's Exhibit 101.

"I should be glad to have the record show here that I do not condemn, as an accountant, from the standpoint of sound accounting the gallonage basis as a measuring factor to be used in the separation of some of these costs, if that factor were established as being reasonably correct by a thorough cost study and analysis."

6088 Trial Examiner Ballinger: Is what the reporter has just read the material to which you desire to direct your motion?

Mr. Hanley: Yes, sir.

Trial Examiner Ballinger: I believe the record is now clear as to what you have in mind. Proceed.

Mr. Hanley: If your Honor please, respondent moves to strike the answer of the witness as just read to the last question propounded by counsel for the Commission; that is, as it was just read by the reporter, on the ground that for the reason that it does not appear from the answer of the witness that what the witness terms an "inconsistency in accounting" as between the regular procedure of respondent, and Respondent's Exhibit 101 has made one penny of difference in cost and until and unless there is a demonstration that the positive testimony of the respondent is erroneous, the critical testimony of the Commission's accountant witness is without value and the answer of the witness is, in its entirety, an accumulation of words without probative value.

Trial Examiner Ballinger: The answer, standing alone may have but very little evidentiary value, or none, but possibly read in connection with the witness' testimony previously given may have some evidentiary value.

The motion to strike is denied. Proceed.

6089 By Mr. Austin:

Q. Mr. Warmack, in Respondent's Exhibits 99, 100 and 101, and in the testimony given by Mr. Boatwright in regard to these exhibits, and the accounting procedure followed by the respondent in the preparation of them, what is there, if anything, which, in your opinion, supports the use of the gallonage method of allocation of the expenses in accounts 000 and 001 between tank wagon resellers, tank wagon consumers, and other methods channel?

A. I have seen no reference in those exhibits to any study ever having been made to support the reasonable accuracy of gallonage as a measuring factor, or the results to be obtained by the use of that as a measuring factor.

That is my answer to it.

Q. Did you inquire from the respondent's officials and employees in Detroit, during your stay in the Detroit office, whether any such study had been made by the respondent?

Mr. Hanley: That is objected to as pure hearsay. Respondent has been crucified in this case on the hearsay rule, your Honor; unless that is made specific certainly we are entitled not to be bound by it.

Trial Examiner Ballinger: Unless an inquiry was made of an official or properly accredited representative of the respondent company, the witness would not be at liberty to answer.

6090 Mr. Austin: I would inquire further.

By Mr. Austin:

Q. Well, did you make such an inquiry of Mr. Houghton?

A. Yes, sir.

Q. Mr. Houghton was, as I understand it, assigned by the respondent to assist you in your research in connection with this cost study?

A. Yes, sir. He was, and—

Trial Examiner Ballinger: (Interposing.) You need not go into any explanation.

Mr. Hanley: We do not question Mr. Houghton's position, but we do want to know what inquiry was made.

Mr. Austin: Very well.

By Mr. Austin:

Q. State what inquiry you made, and if you made any similar inquiry of anyone else that you can name, you may refer to them.

A. I inquired of Mr. Houghton if the respondent company had ever made any cost study or analysis in which it might, or on which it might base a gallonage allocation, and he advised me that he knew of none.

Mr. Hanley: Now just a minute. What do you mea this gallonage allocation? Please be specific. I want to know exactly what you asked Mr. Houghton.

91 Mr. Austin: I think that is more properly an inquiry for cross examination, but I will inquire it.

y Mr. Austin:

Q. What do you mean by that? I would like to know.

A. Well, I thought we were talking about the very thing am talking about, but I will be glad to say it.

Q. Very well, if Judge Hanley wants to know whether ou are referring to Account 000 and 001, or are you ferring to other accounts? I understood that you were ferring to Accounts 000 and 001, to which my question as addressed. That was the way I understand it. If our answer does not refer to it then I do not understand our answer, or at least I do not believe he understood our answer.

A. I am referring to Account 000 and 001 in that partic lar answer.

Mr. Austin: I think my question was limited to that ut I was perfectly willing to have it cleared up if there as any question about it.

Trial Examiner Ballinger: Proceed.

The Witness: I thought that was what we were talking bout.

y Mr. Austin:

Q. Yes.

A. Now, do you want to know what I asked Mr. Hough n?

Trial Examiner Ballinger: Yes, just state what 92 you asked him.

Mr. Austin: If I may interrupt a moment, he was the middle of his sentence, and was interrupted. I ould like to have it read back to see if he had completed is answer.

Trial Examiner Ballinger: Read the last answer of he witness that is referred to by counsel.

(The reporter read the following answer:)

"A. I inquired of Mr. Houghton if the respondent ompany had ever made any cost study or analysis in hich it might or on which it might base a gallonage alloca ion, and he advised me that he knew of none."

By Mr. Austin:

Q. Do you desire to add anything further to that answer?

A. That is all.

Of course, I asked some other people there.

Q. Who?

A. I asked Mr. Gillis.

Q. What did he say?

A. He said he knew of none.

Q. Who was Mr. Gillis?

A. Mr. Gillis was the office manager in the Detroit office.

Q. Anyone else?

A. I asked Mr. Utterback.

Q. Who was he?

6093 A. Mr. Utterback was the assistant office manager in the Detroit office.

Trial Examiner Ballinger: What was his reply?

The Witness: He said he knew of nothing like that.

By Mr. Austin:

Q. Anything else? Anything else you want to add?

A. I talked to Mr. Bath. I talked to him about it.

Q. What did he say?

A. I am sure that he said he knew about no cost study ever having been made to establish gallonage as a measuring factor.

Mr. Hanley: I would like to request a recess for five minutes, Mr. Examiner.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

The Witness: Your Honor, I should like to make one correction.

Trial Examiner Ballinger: Correction in your testimony?

The Witness: Yes, sir.

Trial Examiner Ballinger: Proceed.

The Witness: I stated that during the course of 1940 the company changed its accounting, or its method 6094 of accounting for the salaries of construction superintendent and the superintendent of maintenance, and I would like to correct that to state that it should be superintendents of maintenance only.

Trial Examiner Ballinger: You use the plural term, do you mean plural?

The Witness: I just mean the one man.

Trial Examiner Ballinger: That is you mean the singular?

The Witness: I mean the singular. Of course, if he had an assistant I would have to look that up also, but the construction superintendent and what I said with respect to the change of method in accounting for the construction superintendent and or his assistant, I did not mean to include the superintendent of construction.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Strike the latter part of the witness' answer which is repetitive.

By Mr. Austin:

Q. Mr. Warmack, have you any notes which you made during your study of the respondent's accounting in Detroit which would enable you to state on the record the total amount of the salaries entering into account 6095 000, paid to the tank wagon superintendent, plant superintendents, agent-salesmen, plant supervisors—I think that is all—I would like to know if you can tell me the total amount of the salaries paid to the employees carrying those titles which is charged in Account 000 for the year 1940.

Mr. Hanley: Just a minute. That is objected to, if your Honor please, as immaterial.

It does not go to the question of accounting procedure. It goes to the factual question of salary.

If your Honor will recall, the respondent gave access to our records in connection with the various salaries of employees and officials of the company, and it was the understanding of respondent that that information would be used from the standpoint of determining proper accounting procedure, but would not be divulged or put upon the record as a matter of figures.

I have no objection to an analysis by Mr. Warmack of any accounting procedure in relation to the salaries of any individuals that is, in your Honor's view, pertinent here, but we do object to having salaries, as such, divulged.

If I may be off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed. Let me point 6096 out, Mr. Hanley, that the question merely inquires if the witness has such notes.

Mr. Hanley: Perhaps I misunderstood the question. May I have it read again?

Mr. Austin: Do you mean the question that I just referred to a moment ago?

Mr. Hanley: Yes.

Trial Examiner Ballinger: Yes. Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: I am sure you will withdraw your objection to that question.

Mr. Hanley: Yes. I withdraw my objection to that particular question.

Trial Examiner Ballinger: The objection is withdrawn. The witness may answer.

The Witness: Yes. I have the notes that I secured from the respondent's office in Detroit, and I can do a little addition here and find out what it is.

By Mr. Austin:

Q. Can you do that with reasonable celerity?

A. Yes.

Q. Please do so.

A. Very well.

(The witness made certain calculations.)

Mr. Austin: Off the record.

6097 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. What is the amount?

A. $13,529.67.

Q. Mr. Warmack, now, you have given certain testimoney today regarding Accounts 000 and 001 on Respondent's Exhibit 101?

A. Yes.

Q. Does your testimony regarding the methods used by the respondent in apportioning expense on those two accounts on Respondent's Exhibit 101, namely 000 and 001, apply equally to the expenses shown in Accounts 030, 045, and 100 in that exhibit?

Mr. Hanley: I object to that. I do not even know what those accounts are.

Mr. Austin: I will expand my question to indicate precisely as to what they refer.

By Mr. Austin:

Q. 030 (traveling expense—supervision); 045 (operating and maintenance of vehicles—supervision); and Account 100 (depreciation expense—vehicles—supervision), in that exhibit is what I refer to.

Mr. Hanley: Mr. Austin, you have now indicated
6098 the nature of those accounts.

Mr. Austin: Yes.

Mr. Hanley: Have you completed your question?

Mr. Austin: Yes.

Mr. Hanley: That question is objected to, if your Honor please, on the part of the respondent for the reason that it asks of the witness that he relate certain unspecified testimony in connection with certain unspecified accounts to certain other unspecified accounts, and the respondent is entitled to have this witness testify specifically as to any account and not to make general conclusion in respect of respondent's accounts by a mere allusion to some undefined and unspecified testimony that he may have given at some time in this lawsuit.

The respondent is entirely without a basis for cross examination upon any such testimony of this witness.

Trial Examiner Ballinger: The objection is sustained. Counsel for the Commission may restate his question with particularity.

By Mr. Austin:

Q. The record shows that the expense in Account 030 is the traveling expense incurred by individuals whose salaries are listed in Account triple 0.

The record shows further that expense entered in Account 045 on Respondent's Exhibit 101 is the expense
6099 of operation and maintenance of vehicles used by the
individuals whose salaries appear in Account triple 0.

The record shows further that the expense entered in Account 100 is depreciation expense on the same vehicles just referred to, for Account 045.

The record further shows that the expense allocated in these three accounts, or rather the expense entered in these three accounts is allocated between channels on Respondent's Exhibit 101.

Mr. Austin: I make that a part of my question.

Mr. Hanley: Off the record, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

Mr. Austin: I will strike the question.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. I think I can state without fear of contradiction that the purpose of Respondent's Exhibit 101 and the exhibits in support thereof, being Exhibit 99 and Exhibit 100, is to determine the difference in unit cost of selling gasoline to tank wagon reseller customers on the one hand, and to so-called jobber customers on the other.

In its regular accounting procedure, Mr. Warmack, 6100 apart and aside from this cost study, does the respondent attempt to keep its costs and its cost records in such manner as to precisely account for differences in costs to those two classes of customers?

Mr. Hanley: I object to the question. I can elaborate at considerable length if necessary on that because it goes to the very heart of this lawsuit.

Mr. Austin: Off the record, please.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed. Is there objection to the question?

Mr. Austin: I can save some time there. If there is objection to the question I will consent that it be withdrawn.

Mr. Hanley: There is the objection that I have heretofore made.

Mr. Austin: Then I withdraw the question.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: Mr. Examiner, I move that we adjourn until 9:30 o'clock a. m., tomorrow morning.

Trial Examiner Ballinger: The motion is granted. And now at 4:50 o'clock p. m., July 3, 1942, the hearing stands adjourned to be reconvened at 9:30 o'clock a. m., July 4, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

6101 (Whereupon, at 4:50 p. m., July 3, 1942, the hearing in the above-entitled matter was adjourned.)

6102 Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Saturday, July 4, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

6103 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening of Docket No. 4389 of the case entitled In the Matter of Standard Oil Company of Indiana, at 9:30 a. m., July 4, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in the same room in the same city, July 3, 1942.

Before opening the hearing, the Examiner inquires of counsel whether there is any objection to proceeding with this case on the 4th day of July.

Mr. Austin: None by me.

Mr. Hanley: In response to the inquiry of the Examiner, counsel for the respondent states that the respondent waives any objection to proceeding on this day, this day being July 4th.

Trial Examiner Ballinger: And counsel for the Commission likewise makes a similar waiver?

Mr. Austin: Yes.

Trial Examiner Ballinger: The reporter will note counsel for the Commission and respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

6104 *Direct Examination by Mr. Austin.*

Q. Mr. Warmack, you gave a considerable amount of testimony yesterday regarding the methods of allocation applied by the respondent in distributing the expense of salaries of certain of its employees between the various customer and product channels on Respondent's Exhibit 101. Does all of your testimony in that regard apply equally to the treatment made by the respondent of the traveling expenses of these same employees which are entered in Account 030 on Respondent's Exhibit 101?

Mr. Hanley: Just a moment. The question is objected to as calling for a conclusion of the witness as to how the respondent developed its accounts and, further, as a conclusion relative to a study that the witness made which he has now testified to that he just never did make.

(There was a discussion off the record.)

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: Mr. Austin, do you mean by that question to ask the witness whether he made an investigation to determine that the same method was applied?

Mr. Austin: No. That is already right in the record, your Honor. The respondent's exhibits show that the treatment of the traveling expenses followed the treatment of the salaries.

6105 Trial Examiner Ballinger: The objection is overruled. You may answer the question.

The Witness: The answer is yes, sir.

By Mr. Austin:

Q. And does the testimony which you have given regarding the treatment made by the respondent in this cost study of the salary expense going into accounts 000 and 001 apply equally to the treatment made by the respondent of the expense in Accounts 045 and 100, such expense being the operation and maintenance and depreciation of the vehicles of the individuals whose salaries are entered as an expense in Accounts 000 and 001?

Mr. Hanley: That is objected to for the reason that the testimony of this witness speaks for itself, whatever he has said.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Yes, sir. I should like to call attention to the fact that in Account 030, 045 and Account 100 we are speaking here of only that portion of the expense which was contained in those accounts which applies to each of the separate individuals.

For example, the field manager of the Detroit field, Mr. Raupagh, would have a certain part of each of those expenses and, for example, the other separate super-
6106 visory officials would have a portion of those expenses applicable to them, so to speak, individually; each portion of these accounts following the supervisory officials, and therefore inasmuch as the separations were made of these three accounts, after breaking them down to the separate officials, inasmuch as the separations were made according to the same methods in which the salaries were separated, the same testimony with respect to the separation of the salary would apply equally to the separation of the expense of that particular individual.

By Mr. Austin:

Q. I would now like to refer to Account 004 "Salaries—Salesmen." I think the record shows very fully and at length what the nature of the expense is that is included in that account and the treatment of that expense in the company's regular accounting procedure is described on pages 1 to 3 of Respondent's Exhibit 99. The treatment made of the expense of that account for the purposes of this cost study is described at pages 6 to 22 of Respondent's Exhibit 100.

I refer you to page 1 of Respondent's Exhibit 99. The first sentence of that page reads:

"A memorandum is maintained by each salesman showing the amount of time spent in selling products applicable to each channel of distribution during the last month of each quarter."

6107 For what purpose is that memorandum used, Mr. Warmack?

Mr. Hanley: That is objected to as not within the knowledge of the witness, as shown by any testimony heretofore given.

Mr. Austin: I will strike that last sentence of the question.

Trial Examiner Ballinger: The sentence is stricken.

Q. How was that memorandum used in the preparation of Respondent's Cost Study represented by Respondent's Exhibit 101?

A. No such memorandum is maintained and no such memorandum exists, as far as I was able to learn in the course of my examination of the company's records during the early part of this year in Detroit.

Trial Examiner Ballinger: Will you state what your investigation consisted of with reference to this particular item?

The Witness: Yes, sir. With reference to this particular item, inasmuch as here is the statement in Respondent's Exhibit 99 on page 1 that "A memorandum is maintained by each salesman showing the amount of time in selling products applicable to each channel of distribution during the last month of each quarter," that memorandum being, as I understand it, your Honor, the
6108 data on which salesmen's distribution time sheets
would be primarily based. Then, in the course of my studies in Detroit, that is, in the office of the respondent in Detroit, I asked to see that memorandum.

Trial Examiner Ballinger: That is the basic memorandum?

The Witness: Yes, sir.

Trial Examiner Ballinger: Whom did you ask?

The Witness: I asked a number of the men in Detroit, in the Detroit office.

Trial Examiner Ballinger: Can you name them?

The Witness: Yes, sir. I asked Mr. Houghton, who was sent to Detroit from the Chicago office to work with me there. I asked Mr. Raupagh, who referred me, of course, to Mr. Hamer, and I asked Mr. Hamer, and I asked Mr. Bath, and I asked Mr. Locke. I was told by each of these gentlemen that no such memoranda existed or, as far as they knew had ever existed.

Carrying that a little further, in my discussions with these gentlemen it was pointed out to me that the distribution time sheets were worked upon the third month in each quarter during the year for the purpose of serving as a basis for the distribution of salesmen's costs during the three ensuing months in each instance.

Trial Examiner Ballinger: Did they explain to you
6109 how they were worked up?

The Witness: Yes, sir, and I asked—

Trial Examiner Ballinger: State what explanation they offered.

The Witness: Your Honor, I have prepared a memorandum on that and I submitted that memorandum to the men named.

Mr. Hanley: Just a moment, what men?

The Witness: I just named the men in the record. Do you want their names again?

Trial Examiner Ballinger: Name them again.

Mr. Austin: Will the reporter read the Examiner's last question, please?

(The question referred to was read by the reporter.)

Mr. Austin: All right.

The Witness: Your Honor, in response to that question I prepared a memorandum which in my opinion was what they stated to me while in Detroit, submitted that memorandum to Mr. Hamer, Mr. Locke, and Mr. Bath, and, of course, Mr. Houghton got a copy of it, setting forth what these gentlemen said was done. I can read the memorandum.

Mr. Austin: We will come to that.

Mr. Hanley: Just a moment.

Trial Examiner Ballinger: Just one moment.

Mr. Hanley: It is moved that the answer of the
6110 witness be stricken on the ground and for the reason that he is referring to some memorandum which he says he prepared but which is not in evidence and which has never been offered to either the Government or the respondent or the Court, and no one knows what may be included in the memorandum referred to by the witness.

Trial Examiner Ballinger: Before ruling on the objection, the Examiner asks the witness a further question. Did the parties you have referred to and to whom you showed the draft that you prepared make any objections to it, or did they approve it as to the factual matters?

The Witness: That memorandum was approved as to factual matters, your Honor. I might call your attention—

Mr. Hanley: Just a minute, that answer is objected to as a conclusion of the witness, whatever memorandum, which does not appear in evidence, never having been offered by the witness, if approved by any employee of the respondent company, is hearsay as to the respondent and the respondent is not bound by any conclusion that may have been made by any employee of the company until and unless it is shown what the memorandum contains and who the employee was and what he said.

Trial Examiner Ballinger: Ruling on the objection is reserved until the Examiner asks the witness further questions.

Have you that memorandum?

6111 The Witness: Yes, sir.

Trial Examiner Ballinger: Is it here?

The Witness: I believe that it is.

Mr. Austin: I have it.

Trial Examiner Ballinger: Will you produce it?

Mr. Austin: I have what I understand is the memorandum of the witness.

Trial Examiner Ballinger: Will you produce it?

Mr. Austin: I propose to offer it in evidence in the course of the testimony this morning, your Honor. I will produce it now, of course, if you ask for it.

By Mr. Austin:

Q. Is that the memorandum your referred to, Mr. Warmack?

Trial Examiner Ballinger: Will it interrupt your examination of the witness if it should be introduced now?

Mr. Austin: I think that I would like to lead up to it, since, as I understand it, the memorandum is a description of the methods used by the respondent in allocating salesmen's salaries in their regular accounting procedure.

Trial Examiner Ballinger: With the assurance of counsel for the Commission that the memorandum referred to will be offered in evidence, the objections of counsel for the respondent are overruled.

Mr. Hanley: Let the record show that the respondent now requests information as to whose memorandum
6112 and what memorandum has been under discussion by the Court and counsel for the Government.

Trial Examiner Ballinger: The record fully portrays what memorandum was under discussion. The request is denied.

By Mr. Austin:

Q. Does the company prepare time schedules during the last month in each quarter which it uses to separate salesmen's salaries between channels in its regular accounting procedure, Mr. Warmack?

A. Yes, sir.

Q. Referring to page 15 of Respondent's Exhibit 100, I call your attention to the list of different classes of salesmen on that page, the list comprising about ten different classifications of salesmen. What is the principal class of salesmen in number of salesmen employed in the Detroit field?

Mr. Hanley: That is objected to as calling for a conclusion and an opinion of the witness as to what is the principal class of salesmen employed in the Detroit field.

Mr. Austin: In numbers, I said.

Mr. Hanley: If your Honor please, there are rules of evidence, and it is just requested that the Commission be required to pay some attention to them.

Trial Examiner Ballinger: The exhibit undoubtedly shows which class are the most numerous. For con-
6113 venience, the objection is overruled. The witness may answer.

A. Reseller salesmen.

Mr. Hanley: If your Honor please, it is moved by the respondent that the answer of the witness be stricken for the reason that the exhibit referred to does not show the classes of salesmen by numbers.

Trial Examiner Ballinger: It does show, does it not, the salaries paid to the classes?

Mr. Austin: Your Honor, that information is shown on Commission's Exhibits 88, 89, 102, 103, and I think one other exhibit for various quarters in 1940; in fact, for the entire year 1940.

Trial Examiner Ballinger: Is the exhibit referred to which the Examiner understands is page 15 of Respondent's Exhibit 100—is the Examiner correct?

Mr. Austin: And I have just referred to other exhibits of the Commission which have that information specifically.

Mr. Hanley: It is objected to.

Trial Examiner Ballinger: Just a moment, Judge. If Exhibit 100, page 15, does not contain factual matter sufficient to enable the witness to answer the objection is sustained. You will have to refer to other exhibits.

Mr. Hanley: That was the purpose of my further objection, your Honor, and may I make the record? It is
6114 objected to by the respondent, in that counsel for the
Commission has failed to identify any other or different exhibits than Respondent's Exhibit No. 100 to which he refers.

Trial Examiner Ballinger: The objection has been sustained.

Mr. Hanley: I just want to make the record, sir.

Mr. Austin: Do I understand, your Honor, that I can only ask the witness questions about the Respondent's business only when I refer him to certain exhibits, when the witness has spent two months in Detroit getting this information and when he states it within his own knowledge?

Trial Examiner Ballinger: The Examiner requests the reporter to turn back to the question asked by counsel for the Commission and read it.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: The answer of the witness would of necessity be obtained from an examination of the page of the record referred to. Now, if counsel desires the witness to testify to some matters within his own personal knowledge, he may broaden his question.

Mr. Austin: Yes, your Honor, I think perhaps you misunderstood the scope of the question: The reference to page 15 of Respondent's Exhibit 100 was merely a convenient means of calling attention to the different classes of salesmen, with no reference to numbers. Now, I intended
the next question to be a separate question. May I
6115 again ask the witness a question?

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Just a moment. The statement of counsel is objected to, as it appears that it is an attempt to indicate to the Court a particular instruction as to some portion of the testimony, namely, page 15 of Respondent's Exhibit 100.

Trial Examiner Ballinger: The Examiner will state on the record he will not be influenced by the suggestions offered by counsel for either side.

Mr. Hanley: I am just very sure of that, Judge, but

I want to make my record anyhow, and the respondent objects to the essential inferences in the statements made by counsel for the Commission.

By Mr. Austin:

Q. Can you state from your knowledge of the record and from your investigation in Detroit which class of the various classes of salesmen listed upon page 15 of Respondent's Exhibit 100 is the most numerous in number of salesmen employed?

A. Yes, sir.

Q. Will you so state?

A. Reseller salesmen.

Q. Now, referring to Commission's Exhibit 88, which is the salesmen's quarterly distribution time report for June, 1940, will you state the number of salesmen

6116 of each class employed by the company during that quarter?

A. The total salesmen were 63. Now, do you wish them by classes?

Q. Yes.

A. Industrial salesmen, 11; lubricating engineers, 3; automotive engineer, 1; city salesmen, 6; reseller salesmen, 26; B-station salesmen, 6; asphalt products salesman, 1; special salesmen, reseller, 4; special salesman, heating oil, 1; domestic heating oil salesmen, 4; making a total of 63.

Q. Will you now explain, Mr. Warmack, how the separation of the expenses of these salesmen between the channels on Form 189 is made in the company's regular accounting procedure, and before you answer that question let me ask you whether in answering it you desire to refer to the memorandum which you have described a few moments ago in your testimony?

A. Yes, sir. I think the memorandum states rather clearly and completely what happened.

Mr. Austin: I would like to have this paper marked for identification, please.

Trial Examiner Ballinger: The reporter will mark the paper Commission's Exhibit 131-A, -B and -C.

(The memorandum referred to was marked for identification as Commission's Exhibit 131-A, -B and -C.)

There was a discussion off the record.)

6117 By Mr. Austin:

Q. Mr. Warmack, you testified a few moments ago to having made a memorandum in Detroit, which was shown to and approved by Mr. Houghton and other members of the respondent's accounting staff.

A. Yes.

Q. I show you Commission's Exhibit No. 131-A, B, and C for identification, and ask you if that is the memorandum to which you referred in your testimony?

A. Yes, sir. It is.

Q. And does this memorandum, Commission's Exhibit 131 for identification, set forth the method employed by the respondent in arriving at the percentage factor for reseller salesmen which are set forth on the salesman's quarterly distribution of time reports used by the company in allocating the expenses of reseller salesmen between channels on Form 189 in its regular accounting procedure—

Mr. Hanley: That is objected to—

Mr. Austin: I have not completed my question.

Mr. Hanley: Please do so.

By Mr. Austin:

Q. —as approved by the respondent's accountants formerly testified to by you.

Mr. Hanley: Have you finished?

Mr. Austin: Yes.

6118 Mr. Hanley: That is objected to for the reason that it attempts to recite what is shown by the exhibit, the exhibit being the best evidence and for the further reason that the question assumes to say what the accountants for the respondent company stated, or said, or concluded, which is an assumption by counsel for the commission.

Trial Examiner Ballinger: Objection is overruled.

By Mr. Austin:

Q. What is your answer?

A. I would like to hear the question read.

Trial Examiner Ballinger: Read the question.

(The question was read by the reporter.)

The Witness: Yes, sir.

Mr. Austin: I offer Commission's Exhibit 131 for identification in evidence.

Mr. Hanley: May we be off the record?

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: This is a rather lengthy document. I would like to ask for a short recess in order to go over it.

Trial Examiner Ballinger: The hearing will be in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

6119 Mr. Hanley: If your Honor please, may the Respondent reserve an objection, if any, to Commission's Exhibit marked for identification 131-A, B, and C?

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: On the record. Commission's Exhibit 131-A, B and C for identification is admitted in evidence, the right being reserved for counsel for respondent to renew his objection, and also to move to strike.

Mr. Hanley: May it be understood that counsel for the respondent may make any objection that counsel for the respondent thinks is impertinent to the exhibit.

Trial Examiner Ballinger: That is correct.

(The document referred to, heretofore marked for identification Commission's Exhibit 131-A, B, and C was received in evidence.)

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Turn to page 2 of Commission's Exhibit 131, the statement appears:

> "In checking and reviewing the percentages, Mr. Hamer has at his disposal certain information obtained from 6120 special salesmen, whose duty it is to travel the field with the regular reseller salesman. It was stated in conference with Mr. Hamer that these special salesmen occasionally make personal notes of the actual time devoted to the separate channels and products by the reseller salesman on those days when they accompany the reseller salesman."

Did you ask Mr. Houghton or Mr. Hamer to be shown any of those personal notes, which I understand from the exhibit Mr. Hamer referred to as being occasionally made by the special salesman?

A. Yes, sir.

Q. And did you see any such notes?

A. No, sir. There was none available I was told by Mr. Hamer and Mr. Houghton.

To amplify that I was told by Mr. Hamer that those notes were not kept as a matter of any continuing record of the respondent company, so, I asked Mr. Hamer to show me the notes if he had any for the last month in which those distribution sheets has been prepared prior to my investigation. That would be for December, 1931.

Q. Do you mean December, 1941?

A. December, 1941. I was told that the company could not produce any of those notes.

Mr. Hanley: May we be off the record?

6121 Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Now, referring to Commission's Exhibit 88, 89, 102, and 103, which are the quarterly distribution of time reports for salesmen used for the allocation of salesmen's salaries for the year 1940, are the composite percentages at the bottom of those time reports, percentages representing the percentages of the time of the respondent's salesmen devoted to different channels and products during the preceding three months?

Mr. Hanley: Have you finished, Mr. Austin?

Mr. Austin: Yes.

Mr. Hanley: That is objected to for the reason that the exhibit speaks for itself, and the question propounded to the witness assumes that the calculations appearing on the exhibit may ~~result in~~ something different from what they appear to show.

The respondent has no objection to the witness testifying to the fact, if it be a fact, that the calculation on the exhibit is a different result from that shown on the exhibit, but the respondent does object to the witness merely reciting what the exhibit shows.

Trial Examiner Ballinger: Objection is overruled.

6122 The Witness: Please read the question.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Those composite percentages represent an estimate of the total time of this class of salesmen which are expected to be used for distribution purposes, or which are to be used for distribution purposes during the next three ensuing months in each instance, Mr. Austin.

They represent the time which is expected to be expended; that is, the composite time giving effect to the estimates of time for each class of salesmen during the next three ensuing months.

By Mr. Austin:

Q. Mr. Warmack, I asked you specifically whether those facilities are used for the allocation of salesmen's salary expenses for the preceding three months; that is, the months appearing on the form plus the preceding two months.

A. No, sir.

Q. Then are those composite percentages—if I understood you correctly, those composite percentages are applied in distributing salesmen's salary expense for the quarter following the time when the distribution of time reports is compiled?

A. Yes, sir. That is correct.

Q. And at the time these reports are compiled—still referring to the same four exhibits—has the expense 6123 to which those facilities are later applied, been incurred?

A. I—

Mr. Hanley: (interposing) Just a minute. That is objected to as pure conclusion of the witness, and not being shown a foundation that the witness knows whether or not the factual matter included in the question of counsel for the Commission was taken into consideration by the accountants for the respondent company when they made Exhibits Nos. 88, 89, 102 and 103.

Trial Examiner Ballinger: Objection is overruled. Answer the question.

The Witness: No, sir.

Mr. Austin: I would like to have the question read.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:)

"And at the time these reports are compiled—still referring to the same four exhibits—had the expense to which those facilities are later applied, been incurred?"

The Witness: Well, I would like to hear it read again.

Trial Examiner Ballinger: Read it again.

(The reporter again read the question.)

6124 The Witness: They are.

By Mr. Austin:

Q. You previously said "No."

A. I did not mean to say "No" in answer to that.

Mr. Hanley: I—

The Witness: (Interposing.) I thought that the question read a little differently.

Mr. Hanley: Inasmuch as the witness has now answered by "Yes," and "No" to the several past succeeding questions respondent moves to strike all of the questions and answers on the ground that the witness has not given any intelligible answer.

Trial Examiner Ballinger: Your last answer is the answer you intended to give in both instances?

The Witness: Yes, sir. If I can only give an answer without being continually interrupted.

Trial Examiner Ballinger: The motion to strike is denied.

Mr. Hanley: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

6125 Q. Mr. Warmack, did you spend a considerable amount of time, and state how much time if you can, which you spent in Detroit in the office of the company in studying and analyzing the methods used by the respondent in allocating salesmen's salaries between the various channels in their regular accounting procedure?

A. I spent considerable time, Mr. Austin, on that particular subject during the course of my study of the respondent's records in Detroit during January and February of this year.

Q. Mr. Warmack, did you find that the percentage figures and distribution of time shown on the salesman's quarterly distribution of time reports, examples of which are Commission's Exhibits 88, 89, 102 and 103, are supported by any time schedules or records of the time actually devoted by salesmen to different channels or products, prior to the compilation of the quarterly reports?

Mr. Hanley: Now just a moment. That is objected to as calling for the conclusion and opinion of the witness, and an improper question in that it asks the witness as to what he found in respect of certain exhibits.

There is no objection to the witness stating what he did and what figurative conclusions he reached in connection with his study.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: The objection is overruled.

6126 Mr. Hanley: If your Honor please, I believe we are entitled to have questions and answers which may be made the subject of cross-examination. I do not see how this possibly can be.

Trial Examiner Ballinger: The Examiner has ruled. The witness may answer.

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Mr. Hanley: That is further objected to for the reason that there is no foundation laid.

There is not indicated whether or not any request was made, or whether any information was furnished, or whether any information, in fact, exists in the records and accounts and data of the respondent company relative to the fact whether or not any records exist relative to the character of the accounts referred to in the questions.

Trial Examiner Ballinger: The second objection of counsel for the respondent to the question is overruled.

The Witness: May I hear the question again?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I found no documentary evidence of any kind whatsoever in the Detroit office, and was told that none existed which was supported or which would support these time schedules, Commission's Exhibits 88, 89, 102 and 103.

6127 By Mr. Austin:

Q. Told to whom?

A. Told by Mr. Houghton, Mr. Hamer, Mr. Bath, and probably others.

Mr. Austin: I move that we adjourn until 9:30 Monday morning, July 6, 1942, at the same place.

Trial Examiner Ballinger: The motion of counsel for the Commission is granted. And now at 11:30 a. m., July 4, 1942, the hearing is adjourned to be reconvened on July 6, 1942, at the hour of 9:30 a. m., in Room 388, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 11:30 a. m., July 4, 1942, the hearing in the above-entitled matter was adjourned.)

6128

Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Monday, July 6, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois, appearing for the Respondent.

6129 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

This is a reconvening of Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana," at 9:30 a. m., July 6, 1942, in Room 388, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at the same place on July 4, 1942. The reporter will note the counsel for the Commission and Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Austin.

Q. Mr. Warmack, will you refer to Commission's Exhibits 88, 89, 102, and 103, please?

A. Yes, sir.

Q. From those exhibits, can you state what percentage of the salesmen's salaries were charged to the tank wagon reseller channel during the year 1940 by the Respondent in this regular accounting procedure?

A. Yes, sir.

Q. Please do so.

A. Yes, sir.

6130 The figure worked up in December, 1939, was 31.7 per cent, which was for the allocation of this expense for the months of January, February, and March, 1940.

The figure worked up in March, 1940, was 30.5 per cent, which was used for the allocation of this class of expense during the months of April, May, and June, 1940.

The percentage worked up in the month of June was 29 per cent, which was used for the distribution of the salesmen's time in July, August and September of that year.

The figure worked up in September, 1940, was 28.6 per cent, which was used for the allocation of time in the months of October, November, and December of 1940.

Q. For the purpose of allocation between the tank wagon reseller, tank wagon consumer, and other method channels, were those percentages that you stated applied to the entire salesmen, or only to salaries of certain classes of salesmen?

A. In the company's regular accounting procedure they were applied for the most part to all of the salesmen's salaries, Mr. Austin.

I might refer you to page 2 of Respondent's Exhibit No. 99, which will give you the method employed, or at least a greater detail of the methods employed. It shows an illustration there of the allocation of costs for the months of January, 1940, and July, 1940.

Q. You just said "for the most part"; that these 6131 percentages were charged to all salaries. Page 2 of Respondent's Exhibit 99 says that total salaries paid to salesmen for the months of January and July were distributed according to the example there given. What did you mean when you said "for the most part"?

A. I meant exactly that, Mr. Austin. There would be some slight adjustments coming in with respect to those salaries. And there would be a few of what we might term "minor allocations" made, even at page 2 of Respondent's Exhibit 99 would not be gone into; but I would not regard that as any material change from the fact that practically all of the expense was allocated on the basis of composite percentages—the total composite percentages as shown by those four respective exhibits for the months stated.

Q. Considering salesmen's salary expense in account 004 as a whole, in the entire exhibit for the year, what percentage of that expense was entered by the Respondent in the tank wagon reseller channel in the Detroit field, Form 189?

A. Approximately 28 per cent, Mr. Austin.

Q. Did you check that percentage?

A. Yes, sir.

Q. I wonder if you would mind checking that Mr. Warmack, now, if it would not take too long, so as to give us the exact percentage?

A. I would be glad to if you will furnish me some paper.

6132 Trial Examiner Ballinger: Here is some paper and a pencil.

(The witness made certain calculations.)

The Witness: The percentage, as shown in the 004 account entitled "Salaries, Salesmen," is 29.19 per cent. for the year 1940.

Trial Examiner Ballinger: 004 account of what exhibit?

The Witness: 004 account of Commission's Exhibit 119, your Honor.

By Mr. Austin:

Q. Now, Mr. Warmack, you have said as shown on, or at least I think you said in your answer just given when you referred to the percentage shown in account 004—does Commission's Exhibit 119 show any percentages?

A. No, sir. That is my calculation, Mr. Austin.

Q. I want to make that clear.

A. Yes, sir.

Q. Will you now turn, please, to Respondent's Exhibit 100, to page 18.

A. Yes, sir.

Q. Also turn to page 19.

A. Yes, sir. I have both pages.

Q. As shown on page 19 of Respondent's Exhibit 100,

the portion of salesmen's salaries in account 004
6133 which were allocated to direct shipment business in this cost study amounted to $13,639.17.

In transferring that expense for the purposes of this cost study from the tank wagon reseller, tank wagon consumer, and other methods channels, to the direct shipment channels on Respondent's Exhibit 101, what portion of this amount of $13,639.17 was removed from, or deducted from the amount of expense entered in the tank wagon reseller channel on company form 189, Commission's Exhibit 119?

A. 2.67 per cent.

Q. Then do I understand that in the company's regular accounting procedure, 29 per cent of the salaries of all salesmen were allocated to the tank wagon reseller channel, whereas only 2.67 per cent, of the amount of salesmen's salaries charged to direct shipments was deducted from the tank wagon reseller channel?

A. That is an correct assumption, sir; as a matter of fact, that is what was done.

Q. What would be the effect on the amount of marketing expense of the Respondent entered in the tank wagon reseller channel for account 004, on Respondent's Exhibit 101, if the same portion of the direct shipment in account 004, as shown on Respondent's Exhibit 101; that is, 29 per cent., had been removed from the tank wagon reseller channel expense for that account, for the purposes of 7
6134 this cost study, as was originally charged to that account in the company's regular accounting procedure?

The Witness: I am afraid I do not quite follow that question.

Mr. Austin: I will withdraw the question and restate it.

Trial Examiner Ballinger: The question is withdrawn and will be restated.

By Mr. Austin:

Q. What would be the effect on the amount of marketing expense of the Respondent entered in the tank wagon reseller channel for account 004, in Respondent's Exhibit 101, if the same portion of the direct shipment charge, namely, 29 per cent. had been removed from the tank wagon reseller channel expense for that account for the purposes of this cost study, as was originally charged to that account in the company's regular accounting procedure?

Do you understand that question, Mr. Warmack?

A. Yes, sir, I do.

Mr. Hanley: That is objected to for the reason that it is immaterial what the effect, as inquired about in the question, would be in cost study prepared by the Respondent as reflected by Respondent's Exhibits 99, 100 and 101, since that cost study which, as stated, was prepared by the Respondent in those four named exhibits, are a 6135 factual study of the costs applicable to direct shipment business, and unless and until it is demonstrated that the factual allocations made by Respondent of the cost of direct shipment business are erroneous, the answer of the witness could have no probative value, but would simply be a hypothetical speculation.

Trial Examiner Ballinger: The objection is overruled.

6136 The Witness: The figures as shown in Respondent's Exhibit 101 on Account 604 in the tank-wagon reseller column would be reduced.

I might add that in this connection I made a study in the Detroit office for the months of July, August, and September, 1940, as a test, your Honor, to see just what the effect would be, during those months, it being observed in my review of the respondent's cost report, Respondent's Exhibit 100, that $13,639.17 of this class had been determined by respondent's accountants as being applicable to the direct shipment business.

In view of the fact that Respondent's cost study did not carry through the analysis of this particular class of expense as between tank-wagon reseller channel, tank-wagon consumer channel, and other methods channel on Respondent's Exhibit 101 for 1940, I had to inquire into how this particular class of expense had been handled with reference to those channels as it had been originally applied.

According to the testimony as given by Mr. Boatwright, this portion of this class of expense which is regarded by Respondent as applicable to the direct shipment business has been removed from the regular distribution channels on Respondent's Form 189 in the exact manner that it had originally been applied to those channels in Respondent's regular accounting procedure in the Detroit 6137 field for the year 1940, which would mean that 29.19

per cent of this class of expense had been assigned by respondent in its regular accounting procedure to the tank-wagon reseller column.

In my studies and analysis of this item, from my review of Respondent's Exhibit 100, I found that only 2.67 per cent of this particular class of expense had been removed from the tank-wagon reseller channel for the year 1940 in respondent's recent cost survey.

Now, in my studies and detailed analysis for the months of July, August and September I found that by removing from the tank-wagon-reseller channel in respondent's regular form 189 only 2.67 per cent of this class of cost which had been in the late study assigned to the direct shipments, instead of removing 29.19 per cent as an item had originally gone into that tank-wagon reseller channel in the regular accounting procedure, I found that for those particular three months the tank-wagon channel in Respondent's Exhibit 101 for Account 004 had been overstated by the amount of $581.42.

Mr. Houghton of the Chicago office of the respondent and I together worked up this figure. I did not make the calculation for the complete year because of the pressure of time. I assumed that this test would be sufficient.

If this $581.42 were projected for one year, it means that the tank wagon reseller column on Respondent's 6138 Exhibit 101 is overstated by approximately $2,325.68.

Trial Examiner Ballinger: What is the total amount of the account?

Mr. Austin: You mean Account 004?

Trial Examiner Ballinger: Yes.

The Witness: The amount of Account 004—

Trial Examiner Ballinger: As overstated?

The Witness: —as shown in tank wagon reseller column, is $60,181.54. It is that item which includes an overstatement.

By Mr. Austin:

Q. Did you make any study and analysis of salaries paid to industrial salesmen in the Detroit field for the year 1940 during your investigation of this cost study?

A. Yes, sir.

Q. What were the total salaries paid to industrial salesmen employed by the respondent in the Detroit field for the year 1940?

A. $33,924.00.

Q. Referring again to Commission's Exhibit 88, 89, 102 and 103, will you state what the first line of each of those exhibits represents, if you will?

A. It represents the time allocation and product allocation for industrial salesmen. It might be noted that in the
case of Exhibit 102 the first line says "Lubricating
6139 Salesmen." I think that is a typographical error.
It means industrial salesmen.

Q. On Commission's Exhibit 102, is there any class of salesmen listed as industrial salesmen?

A. No, sir.

Q. And does the classification "Lubricating Salesmen" appear in the same place on Exhibit 102 that "Industrial Salesmen" appears on Exhibits 88, 89, and 103?

A. Yes, sir.

Q. Are the number of lubricating salesmen shown on Commission's Exhibit 102 the same as the number of industrial salesmen shown on Exhibits 88, 89, and 103?

A. It is identical.

Trial Examiner Ballinger: Did you prepare Commission's Exhibit 103?

The Witness: No, sir.

(Discussion off the record.)

Trial Examiner Ballinger: We will take a recess for five minutes.

(A short recess was taken.)

6140 By Mr. Austin:

Q. Then, for the purposes of answering the question which I am about to ask you regarding industrial salesmen, will you assume, Mr. Warmack, that the term "lubricating salesmen" on Respondent's Exhibit 102 refers to the same class of salesmen as is referred to by the term "industrial salesmen" on Commission's Exhibits 88, 89, and 103?

A. Yes, sir.

Q. How many industrial salesmen are shown on those four exhibits?

A. Eleven.

Q. Is the number the same on each of the four exhibits?

A. Yes, sir.

Q. As shown by those four exhibits, do the industrial salesmen spend any part of their time on tank wagon reseller business?

A. No, sir.

Q. How much of their time is shown to be spent on tank wagon consumer business?

A. 12.46 per cent is the time that is spent on tank wagon consumer business, Mr. Austin. It will be noted that these exhibits do not show that identical figure. That means the relation that 137 bears to 1100, which are the figures shown on the respective exhibits, being Commission's Exhibits.

Mr. Hanley: If your Honor please, I would like to 6141 ask a question. May I?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Does your answer just given, Mr. Warmack, mean that you have made a calculation yourself which developed this percentage of 12.46?

A. Judge Hanley, I did make the calculation. That is verified by the—

Mr. Hanley: (Interposing) That is all I wanted to know, as to whether or not the 12.46 is your figure.

The Witness: That is correct, and it is verified by Respondent's Exhibit 100, page 18.

By Mr. Austin:

Q. What are the figures shown on Commission's Exhibits 88, 89, 102 and 103 for industrial salesmen for the tank wagon consumer channel, the other methods, and the automobile supplies channel?

A. The figures shown are identical for all exhibits.

Tank wagon consumer channel	137
Other methods channel	958
Automobile supplies channel	5
making a total of	1100.

Q. What is the meaning of the figures 1100 appearing on those four exhibits?

A. That is the number of salesmen, which is 11 multiplied by 100.

6142 Q. Then you referred to the fraction 137 over 1100. Does that fraction indicate the amount of time spent by industrial salesmen on tank wagon consumer business, or does it indicate the percentage or the proportion of salaries of industrial salesmen which was allocated to the tank wagon consumer channel by the Respondent in it regular accounting procedure for the year 1940?

A. It represents the proportion of time which Respondent assumes or estimates will be expended by this class o employees on that distribution channel; that is, the tan wagon consumer business.

Q. What I am trying to get at, Mr. Warmack, is: Do those divisions of time of industrial salesmen shown on th four exhibits show or do they purport to show the amoun of time actually spent by industrial salesmen on differen classes of business, or are they merely distribution figure arrived at in the method previously described by you whe you described the method by which the Respondent compiles the quarterly distribution of time reports?

A. They are distribution figures, Mr. Austin. They ar estimates of what the company assumes will be the proportion of time which this class of salesmen will expend o tank wagon consumer business, as I have previously described in connection with the reseller salesmen.

Mr. Austin: Off the record.

6143 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Now, did I understand you to say, Mr. Warmac that 12.46 per cent of the salaries of industrial salesme was assigned by the company for 1940 to the tank wago consumer channel?

The Witness: Will you read the question, please?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: That is the estimate of time, Mr. Austi that it was expected would be expended by this class c salesmen. That figure was not used, not that identic figure was used for the separation of this class of expens

By Mr. Austin:

Q. What figure was used?

A. A composite figure of all salesmen, of which this i a component part.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: As I understand, the Respondent has a continuing objection to the witness reading simply what already appears in admitted exhibits.

6144 Now, if your Honor please, Respondent objects to the continuation of any examination relative to lubricating or industrial salesmen, assuming that that may be the same class of salesmen, and any allocation of their time or expense incident to their work to the consumer channel as appearing on Respondent's Exhibit 101, as the same appears in the regular No. 189 accounting form of the Respondent, for the reason that none of that classification of salesmen, nor the channel referred to, to wit, consumer channel, has any bearing, effect, or influence whatsoever upon the differential in cost as between the two classes of customers served by the Respondent, and upon which the charge in the complaint filed herein by the Commission is based, and that this entire inquiry is wholly immaterial.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. Mr. Warmack, what percentage of the salaries of industrial salesmen is assigned in the company's calculation of the company's quarterly distribution of time reports for 1940 (Commission's Exhibits 88, 89, 102, and 103) to other methods business?

A. On each of these 958/1100's percentage of this class of expense, or 87.09 per cent of this class of expense is assigned to other methods, on the exhibits.

6145 Mr. Hanley: Now, if your Honor please, may it be understood that the objection just made by the Respondent may be considered in connection with this particular question, it now appearing that counsel is inquiring as to other methods channel on Respondent's accounting form 189, and I ask to add to that objection that it now appearing that the Respondent's quarterly time distribution estimates are, in fact, estimates only, as now indicated by this witness, and that all of this line of examination as to time distribution and as to accounting in channels other than the reseller channel and the direct channel, are immaterial inasmuch as the differential sought to be justified herein is the differential between the reseller channel and the direct shipment channel, and has no relation to or connection with the various other channels that are now being inquired into by counsel.

If your Honor please, may the Respondent have that objection as a continuing objection to this general line of examination?.

Trial Examiner Ballinger: The objection is overruled. There is reserved to counsel for the Respondent a continuing objection embracing the same grounds.

By Mr. Austin:

Q. What percentage of the salaries of industrial salesmen was assigned by Respondents to automobile supplies in the 1940 quarterly distribution of time reports?

A. 5—1100's or .45 per cent.

6145-a By Mr. Austin:

Q. Is the total of those three percentages that you have named for the tank-wagon consumer and other methods and the automobile-supplies channel 100 per cent?

A. Yes, sir.

Q. Does that mean that no part of the salaries of industrial salesmen in 1940 was assigned by the respondent to the tank-wagon reseller channel?.

A. That means that no part of their time was assigned to the tank-wagon reseller channel on Commission's Exhibits 88, 89, 102 and 103.

Q. Can you state from your investigation whether any of the time of industrial salesmen is spent in connection with tank-wagon reseller business, or do you know that? Well, I will withdraw that question.

Trial Examiner Ballinger: The question is withdrawn.

Mr. Austin: I think that is covered by the testimony.

By Mr. Austin:

Q. Were the percentages which you have just given for the various channels for salaries for industrial salesmen the percentages which were used by respondent in allocating this class of expense (amounting to $33,924.00) in 1940 to the regular channels on Respondent's form 189 shown as Commission's Exhibit 119?

6146 The Witness: May I have that question read, your Honor?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: No, sir.

By Mr. Austin:

Q. What percentages were used by the respondent in allocating salaries of industrial salesmen to tank-wagon reseller, tank-wagon consumer, and other-methods channels in its regular accounting procedure?

A. The composite percentages shown at the bottom of each of the exhibits named, that is, Commission's Exhibits 88, 89, 102 and 103.

Q. What were those percentages for the first quarter of 1940?

A. 29.7 per cent of the total salesmen salaries, which includes industrial salesmen, was assigned to tank-wagon reseller cost; 14.5 per cent was assigned to the tank-wagon consumer column; 51 per cent was assigned to other-methods column; and 4.8 per cent was assigned to automobile supplies column.

Q. Were the same percentages used for the other three quarters of 1940?

A. Did you say were the same percentages used?

6147 Q. Yes.

A. Not the exact percentages.

Q. Were the percentages for the other three quarters approximately the same as the percentages for the first quarter, or was there any substantial variation?

A. There was no substantial variation.

Q. Were these percentages applied to the $33,924.00 Industrial Salesmen's Salaries, in the separation of salesmen's salaries and expenses to channels on Respondent's Form 189?

A. They were not applied to it as such, but to explain the $33,924.00, Industrial Salesmen's Salaries constituted a part of the total of $220,826.71 of salesmen's salaries in the Detroit Field for the year 1940. It is the $220,826.71 to which the percentages were applied to make the allocation. It will be noted, of course, that those allocations were made by the month and were not made on one single annual cost.

Q. Does it or does it not follow from what you have just explained that a portion of the Industrial Salesmen's Salaries were assigned to the tank-wagon reseller channel on Company Form 189 for 1940?

A. In my opinion, yes, sir.

Q. Well, now, I asked you a question which I don't believe is susceptible of a yes or no answer.

6148 Will you read the question again, please?

(The question referred to was read by the reporter.)

The Witness: In my opinion a part of the industrial salesmen's salaries were assigned to the tank-wagon-reseller column in Respondent's Form 189 for the year 1940.

Mr. Hanley: Respondent moves to strike the answer to the question for the reason that the witness has assumed to give an opinion on a pure question of fact. This witness has stated that he has made a detailed study of salary allocations. The question of whether or not respondent did or did not allocate any industrial salesmen expense to the reseller channel is a pure question of fact and, if this witness is qualified to make the answers which he has been undertaking to make during all of the interrogation on this subject, he is qualified assumedly to answer yes or no to a question of fact relative to whether or not the respondent did or did not make the allocation referred to.

Trial Examiner Ballinger: Does counsel for the Commission desire to be heard?

Mr. Austin: Well, the witness has stated that industrial salesmen's salaries were included in the total salesman's salaries and that certain percentages were applied to the total salesmen's salaries to allocate them between channels, so that I think now he is entitled to state that in his opinion
it follows from the procedure used that a portion of
6149 salaries of all salesmen were assigned to each chan-
nel, since the percentages were applied to total salaries. I don't know that it is a question which can be answered strictly as a question of fact.

Trial Examiner Ballinger: The Examiner is of the opinion that it is factual matter, and the motion is granted and the answer is stricken.

By Mr. Austin:

Q. Were the composite percentages shown at the bottom of the quarterly distribution of time reports, Commission's Exhibits 88, 89, 102 and 103, applied to the total salesmen's salaries in charging a portion of that total to each of the respective channels on Respondent's Form 189 for 1940?

A. The answer is yes, with this little explanation: every month, Mr. Austin, there would be some little minor charge that would have some little adjustment, but for the most part, or I mean all but a very small amount, those composite percentages were used.

Q. Were used for what?

A. Used for the allocation of all of the expense, not any one part, but all of it.

Q. Including the salaries of industrial salesmen?

A. Yes, sir. To explain that, just so the record may be
clear, there would be costs from the Chicago office, Mr.
Austin, that would be included in this particular class
of expense covering somebody's salary that had come
6150 out of Chicago. That small portion of the account may
be assigned directly.

Q. I see. Now, so that this may be perfectly clear, Mr. Warmack, will you again refer to Commission's Exhibits 88, 89, 102 and 103 and state whether in the lines of those exhibits marked "Industrial Salesmen" is any part of the time of those salesmen assigned on any of those exhibits to the tank-wagon reseller column?

A. No part of it is assigned to the tank-wagon reseller column.

Q. What composite percentage of the time of all salesmen for the entire year is assigned to the tank-wagon reseller column?

Well, I will strike that question, if you please.

Prefatory to my next question, Mr. Warmack, I believe you have already stated that 29.19 per cent of the total salesmen's salaries for the entire year was assigned to the tank-wagon reseller column. Now, since none of the time of the industrial salesmen is entered in the tank-wagon reseller column on the quarterly distribution of time reports, what effect does the use of the composite percentages in the allocation of total salesmen's expense to the separate channels on Respondent's Form 189 have in your opinion from an accounting standpoint?

6151 A. I believe I could answer it best in this way, Mr. Austin: The use of the composite percentages, bearing in mind all of the facts pertaining to the way they were arrived at, represents in my opinion, from an accounting standpoint, nothing more or less than a rough and ready method of allocating costs.

Q. What do you mean by "rough and ready method," Mr. Warmack, will you give us a little more technical explanation of that?

Trial Examiner Ballinger: Do you mean in effect that it is merely a rough estimate?

The Witness: Yes, sir, that is what I mean.

By Mr. Austin:

Q. Can you state what class of salesmen, if any, spend more of their time on tank-wagon reseller business than on the other classes of the respondent's business?

A. Yes, sir, the reseller salesmen, whose time was estimated by the company as applying over 52 per cent to the tank-wagon reseller business in these distribution cost sheets, Commission's Exhibits 88, 89, 102 and 103.

Q. Did you make any study of the allocation of the salaries of reseller salesmen for the year 1940?

A. Yes, sir.

Q. How many reseller salesmen were engaged in the Detroit field in 1940?

A. Usually about 26 salesmen were engaged, Mr. Austin, the year around.

6152 Q. And what was the average salary paid to each of the various classes of salesmen by the respondent in 1940, if you have any information from which you can state that?

A. I only made an analysis of the salesmen's salary account for the month of January, 1940.

Q. Do you have information from which you can state the average salaries paid to reseller salesmen and to industrial salesmen in January, 1940?

A. Yes, sir. The average salary paid to reseller salesmen in January, 1940, was approximately $215.25 a month. The average salary paid to industrial salesmen for the month of January, 1940 was shown by analysis to be $257.00 per salesman per month.

Q. Were there any salesmen in the Detroit field in 1940 whose salaries were allocated to channels on the basis of composite percentages and whose salaries were in excess of $257.00 per month?

A. Yes, sir, there were several whose salaries were in excess of $257.00 per month.

Q. What were they?

A. You mean what were the amounts of the salaries?

Q. No, what were the salesmen or the groups of salesmen who received more than $257.00 per month?

A. I refer to the analysis, Mr. Austin.

6153 (There was a discussion off the record.)

Mr. Austin: I will withdraw that question.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. Can you tell me, Mr. Warmack, what if any effect was given to the difference in the salaries of different salesmen and different classes of salesmen in the preparation of the quarterly distribution of time reports used by the respondent for allocating salesmen's expenses in its regular accounting procedure?

A. As far as I was able to learn in my study in the Detroit office of the respondent, no weighing factors giving effect to salaries of different salesmen or classes of salesmen were used in the preparation of quarterly distribution of time reports for the salesmen—that is, Commission's Exhibits 88, 89, 102 and 103.

Q. Without giving any names, can you tell me the approximate amount of the highest salary paid to salesmen by the respondent in the Detroit field in 1940?

A. You mean the salesmen's salaries whose accounts are kept in Account 004 of the respondent?

Q. That is right.

A. Around $400 per month.

Q. And what was the lowest salary paid to regularly employed salesmen in the Detroit field in 1940?

6154 A. Less than $200.00 per month.

Mr. Hanley: Just to make the record, if your Honor please, the respondent moves to strike the answer to the last question and the several answers given by the witness to questions relative to salesmen's salaries, for the reason that the same is immaterial and has no bearing whatever upon the cost differential, which is the thing in question in this lawsuit.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. In arriving at the composite percentages used for the allocation of salesmen's salary expense between channels in the company's regular accounting procedure, was the time of the salesmen earning as much as $400.00 a month given more or less weight than the time of the salesman being paid $200.00 a month?

A. As far as I was able to learn in my studies of this particular situation as to how these distribution cost sheet were prepared in respondent company's offices, the tw were treated the same.

Trial Examiner Ballinger: Given equal weight?

The Witness: Given equal weight, yes, your Honor.

Mr. Hanley: May I inquire, if your honor pleas
6155 what the witness means by "equal weight." You don'
mean that $400.00 equals $200.00?

Mr. Austin: No, we were speaking of whether the tim was given equal weight.

Trial Examiner Ballinger: The statement, as the Examiner understands it, is to the effect that they made computation of time of salesmen without taking into account the question of the amounts of salaries paid to th salesmen.

Mr. Hanley: Is that your testimony?

The Witness: That is, Judge Hanley.

Trial Examiner Ballinger: In other words, they gav the same credit to a salesman who was receiving less tha $200.00 a month that they did to a salesman who was receiving $400.00 a month in their computation, is that correct?

The Witness: It is correct, your Honor, and I shoul like to call attention to the fact that I inquired specifically into this particular question while in Detroit.

By Mr. Austin:

Q. Now, will you refer to Respondent's Exhibits 100 page 15, and I direct your attention to the line of tha page marked "Industrial Salesmen," which shows tha $3,030.26 of Industrial Salesmen's Salaries for 1940 wa assigned in this cost study to direct shipment business.

Next I refer you to page 48 of the same exhibit an
6156 ask you to note that opposite "Industrial Salesmen"
the figure $3,030.26 is again shown, and in the thre right hand columns on that page there is shown the portions of this amount which were removed from the respective channels on the Company Form 189 for 1940 fo the purposes of this cost study.

I now ask you what, if any, amount of the Industria Salesmen's Salaries were removed from the tank-wago reseller channel in making the charge of $3,030.26 to direc shipment channels?

A. No part of this class of expense was removed from the tank-wagon-reseller channel on Respondent's regular form 189.

Q. And what amount was removed from the tank-wagon-consumer channel?

A. $377.59.

Q. What amount was removed from the other-methods channel?

A. $2,639.05.

Q. And from the Automobile Supplies channel?

A. $13.62.

Q. Do those three figures total $3,030.26?

A. They do.

Q. Is that total a part of and included in the 220 odd thousand dollars of salesmen's salaries which were assigned to the four channels on Form 189, Commission's Exhibit 119, for 1940 in the Company's regular accounting procedure?

6157 A. Yes, sir, that $3,030.26 is included in the 220 odd thousand dollars, which represents this total expense for the year 1940.

Q. And when you referred to the four channels, one of those channels was the tank wagon reseller channel, was it not?

A. Yes, sir.

Q. Was any part of the 220 odd thousand dollars assigned to the tank-wagon reseller channel or to any other channel on the company's Form 189 on the basis of the respective ratios applicable to salaries of separate classes of salesmen, as shown on the quarterly distribution of time reports, Commission's Exhibits 88, 89, 102 and 103? I am not talking about the composite percentages at the bottom of those time reports. I am talking about the ratios shown in the separate lines, that is, taking the number in any one line under the channel as a portion of the total salesmen's hours for that class only.

6158 A. The answer is "No."

Q. On this cost study I want to call your attention to the fact that, as shown by Respondent's Exhibit 100 pages 15 and 18, $3,030.26 of the industrial salesmen's salaries was removed from the expense account 004, in the bulk plant channels and assigned to direct shipment channels. On the basis of what percentages was that $3,030.26 taken out of the bulk plant channel?

Mr. Hanley: Meaning reseller channels?

By Mr. Austin:

Q. Meaning tank wagon reseller, tank wagon consumer, and other methods.

A. It was taken out on the basis of percentages estimated as being the time which the industrial salesmen only spent in serving customers falling in the respective bulk plant channels, and was taken out not on the basis of composite percentages.

Q. Did that expense go into the bulk plant channels on the basis of composite percentages?

A. Yes, sir.

Q. Applying the composite charges as shown on the quarterly distribution of time reports for 1940 to the $3,030.26 only (that being the portion of industrial salesmen's salaries assigned in this cost study to direct shipment business) what portion of that amount went into the tank wagon reseller column on company form 189, Commission's Exhibit 119?

6159 A. $863.63.

Q. What portion into the tank wagon consumer column?

A. $469.08.

Q. What portion to the other methods column?

A. $1,562.10.

Q. What portion to the automobile supplies column?

A. $135.45.

Q. Now,

Mr. Hanley: (Interposing.) Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Now, referring again to page 18 of Respondent's Exhibit 101, what portion of this $3,030.26—I believe this is Respondent's Exhibit No. 100—was removed from the tank wagon reseller column for the purposes of Respondent's cost study?

A. None.

Q. What is the effect of that, in your opinion?

A. It indicates to me that for industrial salesmen's salaries the tank wagon reseller column in Respondent's Exhibit 101 is overstated by the amount of $863.63 arising from what I consider to be an erroneous method employed in taking direct shipment costs out of the respective channels on form 189.

6160 Q. In the testimony you have just given, Mr. Warmack, I have directed your attention specifically to industrial salesmen's salaries.

In your opinion, are the methods employed and the allocation of salaries of other salesmen in account 004 for the purposes of this cost study equally erroneous, and before you answer that I would like you to understand that I refer not to the amount; I am referring to the method.

A. As to the method, in my opinion, they are equally erroneous.

Q. But does it follow that in every case; that is, as to every class of salesmen the result may be to overload the tank wagon reseller channel?

A. The ultimate effect, Mr. Austin, as I have previously shown, was to overstate the tank wagon reseller channel. There are some of these salesmen's salaries which will have a little compensating effect.

Q. Do you mean classes of salesmen?

A. Yes, sir, but the ultimate effect was to overstate the reseller channel by two thousand plus odd dollars that I have just testified to.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

6161 Mr. Hanley: I would like to ask for a five minute recess.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin: I move that the hearing recess until 1:30 o'clock p. m., this afternoon, if the Examiner please.

Trial Examiner Ballinger: The motion is granted.

Now, at 11:46 a. m., the hearing stands in recess until 1:30 p. m.

(Whereupon, at 11:46 a. m., a recess was taken until 1:30 p. m., this day.)

6162 Afternoon Session.

1:30 p. m.

Trial Examiner Ballinger: Come to order.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination.

By Mr. Austin:

Q. I am going to ask you now to refer to Accounts 025 and 055 on Respondent's Exhibit 101. Account 025 is entitled, "Truck Rental Expense," and the amount of expense entered in that account on Respondent's Exhibit 101 is $75,597.79, all of which expense is entered in the tank-wagon reseller and tank-wagon consumer channels. What is the nature of that expense going into that account, Mr. Warmack, and you can answer that generally, since I believe that it has been described elsewhere in the record?

A. Are you speaking of both accounts 025 and 055?

Q. No; my question was directed only to Account 025.

A. To 025?

Q. Yes.

A. The commission agents own their own truck chassis, for which they receive a rental from the respondent, and that is what this item of expense represents.

6163 Q. Are those truck chassis to which you have just referred truck chassis used in the conduct of the company's business, Mr. Warmack?

A. Yes, sir.

Q. Are they used for the delivery of the company's products?

A. They are.

Q. Does that mean products delivered by commission agents from the respondent's bulk plants?

A. Yes, sir.

Q. Now, Mr. Warmack, this account is entitled "Truck Rental Expense" and doesn't say anything about commission agents. Does the expense in that account include solely rental expense paid commission agents, or is there any other kind of expense in there?

A. Mr. Austin, I didn't make a cold analysis of the expense account for the full year. It is my understanding, and I was told by Mr. Houghton, and what reviews that I did make in the Detroit office showed that this total expense represents payments to commission agents for the use of their truck chassis as just explained.

Q. I think the testimony shows that, but I wanted to make it clear at this point, as long as I asked you the question at all. I didn't think that this answer specifically limited the expense to commission agents, although I believe Mr. Boatwright's testimony does so.

6164 A. It is my understanding that this is solely commission agents' expense.

Q. And how was that total expense going into that account, in the sum of $75,597.79, allocated between the tank-wagon reseller and the tank-wagon consumer channels in the company's regular accounting procedure on its Form 189?

A. On a basis of gallonage, Mr. Austin, that is, the tank-wagon reseller and the tank-wagon consumer gallonage which was distributed through commission agents in the Detroit field for the year 1940.

Q. Do you have a statement of the amount of gallons of petroleum products distributed through commission agents to tank-wagon consumers and included in the tank-wagon consumer gallonage shown on company Form 189 for 1940?

A. I have a statement which was prepared in the Detroit office showing the tank-wagon reseller gallonage and the tank-wagon consumer gallonage. The statement does not include other-method gallonage.

Q. Commission's Exhibit 120 shows the total tank-wagon reseller volume through commission agents and drivers as 21,267,660 gallons. I would like to have you state the tank-wagon consumer gallonage delivered through commission agents and drivers, if you have that record, Mr. Warmack?

A. 21,461,669 gallons.

Q. What is your opinion, Mr. Warmack, as to whether the respective gallonage figures for the tank-wagon 6165 consumer and the tank-wagon reseller channels delivered through commission agents and drivers are a proper basis, from the standpoint of sound accounting, for allocation of this truck-rental expense between the tank-wagon consumer and tank-wagon reseller channels?

A. From an accounting standpoint, I rather feel that the separation could have been made on a more sound basis.

Mr. Hanley: The respondent moves to strike the answer of the witness, for the reason that his answer is merely a criticism of the methods used by respondent, without offering any alternative method which might be in his opinion a sounder method, and in consequence the answer has no probative value.

Trial Examiner Ballinger: Do you desire to ask the witness any further question, before the Examiner rules?

Mr. Austin: I would like to have my question read, if your Honor please.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: Read his answer.

Mr. Austin: I will consent that the answer be stricken and also request that the question be stricken.

Trial Examiner Ballinger: Both the question and answer are stricken.

By Mr. Austin:

6166 Q. Mr. Warmack, you have stated that this expense going into Account 025 was allocated between tank-wagon consumer and tank-wagon reseller channels on the basis of commission gallonage and the amounts of commission gallonage have just been placed in the record for each channel.

Do you or do you not consider that the expense in this account was properly and correctly allocated between tank-wagon and consumer channels, for the purpose of this cost study?

A. It is my opinion that a sounder method could have been used than the method used in the separation.

Q. Do you consider that the method used was a sound method?

A. That is an accounting point that some accountants may differ on, Mr. Austin. I do not think that it is the soundest method.

Q. What do you think is the soundest method, or have you an opinion on that point?

A. I think that this particular class of expense, that is, truck-rental expense, should follow the compensation paid to the commission agents for the separation of truck-rental expense between channels. It would appear that the trucks

are used more extensively in supplying consumer customers and that much more cost is incurred in connection therewith than the supplying of reseller customers; therefore, it would appear to me to be more reasonable and equitable
to separate the truck-rental expense on the basis of
6167 the compensation paid to the commission station
agents, rather than on the basis of total gallonage delivered.

Q. Did you intend also to include commission drivers in that statement, or only commission agents operating
bulk plants?

6168 A. Only commission agents operating bulk plants.

Mr. Hanley: Well, just a moment.

The Respondent moves to strike the answer to the second preceding question for the reason that it does not appear that the witness made any study of the allocations which should have been made, and which he says are the sounder accounting methods, and unless and until the witness so testifies, his criticism of the accounting procedure of the Respondent has no probative value.

Trial Examiner Ballinger: Motion of the Respondent is denied.

By Mr. Austin:

Q. What I am trying to find out is, Mr. Warmack, whether in your opinion this expense of this account should be allocated to the actual gallonage delivered, or should the expense be allocated upon the basis of the compensation paid commission agents for the gallonage sold through them.

A. I believe that I have already stated, Mr. Austin, that in my opinion it should ~~be~~ based upon the compensation paid to the commission agent for the reason that commission agents are paid on a basis of so-called pay gallonage.

Where commission agents deliver a truckload of gasoline to a retail filling station they receive generally the lowest pay gallon rate. As a matter of fact, the pay gallon is
the same, but they receive the lowest pay gallonage.
6169 If they deliver a truckload of gasoline to a rural
customer ten or fifteen miles in the woods from their plant, or away, they receive probably the highest pay gallonage according to the company's method of compensating these agents.

Now, it seems to me that the usage of this truck is going to follow that calculation of pay gallons of gasoline, closer than it is going to follow the gallonage.

Carrying through the same example, the chassis of truck is used in delivering a truckload of gasoline one half mile away from the plant, and the same chassis is used in delivering the truckload of gasoline many miles away from the plant.

In the calculation of the compensation to the agent as just stated, it is based upon the effort that that agent has to expend in delivering the company's product. And it seems to me from the standpoint of sound accounting that this truck rental expense should follow the compensation paid to these commission agents, or the pay gallonage basis, as worked out by the Respondent company for the payment of the compensation.

Q. Then do I understand that one actual gallon of gasoline delivered by a commission agent may actually be credited to him as more than one pay gallon?

A. Oh, yes. It may be credited as five.

6170 Q. Is the compensation paid commission agents as shown opposite account 021 based upon actual gallons or pay gallons?

A. Pay gallons.

Q. As the result of your investigation, can you state whether the ratio of pay gallons to actual gallons is larger for commission agents in the tank-wagon reseller channel or in the tank wagon consumer channel?

A. Oh, by far in the tank wagon consumer channel, Mr. Austin.

Q. Does that account for the fact that the ratio of commissions in the consumer channels and the commissions in the tank wagon reseller channel in account 021 is about two and a half to one, whereas the ratio of gallonage, actual gallons in the two channels is about one-to-one?

A. Yes, sir. That is the reason.

In other words, the commission agent gets more money for delivering the company's products to consumer customers who are at quite a distance from the bulk plant than he receives from delivering to tank wagon reseller customers who are relatively near the bulk plant.

Q. And in your opinion, is the cost of delivery of a gallon to tank wagon consumer customers larger than the cost of delivering, per gallon, to tank wagon reseller customers—again referring now only to commission agents?

A. It is my opinion that it is, Mr. Austin, and I think that it is a fact that it is.

6171 Q. Well, is your opinion based upon a study of the business and the methods used by the company, in handling these commission agent payments and allocating these expenses?

A. Yes, sir.

Mr. Hanley: If your Honor please, may the Respondent ask a question for the clarification of the record and for the further purpose of making a motion?

Trial Examiner Ballinger: You may.

Mr. Hanley: What is the influence, Mr. Warmack, of your conclusions relative to a change in the accounting practice of the Respondent, from what you term the "all gallonage basis" to the "following the compensation basis"?

The Witness: Are you talking, Mr. Hanley, with respect to account 025?

Mr. Hanley: Yes, the same one you have been talking about—the truck rental expense.

Mr. Reporter, please, perhaps you should put the words "following the compensation basis" and "all gallonage basis" in quotation marks as those are the terms used by the witness.

Mr. Witness, are you preparing to make some calculations?

The Witness: I am.

Mr. Hanley: I did not think my question called for calculations.

The Witness: Did you not use the word "influence"?

6172 Mr. Hanley: I did.

The Witness: Then it is necessary for me to make a calculation.

(The witness made a calculation.)

The Witness: Judge Hanley, I have calculated that here rapidly, and my calculation has not been checked, but from my calculation the figure shown in tank wagon reseller column for account 025, Respondent's Exhibit 101, is $37,793.36.

If that class of expense were assigned to the tank wagon reseller column on Respondent's Exhibit 101 on the basis of the compensation paid to commission agents, the figure would be approximately $22,500, or a reduction in the tank wagon reseller column of about $15,000.

Mr. Hanley: Have you prepared work sheets during your stay at Detroit, or since you got back here, or at any time, Mr. Warmack, to demonstrate your method of calculating that difference?

The Witness: Yes, sir. I think that we have prepared work sheets. They may be somewhat rough, Mr. Hanley, calculated under pressure of time, but we can produce that information.

Mr. Hanley: The Respondent now requests that the Government so produce the work sheets in connection with this calculation.

Mr. Austin: I object to that at this time.

6173 Trial Examiner Ballinger: Do you desire them at this time?

Mr. Hanley: Oh, no, Judge, but whenever it is convenient. I do not care when it is done just so we may have the opportunity to examine them.

Trial Examiner Ballinger: Do you object to that?

Mr. Austin: If Mr. Warmack has work sheets which form the basis for any computations which he puts in evidence, I am sure that he will have no objection to producing them, and they will be produced for the examination of the Respondent, if the Respondent desires to see them.

The Witness: My answer, your Honor, to the last question, and the first question which was propounded by attorney for the Respondent did not give effect to the possible application of any part of this truck rental expense to the other method channel. If any part were allocated to that, your Honor, the figure stated of $22,500, approximately, that would appear in the tank wagon reseller channel, would be further reduced.

By Mr. Austin:

Q. Do you have any opinion as to whether or not any part of this truck rental expense should be assigned to that other method channel?

A. I have an opinion; yes, sir, and it is my opinion that some of it should be.

6174 Q. Why?

A. For the simple reason that some of the lubricants sold to customers of the commission agents, receive their lubricants delivered by the trucks of the commission agent.

Mr. Hanley: The Respondent moves to strike the answer of the witness unless and until the witness indicates that he has made a study as to the amount of truck rental expense that should be allocated to these various channels including other methods channel, and enlightens the Court as to what those particular figures are; otherwise, the answer of the witness has no probative value.

Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: The motion to strike is denied.

The Witness: I would like to give a little explanation of that, your Honor, of my last statement. May I?

Trial Examiner Ballinger: You may.

The Witness: I visited one or two of these small bulk plants, which are the commission agents' workshops, so to speak, commission stations, and I personally went into the small warehouse that was at one of the stations. And I went to the trouble or took the occasion to see what was in that warehouse by short observation and
6175 discussion with Mr. Houghton, who was along, and the
agent at the station.

And I was told that those containers in that small warehouse were the various kinds of lubricants of the Respondent company, and that deliveries of these various products were made, from time to time, by trucks of the "B" station agents, but I was further told that the greatest activity of the truck and of the agent himself was in the dispensing of gasoline, fuel oil, heating oil, and such other products of that nature.

Mr. Hanley: In view of the further answer of the witness, the Respondent renews his motion to strike for the reason that the further answer of the witness does not improve the original answer of the witness, and it is now clear from the answer of the witness that he did have an opportunity and in part availed himself of the opportunity to make a study, which he did not make with a view to determine any figures in dollars and cents as to what the influence would be upon the accounting system of the Respondent in his criticisms, if his criticisms were given effect.

Further, that the witness has failed and neglected to offer any alternative accounting system of any kind which demonstrates what, in his judgment as an accountant, would be a better or a sounder, or a more accurate accounting system than that employed by the Respondent.

Trial Examiner Ballinger: The motion to strike is denied.

6176 By Mr. Austin:

Q. In answer to my question a moment ago, Mr. Warmack, you said that your testimony here regarding this Account 025 was directed only to the portion of the expense paid commission agents and not to commission drivers, and by "commission drivers" I am now referring to commission drivers out of salaried bulk plants only, whether or not that is a distinction that is made by the respondent.

In the first place, let me ask you whether commission drivers do not drive trucks for which they receive rental from the company which goes into this account?

A. I certainly don't know. It was my understanding, while in Detroit, and I believe Mr. Boatwright's testimony will bear me out on that point, that the commission drivers operating out of salaried stations were, so to speak, a very, very small part of the company's business, not even a part that would hardly be considered in any cost study. It just wouldn't make any difference much where it went, the costs of that particular class, and I am not including that here or necessarily excluding it. I understand that it is not in these accounts.

Q. What do you mean by "not in these accounts"?

A. I mean Account 025.

Q. I just wanted to be clear on the scope of your testimony, that was all.

6177 A. Yes, sir, that is correct.

Mr. Hanley: If your Honor please, may I at this time ask just one question?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Will you state positively, Mr. Warmack, whether the accounts that you have been referring to, or the items of expense which you have been referring to, are or are not in Account 025 on Respondent's Exhibit 101?

A. It is my understanding, Mr. Hanley, that they are not in there.

By Mr. Austin:

Q. Now, I will have to ask what items of expense you are both referring to.

Mr. Hanley: Are you asking the witness or counsel?

Mr. Austin: I want to know to what the witness' last answer was directed.

The Witness: It is my understanding that the expenses covered in Account 025 entitled "Truck-Rental Expense" represents payments made by the respondent company to B-station agents for the use of chassis trucks for the delivery of respondent's petroleum products.

By Mr. Austin:

Q. And is that the expense which you have referred to in answer to my questions since the lunch recess?

6178 A. That is the expense, yes, sir.

Q. All right. Now, as to Account 055, which is entitled "Vehicle-Tank Expense—Other than Mounted on Company Chassis," the total expense in that account on Respondent's Exhibit 101 is $7,807.01, and that expense is like the expense in Account 025, distributed between only the tank-wagon reseller and tank-wagon consumer channels. What method of allocation is used by the respondent in distributing that expense between those two channels, Mr. Warmack?

A. Commission-agent gallonage between the tank-wagon reseller channel and the tank-wagon consumer channel.

Q. Are the vehicle tanks referred to in the heading of that account tanks which are mounted upon the truck chassis which you have been describing in connection with Account 025?

A. Yes, sir.

Q. Will you explain a little further the nature of that expense and how it arises?

A. It is all expense, Mr. Austin, incident to the maintaining of these tanks which the B-station agents use, the company loan him, and which are placed upon his truck chassis.

Q. That is what I am getting at. You said "which the company loans him," but I haven't heard you describe that. I wish you would tell us a little more about it. How does the expense arise? Where are these tanks used?

6179 A. The agent buys the chassis and he enters into a contract with the company, gets a tank from the company, and he has that tank placed upon his chassis.

Q. Who owns the tank at that time?

A. The company. He owns the chassis and the agent sets out to deliver gasoline and other petroleum products which are loaded in this tank which is a part of the truck at that time. The expense incident to the maintenance of the tank is that class of expense shown in Account 055 on Respondent's Exhibit 101.

Q. Is that expense going into Account 055 the Capital Investment in the tank, is it Depreciation or is it Operation and Maintenance?

A. I just stated it was Maintenance.

Q. That is what I didn't understand you to say.

A. The cost of maintaining that tank, or all of those tanks.

Q. And where, if anywhere, on Respondent's Exhibit 101, is the expense of depreciation of those tanks entered?

A. In Account 106, I believe.

Q. Did you make any investigation of Account 106 while you were in Detroit and Chicago?

A. Yes, sir.

Q. Can you state how the portion of expense going into Account 106 which is depreciation on vehicle tanks mounted on other than company owned chassis is allocated between channels in the company's regular accounting procedure?

A. Yes, sir.

6180 Q. How is it allocated?

A. The ratio of reseller and consumer tank-wagon gallons sold to the tank-wagon sales.

Q. Does that refer only to commission gallonage, or to all gallonage? I don't know whether you have made any study of that, Mr. Warmack. I am just trying to find out.

A. Yes, sir, I made a study of it and I have the story of the situation here as prepared by Mr. Houghton and myself in Chicago early in this year.

Q. Just devote your attention to the particular question I asked you as to the particular allocation of this particular part of Account 106.

A. Mr. Austin, that account is not separated for its allocation.

Q. I don't know whether it is or not.

A. I will endeavor to tell you how it is done. The investment in this class of property is kept in the Chicago office and it is not separated.

Q. Do ~~you mean as between~~ —

A. As between anybody.

Q. Well, as between the vehicle tanks on Commission-Agent Chassis and the other portions of the account?

A. No, sir, they are not separated—that is, and kept such in separate ledgers. You could possibly go down and make an analysis and spend two or three months and
6181 find out where they were, but it is just not kept that way.

Q. Just a minute, that is what I wanted to find out. If there has been no separation made by the respondent for the purposes of allocation in Account 106, I will now go back to Account 055 where I was a moment ago. I thought I might include a portion of Account 106 along with the questions on Account 055, but apparently that is not possible.

A. Since we are on that, I should like to make just a little correction, your Honor.

I find that the investment analysis of the tank and truck investment in the Detroit field in December, 1941, was separate. Vehicle tanks used by B-station agents and commission drivers, as shown on the records of the Chicago office, were $58,203.40 investment, but the depreciation on those tanks was not kept separate in the Chicago office.

Q. I believe the last question I asked you about Account 055 was the nature of the expense, and I think you also stated before that that the expense in that account is allocated between tank wagon reseller and consumer channels on the basis of commission gallonage. In your opinion, is that a correct and proper method of allocation of that expense, referring now to Account 055, having in mind the purposes of this cost study?

A. In my opinion it is not.

Q. Have the reasons for your opinion been already
6182 stated in connection with Account 025, or do you have any different reasons?

A. The same reasons as stated for Account 025 will be the reasons for Account 055.

Q. Now, one more question with regard to Account 106; You have already stated, Mr. Warmack, that the depreciation on vehicle tanks mounted on trucks operated by commission agents is included in Account 106. You have stated the method by which in your opinion the expense in Accounts 025 and 055 should be allocated between tank-wagon reseller, ~~tank-wagon~~ consumer, and possibly other methods channels. In your opinion, should the same method of allocation be applied to the expense in Account 106 which represents depreciation on these vehicle tanks mounted on trucks owned and operated by commission agents?

Mr. Hanley: That is objected to, for the reason that it now appears from the testimony of the witness that he doesn't know what kind of allocations were made in Account 106.

Mr. Austin: I don't think the witness said that, your Honor.

Mr. Hanley: Just let's have the ruling of the Court.

(There was a discussion off the record.)

Mr. Hanley: It does not appear from the testimony of this witness that he knows what system of allocation
6183 was used, and there is no testimony by this witness as to what system of allocation was in fact used in connection with Account 106.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

Trial Examiner Ballinger: Do you know the method employed by the respondent in the allocation of Account 106?

The Witness: Yes, sir.

Trial Examiner Ballinger: You may answer the question. The objection is overruled.

The Witness: That portion of Account 106 which is applicable to equipment such as vehicle tanks on commission agents' chassis should be separated between channels on Respondent's Exhibit 101, in my opinion, in exactly the same manner as just described for the truck-rental expense, which is Account 625.

Trial Examiner Ballinger: We will take a five-minute recess.

(A short recess was taken.)

6184 Trial Examiner Ballinger: Come to order. You may proceed.

By Mr. Austin:

Q. I want to ask you some questions now, Mr. Warmack, regarding the advertising expense of the Respondent in 1940.

A. Yes, sir.

Q. First, with reference to accounts 005, 033, 048, and 103.

A. Yes.

Q. In these accounts are entered the salary and expenses of the field advertising representative in the Detroit field, and his assistants.

A. Yes, sir.

Q. Is a part of those accounts charged to direct shipment channels on Respondent's Exhibit 101?

A. Yes, sir.

Q. Now, how was the amount of expense of those accounts allocated to jobbers, naphtha and gasoline, and jobber, other products on Respondent's Exhibit 101, determined by the Respondent in this cost study?

A. On a basis of study of this man's time, the advertising representative's time, as described at the top of page 25, Exhibit 100.

Q. How is the remainder of the expense of that account allocated between the three bulk plant channels on Respondent's Exhibit 101, referring to accounts 005, 033, 048, and 103?

6185 A. On a ratio of gallons sold by each channel, total gallons sold by all channels, excluding direct shipments.

Q. Is that stated in one of the exhibits?

A. Yes, sir.

Q. Where?

A. Page 4 of Respondent's Exhibit 99.

Q. And is the method which you have first described just now the method of allocation used by the company in its regular accounting procedure?

A. Yes, sir.

Q. What is your opinion regarding the use of these two different methods of allocation for the purpose of distributing the expense in these four accounts between the channels on Respondent's Exhibit 101?

A. I think it is inconsistent, Mr. Austin, from the standpoint of sound accounting for the purpose of arriving at a cost differential.

On the one hand, we have an allocation made on the basis of time, on the other hand we have an allocation on the basis of ratio of gallons. It seems to me that if we are going to use time, from the standpoint of sound accounting, I think that with this class, the expense might be allocated on the basis of time throughout. If that were done I am sure I would have no objection to it.

When you make a separation on the basis of time
6186 and apply that to some of the channels, and take the remainder, which is by far the greater part of this class of expense, and separate it on the basis of gallons, and then we take the unit cost of serving several of the customers which we arrived at on a time basis, and compare that with the unit cost of serving another class of customers with the cost, a cost which has been arrived at on a gallonage basis, I think from the standpoint of sound accounting, why, it is inaccurate.

Trial Examiner Ballinger: Have you any idea as to what extent it would influence the result?

The Witness: Your Honor, the Respondent company did not carry their study through to show what part of the time of the advertising department would or could be assigned to the tank wagon reseller channel. It did make a study as to what time would be assigned—and when I say "time," I mean allocation of the expense on the basis of a time study—would be assigned to the jobber, naphtha and gasoline.

In order to prove the cost, in my opinion, it would be necessary to make a study of time for all of the expenses rather than for just a little part of it; for this reason there would of necessity have to be some time that would be spent, regardless of how thorough the cost study you made for the purpose of determination of time and, some portions of the time could not be positively assigned to any one channel. Therefore, if you did assign through a
6187 cost study proportionate parts of this time to each of these channels, then the remaining portion that could not be assigned, that would be of such a nature that it could not be assigned, so, of necessity, it would have to be apportioned on the basis of the study and allocation made. In that way, from the standpoint of sound accounting, I think that would be a proper method to employ.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Respondent moves to strike the answer of the witness for the reason that it is unresponsive to the question of the Examiner, the sense of the Examiner's question being, what is the influence, and there being nothing in the answer of the witness which reflects any influence.

Trial Examiner Ballinger: There is considerable substantive weight to counsel for the Respondent's motion to strike but actually it goes to the weight of the answer and the Examiner will permit the witness' answer to stand for what it is worth.

The Witness: You understand, Examiner Ballinger, that I am not saying that these figures are wrong. I am saying that they are not supported by a proper study.

Trial Examiner Ballinger: The Examiner understands from your answer that you stated that while some 6188 difference ~~would~~ result you are not able to even approximate it; is that right?

The Witness: I did not intend to say that some difference would result.

I mean to say, your Honor, that from the standpoint of sound accounting, the basis used or the method used in the allocation is positively unsupported by any accounting study and analysis.

Trial Examiner Ballinger: That is not responsive.

The Witness: Well, how on earth can I say what the figure would be?

By Mr. Austin:

Q. Is it or is it not your opinion, Mr. Warmack, that a different result would be reached if the allocation between the channels on Respondent's Exhibit 101 was a result of a time study?

A. I certainly do not know. I am stating this, that no such time study was made and, in my opinion, it would have to be made before you can come to any definite figure—and it has not been done.

Mr. Hanley: May I ask one question now, if your Honor please?

Trial Examiner Ballinger: You may.

Mr. Hanley: Did you ever make such a study?

The Witness: Certainly—certainly not, and I was 6189 never required by anyone anywhere to do so.

Mr. Hanley: Well, did you or did you not make such a study?

The Witness: I answered that question.

Mr. Hanley: I understand that you did not.

The Witness: Yes, sir. I did not.

Mr. Hanley: The testimony of the witness apparently predicated upon no time study is asserted by the Respondent now to be of no probative value, and the Respondent moves to strike the entire testimony of the witness in connection with the four accounts alluded to by counsel for the Commission in his several preceding questions.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. Mr. Warmack, I understand from your testimony that a portion of the expenses in these four advertising department accounts was apportioned to direct shipment channels on Respondent's Exhibit 101, on the basis of time spent, actually spent by the advertising representative and the employees working under him at jobber outlets.

In making that statement I am referring not only to your testimony, but also to pages 24 and 25 of Respondent's Exhibit 100.

I understand further that all of the residue of that expense is allocated between these three bulk plant
6490 channels on a gallonage basis.

What, in your opinion, is the effect of charging a portion of the expense to two channels on the basis of actual time spent at certain outlets, and then charging all of the residue to three other channels? I am referring, in asking that question, when I say "the effect" I want to know whether or not that method results in overloading the channels charged with the residue, or in overloading the channels charged with direct time, or is there any overloading?

A. And you mean by "residue", what? About 95 per cent of this class of expense?

Q. Regardless of what it is, Mr. Warmack, it appears that a portion of the expense which was determined by the amount of time actually spent by jobber outlets was actually charged to certain channels, and all of the rest was charged to the regular bulk plant channels.

Now, I want to know what the effect of that is upon the proportion of the expense charged to the bulk plant channels on the one hand as opposed to the other channels on the other hand.

Mr. Hanley: Respondent objects to the question because it is apparent from the question of counsel that he is referring to some amount of residue which counsel does

not understand, and it is apparent from the question of
the witness propounded to counsel for the Commis-
6191 sion that the witness does not understand what
amount of residue is involved in the question, and
no answer can properly be given, and any answer would
be improper because no answer could have any proper
probative value, in view of the apparent lack of understanding between counsel, and as demonstrated by the witness.

Mr. Austin: I will be glad to explain that if I may, Mr. Examiner.

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. Mr. Warmack, by "residue" I mean all of the expense in the four accounts less the amount of that expense charged on Respondent's Exhibit 101 to jobber, naphtha and gasoline, and jobber, other products.

A. Well—

Trial Examiner Ballinger: Do you understand the question?

The Witness: Yes, sir.

Trial Examiner Ballinger: You may answer it. The objection is overruled.

The Witness: In my opinion, that has the effect of understanding to some extent the costs applicable to direct shipment customers, as shown in Respondent's Exhibit 101, for this reason: A cost study was not carried through
to a proper conclusion or completion. Whatever time
6192 that may have been spent by the advertising man-
ager or his department which may have been of a general nature and which may not have been directly assignable to either tank wagon reseller business or direct shipment business, all was included in the residue, and that residue is then allocated between the three bulk plant channels on a gallonage basis.

6193 By Mr. Austin:

Q. Mr. Warmack, do you recall when we were discussing a few days ago Respondent's Exhibit 31, which was offered by the respondent to justify the cost differential of one-half cent between Ned's Auto Supply Company and other tank-wagon reseller stations in 1937 I asked you some questions regarding these same four advertising accounts and in addition Account 075, which is the chief advertising expense account of the respondent?

A. Yes, sir, I remember.

Q. And you gave at that time considerable testimony regarding the nature of the advertising expense going into these accounts, with particular reference to Account 075, but also to some extent in connection with the field advertising department, and you stated, I believe, what you considered the nature of the expense in these accounts and the method of allocation which should have been applied to that expense in 1937 as between Ned's Auto Supply Company and other tank-wagon reseller outlets of the company.

A. Mr. Austin, you are speaking of which account number?

Q. I am speaking of 075, 005, 033, 047, and 103.

A. Yes, sir.

Q. If I should ask you the same questions, or if you should be called upon to give the same answers either to
my question or to those of the Examiner, if there
6194 were some questions asked by the Examiner, with
regard to the expense in connection with the same accounts for 1940, but assuming that the questions were directed now to the establishment of a cost differential as between all tank-wagon reseller outlets, on the one hand, and all jobber outlets on the other, would your answers be the same as the answers you gave for 1937 when we were concerned with Ned's Auto Supply Company versus other tank wagon reseller stations?

Mr. Hanley: Just a moment. Will you please read the first question that counsel asked and then read the second question or recital that counsel made to the Court?

(The reporter read the last few questions and answers.)

Trial Examiner Ballinger: Any objection, Judge?

Mr. Hanley: Yes, if your Honor please, that is objected to as a compound question unnecessarily confusing to the witness. It assumes to ask the witness if his answer would be the same on a hypothetical state of facts as his answer would have been to another question which was never asked.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Austin:

Q. Do you have the question clearly in mind now, Mr. Warmack?

6195 A. Yes, sir, I have.

I believe that my answers would be exactly the same, Mr. Austin, as the answers given you when you inquired into the 1937 study covered in Respondent's Exhibit 31.

Mr. Hanley: The respondent moves to strike the answer of the witness, since it heretofore appears in the testimony of the witness that he never made any study of the year 1937 and is not qualified to testify concerning it.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. In the discussion of the advertising accounts for 1937 you had before you and were questioned to some extent upon Commission's Exhibit 84, which contains a segregation of various general classifications of expense going into Account 075 for 1937 and states the method used by the respondent in its regular accounting procedure in allocating these various advertising expenses in that account. The record contains no similar exhibit or breakdown of expense for 1940. In stating that your answers for 1940 would be the same as the answers you gave to the advertising questions relating to 1937, do you assume that the respondent's advertising expense going into Account 075 for 1940 was made up of expenses of the same nature as those described in Commission's Exhibit 84?

A. Yes, sir. As a matter of fact, in the Chicago office, when I made inquiry as to this account, it was 6196 suggested to me that that separation might be used, that is, the separation shown on Exhibit 84-A, rather than to have to go to the extent of trying to analyze the costs as shown on Respondent's Account 075 for the year 1940.

Mr. Hanley: The respondent moves to strike the volunteer additional statement of the witness in answer to the question, it not appearing who in the Chicago office made the statement, or specifically what the statement was.

The Witness: Mr. Boatwright told me that.

Mr. Hanley: It is objected to as hearsay.

Trial Examiner Ballinger: The motion to strike is denied and the objection is overruled.

By Mr. Austin:

Q. And in your previous examination, Mr. Warmack, you stated that in your opinion many of the advertising expenses entering into Account 075 for 1937 and described in Commission's Exhibit 84 were advertising expenses for advertising which you then referred to as Advertising for Consumer Acceptance.

In your opinion does the advertising expense which you then stated as being in the nature of a consumer acceptance expense constitute equally a consumer acceptance expense, if incurred and as incurred in 1940, as much as in 1937; in other words, where the advertising expenditure is of
the same character, does the difference in time when
6197 the expense was incurred affect in any way the nature
of the expense, in your opinion?

A. From the standpoint of consumer acceptance?

Q. Yes.

A. No.

Q. On page 25 of Respondent's Exhibit 100, the lower part of the page, two accounts are listed together. One is Account 240—Donations, and the other is Account 075—Advertising. It appears from the explanation given regarding Account 240 on that page and also from Respondent's Exhibit 101 that no part of the donations in Account 240 is charged to direct shipment business in this cost study.

In your opinion, Mr. Warmack, is the expense going into Account 240 of such a nature as to afford or which can afford, on the basis of sound accounting principle, any cost differential as between the different classes of customers or different channels shown in Respondent's Exhibit 101?

A. I question the use of that kind of an expense item, as to whether or not it could afford any cost differential, if the total of that expense which is $2,252.51 in the Detroit field for 1940, were general donations, as this would show. I made no study of that account, Mr. Austin, but—

Q. You have read the exhibits 99 and 100, have you not?

A. Yes, sir.

Q. And are you familiar with Mr. Boatwright's
6198 testimony regarding the nature of the expense going
into that account?

A. Yes, sir, I have read it and I feel that this class of expense has no place in an assigning of cost for the purpose of establishing a cost differential. I just don't think it has a place in there.

Mr. Hanley: I move to strike the answer of the witness, since the witness has now testified that he made no study of Account No. 240—Donations, and does not know what they include.

Trial Examiner Ballinger: The motion is denied.

By Mr. Austin:

Q. If it is necessary to allocate the donation expense between different channels on Respondent's Exhibit 101, how in your opinion should such an allocation be made?

A. General donations, Mr. Austin, in my opinion could only be allocated on the basis of gallonage. If the account were analyzed right down to its finest point, maybe you could find that they had donated to one class of customers in some direct manner, but it is my understanding that this is a general cost. From reading the records and from the information that I have been able to get, without analyzing the account, it seems to me to be of a general nature and I don't think it has any place in a cost study and if it does have a place I don't see how general donations could be separated on any basis other than on a gallonage basis, which of course, would afford no cost differential.

6199 By Mr. Austin:

Q. Is this class of expense an expense which depends upon, or has any relation to differing methods or quantities in which gasoline is sold or delivered to tank wagon reseller customers of Respondent on the one hand, and jobbing customers on the other?

A. I do not see how it could.

Mr. Hanley: The question is objected to because the evidence now shows that the witness made no study and does not know what the account, about which he is talking, includes, and cannot know where, or how, or why it should be allocated. And I move to strike the answer on those grounds.

Trial Examiner Ballinger: The objection is sustained and the motion to strike is granted.

Mr. Austin: For what reason, may I ask?

Trial Examiner Ballinger: For the reasons stated in the statement of counsel.

Mr. Austin: I call your Honor's attention to the fact that the account is described fully in the record, and that the witness said he had read that testimony.

Trial Examiner Ballinger: Read the witness' answer and the motion to strike by counsel.

(The matter referred to was read.)

Trial Examiner Ballinger: The witness testified that he made no study, and he is purely conjectural as 6200 to what was or what would be the result if this were done. If the witness wants to correct that, that is another story.

Mr. Austin: I will ask for a five minute recess.

Trial Examiner Ballinger: We will take a five minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Mr. Warmack, when you were making your investigation of the Respondent's accounting methods and your investigation of this cost study in Detroit and Chicago in January and February of this year, you made an inquiry regarding the nature of the expense going into account 240—donations?

A. Yes, sir.

Q. When you said a while ago that you had made no analysis of this account, what did you mean by that?

A. I meant that I had not pulled all of the vouchers to see exactly to whom the payments were made, or in what amounts, and so forth.

Q. I now call your attention to Mr. Boatwright's testimony appearing at pages 4461 and 4462 of the record, as follows:

"Q. Account 240 is entitled 'Donations'? What is included under this heading?

"A. Just exactly what it says.

"Q. To whom are those donations made?

6201 "A. Oh, Red Cross seals, money gifts to organizations, community chest drives, and organizations of that nature."

And also at page 4463 of the record, it states:

"Q. Are these donations included here donations made by the Detroit field office directly, or is this an allocation of expenses from the general office?

"A. No, those are made directly in Detroit."

Now, based upon the description of the nature of the expense in that account given by Mr. Boatwright, and based upon your own inquiry as to the nature of that expense, in your own opinion, is the expense of that account
240 an expense of such a nature that it can properly afford a differential between the cost of sale of gasoline in tank wagon reseller, tank wagon customers on the one hand and, to jobber customers on the other hand?

I am limiting that to Detroit, and to the jobber customers whose businesses have been described in this proceeding and who are named in the complaint.

Mr. Hanley: I think that is a proper question now.

The Witness: In my opinion it is not.

By Mr. Austin:

Q. Have you already stated your reasons for that opinion? If not, or if you have any other reasons, you may state them.

A. In my opinion, the quantity of gasoline sold,
6202 methods of delivering gasoline can hardly be con-
sidered as influencing factors on this class of expense.

Generally, donations is something by a company for civic welfare, Mr. Austin, to charitable organizations. I just do not see how that expense can be allocated in any way which would afford a cost differential.

Q. Is there any similarity in purpose?

A. I would like to add to my previous answer, your Honor, that in my opinion this class of expense partakes largely or in some instances the nature of a consumer—of advertising for consumer acceptance, creating a feeling in the minds of the consuming public, a good feeling towards the company or its products.

Q. That is what I had in mind in attempting to ask you, Mr. Warmack, as to whether there was any similarity of benefit, if you can call it that, or purpose, between donations and advertising. I had a little difficulty in framing such a question.

A. Well, as I have stated, I think it partakes of the nature of advertising for consumer acceptance, Mr. Austin.

Mr. Austin: Now, your Honor, the witness evidently is suffering somewhat from a cold in its infant stages, and perhaps he would have a better chance to overcome the cold if we adjourned a little earlier so that he could go home and get a good rest and perhaps take some care of himself.

6203 We are already short Mr. Boatwright's presence, which I personally regret, and I am afraid if Mr. Warmack should become incapacitated here that we would find that even more of a major calamity, since it happens to be not Mr. Boatwright that is on the stand, but Mr. Warmack.

Trial Examiner Ballinger: It is apparent that the witness is not feeling well, and that he is threatened with a cold, and the Examiner will entertain any motion counsel desires to make.

Mr. Austin: I move that the hearing adjourn until tomorrow morning, July 7, at 9:30.

Trial Examiner Ballinger: The motion is granted.

And now, at 4:05 p. m., the hearing stands adjourned to be reconvened July 7, 1942, at the hour of 9:30 a. m., in Room 388, Federal Trade Commission, Washington, D. C.

(Whereupon, at 4:05 p. m., July 6, 1942, the hearing in the above-entitled matter was adjourned.)

6204 Room 388, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, July 7, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

6205 PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing in Docket No. 4389, the case entitled In the Matter of the Standard Oil Company of Indiana, is convened at 9:30 a. m., July 7, 1942, in Room 388, Federal Trade Commission Building, Washington; D. C.

The last hearing was held at the same place on July 6, 1942.

The reporter will note counsel for the Commission and respondent present.

You may proceed.

WILLIAM J. WARMACK, resumed the stand and testified further as follows:

Direct Examination by Mr. Austin.

Q. Are you familiar with the nature of the expense in Account 075, Mr. Warmack, Respondent's Exhibit 101?

A. Yes, sir.

Q. I note that on Respondent's Exhibit 101, out of a total of $211,374.32 entered in Account 075, there is a charge of $3,275.24 in the "Jobber—Naphtha and Gasoline" column and a charge of $46.93 in the column headed "Jobber—Other Products." Will you state the nature of those charges in the two jobber columns and the method used by the respondent in allocating that portion of the expense to those two columns?

6206 A. That represents certain point-of-sale advertising, and ~~the company~~'s calculations in arriving at that figure are shown on pages 25 to 28 of Respondent's Exhibit 100.

Q. What is your opinion regarding the methods of allocation used in distributing part of that expense to direct-shipment channels?

(There was a discussion off the record.)

Q. Before you answer that, Mr. Warmack, I will withdraw that question temporarily and ask you another one first, because I don't know whether you stated the nature of the advertising expense which is charged by the respondent to direct shipment business on Exhibit 101.

A. Yes, sir, I stated that it was point-of-sale advertising, Mr. Austin.

Q. Is it entirely point-of-sale advertising? That term "point of sale advertising" I don't believe has been satisfactorily defined, or perhaps I should say definitely defined, during these hearings, and consequently perhaps you could tell us more specifically what the nature of the expense is.

A. Point of sale advertising means advertising or expenses in the nature of advertising incurred at the service stations where gasoline is sold to the public.

Q. Are those expenses incurred by the respondent or incurred by the—

A. It is expense that the respondent company has

6207 to bear. There are various kinds of those things: signs placed at those outlets, certain material that is afforded the outlets, such as road maps, globes furnished the stations, various material of that nature.

Q. At the foot of page 25 and the top of page 26 of Respondent's Exhibit 100 there is a description of certain charges to Account 075 which, if I read the exhibit correctly, are charged in part to direct shipment business on Respondent's Exhibit 101. Is the expense there described what you refer to as point-of-sale advertising?

A. It is a part of the point-of-sale advertising, sir.

Q. What is the nature of the expense referred to there?

A. Costs incurred by construction men making repairs on advertising signs, retail outlets, sign installations, etc.

Q. Was any of that expense charged to direct shipment channels?

A. Yes, sir, part of that ~~makes up this $3,275.24~~ that ~~we were just talking~~ about that was assigned to "Jobbers Naphtha and Gasoline."

Trial Examiner Ballinger: Is that shown on Respondent's Exhibit 100?

Mr. Austin: Yes, sir, Respondent's Exhibit 100, pages 25 and 26.

By Mr. Austin:

6208 Q. What is your opinion regarding the method of apportionment of that expense involving construction men's costs used by the respondent in distributing that expense between channels on Respondent's Exhibit 101, as described on pages 25 and 26 of Respondent's Exhibit 100?

A. On page 26 of Respondent's Exhibit 100 it is stated that most of the charges could be made direct, either to "Jobber Naphtha and Gasoline" or "Jobber—Other Products."

It is my opinion that any charge that can be made directly should be made in that manner and that that is the proper way to make the charge from the standpoint of sound accounting. The apportionment of charges is where the difficulty arises in the allocations of costs. That means joint costs which must be apportioned on some reasonable and equitable basis.

This particular class of expense was small.

Q. How do you know that it was small, Mr. Warmack?

A. Well, the only thing I have to go by is the information set forth on pages 26, 27 and 28 of Respondent's Exhibit 100.

Q. Can you call attention to any specific information which leads you to believe that the amount of this expense, that is, the construction men's time going into this account was a small expense?

A. I see an item marked "Painters" under Salaries.

Trial Examiner Ballinger: Page what?

6209 The Witness: On page 29 of Respondent's Exhibit 100.

By Mr. Austin:

Q. We are talking about Account 075 now, Mr. Warmack. I think that Painter charge is under Account 005, if you are looking at page 29 of Respondent's Exhibit 100?

A. Yes, sir. I do not see a figure that shows construction men's costs during the year 1940 in a reference at the top of page 26 of Exhibit 100 as to how the allocation was made.

Q. The first sentence at the top of page 26 states that the first step in breaking down this account required a review of all work orders, Form 0133, for the year 1940 to indicate the work done at all jobber outlets, the materials used, and time involved on the part of construction employees.

Was a similar tabulation made by the respondent from these work orders to determine the work done at other classes of outlets than jobber outlets and the time spent at, for instance, tank-wagon reseller outlets?

A. In my studies I found nothing to indicate that that was done, Mr. Austin.

Q. And the same paragraph on page 26 of Respondent's Exhibit 100 states that after an allocation of the time found to be spent at jobber outlets as between "Jobber—Naphtha and Gasoline" and "—Other Products" on a gallonage basis and assigning part of the charges directly, the
6240 result was a charge of $270.01 to "Jobber—Naphtha and Gasoline," $30.77 to "Jobber—Other Products."

Is there anything in this exhibit or in the testimony which sets forth the balance of the amount of the charge for construction men's time over and above the sum of $300.78 shown on page 26?

A. No, sir.

Q. And how is the balance of the construction men's time spent on advertising, that is, this same expense about which we have been talking, how was the balance of that time allocated between channels, or how is it treated on Respondent's Exhibit 101?

A. That brings us back to the way that it is allocated in the company's regular accounting procedure. The methods employed there are set forth on pages 5 and 6 of Respondent's Exhibit 99. The exhibit doesn't specifically pick up construction men as such. It gives an example of costs involved in installing jewel globes on gasoline pumps. It states it is possible that those costs were assigned to reseller channels directly. Other costs are assigned to other channels directly, such as the other-methods channel.

6211 Q. You are talking now just about the construction men's time?

A. Mr. Austin, if this means construction, then that is what I am talking about. I don't see a word in here that says "construction." It is an example of cost as set forth and explained on page 5 of Respondent's Exhibit 99. I may answer your question in this way: In a review and study of the respondent's method of allocating the costs of this 075, entitled "Advertising—other costs (including ELA)", in the respondent's regular accounting procedure, wherever it was reasonably possible, costs were assigned direct to the channels; otherwise, they were separated on the basis of gallonage.

Q. Is there anything in either Respondent's Exhibit 99 or Respondent's Exhibit 100, or in the testimony in this case that would indicate how much of the advertising expense resulting from construction men's costs is charged to tank wagon reseller or tank wagon consumer or other methods channels on Respondent's Exhibit 101?

A. No, sir.

Q. Is there anything in the record to indicate how much of that expense was charged directly and how much was charged on a gallonage basis?

A. No, sir.

Q. Now, turning to the lower half of page 26, 6212 Respondent's Exhibit 100, there is a list of expenditures by the respondent in 1940 in the Detroit field, and I will first ask you if those expenditures are what you have heretofore referred to as "point of sale advertising"?

A. Yes, sir; that is a part of the point of sale advertising costs.

Q. How are the costs listed on that page divided between various channels on Respondent's Exhibit 101?

A. On an outlet basis.

Q. What do you mean by an "outlet basis"?

A. An outlet basis is a service station where gasoline is sold for consumption, and this allocation assumes that each outlet will share equally, as far as the allocation of this class of expense is concerned.

Q. Now, you said an outlet is a place where gasoline is sold. What outlets are you referring to, or what outlets are used here by the respondent?

A. Jobber outlets.

Q. Only jobber outlets? I am asking about the allocation of expense to all channels, not merely direct shipment channels.

A. The portion assigned to the direct shipment business was based on the number of jobber outlets.

Q. And how was the question of the portion of expense
assigned to the other three channels on Respondent's
6213 Exhibit 101 determined—and by the "other three
channels" I am referring to bulk plant channels,
because there is also an automobile supply channel which we can not overlook altogether.

Mr. Hanley: If your Honor please, just to keep this record as straight as we can, I wonder if the witness understands and counsel and the Court understand that there would not be any outlet in the consumer channels at all. The outlets exist in the reseller channels or in the jobber channels, and that is all.

Mr. Austin: Well, I assume that the witness will describe that. I asked him how it was allocated to the three channels, and if there is nothing in the consumer channel, I hope the witness will so tell us.

Mr. Hanley: It seems to me that the record is getting pretty badly confused about this thing.

Trial Examiner Ballinger: The Examiner was under the impression that there were but two outlets.

Mr. Hanley: Two classes.

Trial Examiner Ballinger: Two classes of outlets, namely, reseller, retail outlet and the jobber outlet. Now, if there is no other outlet, can it not be so understood?

Mr. Austin: I am quite pleased to have it come from counsel for respondent. I was trying to draw it out of the witness. It facilitates the matter that much.

Trial Examiner Ballinger: I think that can be
6214 considered an established fact.

Mr. Austin: Then do I understand that it is conceded that no part of this expense shown in the lower half of page 26 was charged to the tank wagon consumer channel or the other methods channel on Respondent's Exhibit 101?

Mr. Hanley: No, I don't concede anything of that kind. I am not conceding anything about figures. I am simply stating that there are two classes of outlets. This witness has made his study and he is doing the testifying on the figures now.

Mr. Austin: Well, I think my question was how this expense was charged to the bulk plant channels.

By Mr. Austin:

Q. Mr. Warmack, if you can tell us that there wasn't any charge to certain channels, tell us that, but I just want to know what was done with the expense.

Trial Examiner Ballinger: Can you tell us the particular channels to which it was charged?

The Witness: No, the only thing I had to go by is the record. I have not followed the vouchers. I have not followed every allocation of every one of these little, tiny charges to every one of these outlets. I have the record to go by.

Trial Examiner Ballinger: So far as your investigation disclosed that there is any allocation other than to 6215 the two channels, namely, the reseller and the jobber channel?

The Witness: My understanding is that that is where this expense goes.

By Mr. Austin:

Q. And what part of that point of sale expense as listed on the lower half of page 26 of Respondent's Exhibit 100 is charged to the tank wagon reseller channel on Respondent's Exhibit 101?

A. Which expense are you referring to, Mr. Austin?

Q. The expenses listed on the lower half of page 26 of Respondent's Exhibit 100.

Do you know, Mr. Warmack, or does it appear from this exhibit or anywhere in the record what portion of those expenses is charged to any channel other than the two jobber channels?

Mr. Hanley: The question is objected to, as assuming a fact not in evidence.

Mr. Austin: There are two jobber channels on Respondent's Exhibit 101. I asked him whether the record shows how much of the expense—whether any of it is charged to any of the other channels. I am not trying to restate the question, but simply explain it.

Trial Examiner Ballinger: The witness may answer.

The Witness: Will you read the question?

6216 (The pending question was read as above recorded.)

A. No, sir.

7

By Mr. Austin:

Q. At the top of page 27 on Respondent's Exhibit 100 there is an item of expense of $5,578.45 for road maps. How was that expense allocated between channels in Respondent's Exhibit 101?

A. It was allocated between the tank wagon reseller column and the jobber naphtha and gasoline column on the basis of gallonage.

Q. Does such an allocation result in any cost differential in cost of sales between those classes of customers?

A. No, sir; it does not. The same effect is given—or the same effect will be as though the cost had not been used at all, or had not even been considered in the cost studies. Eliminate it and it will come out identically the same differential.

Q. Now, in the lower part of page 27, Respondent's Exhibit 100, there are certain expenses listed which are charged to capital investment in signs at reseller outlets, including both—no, only at jobber reseller outlets. Isn't that correct, my statement as to capital investment?

A. Yes, sir.

Q. Is the expense charged there in the nature of a direct charge, Mr. Warmack?

6217 A. Yes, sir.

Q. There is no allocation of any of that expense between any channels or products, is there?

A. No, sir.

Q. Is that a direct charge made by the respondent to cost of sales through jobber reseller outlets?

A. Yes, sir; it is direct cost. Regular accounting procedure does not provide for separation of these costs, but of course, in the preparation of Respondent's Exhibit 101 there is a column in which this cost is segregated and set apart.

Q. Does the record show, or do Respondent's Exhibits 99 or 100 show the amount of the cost of signs or charges for signs installed at tank wagon reseller stations?

A. No, sir.

Trial Examiner Ballinger: We will take a five minute recess.

(Whereupon, at 10:35 o'clock a. m. a short recess was taken.)

6218 Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. We have been discussing certain expenses entering into Account 075 which are described on pages 25, 26, 27 and 28 of Respondent's Exhibit 100. Do those expenses account for the entire amount of the expense charged in that account on Respondent's Exhibit 101 to "Jobber—Naphtha and Gasoline" and "Jobber—Other Products"?

A. No, sir.

Q. What other expenses are included there?

A. Oh, there is a large amount of other expenses, expenses which are in the nature of newspaper advertising—

Q. Well now, just a minute, Mr. Warmack, I think perhaps the reporter better read my question back.

(The reporter read the next to the last question.)

By Mr. Austin:

Q. My question was whether the expenses we have been discussing account for the entire entry in the "Jobber—Naphtha and Gasoline" and "Jobber—Other Products" channels on Respondent's Exhibit 101, the amounts being $3,275.24 in the "Jobber—Naphtha and Gasoline" column, and $46.93 in the "Jobber—Other Products" column.

A. Mr. Austin, I don't just exactly understand. I thought you asked me whether there were any other expenses in Account 075, that is, that went to make 6219 up Account 075, which totals $211,374.32.

Q. No, that wasn't my question.

A. I would like to have the question again.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"We have been discussing certain expenses entering into Account 075 which are described on pages 25, 26, 27 and 28 of Respondent's Exhibit 100. Do those expenses account for the entire amount of the expense charged in that account on Respondent's Exhibit 101 to "Jobber—Naphtha and Gasoline" and "Jobber—Other Products"?)

Trial Examiner Ballinger: If you don't understand the question, say so.

The Witness: I don't understand the question.

Trial Examiner Ballinger: Counsel will rephrase his question.

Mr. Austin: I will try again.

By Mr. Austin:

Q. You are familiar, Mr. Warmack, with the nature of the expenses that are listed on pages 25 to 28, inclusive, of Respondent's Exhibit 100, under Account 075?

A. Yes, sir.

Q. And those are the expenses which I have questioned you about this morning?

A. Yes, sir.

6220 Q. Now, my question is whether those expenses are the expense and all of the expense, a part of which is in the "Jobber—Naphtha and Gasoline" and "Jobber—Other Products" columns of Respondent's Exhibit 101. In other words, referring to those two figures in Account 075 on Respondent's Exhibit 101, I want to know whether we have covered all of the expense that is entered in those two columns.

Trial Examiner Ballinger: Do you understand that question?

The Witness: I believe so, sir.

A summary of the expenses which we have been discussing is shown at the top of page 27, which shows a total of $3,021.39. There is an additional charge in the account of $300.78 marked "Field Charges," as shown on page 29 of Respondent's Exhibit 100.

Q. Referring back to page 26 of Respondent's Exhibit 100, is that expense of $300.78 the same expense referred to at the top of page 26?

A. Yes, sir; that is the same expense, and of course that, then, covers all of the expenses in the 075 Account which were applied to the direct shipment business. Those expenses are shown on page 29 under the caption "075 Advertising—Other Costs", part of which was assigned to "Jobber—Naphtha and Gasoline", and part of
6221 which was assigned to "Jobber—Other Products." That represents that portion of point-of-sale advertising which was assigned to the direct shipment business of the respondent company.

Q. Are there other advertising expenses of the respondent entered in Account 075, no part of which is charged to direct-shipment channels?

A. Yes, sir.

Q. What is the nature of those expenses?

A. Those expenses for the most part represent what I term and what in my opinion are advertising for consumer acceptance, Mr. Austin.

In other words, we have been discussing here only point-of-sale advertising, and that constitutes only a small part of the total expense included in Account 075.

Q. Does Account 075 include many expenses of the same nature as those which you discussed and called consumer-acceptance advertising when testifying regarding Commission's Exhibit 84, which is a breakdown of Respondent's advertising charges for 1937?

A. It is my understanding that that is correct, sir.

Q. What is your opinion as to whether any of the consumer-acceptance advertising expense in Account 075 should be charged to direct-shipment channels?

A. It is my opinion that advertising costs for consumer acceptance should be apportioned on a gallonage
6222 basis between the channels or the classes of customers for which such advertising is made.

That means that, for example, newspaper advertising for the sale of gasoline to car drivers, a newspaper ad will be run in the local newspapers, the costs of which will fall into Account 075 for advertising respondent company's gasoline. No customer's name is shown in those newspaper cuts, that is, the number that I have reviewed, but it is pure and simple advertising for consumer acceptance, so to speak, inviting the consuming public, the automobile drivers, to drive into the company's retail service stations, or, that is, service stations supplied by the respondent company either directly or through jobbers, and buy their products or their requirements of gasoline, and it is my opinion that such advertising for consumer acceptance could only be separated on a basis of gallonage sold to or through the respective reseller stations, whether served by the company or served through jobbers.

Q. Has such an allocation of that advertising expense been made by the respondent for the purposes of this cost study?

A. No, sir. I think the record should show that advertising costs for consumer acceptance or, as a matter of fact, any other cost which is separated on the basis of gallonage as just described would afford no cost differential whatsoever, and the cost differentials arrived
6223 at on the basis of separation of other costs would not be affected in any way if that particular class of expense were omitted altogether.

Trial Examiner Ballinger: When you say "that particular class of expense," to what expense do you refer?

The Witness: I refer, your Honor, to advertising costs or any other classes of costs which could only be separated on a unit basis, in this case on a per gallon basis.

By Mr. Austin:

Q. When you refer to a cost differential, or when you say there would be no cost differential if an all-gallonage allocation was made, as to what channels are you referring?

A. I can answer that best in the way of an example. If we have newspaper advertising for consumer acceptance, as I have just explained, it would apply and would be for the purpose of inviting the consuming public into the service stations supplied by the respondent company or its jobbers.

Q. Now, let me interrupt you there, Mr. Warmack. I don't think that is quite responsive. I was just asking you this: When you referred to the cost differential—a differential refers to a difference between two things, two customers, two classes of customers, or two products, or something of that sort, does it not?

A. Yes, sir.

Q. In your answer to my previous question, when
6224 you used the term "cost differential" I want to
know what customers or channels you were referring to when you used the word "differential."

A. Oh, I was referring to the tank-wagon reseller channel and the jobber—naphtha and gasoline channel, as shown on Respondent's Exhibit 101, and my answer dealing with the separation on a gallonage basis meant the gallons flowing through those two separate channels.

Q. We will now take up a different subject, and I would like you to refer to the following accounts listed on Respondent's Exhibit 101: Accounts 200, 201, 202, 203, 204, 205, and 206. Account 200 is entitled "Office Expense—Salaries Accounting." Account 205 is entitled "Office Expense—Operation and Maintenance of Vehicles—Office Automobiles." Account 206 is entitled, "Office Expense—All Other—Water, Light, Fuel, Rent, and so forth."

How is the expense entering into those three accounts, at is, 200, 205, and 206 distributed to the various channels n the company Form 189 in the company's regular ac-ounting procedure?

A. On the basis of tabulations of time by employees the Detroit office.

Q. Does that time tabulation result in the preparation f quarterly distribution of time reports by the respondent?

225 A. Yes, sir. Commission's Exhibit 117-A is distribution of time schedules, Accounting Department, repared in the month of December, 1939, and used for the eparation of costs on its regular form 189 for the three en- ning months, January, February and March, 1940.

Q. And are Commission's Exhibits 117-B, C and D imilar reports for the following three quarters?

A. Yes, sir, the following three quarters during 1940.

Q. Was any part of the expense in Account 200 charged o automobile supply?

A. Yes, sir.

Q. What part of it was charged to automobile supply?

A. Approximately 8 per cent of that total class of xpense.

Q. What was the actual amount charged to automobile upply?

A. $19,398.70, out of a total of $237,524.45.

Q. That is Account 200 now, you are referring to?

A. Yes, that is Account 200, entitled "Office Expense alaries-accounting."

Q. And was that charge of 8 per cent of the expense in hat account to automobile supply made according to the ercentage shown on the quarterly distribution of time reports in evidence as Commission's Exhibit 117-A, B, , D?

A. Yes, sir.

Q. Was any of the expense, Account 205 and 206, harged to automobile supply in respondent's Exhibit 101?

226 A. No, sir.

Q. In your opinion, should a part of the expense n Account 205 and 206 have been charged to automobile upply for the purposes of this cost study?

A. Yes, sir; in my opinion, some part of it should have een so charged.

Q. What part?

A. Well, inasmuch as these two accounts are separated in Respondent's regular Accounting Form 189 on the basis of the percentages as shown on the distribution of time reports, which are Commission's Exhibit 117-A, B, C, D, it would follow, it seems to me, that a portion of these two accounts should be assigned to automobile supply.

Q. Well, should the portion of those accounts, 205 and 206, charged to automobile supply—or rather, should the expense in those two accounts be charged to automobile supply in the same proportion and by the same method as the expense in Account 200 was charged to automobile supply?

A. In my opinion they should, unless we can find—unless respondent should show some reason why they should not be. In other words, respondent is using the distribution cost reports as the basis for the allocation to the other accounts, and I see no reason in my studies to show me why the follow-through should not be complete.

Q. I want to know whether, in your opinion, it should
be or should not be; not whether you see some reason
6227 why it should not be. I want to know what you think
about it, Mr. Warmack.

A. Very well. The basis of my opinion that it should or that it should not would not be a complete statement, your Honor. I should like to explain.

Trial Examiner Ballinger: You may do so.

A. (Continuing.) In the case of Account 205, entitled "Office Expense—operating and maintenance of vehicles—office automobiles," that total expense amounted to $592.95 for the year 1940. It was apportioned on respondent's regular accounting form 189 on the basis of the distribution of time reports worked up by the accounting department from the Detroit office, and apportioned on the basis of those reports, excluding what part of the time the accounting department devoted to automobile supply. In my opinion, this is a general class of expense and should be apportioned on the basis of the expense which may be called more nearly the correct expense, which is the expense of the accounting department in the Detroit field and Account 206, entitled "Office Expense—all other—water, light, fuel, rent, etc.", in the amount of $18,688.01 in the Detroit field for the year 1940. The same reasons as set forth for account 205, in my opinion was followed through to account 206.

Does that answer your question, Mr. Austin?

By Mr. Austin:

228 Q. Yes. Now, if you will turn to page 17 of Respondent's Exhibit 99, Mr. Warmack, at the foot of that page there is a table which is given as an example, showing the method used by the respondent in its regular accounting procedure, as applied to the distribution of the expense in Account 200 for January, 1940. The amount of expense in that month in Account 200 being $20,019.36. The example shows certain percentages applied to three classes of expense, the first class of expense being entitled "Field Office," and a part of that expense is apportioned to each of the four channels, including automobile supply. I note that no part of the "general office" expense and "casual help" expense is charged to automobile supply. I would like to know whether, in your opinion, the treatment given those three classes of expense is consistent with respect to the charging of no part of the second and third classes of expense of automobile supply?

A. In my opinion there is a lack of consistency here, Mr. Austin. This charge of $1,130, representing payments by the general office, are, in fact, payments of salaries of the office manager and two assistant office managers, in the Detroit office. It was explained to me in Detroit that this payment of salaries was made through the office in Chicago in order that it might not be common information around the field office, that is, the Detroit office, as to the amount of salaries paid to these executives, to these higher paid employees, therefore, that this amount was paid

229 through the Chicago office for that particular purpose.

Q. Do those employees supervise the other accounting employees in the field office, whose wages and salaries are included in Account 200?

A. Yes, sir.

Q. And in your opinion should the allocation of the general office payroll, that is, the salaries of these higher employees follow the allocation of expense of the rank and file of the employees in the Department?

A. Yes, Mr. Austin, it is my feeling—and I have so testified here before—that in a situation of this kind, the supervisory compensation should be apportioned on the basis of the personnel supervised, especially when there is a close supervision, and those supervised, and their activities are not too remote from the supervisor.

Q. Does the respondent in its regular accounting sheet follow that method of allocation as to all channels except automobile supply? In other words, are the salaries of the head employees in the field accounting department allocated between tank wagon resellers, tank wagon consumers and other methods channels according to the same proportions which are applied to the salaries of the rank and file of the employees in those channels?

A. Yes, sir.

6230 Q. There is also a small item shown there on page 17 of Respondent's Exhibit 99; "Casual help." In your opinion, should part of that expense be charged to automobile supply for the purposes of the cost study? In answering that, if you wish, state the nature of the expense and how it is allocated between other channels.

A. The item of casual help in the Detroit office for the month of January, 1942, amounting to $577.44, is allocated between the tank wagon reseller column, tank wagon consumer column, and other methods column on the company's regular Form 189, on the basis of the time distribution sheet worked up by the field office accounting department for the month of December, 1939. It is generally sound accounting, Mr. Austin, to let this general costs, which would probably be costs of this nature, follow the allocation of the costs which may be separated and regarded to be of more of a direct nature.

Q. Mr. Warmack, is there any difference in the nature of the "casual help" expense and the nature of the expense listed opposite the words "field office"?

A. Well, that is a pretty broad question.

Q. That is a pretty broad question, but is it all expense incurred in the field accounting department in Detroit?

A. Yes, sir.

Q. It is expense of employees that work in that department.

A. Yes, sir.

6231 Q. Did you answer my question, or can you answer it as to whether, in your opinion, the same proportion of the casual help expense should be charged to automobile supplies as is applied to the field office expense?

A. I was starting to answer your question, Mr. Austin

Q. I don't want to spend too much time on this point.

A. (Continuing.) —from the standpoint of sound accounting, but I just can't say yes or no. If I do, without giving the reasons, the answers will be useless, or worthless.

From the standpoint of sound accounting, in general e costs should follow the cost which is more of a direct ture, and in view of that it would be my opinion that is cost might properly follow the cost which is more or s of a direct nature. There could be a possibility that should not, but I see no evidence anywhere in my studies show or convince me that it should not.

Does that answer your question?

Trial Examiner Ballinger: Will you read that question?

(The reporter read the question as follows:)

"Q. Mr. Warmack, is there any difference in the nature the 'casual help' expense and the nature of the expense ted opposite the words 'field office?'"

Trial Examiner Ballinger:

Q. Is the field office expense a direct expense?

32 A. Direct as to what, your Honor?

Q. You have been using the term "direct expense". In the sense in which you have been using it, I ll ask the question.

A. It is more of a direct nature, and I believe that was e term I used, than the casual help expense. It could t be positively stated that it is a direct expense, but it rtakes more of the nature of a direct expense, your mor, than casual help expense.

Q. In the nature of first or second cousins?

A. I would say that an accounting department which performing accounting services and keeping time records uld be more i the nature of a direct expense, and would at least susceptible to a separation on some reasonable d sound accounting basis than a general cost, such as an ice clerk called in for five days work, and another one led in for a month's work, or such like would be.

The casual help expense, in my opinion, in the absence any showing that it should be otherwise allocated, should allocated on the basis of the allocation of this regular counting department expense.

Mr. Austin:

Q. Is any time study or time record kept of the general ice expense or the casual help expense in Account 200 the respondent in its regular accounting procedure, for the purpose of allocating those two classes of ex-

33 pense?

A. Yes, time records are kept of the time of the regular employees in the accounting department for the most part.

Mr. Austin: That was not my question. Read the question.

(The reporter read the question as above recorded.)

A. Which account are you referring to?

Q. I am referring to page 17, Exhibit 99, Account 200, and the two lower classifications there, "General Office" and "Casual Help."

A. No time records are kept of those two particular items.

Q. And how is the expense of these "general office payroll" and "casual help" in Account 200 allocated between the respective channels on Respondent's Form 189?

A. On the basis of the time studies made of the field office, exclusive of those two items of expense, "General Office" and "Casual Help."

6234 Q. Now, in that example on page 17 of Respondent's Exhibit 99 in the first time it says "Per cent of time spent," then there is a row of percentages. Do you follow me, Mr. Warmack?

A. Yes, sir.

Q. The first per cent is for the "tank-wagon-reseller" column, 29.9 per cent; the next, "tank-wagon-consumer," 21.8 per cent; the next, "other method", 38.4 per cent, and "automobile supplies," 9.9 per cent. Is the total of those four percentage figures 100 per cent?

A. Yes, sir.

Q. And taking the first group of expenses, $18,311.92, which is here called "Field Office" expense, are those percentages applied to that $18,311.92 for the purpose of distributing it between the four channels shown?

A. Yes, sir.

Q. Now, take the second line there entitled "General Office," is that the salary expense of the top supervisory officials in the Field Accounting Department that you have just described, or, rather, that you have previously described?

A. Yes, sir.

Q. The total expense in that line for January 1940 is $1,130.00?

A. Yes, sir.

6235 Q. Is 29.9 per cent of that expense entered in the tank-wagon-reseller channel?

A. More than that amount is entered in that channel.

Q. Is 21.8 per cent of that expense entered in the tank-wagon-consumer channel?

A. More than that amount is entered in that channel.

Q. Is 38.4 per cent of that expense entered in the other-method channel?

A. What was the amount?

Q. 38.4 per cent?

A. More than that per cent is entered in that channel.

Q. And is 9.9 per cent of that amount entered in the automobile-supplies channel?

A. No, sir, no part of it is entered in the automobile-supplies channel.

Q. Then, will you explain how, if those percentages listed are not applied, the general office expense is allocated between the first three channels listed in that table?

A. On a basis of the proportionate part of the total field-office expense which had previously been applied to the three channels, after eliminating the charge to automobile-supplies channel.

After eliminating that charge, we would have only 90.1 per cent of the total $18,311.92 as applying in part to tank-
wagon-reseller and in part to tank-wagon-consumer
6236 and in part to other-method. That 90.1 per cent be-
comes 100 per cent and you arrive at, then, the percentage applicable to each of the other respective channels and, after that percentage in each instance is arrived at, you apply the general office expense, that is, the $1,130.00 to the three channels on that basis.

Q. Now, just one more question on this casual help, Mr. Warmack. I note the last sentence on page 17 of Respondent's Exhibit 99—will you turn to the exhibit, please?

A. Yes, sir.

Q. The last sentence on page 17 says:

"Expense for casual help, when possible, is charged directly to channel affected, based on daily record of time maintained by such casual help."

Did you make any inquiry or investigation as to the daily time records there referred to, and do you know what portion of the casual-help expense is charged to channels as a result of such time reports?

A. May I review my papers on that account, sir?

Q. Yes.

(There was a discussion off the record.)

(The question referred to was read by the reporter.)

A. I made a rather complete study of this account in the Detroit office and the records that I reviewed showed that for the purpose of allocating the costs of the 6237 accounting division daily records are made of time by each ~~employee~~ by departments, except casual employees such as extra help, during the months of March, June, September, and December each year.

Q. Did you ascertain whether any time records are kept for casual help?

A. I ascertained that they were not kept for casual help, Mr. Austin.

Mr. Hanley: I am a little confused now, your Honor. May I ask a question, please?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Are we to understand from your testimony just now given, Mr. Warmack, that you disagree with the accuracy of the statement on page 17 of Respondent's Exhibit 99 read to you by counsel as follows: "Expense for casual help, when possible, is charged directly to channel affected, based on daily record of time maintained by such casual help"?

(The question referred to was read by the Reporter.)

A. From the information that I received in the Detroit office, Judge Hanley, I can answer this question this way: I made a study of this particular account and I made inquiry of a great number of people in the Detroit Office whom I was directed to contact by Mr. Raupagh and other supervisory officials in the Detroit office and the 6238 information that I gained was to the effect that daily time records were not kept by casual employees, such as extra help.

I have the actual tabulations which were made in the Detroit field for the distribution of time reports for the month of June, 1940 and there is no classification for casual help in those sheets. We have a group for relief, which is two people's time, but in inquiring with respect to the procedure it was stated without reservation, it was stated without reservation to me by Mr. Houghton that daily time records for the purpose of setting up these distribution sheets in the Accounting Department in the Detroit field were not kept by casual employees, such as extra help.

Q. You say "not kept by the casual help." Do you mean by that answer to say that none were kept, whether by them or by someone else in connection with their work?

A. Yes, sir, that is the import of my answer.

Q. So either you are mistaken or this statement on page 17 of Exhibit 99 is mistaken?

Trial Examiner Ballinger: I think the two statements are easily reconciled. As I understand the witness, he has testified that there were no daily time records kept in the office.

Mr. Austin: For casual help.

Trial Examiner Ballinger: For casual help, and the statement appearing in the record is that "Expense 6239 for casual help, when possible, is charged directly to channel affected, based on daily record of time maintained by such casual help." The witness says that there was no record from which such a computation was possible.

Mr. Austin: Yes, exactly, your Honor.

Mr. Hanley: That is the point I am trying to find out, if he directly contradicts this statement.

Trial Examiner Ballinger: This statement says, "when possible."

Mr. Hanley: Yes, and that, I understand, is the fact, but I don't want this record to be anything but factual. If there is a mistake on his part, I want him to correct it. If there is a mistake on our part, we want to correct it.

(There was a discussion off the record.)

Mr. Austin: I move that the hearing adjourn until 2:00 o'clock, if your Honor please.

Trial Examiner Ballinger: The motion is granted and now, at 12:10 p. m., the hearing stands in recess until 2:00 p. m.

(Whereupon, at 12:10 p. m. a recess was taken until 2:00 p. m. this day.).

6240 Afternoon Session.

2 p. m.

Trial Examiner Ballinger: We will come to order.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Austin.

Q. Mr. Warmack, referring to Accounts 202, 203 and 204 on Respondent's Exhibit 101, it does not appear that any portion of the expense in those three accounts is charged to automobile supplies business. Will you state briefly the nature of the expense in those three accounts and whether, in your opinion, an amount of such expense should be charged to automobile supplies for the purposes of this cost study?

A. Account 202 is an account entitled "Office Expense—postage." Account 203 is entitled "Office Expense—telephone and telegraph." Account 204 is entitled "Office Expense—exchange."

I think the names are descriptive of what the accounts are, Mr. Austin, with the possible exception of the item of exchange.

Q. Well, I think the nature of the expense in the account is sufficiently described by Mr. Boatwright. Are you familiar with his testimony in regard to the three accounts?

6241 A. Yes, sir.

Q. What is your opinion as to whether any of the expense of the nature charged to those accounts should be allocated to automobile supplies for the purposes of this cross section?

A. It is my opinion that some part of each of these three expenses should be allocated to automobile supplies in each instance. What I mean by that is, I think that a part of each one of these separate accounts will be influenced to some extent by the automobile supplies business of the respondent company.

Trial Examiner Ballinger: Does this statement appear in Respondent's Exhibit 100, of the allocation of the expenses?

Mr. Austin: It is in Respondent's Exhibit 99 as to the regular accounting procedure.

Trial Examiner Ballinger: Where?

Mr. Austin: The allocation to automobile supplies would be made in the course of the regular accounting procedure, if at all, I believe, because the allocations to direct shipment channels are described in Respondent's Exhibit 100.

The Witness: Pages 73 and 74 of Respondent's Exhibit 100.

(Discussion off the record.)

6241-A Trial Examiner Ballinger: I wanted to find out where the explanatory statement was.

The Witness: The figures showing where the portions of those accounts were applied to direct shipment business are shown on pages 73 and 74 of Respondent's Exhibit 100 —the method used in regular accounting procedure.

Mr. Austin: That is on page 18 of Respondent's Exhibit 99. I would suggest that you look at page 18 of Respondent's Exhibit 99. There is a short statement there which I think covers the regular accounting procedure.

By Mr. Austin:

Q. How is the expense in these three accounts allocated to channel in the company's regular accounting procedure?

A. On the basis of gallonage.

Q. What gallonage?

A. Tank wagon gallonage.

Q. Was some of the expense in those accounts allocated to other methods?

A. Yes, that statement should be corrected to read "bulk plant gallonage." That is reseller gallonage, consumer gallonage, and other methods gallonage.

Q. Including or excluding direct shipments?

A. Well, in the regular accounting procedure there is no provision for direct shipments, therefore, whatever the cost would be included in direct shipments would be as-
6242 signed in the regular channels on Form 189, on the basis just stated.

Q. Well, I guess my question was not clear. When you said that the gallonage method was used for allocating this expense between channels, did the gallonage used include or exclude direct shipment gallonage?

A. It does not include direct shipment gallonage.

Q. And is any recognition given by the respondent to automobile supply sales in the gallonage used as a basis for allocating the expense in these three accounts between channels?

I mean by that this: I understand that greases are sold by the pound, but they are converted to a gallonage basis and included in the gallonage used for allocation of expenses, which are distributed on a gallonage basis in the respondent's regular accounting procedure. My question now is whether the same thing is done with automobile supplies. Are they converted to a gallonage figure and included in the gallonage used by the respondent for these gallonage allocations?

A. No, sir. That is the reason, of course, that there is no expense carried in the automobile supply column.

Q. And what are your reasons for stating that a portion of the expense of these three accounts should be charged to automobile supplies for the purposes of this cost study?

A. For the reason that this is a part of the respondent company's business. It would naturally be assumed,
6243 without making a detailed analysis of the postage account, that some postage would be involved in this class of business.

Q. What class of business?

A. Automobile supplies business, inasmuch as automobile supplies are sold in many instances on a budget plan, that is, they are sold to customers on credit. If the customer does not pay, surely the company has to write him a letter, many letters. I assume, and I believe it is reasonable to assume, that postage will be incurred in connection with the purchasing of these supplies by the company, the handling of these supplies, and various other things in connection with the merchandising of this particular class of merchandise that would involve the writing of letters and the incurring of postage costs. That is, for Account 202. In connection with telephone and telegraph, which is Account 203, this is another general expense of the company, and I think it is fair to assume that there would be some class of this particular cost, some calls made or calls received, transactions made over the telephone and the like, that would involve in some way the merchandising of automobile supplies. There is nothing in the record to show that this would not be incurred, Mr. Austin.

In connection with Account 204, which is the item entitled "Exchange," Mr. Boatwright went into that in the record when he was on the stand, and I inquired into 6244 this particular account in my field study in the respondent company's office in Detroit, and I learned that there is a charge for the handling of money by the depositories of the company, and in addition the company employs a company which is known, I believe, as the Brinkley Company, for the picking up of cash and depositing of that cash, and for which the respondent company pays a certain charge. It seems to me, Mr. Austin, that it would be reasonable to assume that some part of that charge would be influenced to some extent by the automobile supplies business of the company, and I believe those constitute sufficient reasons for my answer.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

6245 By Mr. Austin:

Q. Is any explanation made in this record or in the exhibits as to why automobile-supply expense and its equivalent in gallonage was not included by the respondent in allocating this expense between channels on a gallonage basis in its regular accounting procedure?

A. I know of none, Mr. Austin. I might add to that there was some explanation with respect to incremental cost.

Q. Was that in connection with these three accounts, or some other account?

A. I believe that was in connection with some other account.

Q. Did you make any inquiry regarding these accounts when you were in Detroit as to why automobile supplies was not included by the respondent in allocating the expense?

A. Yes, sir, I asked about that.

Q. What information did you receive, if any, and state from whom you received it?

A. I asked Mr. Houghton why some part of this expense wasn't over in the automobile-supplies column, and he stated that it just wasn't over there, and that is all the information I have.

Q. Referring now to Accounts 201, 202, and 204—202 and 204 we have been speaking of, and 201 is entitled "Of-

fice Expense—Stationery and Office Supplies." It appears
from Respondent's Exhibit 100 that a cost study was
6246 made of the expense going into each of these three
accounts for the purpose of determining what portion of the expense in each account should be charged to the respective direct shipment channels on Respondent's Exhibit 101. The explanation of the methods used by the respondent to segregate direct-shipment costs in these accounts is described at pages 72, 73, 74, and 75 of Exhibit 100.

On page 18 of Respondent's Exhibit 99 it appears that the expense in these three accounts is distributed to the various channels other than automobile supplies on the basis of gallonage in the company's regular accounting procedure. Therefore, turning to page 63 of Respondent's Exhibit 100, where those three accounts are listed, it appears that a portion of the expense in those accounts is charged to direct-shipment channels, as explained in Respondent's Exhibit 100, the pages above cited, and the balance of the expense in the three accounts remains in the bulk-plant channels on a gallonage basis.

Will you state, Mr. Warmack, whether I have correctly stated the contents of Respondent's Exhibits 99 and 100 in regard to the distribution of the expense in these three accounts?

Mr. Hanley: Don't the exhibits speak for themselves as to what they contain?

Trial Examiner Ballinger: They do, but if the
6247 witness' subsequent testimony deals with this, it will
be considered as on the basis of the statement made
now.

The Witness: Will you read the question?

(The question referred to was read by the reporter.)

The Witness: In my opinion, you have stated it correctly, Mr. Austin.

By Mr. Austin:

Q. In your opinion, is that treatment of the expense in these accounts proper and sufficient for the purpose of establishing a cost differential between tank-wagon-reseller differential.

A. In my opinion it is not sufficient to establish a price gasoline and jobber gasoline?

Q. You mean cost differential, don't you?

A. I mean cost differential, I beg your pardon.

Q. And will you state your reasons for that opinion?

A. Yes, sir. In the first place, the costs were separated on the basis of gallonage, exclusive of direct shipment gallonage. In other words, in the company's regular accounting procedure, it made the separations of this class of expense between distribution channels on its regular Form 189 in the Detroit field for the year 1940 on the basis of bulk-plant gallonage.

For the purpose of separating out of the prior distributions of this cost that portion of the cost which applied 6248 to direct shipment business, the respondent made various studies, as enumerated and outlined on pages 72 to 75 of Respondent's Exhibit 100.

It appears to me, or it is my opinion that if the respondent had completed its studies to make a full coverage of this account, rather than just to drag out that portion by a time study which it assumed to be applicable to direct shipment business, it would have been able to make a separation between all of the channels, as shown on Respondent's Exhibit 101, by one full and complete cost study, rather than to have part of the cost allocated on that exhibit on the basis of gallonage and another part of the expense allocated on the exhibit on the basis of a detailed study.

Does that answer your question?

Q. I think so, Mr. Warmack, if you think so.

A. I believe that covers it.

With respect to some of these costs, I have another question with respect to their use in proving a cost differential.

Q. Which cost are your referring to?

A. I am referring to that portion of this class of expense which has to do with credit cards.

Q. There is some credit card expense included in some of these accounts?

A. Yes, sir.

6249 Q. I think we will take that up separately, unless there is something along that line which you think is material in connection with my past question.

A. Following my thought, as previously stated, if a detailed cost study were made to determine the influencing factors of each of these channels completely, rather than only that portion which respondent regards as being applicable to direct shipment business, then all of these questions would be thoroughly and sufficiently developed as to see what the cost is, where it went, and what influenced it, with respect to each channel.

Q. Is the proportion of the salaries in Account 200 charged to the other-method channel by the respondent, as a result of its quarterly time reports previously described by you, larger or smaller than the proportion of respondent's total gallon units sold through the other-method channel in the Detroit field in 1940?

A. The amount of salaries charged in the other-method channel is much larger than the proportion of gallonage in that channel, Mr. Austin, to the total tank-wagon or bulk-plant gallonage.

Q. Does that fact in your opinion, create an inference or indication that the gallonage method of allocation, as applied to Accounts 201, 202, and 204, results in placing too large a portion of the expense in those accounts in the 6250 tank-wagon reseller channel?

The Witness: Read the question, please.

(The question referred to was read by the reporter.)

A. That indicates to me that there would be great need for a study to determine a basis of direct allocation, as far as it could be made, and a reasonably accurate allocation of those expenses which could not be assigned directly, included in the items just mentioned, to the three channels, that is, tank-wagon reseller, tank-wagon consumer, and other-method.

Only a study of that kind, Mr. Austin, would tell or disclose the fact as to where those accounts and in what amounts should be applied to those channels.

There may be a following of this class of expense to effort of employees in these channels. If there is, then, the allocations as shown would appear to be out of line, but whether there is a following or not could only be established by a detailed study, and I am coming there to the study which I have called a factual and objective study, and not speaking of the term loosely.

Mr. Hanley: I don't believe that I understand the last two questions and the answers made thereto. I would like to clarify the situation, if I may, your Honor.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Haven't you testified that this Account 200 6251 "Salaries—Accounting" is built up on a time sheet or record of some sort?

A. Yes, Judge Hanley, as the result of tabulations of time in the district office.

Q. And doesn't that time study relate to the amount of effort that goes into any one of these channels by the particular employee?

Trial Examiner Ballinger: What do you mean? Time effort?

Mr. Hanley: Yes, sir.

The Witness: May I inquire, are you speaking with respect, Judge Hanley, of the regular accounting procedure of the company?

Mr. Hanley: Yes.

Mr. Austin: Are you referring only to Account 200?

Mr. Hanley: That is all.

The Witness: Yes, sir.

By Mr. Hanley:

Q. And doesn't that show what effort went into other-method gallons and consumer and reseller channels gallons?

A. In the regular Form 189?

Q. Yes.

A. Yes, sir.

Q. Then, I don't understand this, Mr. Warmack. In some answers you have given to Mr. Austin you have 6252 indicated that there is an overstatement of this account in the other-method channel in relation to gallons. Haven't you so stated?

A. Judge, I think maybe I could explain that this way: there are figures—I will give them in round numbers—$82,000.00 in the tank-wagon-reseller column, $39,000.00 in the consumer column, and $91,700.00 in the other-method column on Respondent's Exhibit 101.

Mr. Austin: Which account, though?

The Witness: For Account 200.

The gallonage, now, for those respective columns?

Mr. Hanley: Yes.

The Witness: Tank-wagon-reseller column is 69,000,000, tank-wagon consumer is 32,000,000; other-method column is 4,900,000.

Now, the point was not necessarily that the account was overstated, but it was in answer to a question where I was asked the relationship of the amounts of Account 200 apportioned to each of those channels, as compared with the relationship of the gallonage appearing in each of those channels.

By Mr. Hanley:

Q. Perhaps we can get it the other way around, in view of your answer just given.

6253 You have indicated the amount of gallonage in each of these channels. On the basis of gallonage, isn't it a fact that this Account 200 is understated in the tank-wagon reseller channel?

A. If Account 200, Judge Hanley, if I may state it in this way, were apportioned on basis of gallonage, then the tank-wagon reseller column would be much larger and the other-method column would be much smaller.

Q. That is what I am getting at.

A. Than the figures as shown for Account 200 on Respondent's Exhibit 101.

Q. And the cost differential relates to the reseller channel and not the other-method channel, does it not?

A. That is correct.

Q. And hence, if the straight-gallonage method of allocation of this account had been used—

A. As between the three channels, you mean?

Q. —as between the three channels, it would have had the effect of increasing the cost differential, wouldn't it?

A. That is correct.

Mr. Hanley: That is all. I think that I see.

(There was a discussion off the record.)

By Mr. Austin:

Q. Now, I wish to call your attention, Mr. Waramack, to Account 203, the heading of which is "Office Expense—Telephone and Telegraphy," and Account 663, the heading of which is "Telephone and Telegraph (other than main office)"?

6254 I am taking up the two accounts together because they are both telephone and telegraph expenses, and I think may be considered at the same time, even though they appear at different places on Respondent's Exhibit 101.

A portion of the expense in Account 203 is charged to direct shipment channels on Respondent's Exhibit 101.

Upon what basis was that expense allocated to direct shipment business?

A. On the basis of total hours devoted to direct shipment business by all employees in the main office as a proportion of the total hours of such employees shown on page 74 of Respondent's Exhibit 100.

Q. And how is the remainder of the expense in this account allocated between the three bulk-plant channels?

A. On the basis of gallonage.

Q. What gallonage, Mr. Warmack?

A. All gallonage, exclusive of direct shipment gallonage.

Q. In your opinion, is the use of these two methods of allocation in distributing the expense in this account a proper one from an accounting standpoint for the purpose of establishing a cost differential?

A. I think they are unsound and inconsistent, and the same answer given to the same question for a separate account previously would apply equally here.

6255 Q. For which account previously? I just don't want to leave that indefinite, if there is any question about what account you are referring to.

A. I think I spoke previously of this particular Account 203.

Q. I don't think so in this connection. You did discuss Accounts ~~201,~~ 202, and 204.

A. I will say it again.

Q. Just a minute. I just want to know what accounts you referred to when you said you had previously expressed the same opinion, and I will ask you whether you were referring to your opinion given in connection with Accounts 201, 202 and 204?

A. Yes, sir.

Q. If the expense of this account were allocated between bulk-plant channels by the use of the same measuring factor that was applied to it in charging a part of it to direct-shipment channels, would the charge to the tank-wagon-reseller channel be affected?

Mr. Hanley: Is that asking for a question of fact or an opinion? I think it asks for a question of fact.

Mr. Austin: Yes.

Mr. Hanley: And that being the case, we object unless and until a foundation is laid showing that the witness has made a study and is able to answer factually.

Trial Examiner Ballinger: The objection is sus-
6256 tained.

By Mr. Austin:

Q. Mr. Warmack, I believe you stated that the expense in this account is in part allocated to direct shipment business on the basis of the ratio of total hours of main-office employees devoted to direct shipment business to their total hours; is that correct?

6257 A. That is correct.

Q. Can you, or have you examined this cost study sufficiently to be able to testify as a fact as to whether, if that same measuring factor were applied to this expense in distributing it among all channels in Respondent's Exhibit 101, the proportion of the expense in the tank wagon reseller channel?

A. I certainly could not tell you.

Q. Then you have no opinion? I understood you to just say you did.

A. Mr. Austin, if we have an account that is separated in two ways: first, on the basis of gallonage, then on the basis of a study, there may be some general costs included here in these alocations as a result of a study, which I will give no effect to as far as the cost applied to the direct shipment is concerned. The remainder of that cost remains in the tank wagon reseller column, tank wagon consumer column, other methods column, on a basis of gallonage. Now there has been no study made that is allocated on the basis of gallonage. Is this what you are asking me, what would a study show?

Q. No.

A. Then I don't understand the question.

Q. What was the measuring factor used by the respondent in this cost study in allocating a part of the expense in Account 203 to direct shipment channels?

6258 A. A portion of the expense in Account 203 is charged to direct shipments channels on Respondent's Exhibit 101, on the basis of total hours devoted to direct shipment business of all employees in the main office, as a proportion of the total hours of such employees.

I believe I understand your question, Mr. Austin, and I am sorry that I did not understand it. I will try to answer it.

Assuming that the hourly effort in the Detroit field of all the employees in the Detroit field follows reasonably the allocation of salaries or other compensation in the Detroit field, as shown in the respective and several salary accounts on Respondent's Exhibit 101, then, if this class of expense were allocated to the separate channels on Respondent's Exhibit 101 in accordance with those salary allocations or compensation allocations to the respective channels, the amount shown in the tank wagon reseller column of Respondent's Exhibit 101 for Account 203 would be materially reduced.

Trial Examiner Ballinger: We will take a recess for five minutes.

(A short recess was taken at 3:10 p. m.)

By Mr. Austin:

Q. Is that your complete answer to that question, Mr. Warmack?

6259 A. No, sir; that answer should be changed to this extent: that if the same methods employed by the respondent in the allocation of this class of expense to direct shipments and between the separate direct shipment channels were applied to that portion of the expense which was allocated to the three bulk plant channels, tank wagon reseller, tank wagon consumer and other methods channels, the amount of expense appearing in Respondent's Exhibit 101 for Account 203 would be materially reduced. That is the correct answer.

Q. Would it be reduced—where would it be reduced, Mr. Warmack?

A. The amount shown in tank wagon reseller channels—that is, the amount of $7,748.07—would be materially reduced.

Q. Now, the other account that I mentioned, involving telephone and telegraph expense, was Account 063 on page 10 of Respondent's Exhibit 99. It appears that the expense in this account is allocated to channels in the company's regular accounting procedure on a gallonage basis, excluding direct shipments. Is a portion of the expense in that account also allocated to automobile supplies on the Detroit Form 189 for 1940?

A. Yes, sir; the amount of $298.04 of that account is allocated to automobile supplies on the regular Account Form 189 of the Detroit field for the year 1940.

Q. Is any part of the expense in that account allocated to direct shipments channels on Respondent's Exhibit 101?
6260

A. No, sir. The allocation as shown in respondent's regular accounting form 189 in the Detroit field for the year 1940 is the same allocation as is shown in Respondent's Exhibit 101.

Q. By the "same allocation" are you referring to the amount entered in the three bulk plant channels?

A. Yes, sir; as well as the automobile supplies channel.

Q. Where is this expense in Account 063 incurred, Mr. Warmack? In that connection, I might refer you to pages 40 and 41 of Respondent's Exhibit 100.

A. At the bulk plants of the company.

Q. What is your opinion as to the propriety of the use of the gallonage method of allocation for the expense of this account between the tank wagon reseller, the tank wagon consumer and other methods channels for the purpose of establishing the tank wagon reseller expense in that account, to be used in turn for establishing a cost differential between tank wagon reseller gasoline and jobber gasoline?

The Witness: Will you read the question?

(The question was read.)

Trial Examiner Ballinger: Do you understand the question?

A. Yes, sir; I understand the question. I question the propriety of this separation, or such a separation for the purpose of establishing cost, and for this reason: 6261 in the separation of Account 203, which is telephone and telegraph expense, of the main office, the separation was made between direct shipment customers and was assigned to direct shipment business on the basis of the effort of employees engaged in the main office. Inasmuch as this class of expense is incurred for bulk plants, it would seem to me that it would be more proper, more in accordance with sound accounting, and would surely be more consistent if the respondent had followed through the separation of this class of expense, which would, of course, require a separation based upon effort at the bulk plant—that is, effort of employees. Consistency there, Mr. Austin, is the main question at issue.

By Mr. Austin:

Q. Would it be possible to apportion that expense in Account 063 between the three bulk plant channels, by making a cost study of the expense and determining in what connection it was incurred?

A. Yes, that might be possible. I rather think that such a study would have to be made in prospect and not in retrospect.

Q. If the expense in Account 063 were allocated between the three bulk plant channels in the same proportion as the salaries of warehouse labor apportioned between channels in Account 008, what would be the 6262 effect, if any, upon the amount of expense in Account 063 which would fall into the tank wagon reseller channel?

Mr. Hanley: Will you please read that question?

(The reporter read the question as above recorded.)

Mr. Hanley: I have an objection to that question, if your Honor please. I would like to ask a question of the witness first.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. You have been discussing Account 063, which is telegraph and telephone expense other than the main office, which occurs out in the bulk plants.

A. That is correct.

Q. Have you made any investigation at all, Mr. Warmack, to determine specifically how that expense is incurred? For instance, do you know as a fact whether a telephone call from a bulk plant to the main office, ordering gasoline, could possibly be split on any other than a gallonage basis, inasmuch as it is all fungible property, all goes in to the same tank and is all delivered through the same equipment on orders as they prospectively come in? Do you understand that to be the system that is in use?

The Witness: Will you read the question?

(The reporter read the question as above recorded.)

6263 The Witness: Judge Hanley, I don't know that it could. I have not made any cost study, as such, of this, but I have reviewed the accounts of the company to some extent and I have studied respondent's cost reports, particularly Respondent's Exhibits 100 and 99. My question with respect to this account was particularly directed to the one point, consistency.

Mr. Hanley: I think Mr. Austin has a question on the record.

Trial Examiner Ballinger: Do you desire the question read?

The Witness: I can answer the question.

Trial Examiner Ballinger: You can answer it?

The Witness: Yes.

Mr. Hanley: I intended to make an objection, but I think the general objection is sufficient there, in view of the statement of the witness.

The Witness: The figure of $6,777.33, as shown in the tank-wagon reseller column of Respondent's Exhibit 101 for Account 063, would be materially reduced.

By Mr. Austin:

Q. Judge Hanley just asked you a question regarding the method of allocation that should be made of the expense of a telephone call from a bulk plant to the main
office ordering gasoline. In your opinion, Mr. War-
6264 mack, should any part of the cost of any such tele-
phone call be charged to the other-method channel for the purpose of this cost study?

A. Mr. Austin, you and Judge Hanley both are going into fine technicalities with respect to this class of expense.

Trial Examiner Ballinger: Answer the question.

The Witness: Judge Hanley posed a question as to if the bulk plant ordered gasoline over the telephone from the main office.

Trial Examiner Ballinger: Well, you may answer Mr. Austin's question first, and then answer it as modified by Judge Hanley.

The Witness: I don't know how it could be done, Mr. Austin. I don't know how you could apply any part of it to the other-method column.

Trial Examiner Ballinger: Now, answer the question as amended.

Mr. Austin: If your Honor please, I would like to have my question read and perhaps the witness can give a more direct answer to it. I don't know.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: Now read the answer.

(The answer referred to was read by the reporter.)

Mr. Austin: I didn't ask the witness whether it could
be done. I asked him whether in his opinion it should
6265 be done.

Mr. Hanley: That is objected to, if your Honor please. If the witness says it can't be done, he can't reasonably say it should be done.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Hanley:

Q. I still have this question on the record: Assuming that in the same telephone call above referred to about gasoline the bulk-plant operator ordered lubricants and axle grease and the things that you found together in other-method channel, and suppose he talked more about a case of axle grease than he talked about a carload of gasoline, how would you make that kind of an allocation in a detailed and factual cost study that you are talking about?

A. I certainly don't know—or if he talked about a ball game.

Q. Exactly. Suppose he did, what would you do with that?

A. Or his wife's cousin or sister or brother or something, just made a nice general family visit over the phone. You two gentlemen have gone into fine technicalities with respect to this little, small account.

Q. It leads back to one thing, and I would like to clarify it, if your Honor will permit me.

Do you know any way that is more reasonable, 6266 in the matter of the allocation of this expense item 063 as between these bulk-plan channels, than on a gallonage basis?

A. Judge Hanley, if I wanted to go to greater refinement than a gallonage basis, I can think of certain tabulations that might be made which would disclose whether or not one class of customers or distribution channel or group of products may influence the use of this service more than another, but my question with respect to the propriety of the allocation of this class of expense, both at the bulk-plant station and at the main office, went to the point of consistency, Judge Hanley.

Trial Examiner Ballinger: Do you think it is practical in a business operation to carry the allocation of this account to the refined extent that you have indicated?

The Witness: Ordinarily not, your Honor.

By Mr. Austin:

Q. Referring to Account 203, which is the same type of expense, Mr. Warmack, did the respondent use the gallonage basis of allocation when it sought to charge a part of the expense in that account to direct-shipment channels?

A. No, sir.

Q. And when you refer to consistency, are you referring to consistency between the method employed in allocating part of the telephone and telegraph expense to direct-shipment channels on the one hand and the rest of
6267 it to the bulk-plant channels on the other hand?

A. On different bases, Mr. Austin, yes.

Q. Returning again to Account 203, which is telephone and telegraph expense at the main office, if all of the expense in that account had been allocated between all channels on Respondent's Exhibit 101 on an all-gallonage basis, including direct-shipment gallonage, would the amount of the expense falling into the direct-shipment channels as a result of that method of allocation be larger than the amounts now entered in those channels for Account 203 on Respondent's Exhibit 101?

A. It would be greater than the amounts shown on Respondent's Exhibit 101, but I think this record should show here that I am not saying that any such allocation should have been made at all.

Trial Examiner Ballinger: If it had been made that way, it would have been a little more refined, would it?

The Witness: That is a matter of conjecture, your Honor.

By Mr. Austin:

Q. Let me ask you this further question, Mr. Warmack, on those two accounts: You have, at previous points in your testimony, referred to the allocation of indirect expense following direct expense, and there are numerous accounts on Respondent's Exhibit 101 where all or a part of the expense in the account is apportioned to the
6268 effort of employees which is accounted for in different accounts.

Is this telephone and telegraph expense an expense which in your opinion can be properly allocated following the effort of the employees where the expense is incurred?

Mr. Hanley: I believe, your Honor, I will object to that as repetitious. The witness has answered that question a number of times.

Trial Examiner Ballinger: Read the question.

Mr. Austin: Before the witness answers that—

Trial Examiner Ballinger: Just a moment, there is an objection pending.

Mr. Austin: I see. Go ahead.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: Isn't this repetitious? Haven't you asked the witness with reference to this same matter?

Mr. Austin: I will withdraw the question, at any rate.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. In your opinion, Mr. Warinack, should the same method of apportionment or allocation be applied to the expense in both Account 063 and Account 203 for distribution between all channels on Respondent's Exhibit 6269 101, for the purposes of this cost study?

Mr. Hanley: That is objected to as already having been asked and answered, and for the further reason that the witness has declined to give any opinion as to how he thinks that might be better done and having stated in answer to one of the Examiner's questions that any different method would be just a conjecture as to whether it was better or otherwise.

Mr. Austin: If your Honor please, I would like to have a chance to express my opinion on that.

Trial Examiner Ballinger: All right.

Mr. Austin: This question is directed specifically as to whether the expense in these two accounts should be treated in the same manner or whether the same method of allocation should be applied to both for all channels. I don't believe I have asked the witness that question before, and the purpose of the question is to make it clear if it is a fact that the expense in these two accounts is of the same nature and should be handled consistently.

Mr. Hanley: If that changes the question any in your Honor's mind, I want to add the further objection that the question as now amplified omits a necessary element in the evidence, in that the question says: should the allocation be made the same for all channels in the one instance and in the other, wherein, as a matter of fact, the Account 063, as explained on pages 40 and 41

6270 of Respondent's Exhibit 100, has no bearing or effect
whatsoever upon direct-shipment gallonage, and it would be improper to attempt to give the same treatment on any basis to an expense account which has no bearing whatsoever on direct shipment gallonage as might be given an expense account which would have a bearing on direct shipment gallonage.

Trial Examiner Ballinger: I will hear from counsel for the commission.

Mr. Austin: I don't think that affects the question because, for instance, if a gallonage method was applied to both accounts, as to Account 063 you naturally would apply only the bulk-plant gallonage, whereas as to Account 203 it would be possible to apply all gallonage, including direct shipments since it is conceded that direct shipments were concerned in Account 203, but it still would be the same method of allocation, which my question contemplated. On the other hand, if the distribution of effort method were used for both accounts, that again would depend upon effort of bulk-plant employees in one case and effort of main-office employees in the other, but again it would be the same method of allocation.

Trial Examiner Ballinger: Hasn't this witness testified
with reference to one of these items that he can not say
that the method employed by the respondent company was
not the proper method? Now you are including with-
6271 in your question that factor, as well as all others.
How can he express an opinion or answer your
question, in view of his statement?

Mr. Austin: He said that he considered the methods in the two accounts were inconsistent.

Trial Examiner Ballinger: Yes.

Mr. Austin: If they are inconsistent, they can not both be right, certainly.

Trial Examiner Ballinger: They might be inconsistent and yet perfectly proper.

Mr. Hanley: Certainly, your Honor.

Mr. Austin: Then, this question is directed to that. The question is whether the same method should have been used for both accounts, which I don't think has been answered.

Trial Examiner Ballinger: That can only be answered on the basis of consistency. If you desire such an answer, you may have it.

The witness may answer the question.

Mr. Hanley: That is objected to now as immaterial; unless it is shown that the inconsistency has some fatal effect upon the validity of this cost study, it doesn't matter whether it is inconsistent or not.

Trial Examiner Ballinger: The objection is overruled, reserving to counsel for respondent the right to move
6272 to strike the question and answer, when received.

Mr. Austin: Are you familiar with the question?

Mr. Ballinger: You may answer the question.

The Witness: I would like to have the question read, your Honor.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"In your opinion, Mr. Warmack, should the method of apportionment or allocation be applied to the expense in both Account 063 and Account 203 for the distribution between all channels on Respondent's Exhibit 101, for the purposes of this cost study?")

Trial Examiner Ballinger: Answer the question.

The Witness: Yes, I feel that some reasonable degree of consistency should be followed in the separation of these accounts, and I think that inasmuch as we have talked so much about this particular expense that I should amplify on that just a little, your Honor, if I may.

Trial Examiner Ballinger: You may.

The Witness: If respondent has established the fact or the point that this class of expense can be separated on the basis of effort, first, as to assigning the cost to one class of business as against another, speaking of direct-shipment business and bulk-plant business, and inasmuch as they have employed that basis for the separation,
6273 then, between the three direct-shipment channels, from the standpoint of consistency it seems to me that that portion of the expense applying to the bulk-plant channels should be separated on a basis of effort, or that information be developed to show why it shouldn't be, your Honor, separated on that basis. That is the question that I raise here with respect to consistency.

In connection with Account 063, that expense is of the same nature as Account 203, Telephone and Telegraph Expense, and if such a great refinement were gone into in the separation of this class of expense at the main office, then, if you are going to follow through from the standpoint of consistency, Account 063 would have to be explored and separated in the same way.

I am just pointing out that one point, your Honor, consistency, in the handling of this item of expense, without saying or intending to say what method should be employed in the separation of expense.

Mr. Austin: May I ask one more question before—

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. You stated, Mr. Warmack, that a reasonable degree of consistency should be used. In your opinion, has the respondent used a reasonable degree of consistency in apportioning the expense in these two accounts on its Exhibit 101?

6274 Mr. Hanley: Just a minute, the respondent moves
to strike the answer of the witness to the last question for all of the reasons urged in the several objections to the question, and for the further reason that it is not responsive and is largely a volunteer statement, and the objection is made to the present question of counsel for all of the reasons made to the preceding question and for all of the reasons assigned to the motion to strike.

Trial Examiner Ballinger: Reserving ruling on the motion made and reserving to counsel for respondent the objection and motion to strike the answer to the pending question, the witness may answer.

By Mr. Austin:

Q. I would like to have a yes or no answer on that, Mr. Warmack, if you can give it.

A. In my opinion, the answer is no.

By Mr. Hanley:

Q. That is to say that there is not a reasonable degree of accuracy in these two accounts?

A. Not accuracy, Judge—consistency.

Mr. Hanley: Consistency, I should have said. I beg your pardon.

Trial Examiner Ballinger: Is the motion renewed as to the last—

Mr. Hanley: All of the motions are renewed in
6275 connection with this line of examination, and there
is added to the motion the further ground that the
witness has now assumed to say that there is not a rea-

sonable degree of consistency employed in the accounting methods of the respondent in connection with the two telephone accounts under consideration, but he has not indicated what he means by "reasonable," although he definitely indicated that it would be a conjectural matter to undertake any further refinements.

Trial Examiner Ballinger: The objections to both questions are sustained and the motions to strike are sustained. The matter is stricken.

Mr. Austin: But for the reasons stated by counsel?

Trial Examiner Ballinger: For the reasons stated by counsel.

(Discussion off the record.)

Mr. Austin: I move that we adjourn.

Trial Examiner Ballinger: The motion is granted, and now, at 4:25 p. m., the hearing stands adjourned, to reconvene on July 8, 1942, at the hour of 9:30 a. m. in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:15 p. m., July 7, 1942, the hearing in the above entitled matter was adjourned.)

6276

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Wednesday, July 8, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

6277 PROCEEDINGS.

Trial Examiner Ballinger: Come to order.

The hearing in Docket 4389, of the case entitled In the Matter of Standard Oil Company of Indiana, is convened pursuant to notice at 9:30 a. m., July 8, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in the Federal Trade Commission Building, Washington, D. C., in Room 388, July 7, 1942.

The reporter will note counsel for the Commission and respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination by Mr. Austin.

Q. Account No. 206 on Respondent's Exhibit 101 is entitled "Office Expense—All Other—Water, Light, Fuel, Rent, etc." That account is referred to at page 75 of Respondent's Exhibit 100 and also at page 17 of Respondent's Exhibit 99.

Will you state how the expense in this account is distributed by the respondent between tank-wagon reseller, tank-wagon consumer, and other-method channels in its regular accounting procedure?

A. This item of expense is distributed to the
6278 three separate channels on company's Form 189 on
the basis of a distribution of time report which is prepared for all accounting employees in the Detroit office in the regular accounting procedure.

Q. Is that the quarterly distribution of time report for the accounting department that you referred to yesterday?

A. Yes, sir.

Q. And what is the exhibit number? I believe that several of those were introduced as exhibits.

A. Commission's Exhibits 117-A, -B, -C and -D.

Q. Then, do I understand that the water, light, fuel, and other operating expenses and rental expense of the main office are distributed between channels in the regular accounting procedure according to the same proportions as the salary expense of the accounting department?

A. Yes, sir, they are. You are speaking with reference, of course, to Account 206.

Q. Do the employees in the accounting department constitute the great majority of employees working for the respondent in the main office building?

A. Working in the main office building, yes.

Q. What I mean is, Mr. Warmack, I wanted to know whether allocation of this office-building expense according to the distribution of effort of employees in the accounting
department is in effect a distribution of the expense
6279 according to distribution of effort of employees in
the main office building itself.

~~The Witness: May I have the question read.~~

(The question referred to was read by the reporter.)

The Witness: Yes, sir, that is the way the distribution is made on the basis of the time and the effort of the accounting employees in the Detroit office.

By Mr. Austin:

Q. I don't know whether you quite understood my question. This is a building expense. It is not an accounting department expense, is my understanding.

A. Yes, sir.

Q. Is this expense allocated between channels, according to the effort of the employees in the main office building?

A. The information that I have, Mr. Austin, is that it follows the distribution sheets that we have just been talking about, which are Commission's Exhibits 117-A, -B, -C, and -D, and I think that will be substantiated by a statement at the top of page 17 of Respondent's Exhibit 99.

Q. Yes, I understand. I have no question at all as to what was actually done, Mr. Warmack.

A. Yes, sir.

Q. But I want to know whether there are any substantial number of other employees in the main office building other than those whose effort is accounted
6280 for on the quarterly distribution of time reports which you have just referred to.

A. There are a good number of other employees in there, yes, sir, but the large majority I think are accounting employees.

Q. You were there for a number of weeks, weren't you?

A. Yes, sir.

Q. So I assume you know something about it?

A. By far the accounting employees in my opinion are the greatest number of employees in the Detroit office, but I have made no count check of the number. I have done nothing so as to state that I know of my own knowledge as to what the number of any of the employees are. I have just observed that there is a large number of accounting employees and, from observation, it appears that they are by far the largest group.

Q. Now, you have stated that the expense in Account 206 is allocated by the respondent between bulk-plant channels in its regular accounting procedure according to the composite percentages of the accounting department distribution of time reports. How is the expense in that account charged to direct-shipment channels on Respondent's Exhibit 101?

A. A portion of the expense in this account 206 is charged to direct-shipment channels following the proportion of effort of main-office employees found to have been devoted to direct-shipment business.
6281 I might explain that just a little. Respondent company made a study of the accounting employees in the Detroit office beginning about August 10 or 11 and running for a period of a month to determine, if possible,

by actual tabulation of time and effort of each employee devoted on direct shipment business. As a result of that tabulation, separations were made to show that portion of costs in the Detroit field for 1940, based on these findings in 1941, applicable to direct shipment business, and the same methods employed there were employed in the separation of this Account 206; in other words, the separations in Account 200 served as a basis for the separation of Account 206. Is that sufficient?

Q. Yes, and is that true both as to the bulk-plant channels and to the direct shipment channels, still referring to Account 206?

A. Oh, yes, that is true in the case of both.

Q. Then, do I understand that the expense in Account 206 followed the distribution of the expense in Account 200, both in the Respondent's regular accounting procedure and in this cost study?

A. That is correct, it did.

Q. In your opinion, are these methods of allocation which were applied by respondent to the expense in Account 206 for the purpose of distributing that expense between all of the various channels on Respondent's 6282 Exhibit 101, other than the automobile-supplies channel, consistent and proper methods of allocation?

A. Mr. Austin, I rather think that they are. It is my opinion that they should be allocated in some way whereby the general expenses would follow those larger expenses which would be more susceptible to a separation than a small expense of this kind. The only quarrel that would come about in that instance, if any, would be the separation of the larger accounts which they followed. Consistency has prevailed in this instance.

By Mr. Austin:

Q. Now, I would like to call your attention to another group of accounts: Account 060—"Plant Maintenance," Account 161—"Rental Expense," Account 062—"Water, Light, Fuel (other than the main office)," Account 087—"General Supplies Used", Account 088—"Station Operating Tools and Equipment."

It is stated at the foot of page 40 of Respondent's Exhibit 100 that in the main all of these items of expense are incurred at the respondent's bulk plants.

Is the expense charged in these five accounts, Mr. Warmack, an expense of the same general or overhead nature as the expense in Account 206?

A. It is my understanding that they appear to be of a similar nature to the expenses going in Account 206, Mr. Austin.

6283 Q. And has the expense in these five accounts in 1940 been allocated between the bulk-plant channels on Respondent's Exhibit 101 on the basis of distribution of effort of the employees working in or operating the bulk-plants?

A. No, sir.

Q. By what method is the expense in these five accounts allocated between channels on Respondent's Exhibit 101?

A. I understand that some of the charges included in some of these accounts are allocated directly to the channel to which they apply; that the remainder of expenses in the respective accounts are allocated between the three bulk-plant channels on the basis of gallonage.

Q. Is that gallonage allocation an all-gallonage allocation as between the three channels, or is there a different allocation in some instances which does not apply to all three channels?

A. That will require that I look it up.

(Witness refers to papers.)

Some of the charges in each of the accounts as just stated may be allocated directly. The remaining portion of the charge in part may be allocated on the basis of the gallonage in each of the three channels, and a portion may be allocated upon a basis of the gallonage of two channels. That means tank wagon reseller and tank-wagon consumer channels. That is shown on page 9 in detail, that is,

6284 in sufficient detail to satisfy us.

Q. What exhibit?

A. That is Respondent's Exhibit 99.

Q. Now, will you turn to Account 008, Mr. Warmack, the account being entitled "Warehouse Labor"? Is that account a salary account?

A. Yes, sir.

Q. And is the expense going into that account the salaries of bulk-plant employees?

A. It is my understanding, Mr. Austin, that that is correct.

Q. What percentage of the expense in that account is entered in the tank-wagon reseller channel on Respondent's Exhibit 101?

A. 29.46 per cent of the total expense in Account 008, entitled "Warehouse Labor," is shown in tank-wagon-reseller account on Respondent's Exhibit 189 for the year 1940.

Q. And is the same percentage shown on Respondent's Exhibit 101 in that channel?

A. Yes, sir.

Q. Now, what per cent of the expense in Account 060, "Plant Maintenance," is entered in the tank-wagon reseller channel on Respondent's Exhibit 101?

A. 64.41 per cent.

Q. And what percentage of the expense in Account 061 is entered in the tank-wagon-reseller channel on Respondent's Exhibit 101?

A. 65.44 per cent.

Q. What percentage of the expense in Account 062 is charged to the tank-wagon reseller channel on Respondent's Exhibit 101? 6285

A. 61.23 per cent.

Q. And what percentage of the expense in Account 087 is charged to the tank-wagon reseller channel on Respondent's Exhibit 101?

A. 64.99 per cent.

Q. And will you give the same information as to Account 088?

A. Yes, sir, the percentage is 54.39 per cent.

Q. 54?

A. Just one second. (Witness refers to papers.) 54.39 per cent of the expense in Account 088, entitled "Station operating tools and equipment," is shown in the tank-wagon reseller column on Respondent's Exhibit 101.

Q. You may have answered this question before, Mr. Warmack, but I would like to have it again at this point. When the expense in any one of these accounts on Respondent's Exhibit 101 is allocated between the three bulk-plant channels on Respondent's Exhibit 101, or on the Form 189 for 1940, on a gallonage basis, what percentage of the expense in the account enters into the other-method channel?

Now, you may answer that on an annual basis, which I understand would be approximately correct, realizing that actually this expense is allocated by months.

A. Yes, sir, I could give it to you monthly, if you desire it.

6286 On an annual basis, it is 65.08 per cent.

Q. Just a minute. Will you read the question back, please.

(The question referred to was read by the reporter.)

A. I beg your pardon, Mr. Austin, I gave you the percentage for the tank-wagon reseller column.

Q. Yes.

A. The percentage for the column would be 4.62 per cent.

Q. You testified previously, Mr. Warmack, that you made a visit to, I believe it was, the Scotten Avenue bulk plant of the respondent in Detroit?

A. Yes, sir, I did.

Q. Did you visit any other of the bulk plants than the Scotten Avenue?

A. I didn't go through any other, but I went by the Lyceaste plant.

Mr. Hanley: Just a moment, I want to be sure this is clear, if your Honor please.

By Mr. Hanley:

Q. Just adverting for a moment to your answer that on all of the accounts appearing on Exhibit 101 the percentage or the total gallons appearing in the bulk-plant channels is expressed by you in terms of percentage. Do you mean by that answer to say that that is the identical percentage that would be allocated to any particular account in any of the three bulk plant channels?

6287 A. No, sir, not necessarily, Judge.

Q. Then, it is true, is it not, that in some instances there was no gallonage allocation in the other-method channel at all?

A. With respect to some particular accounts.

Q. So the entire force of your answer, if I correctly understand it, is that you have just made an arithmetical calculation and expressed the gallons that appear in total in terms of percentage, without referring to any particular account or all of the accounts; is that right?

A. That is true, Judge. I picked up the gallonage shown at the foot of each of those respective channels: tank-wagon-reseller, tank-wagon-consumer, and other method, and the ratio of the gallonage for any one channel as related to the total gallonage would be the percentage for any one channel based on a yearly gallonage.

Q. Do you understand that your percentage, as arrived at by you, has any relation whatsoever to gallonage allocation in the several accounts?

A. I would rather think, Judge Hanley, that it would have some relation somewhere. That is my feeling and I can explain that, if you desire.

Q. Perhaps I am not making myself clear, and I don't want to take too much time, but I want the Court to understand these things as we go along as much as possible.
6288 You have been testifying to a class of accounts, that class of accounts which appears on page 8 and is explained on pages 8 and 9 of Respondent's Exhibit 99, and you have testified this morning that in some of those accounts there was a gallonage allocation as between tank-wagon reseller and tank-wagon consumer, but no allocation as between either or both of those channels and other-method channel.

Mr. Austin: I don't understand the testimony to be that.

By Mr. Hanley:

Q. What becomes of your four-plus per cent calculation in an account like that?

A. It could only be used in what your company terms an allocation of general prorata costs. That means costs which your company assumes or knows should apply equally per gallon as between the three separate channels, and that allocation is made monthly by the respondent company, and the gallonage of the particular month in question will be the gallonage on which that general prorata expense is allocated, Judge Hanley, now, in probably the same expense account as your Exhibit 99, page 9, shows.

In one account there may be a portion of expense that will be general prorata that will be allocated to each channel on a gallonage basis, and there may be contained in that account a portion of the expense which would
6289 not apply at all to the other-method column and would apply to the two columns: tank-wagon-reseller and tank-wagon-consumer, and of course, the gallonage of those two channels would govern the allocation and would form the basis on a monthly basis for that allocation.

In addition, Judge, and this probably should have been stated beforehand, in each of these accounts there might be a direct expense that would find its way directly to the proper channel, leaving the residue to be allocated as I have just described.

Q. Isn't what you have just concluded your answer with true as to the class of accounts that you have just been talking about and that are explained on pages 8 and 9 of Respondent's Exhibit 69, namely, that there was a direct charge?

Mr. Austin: That is objected to as repetitious. That has been previously answered this morning by the witness to exactly the same question on direct examination.

Trial Examiner Ballinger: The witness may answer.

The Witness: My answer is based upon what is in the records here, and that shows that there are from time to time direct charges and, as such, they are assigned directly to the channel.

By Mr. Hanley:

Q. As I now understand you, Mr. Warmack, your answer to the question as propounded by Mr. Austin 6290 does not mean, as the question stated, that these percentages are applicable to all of the accounts on Exhibit 101?

Mr. Austin: I object to that.

By Mr. Hanley:

Q. (Continuing) But only to those where the ratio of gallonage allocation was made between the bulk-plant channels on the basis of the totals of gallonage for each of those channels, as appears on Exhibit 101?

Mr. Austin: I object to that, your Honor, very strenuously because this is getting out of context. It is strictly cross examination. He is attempting apparently to try to vary the witness' answer. The original question, I think, and the answer to it are perfectly clear. I don't believe that questioning of this scope should be allowed at this time. I haven't objected to questions directed to attempting to clarify what the witness has been talking about, or clarifying questions in the mind of counsel, but I don't think cross-examination should be allowed at this time. I think this is clearly cross examination.

Mr. Hanley: I am going to submit in response to the objection, your Honor, that I am just trying to give him a chance to say what he means.

Mr. Austin: I think he has said what he means. The answer is on the record considerably back of this.

6291 Trial Examiner Ballinger: While the question partakes of the nature of cross-examination, it is enlightening certainly to the Examiner, and the objection is overruled and the witness may answer.

Mr. Austin: Well, your Honor, I wish to note an exception in this case on the record especially, if I may.

Trial Examiner Ballinger: Exception is noted.

Mr. Austin: And may I also make an additional objection, that if the witness is going to answer this question, that the reporter physically again transcribe the original question and answer at this point so that it will appear in connection with the answer to the question.

Trial Examiner Ballinger: If that is desired and you think it would present the matter more clearly, it may be done.

Mr. Austin: In that case, your Honor, I will withdraw my objection to the answer, because it was based primarily on the fact that the two answers were so far apart that I thought the record would be confusing.

Trial Examiner Ballinger: And the exception also goes out?

Mr. Austin: Yes, provided that both come together.

(By instruction of the Trial Examiner and consent of counsel the following question and answer appearing previously in the record were copied in:

6292 "Q. You may have answered this question before, Mr. Warmack, but I would like to have it again at this point. When the expense in any one of these accounts on Respondent's Exhibit 101 is allocated between the three bulk-plant channels on Respondent's Exhibit 101, or on the Form 189 for 1940, on a gallonage basis, what percentage of the expense in the account enters into the other-method channel. Now, you may answer that on an annual basis, which I understand would be approximately correct, realizing that actually this expense is allocated by months.

"A. The percentage for the other-method column would be 4.62 per cent."

Trial Examiner Ballinger: Read Judge Hanley's question.

(The reporter read the last question.)

The Witness: Yes, you will just have to break that a little for me. I don't understand exactly.

By Mr. Hanley:

Q. I will restate the question and withdraw that question.

You recall that there was a discussion, Mr. Warmack, between you and your own counsel about what accounts were meant in the question when he was asking you about the application of your percentage allocations; do you recall that?

6293 A. Let's let her read it.

Q. We are getting the record so badly mixed up that I think we can clarify it best by my asking you just a straight question.

A. Yes, sir.

Q. Irrespective of anything you have heretofore said about this matter, isn't it true that the percentage allocations that you have talked about when you have expressed gallons in per cent apply only to allocations in Accounts where the company made such an allocation on the basis of the ratios of gallons as total gallons appear in the three bulk-plant channels?

The Witness: May I have the question read.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: Judge, I am sorry. I don't mean to hedge on your question and I am not hedging on it, but the company's records show where they made their gallonage allocation in each account and in every instance, and I have gone into it and explained as to everything I know about where the allocations were made and what these records show. I can explain any one account to the best of my knowledge.

Mr. Hanley: Can't you answer the question? Don't you understand the question?

Mr. Austin: Your Honor, I would like to interpose
6294 another objection which I think is very pertinent, particularly in view of what the witness has just said.

It is one thing to obtain clarification from the witness at this time about what the witness is talking about, but it is another thing to cross examine him regarding methods of accounting procedure which are undoubtedly best known to the respondent, and it seems to me the witness should not be required to answer questions at this time regarding how the respondent allocates the expense in its own accounts. The respondent ought to know that and consequently, while it may be proper cross examination, I can see no reason for interrogating the witness about factual matters which the respondent knows fully as well as the witness.

Mr. Hanley: I am willing to submit to the objection, your Honor. I do not care to withdraw the question. The witness is now making figures. He has made these percentages. We didn't. If he is willing to let his answer stand, I am.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed with your direct examination, Mr. Austin.

(There was a discussion off the record.)

(A previous question by Mr. Austin and the answer were read by the reporter as follows:

"Q. You may have answered this question before, Mr. Warmack, but I would like to have it again at this
6295 point. When the expense in any one of these accounts on Respondent's Exhibit 101 is allocated between the three bulk plant channels on Respondent's Exhibit 101, or on the Form 189 for 1940, on a gallonage basis, what percentage of the expense in the account enters into the other-method channel. Now, you may answer that on an annual basis, which I understand would be approximately correct, realizing that actually this expense is allocated by months.

"A. The percentage for the other-method column would be 4.62 per cent.")

Trial Examiner Ballinger: Do you want to add to your answer as given previously on the record?

The Witness: Your Honor, I want this record to show what I was testifying to. I was stating that the percentages of bulk-plant gallonage sold in the Detroit field for the year 1940 through the column on company's Form 189 are as there portrayed in that column. The gallonage amounted to 4,920,137 gallons. The total gallonage amounted to about 105,000,000 gallons, and the figure that I gave was the percentage that the 4,920,137 gallons in the other-method channel bore to the total bulk-plant gallonage, and any prorata account that is separated on this whole exhibit, Commission's Exhibit 119, and Respondent's Exhibit 101, between the bulk-plant channels, on the

basis of total bulk-plant gallonage, if made on an
6296 annual basis 4.62 per cent of that prorata charge in
any account would go in the other-method column.

Just one word further: The allocations are made on a monthly basis, and this 4.62 per cent is the percentage of the total other-method gallonage related to the total bulk-plant gallonage on an annual basis.

I believe that is a proper explanation.

6297 Trial Examiner Ballinger: The statement you have just made is not at variance with the explanations offered by the Respondent in its Exhibit No. 99 and No. 100; is it?

The Witness: I do not think so.

By Mr. Austin:

Q. I am wondering if you have fallen into an unconscious error, in giving this last answer in regard to the bulk plant?

A. Perhaps I have, what is it you have in mind?

Mr. Austin: Perhaps the better way would be to have the answer read. May the answer be read? I think you made a slip of the tongue.

Trial Examiner Ballinger: Let the last answer of the witness be read.

(The last portion of the answer of the witness was read as follows:)

"Just one word further: The allocations are made on a monthly basis, and this 4.62 per cent is the percentage of the total other method gasoline as related of the total bulk plant gasoline on an annual basis. I believe that is a proper explanation."

By Mr. Austin:

Q. I just wanted to call your attention to the phrase in there "other method gasoline" and I wonder if you wanted to say "gasoline."

A. No. Other method gallonage.

6298 Q. Other method gallonage?

A. Yes, sir, "gallonage" is the word.

Mr. Austin: Off the record.

Trial Examiner Ballinger: We will be off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: May we have a recess for five minutes?

Trial Examiner Ballinger: The hearing will be in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

You may proceed, Mr. Austin.

By Mr. Austin:

Q. I have asked you, Mr. Warmack, whether you visited the Scotten Avenue bulk plant and you said that you had.

A. Yes.

Q. How much of a tour of inspection of that plant did you make?

A. I went through all of the buildings, walked around on the grounds where the storage tanks with gasoline and fuel oil in storage, and dispensed in trucks. I spent some little time, enough time to get around and see what was going on.

Q. Are you able to state as a result of your inspection whether substantially more than 4.62 per cent of the space and facilities at the Scotten Avenue bulk plant
6299 is devoted to the storage and handling of products
other than gasoline and refined oils?

A. Yes, sir.

Q. Please do so.

A. I had occasion to go through the warehouse where all kinds of packaged products were moving and stored, and although I made no positive surveys as to footage or anything else, I did observe what was going on.

And I am convinced that more than 5 per cent of the space and facilities of the bulk plant were devoted to the activities of the company which we term, and which the company terms "other methods" merchandise.

Q. Now, will you again turn to Respondent's Exhibit No. 101 and state what percentage of the expense in account 060 is charged to the other methods channel?

A. Mr. Austin, you are referring to the total expense as shown on Respondent's Exhibit No. 189 of the Detroit field for 1940?

Q. Well—

Mr. Austin: Will you read the question, please?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

By Mr. Austin:

Q. I am referring to account 060.

6300 A. Excuse me.

Q. Yes.

A. I will examine this document.

Trial Examiner Ballinger: Go ahead and examine the document.

The Witness: Yes, sir.

(The witness examined the document for several moments.)

By Mr. Austin:

Q. Are you ready to proceed?

A. Yes.

Q. What is the figure?

A. 5.49 per cent.

Q. 5.49 per cent?

A. Yes.

Q. Is that the account entitled "Plant Maintenance"?

A. Yes, sir.

Q. And what percentage of the expense in account 061 "Rental Expense" is entered in the "other methods" channel?

A. 4.61 per cent.

Q. What percentage of the expense for 1940 entered in account 062 "Water, Light, Fuel (Other Than Main Office)" is charged to the "other method"?

A. 4.64 per cent.

Q. 4.64 per cent?

A. Yes.

6301 Q. What percentage of the expense in account 087 is entered in the other methods channel on Respondent's Exhibit No. 101?

A. 4.3 per cent.

Mr. Hanley: 4.3?

The Witness: Yes.

By Mr. Austin:

Q. What is the percentage figure for expense entered in the other methods channel in account 088?

A. 088?

Q. Yes.

A. 8.15 per cent.

Mr. Hanley: 8.15?

The Witness: Yes.

By Mr. Austin:

Q. Will you now refer to account 110, Respondent's Exhibit No. 101, entitled "Depreciation Expense—Plant (buildings, machinery, equipment, furniture and fixtures)";

Also account No. 112, "Depreciation expense — real estate improvements";

Also account 086, "Taxes—real estate and personal property"?

A. Yes, sir.

Q. Do you have that?

A. Yes, sir.

Q. What is the total amount of the expense going into these three accounts on Respondent's Exhibit No.

6302 101?

A. I will have to make a calculation.

Q. Before you can give the answer?

A. Yes.

Q. Please do so.

A. I will proceed to make the calculation.

(The witness made certain calculations.)

Q. Are you ready to give your answer?

A. Yes.

The total expense in the Detroit field for Account 110 is $97,102.86.

The same in Account 112 $6,441.81.

The same for Account 086 $54,722.88.

making a total for the three accounts of $158,267.55.

Q. That is not a part of the expense in those three accounts charged to direct shipment—or perhaps I had better ask you, is any part of the expense in those three accounts charged to direct shipment channels on Respondent's Exhibit No. 101?

A. Yes, sir. A very small portion of each of the accounts is charged to direct shipment business of the Respondent company on Respondent's Exhibit No. 101.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

6303 Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. How much of the expense in account 110; that is, how much of the total of $97,102.86 in that account is charged to direct shipment business, on Respondent's Exhibit No. 101?

A. $379.17 out of a total of $97,102.86.

Q. What portion of the expense in account 112 is charged to direct shipments, Mr. Warmack?

A. $1.39 of a total of $6,441.81.

Q. What portion of account 086, taxes and real estate and personal property, is charged to direct shipment business on Respondent's Exhibit 101?

A. $242.06 out of a total of $54,722.88.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. What part of the expense in these three accounts is charged to direct shipment channels, Mr. Warmack—devoting your answer now not to the dollar amount but to the nature of the expense?

A. I will have to have you state that again—

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

6304 (The reporter read the question.)

The Witness: I am sorry. I do not understand the question. Will you clarify that for me, Mr. Austin?

By Mr. Austin:

Q. Perhaps if you will turn to the top of page 41 of Respondent's Exhibit 100, that will help you to answer the question.

A. I will find that. I have found it. Now, I would like to hear the question again.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:)

"Q. What part of the expense in these three accounts is charged to direct shipment channels, Mr. Warmack—devoting your answer now not to the dollar amount but to the nature of the expense?")

The Witness: Will you detail your question a little more, please, Mr. Austin?

By Mr. Austin:

Q. We are talking about depreciation and taxes.

A. Certainly. Yes, that is what the accounts are, and the accounts speak for themselves.

Q. Depreciation on these buildings, or taxes on what property is charged to direct shipment expense channels, or any part to direct shipment channels on Respondent's Exhibit No. 101?

6305 A. Well, the taxes on the main office building are apportioned in part to the direct shipment expense of real estate, and real estate—let me get that straight—the taxes on the main office buildings are apportioned in part to direct shipment business on real estate improvements incident to the main office building, and are, of course, included in the main office building as an allocation for that, and that is true also of depreciation.

That is the answer.

Q. What depreciation?

A. On the main office building, and real estate improvements adjacent thereto.

Q. Is that the only part of the expense in accounts 110, 112 and 086, which is allocated in part to direct shipment channels?

A. That is my understanding, Mr. Austin, that that is the fact.

Q. Do I understand correctly that the only part of these three accounts, or rather, the only part of the expense in these three accounts which is charged to direct shipment business is a part of the depreciation and taxes on the main office property and building in Detroit?

A. Yes, sir. That is correct.

Q. What method of allocation or apportionment was used by the respondent in assigning part of the main office building expense in these three accounts to the 6306 direct shipment channels?

A. A basis was used which was the ratio of the man-hours devoted to direct shipment in the main office to the total man-hours in the main office.

Q. You say "main man hours"; what do you mean by that?

A. Well, just call it "man hours in the main office." I was thinking of the main office building man hours.

Q. Now, after deducting the amounts so determined which were charged to direct shipment channels, how was the balance of all of the expense in these three accounts, including both main office building depreciation and taxes, and depreciation and taxes on the other properties of the company, allocated between the three bulk plant channels?

A. The balance of the expense in the three account was allocated between bulk plant channels on a gallonag basis; that is, exclusive of direct shipment gallonage.

Q. And when you say "a gallonage basis" was used was that an all-gallonage basis other than direct shipments?

A. Yes, sir.

Q. By using that basis what percentage of the expens was allocated, or so allocated would fall into the respective bulk plant channels, if the allocation were made o an annual basis?

A. (There was no answer.)

6307 Mr. Austin: I would like to strike that questio I withdraw the question.

Trial Examiner Ballinger: The question is withdraw

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. In your opinion, Mr. Warmack, is the method of distributing this expense between the channels on Exhibit Respondent's Exhibit No. 101 which you have just described, the correct or proper method of allocation for th purpose of establishing a cost differential between tan wagon reseller gasoline and jobber gasoline?

A. I—

Q. If you wish, you may restrict your answer to th main office operation of that expense assumed to apply t it, or you may apply it as you see fit.

My question covers the whole extent of the expense bu I do not know whether I am asking too broad a question o not. You can give your answer as broad or as narrow a your experience dictates.

The Witness: Shall I answer?

Trial Examiner Ballinger: You may answer.

The Witness: The gallonage basis, in my opinio

6308 is not sufficient in making this allocation for the pu pose of arriving at a cost differential both as to ma office building, and also as to the bulk plant.

I might amplify that by saying that unless informatio is at hand to prove the point that the basis is a sou basis; that is, that the gallonage basis is a sound basis-

and the only way that can be arrived at in my opinion is by intensive cost study of this particular class of expense for the purpose of establishing allocation factors.

By Mr. Austin:

Q. Now, first referring specifically to the allocation of the taxes and depreciation on the main office property in Detroit, you stated that part of your expense was charged to direct shipment channel on the basis of distribution of effort of the main office employees, and the balance charged on a gallonage basis to the bulk plant channels.

Is the use of those two methods of allocation as applied to that same expense a sound accounting practice for the purpose of this cost study?

A. An analysis of the account, Mr. Austin, would have to go further than that in my opinion.

Q. Well, just a minute.

A. Yes.

Q. I am not asking a question now about that. I am asking a question now only about the main office 6309 operation of this expense. Can you answer that specifically as to that account?

A. I cannot say "yes" or "no" to any of this stuff.

Mr. Austin: Will you read the question again, Mr. Reporter?

The Witness: I want to say that it is difficult to answer things of this kind very definitely one way or the other. I have to give it as a basis of my opinion. These matters are quite involved.

Mr. Austin: I understand that. I think it would be better to read the question.

Mr. Hanley: There have been two or three questions asked here now. Just what question do you have in mind having the reporter read?

Trial Examiner Ballinger: Read the question referred to by Mr. Austin.

(The reporter read the following question:

"Q. Now, first referring specifically to the allocation of the taxes and depreciation on the main office property in Detroit, you stated that part of your expense was charged to direct shipment channel on the basis of distribution of effort of the main office employees, and the balance charged on a gallonage basis to the bulk plant channels.

"Is the use of these two methods of allocation as applied to that same expense a sound accounting prac-
6310 tice for the purpose of this cost study?")

Mr. Hanley: Is that the question you had in mind?

Mr. Austin: Yes.

Mr. Hanley: I thought you were referring to the latter one.

Mr. Austin: No. That is it.

The Witness: Could I hear the answer I made to that particular question? I also answered another one, too, I believe.

Trial Examiner Ballinger: Read the answer referred to.

(The reporter read the following answer:

"A. An analysis of the account, Mr. Austin, would have to go further than that in my opinion.")

Mr. Hanley: You made another answer there too; did you not?

The Witness: That is the answer I had in mind.

Mr. Austin: In order to make the record clear, read the next question and answer.

Trial Examiner Ballinger: Read the next question and answer.

(The reporter read the question and answer following.)

The Witness: These things will have to be explained, because just to say "yes" or "no," leaves a gap
6311 there which is not filled up.

By Mr. Austin:

Q. I do not want you to say "yes" or "no" in answer to the question.

A. No?

Q. I just wanted to get your answer as to the main office expense as distinguished from the balance of the expense in that account.

A. To take up the main office building, we can just do that very quickly. That is not a very difficult one to work out. In order to get at the main office, all you have got to do is to make a study of the floor space and the people who are involved there, and what their duties are, and then you can make your necessary allocation of all of the main office expense with respect to the taxes or any other expense incident to the mechanics or the operation of the main office, including depreciation, rent, or what expenses you may have incident to the main office.

To resort to a gallonage basis, Mr. Austin, unsupported by any study or survey, or review having not been made, as in this case it was not made—to my opinion is making it on an arbitrary basis and in my opinion an arbitrary basis is not a sufficient basis to be used in a separation of these costs for the purpose of setting up a cross differential.

6312 To properly set up a cost differential it should be supported by a thorough study, review, and survey first having been made which would support the basis used, and it should not be an arbitrary basis.

Q. If the expense in this account is prorated to direct shipment channels on the basis of effort of employees in the main office building, speaking now only of the main office building, taxes and depreciation, in your opinion, and the balance of the main office building taxes and depreciation being allocated through the bulk plant channels also on the basis of distribution of effort, would that be proper? In other words, should the balance of the main office building taxes and depreciation be allocated to the bulk plant channels—or rather, through the bulk plant channels also on the basis of depreciation or of distribution of effort of employees in the main office building?

A. I am sorry. I got mixed up in there somewhere and got lost.

Mr. Austin: It may have been a little involved. I will withdraw the question and ask it again.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. If the expense in this account is prorated to direct shipment channels on the basis of effort of employees
6313 in the main office building—speaking now only of the main office building taxes and depreciation, in your opinion should the balance of the main office building taxes and depreciation be allocated through the bulk plant channels also on the basis of distribution of effort of employees in the main office building?

A. Oh, I see what you mean. It would be reasonable to assume that it should.

The only thing in the world that you can do to see how any of that should be allocated would be on a study, as I have just outlined, from the standpoint of sound accounting.

Q. Now, turning to the taxes and depreciation on the bulk plant properties, can you state what in your opinion should be done as to the allocation of expense—of the bulk plant expense, taxes, and depreciation, for the purpose of establishing tank wagon reseller costs to be used in determining the cost differential?

A. Here we have a problem that is different, Mr. Austin, from the one just discussed. That was the main office building.

Here we have properties that are involved wholly and entirely in the dispensing of the company's product through bulk plants and not involved in direct shipment business. And I believe the testimony in this record will show that.

6314 The problem here is to support in an equitable and sound way this class of expense, and to separate it based upon that basically firm foundation, between the three bulk plant channels so that it is separated in a sound and equitable way between the three bulk plant channels. This has been done on a gallonage basis.

Before it could be stated as to exactly what should be done a cost survey would have to be made of the properties in question and that done to the end of ascertaining how the serving of the three separate and distinct groups of customers influenced the incurring of this expense or, as a matter of fact, what portions of each of these plants or parts of the plants are properly applicable to those three classes, but prior to that in the case of this respondent company, it is my opinion that the study would have to be made in order, first, to make what we term a "product segregation" and—

Mr. Hanley: (Interposing.) Just a moment. I do not understand that.

The Witness: No?

Mr. Hanley: Do you mean by all of the seven thousand odd products manufactured and marketed by the Standard Oil Company?

The Witness: No, Judge Hanley, not that at all, for every classification,—for example—a very broad—

Mr. Hanley: (Interposing.) How broad—you
6315 say a very broad classification. That is another general term.

The Witness: In the case of those other methods column that seems to be separate and distinct, and it seems to me that the classification between other methods costs, or the separation between other methods costs and the costs of the regular tank wagon business would be, in fact, a product segregation.

Mr. Hanley: I see.

Mr. Austin: Have you finished?

Mr. Hanley: Yes.

By Mr. Austin:

Q. Continue with your answer.

The Witness: If I could hear my answer read?

Trial Examiner Ballinger: Read the witness' answer referred to.

(The answer referred to was read by the reporter.)

The Witness: After such a segregation has been made it would then be necessary to separate that part of this class of expense which applies to gasoline, refined oil, and whatever other accounts of the company, or whatever other kinds of the company's products which are dispensed through tank wagons, between the two classes of customers; tank wagon reseller customers, on the one hand and the tank wagon consumer customers on the other hand.

By Mr. Austin:

6316 Q. Is any portion of the expense in accounts 110, 112, 086 charged to automobile supplies on Respondent's Exhibit No. 101?

A. No, sir.

Q. In your opinion, should a portion of the expense in those accounts be charged to automobile supplies for the purposes of this cost study?

A. I should think that they should, Mr. Austin. This is not a part of the company's business that can be left out because this is a part of the company's business and it seems to me like every channel of distribution, every part of the business should bear some share, some equitable share of this general overhead cost.

Q. Is that your opinion?

A. Yes, sir.

Q. What percentage of the salaries of warehouse labor, as is shown in account 008 is chargeable or charged to automobile supplies for the year 1940, in the respondent's regular accounting procedure?

A. Account 008 entitled "Salaries—Warehouse Labor" $6,473.15.

Q. I asked you what percentage of the total of that amount is charged to automobile supplies, just approximately?

A. The relation of $6,473.15 to $58,642.65.

Q. That is considerably more than 10 per cent, is 6317 it not, Mr. Warmack?

A. Yes, sir. It is more than 10 per cent.

Q. And approximately what percentage of the salary expense of the field office accounting department in account 200 is charged to automobile supplies?

A. A total of $19,398.70 is charged to automobile supplies out of a total of $237,524.45, which would be between 8 per cent and 9 per cent.

Q. In determining what measuring factor should be applied to the allocation of taxes and—to the allocation of taxes on bulk plant products for the purpose of this cost study should the use to which the various parts and parcels of real estate are put, be considered?

A. In my opinion, it should.

Q. And as to both taxes and depreciation should the use to which the building is put which is being depreciated, and the taxes, are put to be considered?

A. I do not understand the question.

Mr. Austin: I will withdraw the question. It may be a little awkward.

By Mr. Austin:

Q. And as to both taxes and depreciation, should the use to which the building which is the subject of depreciation, and of taxes, is put, be considered?

A. In my opinion it should.

6318 Q. Would the distribution of time between employees, between different products and different classes of customers,—having in mind the classifications regularly used by the respondent—should they be considered in arriving at a proper measuring factor?

A. It would have to be considered; yes, sir.

All of these would have to be weighted thoroughly in a cost study if you are coming down to figures that would be reasonably accurate, and accurately assigned and supported.

Mr. Hanley: If your Honor please, I want to make a little record here, if your Honor please.

Trial Examiner Ballinger: Yes.

Mr. Hanley: The respondent moves to strike the answer of the witness for the reason that the answer apparently assumes that no cost surveys or studies have been made by the respondent.

It appears that the witness had an opportunity to determine that as a fact, but he declined to indicate as to whether or not he knows whether any cost studies and surveys have been made by the respondent.

Until and unless it appears by the testimony of this witness that in fact such surveys were not made, the witness is not entitled to make an answer that is of the character that he has made to the above question. He is 6319 merely assuming that the ~~study~~ should be made, without indicating whether it was or was not, which renders his testimony valueless.

Trial Examiner Ballinger: The ruling of the Trial Examiner on the motion will be suspended while the Examiner asks the witness a question.

Mr. Warmack, did you make any inquiry as to whether cost studies had been made?

The Witness: Yes, sir.

Trial Examiner Ballinger: What were you informed?

The Witness: I was informed that no such studies had ever been made so far as was known around the Detroit office.

Trial Examiner Ballinger: Who were your informants?

The Witness: I inquired of Mr. Houghton in the Detroit office.

I inquired of Mr. Gillis in the Detroit office; that is, during my studies of the records in the Detroit office of this respondent company.

Mr. Hanley: The respondent now moves to strike the answer of the witness unless he clarifies it by stating exactly what he asked Mr. Houghton, or any one else in the Detroit office, and exactly what he referred to, and what the answer was in relation thereto, it being a fact which, if it is not already proved by the respondent will 6320 be, that many, many cost studies and surveys extending over many, many years have been in progress and are still in progress, and that there are literally hundreds of qualified accountants constantly working on the question of the propriety of these allocations.

Trial Examiner Ballinger: The motion to strike is denied, reserving to counsel for the Respondent the right to subsequently renew the motion.

Mr. Austin: I think the answer is, your Honor, that these expenses were allocated on a gallonage basis, as is shown by the Respondent's Exhibits, and there is no supporting evidence, there is no support in any of the exhibits or testimony offered by the Respondent for that gallonage allocation.

Trial Examiner Ballinger: The motion has been disposed of temporarily at least.

Mr. Austin: I suggest that we adjourn until, say, half past one or one o'clock.

Mr. Hanley: If I might, I would like to have until half past one, because it is so difficult to attend to any matters during the luncheon hour and get back here, on account of the crowded condition of the city.

Trial Examiner Ballinger: The motion is granted.

And now, at 12 o'clock noon, the hearing stands in recess until 1:30 p. m.

6321 (Whereupon at 12 noon, a recess was taken until 1:30 p. m. this day.)

6322 Afternoon Session.

1:30 p. m.

Trial Examiner Ballinger: Come to order.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination by Mr. Austin.

Q. I believe you previously gave some testimony regarding Accounts 215, 216 and 217. Account 215 is entitled "Expense—Salaries—Others," and Accounts 216 and 217 are the traveling expenses and operation and maintenance of vehicles of the individuals whose salaries are included in Account 215, according to the exhibits 99 and 100 of the respondent.

What is the nature of the expense giving rise to the three accounts, Mr. Warmack? I will restrict that to

Account 215 because the other two, as I have just stated, are incidental expenses.

A. Account 215 covers salaries of individuals in the real estate department and the tax department for the respondent company in its Detroit field.

Q. I note that on Respondent's Exhibit 101 some portion of the expense in the three accounts is allocated to direct-shipment channels. Will you state how that allocation was made by the respondent in this cost study?

A. Yes, sir. A study of the files of the real estate
6323 and tax department was made by respondent's
accountants and they found that a small portion of this class of expense on the basis of time was applicable to the direct-shipment business in the Detroit field. Allocations were made on that basis of time to the direct-shipment business.

Trial Examiner Ballinger: Does that appear from Respondent's exhibits?

The Witness: Yes, sir, that is shown on pages 109 and 110 of Respondent's Exhibit 100.

By Mr. Austin:

Q. And except for the amount of expense allocated on a time basis to direct shipment channels, is the balance of the expense in those accounts entered in the three bulk plant channels on Respondent's Exhibit 101?

A. Yes, sir, on the basis of gallonage, exclusive of direct shipment gallonage.

Q. Do I understand you to say that the expense in these three accounts entered in the three bulk-plant channels is allocated between those channels on the basis of all gallonage, including other-methods gallonage, other than direct-shipment gallonage?

A. Yes, sir.

Q. What is your opinion as to whether the methods of allocation applied to the distribution of the expense in
these accounts are correct or proper for the purpose
6324 of affording a comparison of costs as between tank-
wagon reseller customers and jobber customers?

A. It is my opinion that the costs have not been properly separated from the standpoint of sound accounting for the purpose of determining a cost differential.

Q. And what are the reasons for your opinion?

A. In the first place, if respondent's study to determine the amount of time and effort applicable to channels were to be made from the standpoint of sound accounting, it is my opinion that that study should be carried through to its proper conclusion whereby the time element should be given weight and effect in the establishing of measuring factors for the purpose of assigning the proper proportions of this class of expense to the six channels as set forth on Respondent's Exhibit 101.

That means the three bulk-plant channels known as tank-wagon reseller, tank-wagon consumer, and other-method; and the three direct-shipment channels, known as jobber—naphtha and gasoline, jobber—other products, and jobber—other customers. A separation of that kind would certainly be, of necessity, thorough and complete.

In view of the fact that the study only went to determine how much of this class of expense, on the basis of time, should be applied to the three direct-shipment channels, leaving the residue, which was almost all of the 6325 expense, that is, of this particular class of expense, about 97 per cent of that expense is unexplored and not studied and separated in its entirety between tank-wagon reseller channel, tank-wagon consumer channel, and other-method channel on a basis of gallonage.

I inquired while I was in Detroit of Mr. Houghton and other responsible people in the Detroit office if any studies had been made which would serve as a basis and prove the accuracy or possible inaccuracy of this gallonage separation, and I was told by Mr. Houghton that there were none. Therefore, I feel that the study has not been properly completed from the standpoint of sound accounting.

There is one other point that I should like to call to your attention, Mr. Austin, and that is this: where you make a time-study and you draw out an account for a part of the time of an individual or of a department and assign directly that time to one particular channel of distribution or product and do not carry the time study through until you account for all of the time of that individual, the portion of that individual's or that department's time which is of a general nature will be excluded from any allocation which would be made to the channels or the products to which the direct time afforded by the study or by the partial study could be made: therefore, the residue includes

a considerable part in almost every instance of time
6326 spent on miscellaneous things of a general nature
6327 which, of necessity, would have to be apportioned in
some way, if a complete study were carried through
on the way that the time was apportioned, or that portion
of the time which could be considered as direct time had
been apportioned.

6328 Q. Now, as to account No. 220, Mr. Warmack, which is entitled "Expense—Employment Department—Salaries and all Other Expense"—

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Austin: Read the question so far as it has gone.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

By Mr. Austin:

Q. Did you make any inquiries or investigation to determine what the duties of the employment department are in the field office beyond what appears in the testimony?

A. Yes, sir. I inquired about that.

Q. What were you told?

A. I was told substantially what is recited in the testimony. There may have been a little amplification on it.

Q. Can you state briefly what the duties of the employment department are? I understand from the testimony that the employment department is headed by a man known as the personnel supervisor. Is that correct?

A. That is right.

Q. What are his duties?

6329 A. General supervision.

Q. Now, just give us a very general answer, if you can state that, or if you do not care to, all right, they are described in the testimony to some extent, but if you can give us a general statement now to serve as a basis for the questions which I intend to ask, it might be helpful.

A. I rather think they are better stated in the testimony than I can state them, Mr. Austin. This particular individual, his duties turn largely on the question of employment of personnel in the Detroit field, and he works up various statistical data, and manages the employment department. He has a multitude of things to do there that he prob ably, and he and he alone could enumerate in total detail, but it turns largely to the employment of personnel in the Detroit field.

Q. Is the expense incident to the duties and activities of that department an expense of such a nature that it may be used, in your opinion, for the purpose of establishing a cost differential between jobbing business in gasoline on the one hand and tank wagon reseller gasoline business on the other hand, by means of any logical method of allocation?

Mr. Hanley: May I have the question read, Mr. Examiner? I have some difficulty in following them.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

6330 Mr. Hanley: Thank you.

That is objected to for the reason that it calls for a conclusion and opinion on the part of the witness as to whether it is possible to logically prove a cost differential.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: The Robinson-Patman Act assumes that there is that possibility, at least.

Mr. Austin: I have been of the opinion, or at least I am assuming that there are some costs of such a general nature that they will not afford any basis for a cost differential, because there is no means of allocating them except on a gallonage basis, and of course a gallonage basis affords no differential.

Trial Examiner Ballinger: I think I understand the situation sufficiently.

The objection is overruled.

The Witness: I am sorry, I have now lost the question. I don't know what question you are referring to.

Mr. Hanley: I am not sure that I do now.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

6331 "Q. Is the expense incident to the duties and activities of that department an expense of such a nature that it may be used, in your opinion, for the purpose of establishing a cost differential between jobbing business in gasoline on the one hand and tank wagon reseller gasoline business on the other hand, by means of any logical method of allocation?")

The Witness: These costs are of a general nature—these costs, which are of a general nature—

Mr. Hanley: (Interposing.) Can we not have an answer directly "yes" or "no", your Honor?

The Witness: I cannot say "yes" or "no" to that or a lot of others.

Mr. Hanley: I dislike, your Honor, to ask any witness to answer "yes" or "no", and seldom do, if he cannot give a truthful answer, but he was asked a specific question as to whether or not it was possible to make any logical allocation for the purpose of arriving at a cost differential by allocating expense in this account.

It seems to me that is a question that can be answered "yes" or "no" as to whether it is possible to do so or not possible to do so.

Mr. Austin: No, he was asked whether in his opinion the account or that type of account would serve as a means for any logical method of allocation.

6332 Mr. Hanley: Well, it still can be answered "yes" or "no."

Trial Examiner Ballinger: Well, if the witness cannot answer "yes" or "no", what good is the explanation?

Mr. Hanley: I do not know.

Mr. Austin: I think that the witness at least, or what I wanted was to have the witness' opinion on that subject. Now, if there is a difference between accountants on the subject, differences of opinion, I think that the witness should be permitted to state them.

Trial Examiner Ballinger: He says he cannot even express an opinion "yes" or "no" on it.

Mr. Austin: I did not understand that he said that. He said that he could not answer "yes" or "no."

Trial Examiner Ballinger: Let us ask him.

Mr. Warmack, can you express an opinion one way or the other in answer to the question?

The Witness: I can only answer the question and give you, your Honor, what accountants generally think about these costs that are of a very, very general nature.

Mr. Hanley: Well, any such answer as that is objected to. In the first place, it is not responsive to the question as asked.

Trial Examiner Ballinger: It is not what accountants generally think. You are asked as to what you think.

6333 The Witness: O. K. I will tell you what I think about the situation.

Trial Examiner Ballinger: Proceed.

The Witness: Costs of a general nature such as this are not susceptible to a separation ordinarily of themselves whereby they can be directly applied as applying to customer classifications or product classification.

If they are used in a cost justification they must of necssity follow the allocations of some other costs which are more or less of a direct nature.

Mr. Hanley: Respondent moves to strike that because it is qualified by the witness with the term "ordinarily," apparently meaning that accounts or expenses of a certain general character cannot ordinarily be made susceptible to cost separation.

The witness was asked about a specific account, about a specific expense as applying in this particular lawsuit, and not as to what in his opinion may ordinarily be true about some indefinite class of accounts.

Trial Examiner Ballinger: The motion to strike is granted.

Mr. Austin: Your Honor, may I ask the witness another question based upon that question?

Trial Examiner Ballinger: You may, and the Examiner
will reserve or recall his ruling until the question
6334 is asked and answered.

The Witness: Would you mind reading my previous answer?

Trial Examiner Ballinger: Read the previous answer of the witness.

(The answer referred to was read by the reporter.)

By Mr. Austin:

Q. Mr. Warmack—

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Mr. Warmack, you have given an opinion there of the applicability, you say, ordinarily to costs of this nature and their susceptibility of allocation.

A. Yes.

Q. Is what you have said there about expenses of this nature ordinarily being not susceptible to direct allocation applicable to the specific expenses contained in account 220 being expenses of the employment department?

A. Yes, that is so.

Mr. Hanley: Now, I have the question and the answer read? I am sorry, but I did not follow it.

Trial Examiner Ballinger: Read the question and 6335 answer.

(The question and answer referred to were read by the reporter.)

Mr. Hanley: If your Honor please, I move to strike the question and answer as too indefinite, vague, and uncertain as to serve any purpose in this record.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Austin: I will withdraw the previous question and ask this question.

Trial Examiner Ballinger: The previous question is withdrawn.

By Mr. Austin:

Q. You gave an opinion, Mr. Warmack, regarding the allocation of certain expense of a general nature, and their susceptibility of allocation on any other basis than following the allocation of expenses or a more direct nature. Is that correct?

A. Yes, sir.

Q. Did your opinion apply, or do you desire to have it apply specifically to expense of the nature of the expense included in the account 220 in this cost study, which is expense of the employment department of the respondent.

A. That was the account I was talking about, Mr. 6336 Austin, when I made the statement.

Mr. Hanley: Again, I move to strike the answer of the witness.

His answer now refers back to another question, not to the present question, and the present question is susceptible of a "yes" or "no" answer as to whether or not this cost differential applies to this specific account.

Trial Examiner Ballinger: The motion to strike is granted.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Austin:

Q. Do you recall the previous question that I asked you?

A. Well, which one do you mean?

Q. The one in reference to this account 220.

A. Well, there were several of them. I don't know just which one you refer to.

Mr. Hanley: Would it not be better to read the one to him that you have in mind?

Trial Examiner Ballinger: Read the question to which Mr. Austin refers.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

6337 (The reporter read the following question:

"Q. Did your opinion apply, or do you desire to have it apply specifically to expense of the nature of the expense included in the account 220 in this cost study, which is expense of the employment department of the respondent?")

The Witness: Yes, sir. I was under the impression, Judge, that is what we were talking about at the time.

Trial Examiner Ballinger: In view of the witness' answer to the last question, the motion of counsel for the Respondent to strike his answer to the previous question upon which the Examiner ruled, is overruled;

And the previous action of the Examiner is revoked and recalled.

By Mr. Austin:

Q. It appears from Respondent's Exhibit 101 that a portion of the expense in account 220 is charged to direct shipment channels. What was the basis of your distribution of that expense, Mr. Warmack?

A. The expense of this department, that is, the employment department account 220 is allocated upon the basis of direct shipment hours of the Detroit field, expressed as a proportion of the total amount of hours of all employees in the field by months.

That information is shown at page 110 of Respond-
6338 ent's Exhibit 100. That is the basis of the distribution of that expense as is thereby indicated.

Q. Was that same method of allocation used in distributing the expense of this account as between the three bulk plant channels on Respondent's Exhibit 101?

A. I—

Mr. Hanley: (Interposing.) Before the question is answered, may I ask a question for the purpose of making a motion to strike, if your Honor please?

Trial Examiner Ballinger: You may.

Mr. Hanley: Mr. Warmack, in your answer to the last question indicating the method used of allocating part of the expense in account 220 to the direct shipment channels, have you made a study of the method of which you are talking?

(There was no answer given.)

Mr. Hanley: Have you studied the exhibit prepared by the Respondent from which you are reading in respect of the allocation?

The Witness: Yes, sir. And my answer to your previous question—I was looking at this document—is yes.

Mr. Hanley: Do you dispute the accuracy of the calculations in respect of time allotted in the direct shipment channels in reference to the expense on account 220?

6339 The Witness: I—

Mr. Austin: (Interposing.) I object to that question, your Honor, on the ground that I did not go into the amounts, but simply asked the question of the witness as to the method used. I did not go into the amounts. I simply asked the witness as to the methods used. I think the question is clear.

Trial Examiner Ballinger: The objection is sustained.

Mr. Hanley: If your Honor please, if the witness' answer is "no" then of necessity his opinion as to the impossibility of allocating this particular account on any direct basis cannot still be in his mind, because he admits if he does not dispute the accuracy of this calculation that such an allocation was accurately made, and he stated before he has seen it, and he has studied it. I think we are entitled to have it understood what this witness' opinion is.

Trial Examiner Ballinger: The Examiner understands that this witness is not going into the question of the accuracy of the computations made by the Respondent, that he is dealing only now with methods.

Mr. Hanley: Well, for the purpose of the record, may the witness answer for himself as to whether he is disputing the accuracy of the Respondent's calculations?

6340 I want to make this motion.

Trial Examiner Ballinger: Gentlemen, if you deem that important the Examiner will permit the witness to answer.

The Witness: Now, what must I answer?

Mr. Hanley: I will restate the question, Mr. Warmack.

The Witness: Please.

Mr. Hanley: Do you dispute the accuracy of the computations made by the Respondent appearing in Respondent's Exhibit 100 which are reflected in direct shipment channels on Exhibit 101 opposite account 220? Now, I think that may be answered "yes" or "no."

The Witness: May I have the question of Judge Hanley read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not like the word "dispute", Judge, but I most certainly question their accuracy.

Mr. Hanley: It does not matter whether you like it or not, please, Mr. Warmack. That is what I asked you. Will you please answer that?

Trial Examiner Ballinger: The witness has said that he did not like the word "dispute," but that he questioned the accuracy of the account.

6341 The Witness: I question their accuracy. I question the accuracy of the account.

Mr. Hanley: That is all right.

The Witness: From the standpoint of sound accounting, for the reasons as just previously stated, and as stated in connection with account 215.

Mr. Hanley: That injects an entirely new picture in this lawsuit, then.

6342 Trial Examiner Ballinger: Read the question.

(The question was read by the reporter as follows:

"Q. (By Mr. Austin) Was the same method of allocation used in distributing the expense of this account as between the three bulk-plant channels on Respondent's Exhibit 101"?)

Trial Examiner Ballinger: And read the answer preceding that.

(The answer referred to was read by the reporter.)

The Witness: The answer is no, sir.

By Mr. Austin:

Q. What method of allocation was used for apportioning this expense between the three bulk-plant channels?

A. Gallonage basis, exclusive of direct-shipment gallonage.

Q. If the expense in this account were apportioned between all seven channels on Respondent's Exhibit 101 on the basis of total effort of all field employees, what effect would such an allocation have upon the amount of the expense entered in this account in the tank-wagon reseller channel?

A. It would be materially reduced.

Mr. Hanley: Just a second, please, Mr. Austin. Do I understand now that you regard it as a possibility to make such an allocation?

Mr. Austin: I object to that question, your Honor, on the ground that it is not proper interpolation, not 6343 directed toward clarifying.

Trial Examiner Ballinger: The objection is sustained. It is a matter that can be gone into on cross-examination.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. I would like to call your attention to Account 111, Mr. Warmack, on Respondent's Exhibit 101. The account is entitled "Depreciation Expense—Plant—E. L. A." and the expense contained in the account is depreciation expense on dispensing equipment loaned by the respondent to retail service stations. A part of the expense in this account is charged to direct-shipment business on Respondent's Exhibit 101.

Will you please state by what method the respondent made those charges to direct-shipment business in this account?

A. Direct application, Mr. Austin. The respondent company has a record of the equipment that is loaned to jobbers for dispensing its petroleum products, and it just applied the depreciation rate to the investment in that equipment and arrived at a figure which they directly applied to the respective direct-shipment outlet channels.

Trial Examiner Ballinger: Is your answer based 6344 upon some document introduced by the respondent?

The Witness: Yes, sir.

Trial Examiner Ballinger: Please refer to it.

The Witness: Page 51 of Respondent's Exhibit 100 and page 52 of the same exhibit.

By Mr. Austin:

Q. Then, did the respondent use capital investment in actual equipment at jobber outlets for the purpose of applying the depreciation rate which resulted in the direct shipment expense in this account?

A. Yes, sir.

Q. Now, as to the portion of the expense in this account which is entered in the three bulk-plant channels, is the expense entered in each of those channels the result of applying the same depreciation rate to capital investment in E. L. A. equipment chargeable to those respective channels?

A. No, sir.

Q. What method of allocation was used in distributing the expense in this account between the three bulk-plant channels?

A. It was allocated to the three channels, Mr. Austin, on the basis of gallonage, exclusive of direct-shipment gallonage, in the company's regular accounting procedure, and the allocations are made each month.

Q. How is the depreciation expense obtained in the company's regular accounting procedure, and by that I
mean, Mr. Warmack, that before you can allocate the
6345 depreciation expense between channels on a gallon-
age basis you have to find out what the depreciation
is. Do you know how that is handled?

A. Yes, sir.

Trial Examiner Ballinger: State it, if you know.

The Witness: The respondent company has an investment in all of this class of property loaned, in total, but its records do not show a separation of this equipment, that is, this property we are speaking about, by channels or outlets separately; therefore, in its regular accounting procedure it applies its depreciation rate to its total investment in this class of property and arrives at a depreciation figure which it in turn separates between bulk-plant channels on the basis of gallonage, exclusive of direct-shipment gallonage.

By Mr. Austin:

Q. Then, when respondent made its cost study, did it ascertain from its records the actual capital investment value of equipment loaned to jobbers?

A. Yes, sir.

Q. And did it then apply the depreciation rate of 4 per cent to that capital investment?

A. It did.

Q. Did it also from its records determine the capital investment of dispensing equipment loaned to tank-wagon reseller customers for gasoline and refined oils?

6346 A. No, sir.

Q. Do I understand correctly that respondent did make that determination of capital investment of dispensing equipment loaned to jobbers for gasoline and refined oil, and a similar calculation for its equipment loaned to jobbers and used for other products?

A. Yes, sir, it certainly did and I know of no more accurate calculations that could possibly be made than that.

Q. You are now referring to the calculation made for the allocation of direct shipment channels?

A. Yes, sir.

Q. In your opinion, was it good or sound accounting to apply the accurate method which you have described for the purpose of arriving at the marketing expense of this equipment to jobber gasoline business, and using the gallonage method for making an allocation of the expense to tank-wagon reseller business, and then comparing the tank-wagon expense arrived at by one method with the jobber expense arrived at by another method?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the Reporter.)

The Witness: In my opinion, the method is unsound from the standpoint of sound accounting. I can appreciate this, however, in connection with that, that this account is not very large and the work required to
6347 break down this great number of items may have
been considered as not being commensurate with the good that respondent would get out of it.

By Mr. Austin:

Q. Does that affect your opinion as to whether or not the methods used were sound from an accounting standpoint?

A. From an accounting standpoint, it does not affect the opinion, except from the standpoint of whether or not it was a practical thing to do.

(There was a discussion off the record.)

Mr. Austin: May we have a five-minute recess now?

Trial Examiner Ballinger: We will take a five-minute recess.

(A short recess was taken.)

6348 Trial Examiner Ballinger: Come to order.

Mr. Austin: If I can have about five minutes, your honor.

Trial Examiner Ballinger: We will be in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. Mr. Warmack, do you desire to make any further statement in your opinion—

A. (Interposing.) I beg your pardon. I did not hear you.

Q. Do you desire to make any further statement of your opinion for the purposes of clarification as to the methods used by the Respondent in allocating expense in account 220 between channels on Respondent's Exhibit 101?

A. Yes, sir. I do.

Q. Will you make such a statement?

A. Account 220, entitled "Expense—Employment Department—Salaries and all other expense," is an expense of a general nature, and ordinarily is not susceptible to a separation and allocation to the customer classifications or product classifications in a direct manner—

The Witness: May I have my answer as far as I have given it read?

Trial Examiner Ballinger: Read the answer.

6349 (The reporter read the answer as given.)

By Mr. Austin:

Q. Proceed.

A. It would therefore be necessary to allocate the expense if it were used in determining cost differentials, on a basis of an allocation of an expense of a direct nature.

Inasmuch as the Respondent elected to allocate a portion of that expense on the basis of effort to direct shipment channels, it is my opinion that the same method should be employed in the allocation of that general expense on that basis of effort of employees in the bulk plant channel.

~~Trial Examiner Ballinger:~~ Mr. Warmack, can you state for the record the total amount of expense dealt with, and to which you have just referred?

The Witness: Yes, sir.

Trial Examiner Ballinger: Please do so.

The Witness: $3,889.23.

Trial Examiner Ballinger: If all of that expense had been placed in any one account, would it have made any perceptible difference in the result?

The Witness: Yes, sir.

Trial Examiner Ballinger: What and how?

The Witness: It would have made a difference if all of it had been placed in the channel marked "jobber, naphtha
and gasoline" inasmuch as it would be about 10 per
6350 cent more than the total cost placed in that channel,
the total cost of that channel is shown by Respondent's Exhibit 101 as $24,389.05.

Trial Examiner Ballinger: How would it have affected the cost of marketing between the tank wagon reseller channels and the jobbers?

The Witness: Do you mean, your Honor, if it were all placed in that channel?

Trial Examiner Ballinger: Yes.

The Witness: It would have increased the cost shown as .16 cents per gallon at the bottom of channel marked "jobber, naphtha and gasoline."

Trial Examiner Ballinger: Approximately, how much, just roughly?

The Witness: I will make a calculation.

Trial Examiner Ballinger: Proceed.

(The witness made a calculation.)

Trial Examiner Ballinger: Do you have your figure?

The Witness: Yes, sir.

Trial Examiner Ballinger: What is it?

The Witness: It would have increased that cost to a little over .18 cents per gallon.

Mr. Hanley: How much?

Mr. Austin: .18 cents.

Mr. Hanley: .18 cents per gallon?

Mr. Austin: That is right.

6351 Mr. Hanley: Thank you.

Trial Examiner Ballinger: All right.

Mr. Hanley: May I ask one question, Judge, along the same line?

Mr. Austin: I would like to continue this examination.

Trial Examiner Ballinger: I will permit the question by counsel for the Respondent.

Mr. Hanley: Thank you.

If it had all been placed in the tank wagon reseller channel, where approximately two thirds of it already is, would it have perceptibly affected the result?

The Witness: No, sir.

Mr. Hanley: Would it have affected it at all within the two decimal points?

The Witness: I rather think that it would not have affected it within the two decimal points, Judge Hanley.

Trial Examiner Ballinger: Anything further?

Mr. Hanley: No.

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Mr. Warmack, you just referred, in the opinion that you have given, in the allocation of cost of account 220 on the basis of effort; that is, distribution of effort of all employees in the Detroit field, is that correct?

6352 A. Yes.

Mr. Hanley: May I hear that question and answer read?

Trial Examiner Ballinger: Read it.

(The question and answer referred to were read by the reporter.)

Mr. Hanley: It is not clear to me.

By Mr. Austin:

Q. In your opinion, is the distribution of expense representing effort of the employees in that field what you have termed a more direct expense than expense of the nature going into account 220?

A. Yes, sir.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Austin:

Q. Will you please direct your attention to Schedule six on page 55 of Respondent's Exhibit 100?

A. Yes, sir.

Q. The schedule and the explanation on the pages following is entitled "Credit Information—Bad Debts and Recovery, Detroit Field, 1940." Is that correct?

A. Yes, sir.

6353 Q. What costs are, for the most part, represented in the accounts listed in said Schedule 6?

A. On each portion of those costs, Mr. Austin—well, let me look at this just a minute—

Q. Yes.

A. A large portion of those costs, Mr. Austin, are credit cards. I just wanted to be sure about that.

Q. Will you name the accounts and the total?

A. Yes, sir.

Q. Please do so.

A. Account 208, credit information, expense.

Q. Yes.

A. Account 400, bad debt collection written off prior years. That is a credit account.

Q. A credit account?

A. Yes.

Q. Proceed.

A. Account 431, budget plan, income and expense.

Q. Is that a credit account?

A. That is a credit account.

Q. Next?

A. Account 510, losses by bad debts.

Q. Bad debts?

A. Yes.

Q. Proceed.

6354 A. Account 511, expense collecting bad debts, current year.

Mr. Hanley: Current year?

The Witness: Current year.

By Mr. Austin:

Q. Any others?

A. Yes. Account 512, expense collecting bad debts previous years—prior years it is.

Q. Is that all?

A. Yes.

Q. When you referred to credit cards, Mr. Warmack, are you referring to the Standard Oil Company (Indiana), National Credit identification cards, one of which cards was introduced in evidence as Commission's Exhibit 21, and which I now show you?

A. Yes, sir.

Q. Have you heard the testimony regarding the amounts of or—first, the use which is made of those cards by the Respondent in the nature of the card credit offered through those cards?

A. In the nature of the credit offered through those cards?

Q. Yes.

A. Yes, sir, I have.

Q. Did you make any further investigation of the credit card practices of the company, the Standard 6355 Oil Company, while you were in Detroit?

A. Yes, sir. I did.

Q. Just what did you do in that regard, Mr. Warmack? If you discussed it with anybody, state with whom you discussed it.

A. I did discuss it. I discussed it with Mr. Houghton at length, and he described it to me in virtually the same manner as it is described in the record.

Q. Did you make a study of the records of the company for the purpose of determining the amount of the total credit card expense of the Respondent for 1940, and the methods employed in the separation of those expenses in various accounts where it occurs on Respondent's Exhibit 101?

A. For the Detroit field; yes, sir.

Q. Did you find that other accounts than those listed on Schedule 6 of Respondent's Exhibit 100 were included as credit card expense?

A. Yes, sir.

Q. Will you state the other accounts which are listed on Respondent's Exhibit 101, other than those included in Schedule 6, and which include credit card expense, and for which account; that is, for each account, if you can state the amount of the expense in the account, which is a credit card expense, I will ask you to do so. First, can you do so?

6356 A. Yes, sir.

Q. Please do so.

A. First, account 066 entitled "Miscellaneous Operating Expense," $740.83.

Mr. Hanley: 066?
The Witness: Yes, sir.

By Mr. Austin:

Q. Proceed.

A. Account 200, which is entitled "Office Expense-Salaries Accounting," $6,743.68.

Mr. Hanley: $6,743.68?

The Witness: That is right.

By Mr. Austin:

Q. Next?

A. Account 201 entitled "Stationery"

Mr. Hanley: Stationery?

Mr. Austin: Yes.

The Witness: That is $3,747.03.

By Mr. Austin:

Q. And the next one?

A. Account 202, that is entitled "Postage."

Mr. Hanley: Postage?

The Witness: Postage.

The amount shown there is $3,168.61.

By Mr. Austin:

6357 Q. Any others?

A. Account 204, which is entitled "Exchange," and the amount is shown to be $1,317.21.

Q. Is there anything you desire to call attention to in connection with that?

A. I should like to call your attention with respect to the figures given that only in the case of account 200 does it appear that there is credit card expense applicable to automobile supplies.

I gave a figure of $6,743.68 as shown for credit card expense in account 200, of which $573.90 is shown as applicable to automobile supplies. Mr. Houghton and I, when we worked up this information, did not go to the refinement of determining in every instance what portion of the expense, if any, had been applied to automobile supplies.

Q. You are speaking of credit card expense?

A. Yes, sir.

Q. In giving this last answer?

A. Yes, sir.

6358 By Mr. Austin:

Q. Does any part of the expense that you have just stated for the five accounts you have just referred to apply to automobile supplies other than the amount of $573.90 in Account 200?

A. No, sir, no part of those expenses just stated, except that, applies to automobile supplies.

Q. Now, turning again to the accounts listed on Schedule 6, page 55 of Respondent's Exhibit 100, what portion of the total expense or credit, as the case may be, in those accounts is credit card expense?

A. I can give them separately, Mr. Austin.

Q. All right.

A. Account 208 entitled "Credit Information Expense," is shown on page 55 of Respondent's Exhibit 100 as amounting to $14,111.30, of which $11,960.95 was found to be applicable to the credit-card business or activities.

Account 400, entitled "Bad Debts Collected—Written Off Prior Years," for which a total of $5,481.45 is shown as a credit, of that total $73.82 was found to be a credit applicable to credit card expense. That means bad debts recovered during 1940.

Account 431, for which a total of $1,058.17 is shown on page 55 of Respondent's Exhibit 100, no part of which
was found to be applicable to credit-card expense, it
6359 may be that some little part of that was applicable
to automobile credit-card expense, but inasmuch as
that account applies wholly to the automobile expense, we didn't explore it thoroughly.

Account 510, for which there is shown a total of $7,520.88—

Trial Examiner Ballinger: Losses by bad debts?

The Witness: Yes, sir.

(Continuing)—of that total amount, $3,109.83 were found to be applicable to the credit-card expense.

Account 511, entitled "Expense—Collecting Bad Debts—Current Year," for which there is shown a total of $223.10, only $1.50 of that amount was shown as applicable to credit card expense.

Account 512, entitled "Expense—Collecting Bad Debts—Prior Years," for which a total of $835.35 is shown on page 55 of Respondent's Exhibit 100, only $2.50 of that item was found to be credit-card expense.

Q. Are credit-card holders customers of the respondent, or are they customers of the respondent's customers?

A. They are customers of the respondent's customers.

Q. Are they in some instances customers of companies other than the respondent, engaged in the sale of petroleum products?

I will withdraw that question, if I may.

6360 Trial Examiner Ballinger: You may withdraw it.

(Discussion off the record.)

By Mr. Austin:

Q. In your opinion, Mr. Warmack, is the expense incurred by the respondent in connection with issuing of credit cards, the handling of collection from credit card customers, and all other expense in connection with its credit card practices and activities, that is, activities resulting from the issuance of these cards, an expense which may properly afford a differential in cost as between the respondent's cost of selling and delivering gasoline to jobbers on the one hand and to tank-wagon-reseller customers on the other?

A. It is my opinion that it is a cost which would not properly afford a cost differential.

Q. What is the basis of your opinion?

A. This is an expense or a class of expense which is very comparable in nature to advertising for consumer acceptance. The respondent company has no control over where the customer-consumer, speaking specifically of automobile drivers who own credit cards, purchase their gas. The company is materially concerned, naturally, to the end that this particular customer or group of customers buy Standard Oil gas or Standard Oil products or products of its affiliated companies, but, to state it again, it has no control over where they buy or what they

6361 buy, as long as it is Standard Oil products.

It is my opinion, Mr. Austin, that that class of expense should be separated on the basis of gallonage sold by the respondent company to its customers for ultimate resale to the consuming public, that is, on a gallonage basis. The separation of cost on a gallonage basis affords no cost differential.

Trial Examiner Ballinger: Purchases on credit under the cards are not confined to the products of the Standard Oil Company of Indiana, are they?

The Witness: It was my assumption, Judge, that they were confined to the purchases through stations of the Standard Oil Company of Indiana or some or certain of its affiliated companies, such as the Amoco company.

I rather assume and I believe to be a fact, that if a reseller of gasoline were selling some grade of motor oil or kind of motor oil that wouldn't be Standard Oil, that he could sell it to credit card customers.

Trial Examiner Ballinger: The card, and I refer to Commission's Exhibit 21, states on its face:

"This card may be used by customer whose name and vehicle license number are shown on the face hereof in purchasing on credit merchandise manufactured or 6362 distributed by Standard Oil Company, Indiana, or by any of the within named companies at any place of business reselling such merchandise."

And on the back of the card appears the names of the "within companies":

"American Oil Company
Pan American Petroleum Corporation
Idaho-Utah Oil Company
Utah Refining Company
Standard Oil Company of California
Standard Oil Company of Ohio
Standard Oil Company of Nebraska
Standard Oil Company of Kentucky
Humble Oil & Refining Company
Standard Oil Company of Texas
Standard Oil Company of California
Union Oil Company of California
British Columbia Standard Oil Company, Limited, and
Union Oil Company of Canada, Limited."

Mr. Austin: Are you through?

Trial Examiner Ballinger: Yes.

By Mr. Austin:

Q. Mr. Warmack, whether or not the use of the credit cards by the holder thereof is restricted to the respondent's products or to stations supplied by respondent or by its affiliates, does that in any way affect your opinion 6363 as to the nature of this expense?

A. No, sir, the holder of the credit card has it wholly within his power and election as to where he is going to exercise the use of that card, according to the limitations as set forth on the card.

Q. Are you referring now to jobber outlets and tank wagon reseller outlets?

A. Yes, sir, any reseller of gasoline, that is, petroleum products, of this respondent company, to the consuming public. The holder of the card can go to one station and it will be honored, he can go to another station and it will be honored, and it can continue on and on according to his own election.

Trial Examiner Ballinger: And buy the product of any company enumerated on the card?

The Witness: That is correct, your Honor, and that is the reason that, and the reason previously given, why in my opinion I don't see how it is, in my opinion, that it could be only allocated on a basis of gallons sold, either directly or indirectly, to resellers of gasoline to the consuming public.

By Mr. Austin:

Q. Does that include gallonage sold to jobbers for resale to reseller outlets?

A. Yes, sir.

Mr. Hanley: May I ask a question, Mr. Austin?

6364 Mr. Austin: Yes.

By Mr. Hanley:

Q. Mr. Warmack, is the fact that the credit card holder may buy at any Standard Oil station, for instance, or may buy at these other company-supplied stations your reason for your opinion that it is not a proper expense as allocated on the company's records?

A. Judge Hanley, I don't understand your question that it is not a proper expense as allocated. I most certainly agree that it is an expense of the company incurred in its regular course of business.

Q. Well, then, let me ask you this: Does the fact that a credit card holder of a card issued by the Standard Oil Company may buy the products of that company at any station handling them or products of these other companies anywhere he may choose have anything at all to do with the cost and the expense to the Standard Oil Company of issuing the card and servicing the account? I mean "servicing" from an accounting standpoint.

A. Read that to me, please.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: If I understand your question, Judge,
it is this, Does the fact that the issuing of the card and
the servicing of the card have any relationship to
6365 where he buys?

Mr. Hanley: Yes, that is right, does it?

The Witness: I don't see how it could have. Your card may be issued in Detroit and he may move immediately to California.

6366 Mr. Hanley: That is true.

The Witness: And he may stay in California.

Mr. Hanley: Right.

The Witness: And that is what I want to know, is how that expense could be allocated.

Mr. Hanley: That is what I am asking you.

The Witness: That is what I have been trying to find out.

Mr. Hanley: The Standard Oil Company is presumed in my question to have issued the card and is continuously servicing it from an accounting standpoint, and guaranteeing the payment on it, to any company that supplies products on the strength of it; you agree, do you not, that that is an expense to the Standard Oil Company?

The Witness: Certainly.

Mr. Hanley: Then, do you not agree that where and how and how much and what kind of products are purchased on that card have nothing whatever to do with the expense to the Standard Oil Company of issuing the card?

The Witness: Of issuing the card?

Mr. Hanley: And servicing it.

The Witness: It may have some minor bearing on the
servicing of the card. I do not know just what the customer
is allowed to buy, and how much he is allowed to buy on
the credit card, but if there is no measuring factor
6367 that could be established other than the gallonage
basis or factor, as I have just discussed, I certainly
would like to know how it can be done from the standpoint
of sound accounting.

Mr. Hanley: Well, I think any further questions I might have would be properly cross-examination. I wanted to understand your theory.

The Witness: I see.

Trial Examiner Ballinger: Proceed, Mr. Austin.

Mr. Austin: May I have this document marked for identification?

Trial Examiner Ballinger: The reporter may mark the document for identification.

(A document entitled "Standard Oil Company, Docket 4389, Credit Card Expense, (including couponbook expense) Detroit Field—1940," was marked Commission's Exhibit 132 for identification.)

By Mr. Austin:

Q. I show you Commission's Exhibit 132 for identification, Mr. Warmack.

A. Yes.

Q. Will you state what the contents of that sheet are?

A. This is a statement prepared by Mr. Houghton and me from the Detroit Field, in the Detroit Field, rather, covering credit card expense including coupon book
6368 expense in the Detroit Field for 1940.

The statement shows the total credit card expense including, possibly, some expense of a credit card nature which would be applicable to automobile supplies.

In that connection, Mr. Houghton and I did not make studies sufficiently to pull out all of the credit card expense which would be applicable to the automobile supplies. We only covered and endeavored to determine the cost of credit card expense applicable to petroleum products. And what I mean by that is that the way that the Respondent company did allocate these expenses as between six petroleum products channels of Respondent's Exhibit 101.

It will be noted that no part of this expense was found as being applicable to the "direct shipments," other customers channel on Respondent's Exhibit 101.

Q. What do you mean by "coupon book expense" referred to on this sheet?

A. There was a time, I understand, probably prior to the inauguration of the credit card or running right along with the time that the credit card method, and the issuance of credit cards was gone into in a big way, maybe we will say, that the company issued coupon books to consumers of gasoline and other petroleum products, which would be honored at the reseller stations, and that since the expense was handled by the company the same as this credit
6369 card expense, we felt that they were very, very closely related.

Q. And in your opinion, was the expense of the company incurred or that the company incurred in connection with the issuance of and servicing of coupon books expense of the same nature as the credit card expense you have described?

A. Yes, sir.

Q. What is that based upon?

A. That is based upon information obtained from Mr. Houghton.

Q. And by "expense of the same nature," I mean the expense in your opinion that should be allocated in the same manner as you have already stated for credit card expense.

A. Yes, sir. It was my understanding that the coupon books could be used at any reseller outlet where the company's products were sold.

Q. Now, on Commission's Exhibit 132 for identification, there are five channels listed entitled as follows:

1. Tank wagon reseller.
2. Tank wagon consumer.
3. Other methods.
4. Jobber, naphtha and gasoline.
5. Jobber, other products.

There are certain dollars and cents figures listed in each of those five columns. Are the figures listed in those columns; that is, in each column for each of the respec- 6370 tive accounts—or rather, do those figures represent the amount of expense in each of those accounts entered by the Respondent in the same channel and for the same account on Respondent's Exhibit 101 in this cost study?

A. Yes, sir. You will have to bear this in mind, in that, though, some of these accounts would be only partly applicable to credit card business.

As a matter of fact, I do not think any one listed on here was wholly applicable to the credit card business. Therefore, Mr. Houghton and I had to go back and calculate what portion of this expense we found was applicable to credit cards that had been assigned to the respective channels.

Q. Yes. I understand that, Mr. Warmack. And what I wanted to find out was whether the amounts entered in those six columns are the amounts that you and Mr. Houghton determined to represent the credit card expense because these accounts actually entered upon by the Respondent in the same amounts and the same channels on Exhibit 101 appear to be similar.

A. Well, I am afraid I do not quite follow your ques-ion there.

Mr. Austin: I will withdraw the question.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Austin:

Q. What I wanted to find out, Mr. Warmack, was whether the amounts entered in those columns to which I have just referred are the amounts that you ave been told determined to represent the credit card xpense in these accounts actually being entered by the Respondent in the same accounts and in the same channels n Exhibit 101? 371

A. Yes. That is correct. That is what we did find. They are the sums that Mr. Houghton and I determined epresented the credit card expense, Mr. Austin, and these ccounts actually were entered by the Respondent in these ame accounts, and as far as that is concerned, in the very ame channels of Commission's Exhibit 101—on this Ex-ibit 101.

Q. So, as I understand it—that is Respondent's Exhibit 01, not Commission's.

A. I beg your pardon. Respondent's Exhibit 101.

Q. So, as I understand it, this exhibit for identification, 32 is a breakdown or analysis of credit card expense in Respondent's Exhibit 101 and does not represent or pur-ort to represent anything not contained—that is, it does ot purport to represent any new allocation or any different llocation of expense from that contained in Exhibit 101?

A. Your statement is correct.

Trial Examiner Ballinger: Now, I think we understand t.

Mr. Austin: I offer in evidence Commission's Exhibit No. 132 for identification.

372 Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Any objection to it?

Mr. Hanley: Now, Judge, just a minute please. This a long and complicated statement. May we be off the ecord again?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Any objection?

Mr. Hanley: I have an objection as to materiality, Judge, that is all. I do not believe it proves anything as to the propriety of the allocation.

Trial Examiner Ballinger: Objection overruled, and Commission's Exhibit No. 132 for identification is admitted in evidence.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 132, was received in evidence.)

Mr. Austin: I wonder whether your Honor would insist on us going ahead? I would like to take an adjournment at this time until tomorrow morning. We have covered quite a little more territory today than usual, this afternoon particularly. I think that a review of
6373 several of the accounts which we still have to cover
will greatly facilitate the questioning which I will have to make of the witness, and I believe it would be profitable if I could have an adjournment until tomorrow morning. It is now a quarter after four.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The motion for adjournment of counsel for the Commission is granted.

And now, at 4:15 p. m., on July 8, 1942, the hearing is adjourned to be reconvened in Room 532, Federal Trade Commission Building, Washington, D. C., at 9:30 o'clock a. m., July 9, 1942.

(Whereupon, at 4:15 p. m., July 8, 1942, the hearing in the above-entitled matter was adjourned.)

6374

Room 532, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, July 9, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Ill., appearing for the Respondent.

6375

PROCEEDINGS.

Trial Examiner Ballinger: The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana" is reconvened pursuant to notice at 9:30 a. m., the 9th day of July, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C. The last hearing was held at the same place July 8, 1942.

The reporter will note counsel for the Commission and counsel for the respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Austin.

Q. Mr. Warmack, I call attention now to Account 520 on Respondent's Exhibit 101, entitled "Annuities and Retirement Plan Expense." The total amount of the expense entered in that account for 1940 is $157,014.35. Is that total expense made up of more than one different class of expenses, Mr. Warmack?

A. Yes, sir.

Q. Have you made some investigation of the nature of that account, and have you read the testimony regarding it, and have you discussed it with some of the company officials?

6376 A. Yes, I have.

Q. I wish you would just tell us in your own words what is in that account, the various kinds of expense going into it. And you may refer, if you wish to any statements made to you by any of the respondents, particularly regarding the nature of the expense in the account.

A. The total amount of $157,014.27 in this account is made up of three parts. The first part is $26,226.38, representing contributions made by the respondent company to match contributions made by employees engaged in the Detroit field during the year 1940.

The next portion is $108,508.83, which represents a portion of trust funds contributed by the respondent company for the retirement of employees in the Detroit field in 1940, to cover services of such employees prior to January 1, 1939.

The next portion is $22,279.06, which represents annuities paid by the respondent company to retired employees in the Detroit field during the year 1940.

Those three separate items make up the total of $157,014.27.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Go ahead, Mr. Austin.

By Mr. Austin:

6377 Q. You referred to a trust fund, Mr. Warmack, in this account. I believe you said $108,000 of the expense in this account for 1940 was paid by the company to a trust fund?

A. That is correct.

Q. Do you refer to the trust fund which is described in the trust agreement on the last page of Commission's Exhibit 108?

A. Yes, sir.

Q. Now, to make the matter a little more clear as to these divisions of this expense, suppose that, prior to January 1, 1939, one of the company's employees had retired, and under the retirement plan then in effect was paid an annuity, and assume that the employee is still living, or was living in 1940, and received annuity payments in that year, which one of these three groups of expenses would cover the payment of that annuity? Perhaps I had better ask you in which one of these groups that annuity payment would appear?

A. That would be included in the group which I explained to be annuities paid to retired employees in the Detroit field for the year 1940. The total amount of such annuities was $22,279.06.

Q. Were the employees to whom those annuities were paid, in the employ of the company in 1940?

A. No, sir; they were retired.

Q. Now, suppose that an employee of the com-
6378 pany was placed on retirement in 1942, and that the employee had been in the employ of the respondent for, we will say, the last ten years, and respondent now pays him an annuity—or at least, he receives an annuity from one or more of these funds—will you state from what fund that annuity will be paid, with respect to the period of service covered?

A. It will be paid from the trust fund retirement plan covering the services prior to January 1, 1939, and he will also receive payments from an insurance arrangement whereby he is to contribute a part of his salary and the company contribute a like amount of his salary—to match his salary. That is my understanding of the arrangement, Mr. Austin.

Q. And would the portion of the annuity or retirement benefits received by such employee for services to the company prior to January 1, 1939, be paid from the trust fund or by the insurance company?

A. It would be paid from the trust fund.

Q. And as to the benefits received by the employee due to service, or based upon services to the company in 1940, from what fund would those expenses be paid?

A. That would be paid by the insurance company from the funds contributed part by the employee and part by the company. That particular amount I have outlined for the year 1940 would be covered by a portion which I stated represented contributions made by the company to
6379 match contributions made by employees engaged in the Detroit field during 1940.

Q. How much is that amount?

A. The company paid during 1940 $26,226.38.

Q. That is to meet the insurance company payments for the plan started in 1939?

A. Yes, sir; that is where the company matched contributions paid by the employee.

6380 By Mr. Austin:

Q. Now, I would like to ask you, Mr. Warmack, as to each one of these three classes of payments which are included in Account 520 for 1940 whether the class of expense or the actual expense in this case may properly be treated in your opinion as a current marketing expense for the year 1940 and, if not, how the expense should be treated.

A. The amount of $26,226.38 representing contributions made by the company to match contributions made by the employees in the Detroit field in 1940 in my opinion should be considered as additional compensation to the employees and treated as a current marketing expense of the company during the year 1940.

The amount of $108,508.83 assigned to the Detroit field as a portion of the trust fund contributed by the company for the retirement of employees in the Detroit field to cover services of such employees prior to January 1, 1939, is in my opinion not a current marketing expense.

The item of $22,279.06 representing annuities paid to retired employees in the Detroit field for the year 1940 is in my opinion not in the nature of a current marketing expense.

I should like for the record to show here, just for the purpose of clarity, that the total amount of those three
items is $157,014.27, whereas the total amount for
6381 this account, as shown on page 520 of Respondent's
Exhibit 101, is $157,014.35, or a difference in the total of 8 cents.

This is considered trivial and was not reconciled while on the field investigation

Q. Will you proceed, Mr. Warmack, and state how, in your opinion, these expenses should be treated, if they are not current marketing expense for 1940?

A. They may be treated in the records, of course, in any way that the company elects to treat them. It is the company's business as to how they are going to keep books, but for the purpose of proving a cost differential, it is my opinion that inasmuch as they are not current marketing costs that they should not be given effect in calculations made for determining the cost differential in the Detroit field.

Q. What I meant to ask you, Mr. Warmack, or I assume Judge Hanley will ask you if I don't, that if you do not consider these as current marketing costs, what do you consider them as, from a cost accounting standpoint?

A. In my opinion they are a proper charge against accumulated earnings of the company.

Mr. Hanley: That is objected to, if your Honor please, as not responsive, as to where the blow might fall. The witness was asked—I won't attempt to restate the question. Will you read it, please.

(The question referred to was read by the reporter.)

6382 Trial Examiner Ballinger: Read the answer.

(The answer referred to was read by the reporter.)

Mr. Austin: It sounds responsive to me, your Honor.

Mr. Hanley: May I ask if the witness means that they are not a marketing expense some place?

Trial Examiner Ballinger: You may.

The Witness: It is my opinion, as I have stated, that they are a proper charge against accumulated earnings of the company. If they had been placed on the books at the time that they applied, then they may have been properly charged as an operating expense.

Mr. Hanley: Will you just say whether or not they constitute a proper marketing expense of some kind, irrespective of whether they are charged against accumulated earnings, or some other company funds?

The Witness: Will you tell me for which year you are speaking?

Mr. Hanley: I am asking you.

The Witness: I can not answer unless you tell me the year.

Mr. Austin: I object unless it is limited to 1940.

Trial Examiner Ballinger: There appears to be a difference in the questions. One question is as to whether or not they constitute a marketing expense. The

6383 other is as to whether or not they constitute a current marketing expense.

Mr. Hanley: He has answered the last question. I am now trying to find out if he regards them as a marketing expense.

The Witness: I regard them as a proper charge against accumulated earnings of the company.

Mr. Hanley: May I not have an answer to that question?

Trial Examiner Ballinger: Can't you answer that, as to whether or not they constitute a proper marketing expense, or a proper current marketing expense?

Mr. Austin: Just a moment, your Honor, the witness has stated that he does not consider them a marketing expense for the year 1940. It seems to me that it is immaterial and also indefinite to ask him whether they are a marketing expense when marketing expenses can only be applied, I assume, in accounting to a particular year.

Trial Examiner Ballinger: That is a matter of argument, pure and simple. The witness may answer the question.

The Witness: They are not a current marketing expense for the year 1940 in my opinion.

Mr. Hanley: Judge, I can not make a record unless I can get an answer from the witness. Now, he knows whether or not he regards these as a proper market-
6384 ing charge. He has said he doesn't regard them as a proper current marketing charge for the year 1940. All I am asking him is whether he regards them as a proper marketing charge. I don't care whether he thinks the company ought to charge them against the reserves or accumulated earnings or where he thinks they ought to be charged as a bookkeeping matter.

Trial Examiner Ballinger: The Examiner directs the witness to answer the question if he can.

Mr. Austin: Your Honor, I would like to make a further objection, on the ground that very clearly and definitely the only question with which we are concerned here is the year 1940; therefore, the witness having clearly and fully answered the question as in 1940, it is entirely improper for counsel for the respondent to cross-examine at this time upon the general knowledge and qualifications of the witness. This question can go only to the general knowledge and qualifications of the witness as to his accounting experience and accounting opinions. It has positively no relevancy to anything in this lawsuit, which is concerned solely with the year 1940; therefore, I contend the questioning is improper at this time, and that as to whether it is proper cross-examination should be determined when the time for cross-examination arrives.

Trial Examiner Ballinger: There is much force in the objection of counsel for the Commission that it would
6385 properly fall within cross-examination, but the witness may answer the question if he can.

Mr. Austin: If you can, Mr. Warmack.

Trial Examiner Ballinger: If he can.

The Witness: If I am asked, your Honor, what year they would be current marketing expense of, I maybe could answer the question to some extent.

Trial Examiner Ballinger: Would they constitute any part of the marketing expense for the calendar year 1940?

The Witness: I have stated three times, I believe, your Honor, that in my opinion they would not.

Mr. Hanley: You just decline to answer the question I asked you, is that right, Mr. Warmack?

Trial Examiner Ballinger: Judge—

The Witness: If you would make the question where it is proper, I can answer it.

Trial Examiner Ballinger: The Examiner considers that the witness has answered the question so far as relates to the matter under inquiry.

By Mr. Austin:

Q. What amount was paid to the trust fund set up as of January 1, 1939, by the company during 1939 and subsequent years, if you have that information?

A. I have information to the effect that during the year 1940 the company contributed $3,411,014.34 to the trust fund of the whole company, of which $108,-
6386 508.83 was considered to be the portion applicable to the Detroit field for the year.

Q. Does the respondent pay a fixed amount each year into that trust fund?

A. No, sir.

Q. How is the amount, if any, which the respondent pays into the trust fund during a particular year determined?

A. It is determined by the Board of Directors. I believe I have a statement here furnished me by Mr. Bergeson as to how that was determined, which was given to me in response to that question, Mr. Austin.

Q. Who is Mr. Bergeson?

A. Mr. Bergeson is the comptroller of the company. I have that statement before me, which I believe is stated better than possibly I could state it, Mr. Austin. I can give you my answer from that statement.

Q. Was the statement prepared by you or by Mr. Bergeson?

A. By Mr. Bergeson in my presence.

Q. Will you read the statement?

A. Yes, sir.

The statement is marked "Memorandum dated March 9, 1942," addressed to W. J. Warmack, and I quote:

"In answer to your question as to the basis or method used by this company in determining amounts con-
6387 tributed towards the annuity trust fund for the years 1939, 1940 and 1941, the following is recited:

"An estimate based on whatever information is available prior to the termination of each calendar year is discussed among the executives and on this basis total contribution is decided upon. Subsequently the distribution of this total amount to subsidiaries and the parent company is allocated, predicated on the actuarial liability of the respective subsidiaries. The controlling feature with regard to the total contribution is that the Board of Directors is restricted and an amount can not be contributed in excess of the 10 per cent of the consolidated net earnings after provision for Federal taxes. The contribution is obviously not considered an expense item before the calculation is made of the net profits."

That was signed on the typewriter by C. T. Bergeson. Mr. Bergeson is comptroller of the company, and this memorandum was dictated in my presence.

Trial Examiner Ballinger: By him?

The Witness: By him. It is not signed by him, your Honor. It was handed to me immediately after it was typewritten.

Mr. Austin, I have the figures of the contribution for each of the years before me, if you would like them.
6388 That was the question you asked me some few minutes ago when I didn't have that.

By Mr. Austin:

Q. Have you the figures in total for each year?

A. Yes, sir.

Q. You may state them.

A. 1939, $3,422,842.00; 1940, $3,411,014.34; 1941; $4,053,777.60.

That applies only to the Standard Oil Company of Indiana and not to the affiliated companies.

Q. Was any part of the expense in Accounts 243, 244, 520, or 525 charged to automobile supplies on Respondent's Exhibit 101?

A. No, sir.

Q. How is the expense in Account 243, entitled "Taxes—Federal Insurance Contributions" allocated between channels by the respondent in its regular accounting procedure?

A. That is allocated to distribution channels in the company's regular accounting procedure on Form 189 on the basis of all salaries and commissions in each channel as related to total of all salaries and commissions.

Q. What page is that?

A. It is shown on page 20, Respondent's Exhibit 99, and that allocation is made by the month.

Q. How is the expense in Account 244 "Taxes—Unemployment Insurance" allocated between distri-
6389 bution channels in the respondent's regular accounting procedure?

A. On the same basis as just stated for Account 243.

Q. And how is the expense in Account 520 "Annuities and Retirement Plan Expense" allocated by the respondent in its regular accounting procedure?

A. In the same manner as just stated for Account 243, and that is shown on page 20 of Respondent's Exhibit 99.

Q. How is the expense in Account 525 "Death Benefits" allocated between channels by the respondent in its regular accounting procedure?

A. That account is allocated between channels in the regular accounting procedure in the preparation of Respondent's Form 189 on the basis of all gallonage, excluding direct-shipment gallonage.

Trial Examiner Ballinger: Is that answer based upon information contained in respondent's exhibits?

The Witness: Yes, sir, on page 21 of Respondent's Exhibit 99, your Honor. Thank you.

By Mr. Austin:

Q. You stated, Mr. Warmack, that the expense in Accounts 243, 244 and 520 is allocated between channels by the respondent in its regular accounting procedure on the basis of the proportion of the salaries of field employees in the respective channels, is that correct?

6390 A. Yes, sir.

Q. Is a substantial part of the salaries of the field employees charged to automobile supplies on Respondent's Exhibit 101?

A. There are considerable amounts of salaries of various employees charged to automobile supplies in Respondent's Exhibit 101.

I direct you to one particular charge in Account 004 entitled "Salaries Salesmen" which is a charge of $13,371.55 for that particular item of expense.

Q. And what is the portion of the expense of the accounting department in Account 200 which is charged to automobile supplies?

A. Account 200 is "Office Expense, Salaries, Accounting Department, in Detroit field for the year 1940," and $19,398.70 of those salaries are charged in the automobile supplies column on Respondent's Exhibit 101.

Q. In your opinion, should any part of the expense in Accounts 243, 244 and 520 be charged to automobile supplies for the purpose of this cost study?

A. Yes, sir, in my opinion they should.

Q. Why so?

A. The reason for that opinion is that respondent has followed the plan of making an allocation of this class of expense on the basis of compensation paid to the employees and, in view of that plan of allocating this
6391 class of expense, which in my opinion is a good plan
and proper plan, naturally whatever part or proportionate part of the salaries which appear in any one distribution channel should bear its prorata part of this class of expense as shown in Accounts 243, 244 and 520.

Trial Examiner Ballinger: Would you be a little more specific and state what amount, if any, or whether a substantial part of it should be so charged?

Mr. Austin: Perhaps I can explain there a moment, your Honor. The witness said—

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Mr. Harley: May we have a five-minute recess.

Trial Examiner Ballinger: Yes, sir, you may. We will take a five-minute recess.

(A short recess was taken)

6392 Trial Examiner Ballinger: Come to order. You may proceed.

Mr. Austin: I believe there is a question pending by the Examiner.

Trial Examiner Ballinger: Do you desire the question read?

The Witness: If you please.

(The reporter read the Examiner's question as follows:)

"Would you be a little more specific and state what amount, if any, or whether a substantial part of it, should be so charged?"

By Mr. Austin:

Q. Can you state, in answer to the Examiner's question, Mr. Warmack, what percentage of expense in the main salary account on Respondent's Form 189, being the salary accounts listed on Commission's Exhibit 116, has been allocated by respondent to the automobile supplies channel in its regular accounting procedure?

A. 4.052 per cent.

Q. And in arriving at that percentage, Mr. Warmack, did you charge to automobile supply any part of Accounts 000, 001, 243, 244 or 502? Your testimony in relation to those accounts having been that some parts therof should be charged to automobile supply?

6393 A. No, sir; no part of those accounts was applied by the company to automobile supply account.

Q. Then if a part of those accounts were also charged to automobile supplies, would that increase the percentage of the salary account falling into automobile supplies channel above the figure which you stated?

A. I would have to answer that in this way, Mr. Austin: if a part of Accounts 000 and 001, particularly those two accounts, would change the percentage, the Accounts 243, 244 and 520 would, of course, have to follow the allocation of the salary accounts, in my opinion, and naturally, they would increase the charge also in the automobile supplies account.

Trial Examiner Ballinger: Would that increase be material?

Mr. Austin: May I ask a question, your Honor?

Trial Examiner Ballinger: You may.

By Mr. Austin:

Q. Wouldn't the result be, Mr. Warmack, to enter in the automobile supply channel something in excess of—what was that percent?

A. 4.052 per cent.

Q. 4.052 per cent of the expense in Accounts 243, 244 and 520?

A. Yes, sir.

6394 Trial Examiner Ballinger: Well, would the amount thrown into that account result in any substantial change in the amount?

Mr. Austin: I should like to call your Honors' attention that after all, we are dealing in hundreds of percents here, and I think, if I may say so, that it would be rather difficult to state what is a substantial change in differential effected by one account. There are many accounts where a change in allocation might make a small or unsubstantial difference in the total differential, but if you add it up it may become substantial.

Trial Examiner Ballinger: But from the witness' answer, it may result in a change of 40 cents or is may result in a change of $1,000, or it may result in a change of $500. Now, I want to know whether it would be some insignificant amount or whether it would be some substantial amount?

By Mr. Austin:

Q. Can you state, Mr. Warmack, in dollars, how much of the expense in 243, 244 and 520 would be thrown into automobile supply if they were allocated to all channels on the basis of the principal salary account?

A. Yes, sir.

Q. Will you state those figures?

A. For Account 243, an amount of $496 would be placed in the automobile supply channel.

6395 For Account 244, an amount of $1,638.63 would be placed in the automobile supply account.

For Account 520, an amount of $6,362.22 would be placed in the automobile supply channel.

There had already been placed in the automobile supply channel by the respondent company—and these figures were taken from Respondent's Exhibit 101—$48,609.98, representing salaries of employees in the Detroit field for the year 1940.

Q. You state that in your opinion part of the expense in Account 520 should be allocated to automobile supply for the purposes of this cost study, Mr. Warmack. Were you referring only to the part of the expense in that account which you described as being a contribution by the company to an insurance fund to match the portion of the salaries of employees paid into that fund, or were you referring to the entire expense in Account 520?

A. The figure that I have of $6,362.22 as falling in automobile supply a few minutes ago on the basis of the percentage of salaries in that account, would be a portion of the total of $157,014.35, as shown on Respondent's Exhibit 101.

With respect to the point as to the portion that should fall in there, eliminating the portions which, in my opinion, are not current marketing expenses in the Detroit field for
the year 1940, we would only have a percentage of
6396 the item of $26,226.38 representing contributions by
the company to match contributions made by the employees engaged in the Detroit field, and not the total of $157,014.26; and if such allocation is made, the item of $6,362.22, based on the total amount appearing in Account 520, would be reduced.

Q. Well, the figures that you give for automobile supply were based upon the actual expense entered in each account by the respondent on its Exhibit 101, as I understand it?

A. That is correct, the actual figures placed in that Account 520.

Q. Now, turning to death benefits, Account 525, it is stated on page 94 of Respondent's Exhibit 100:

"The nature of this expense is similar to the company contribution to the employees' annuity plan. For this reason, the distribution of expense, to the class of direct shipment customer and products was made on the same basis the company contributions to the retirement plan on salaries applicable to direct shipment business bear to total contributions on total all salaries.

It appears from Respondent's Exhibit 99, page 20, that the expense in Account 520 is allocated to channels—that is, bulk plant channels on Respondent's Exhibit 101—also on the basis of salaries and commissions in each channel at a ratio of total all salaries and commissions, and

6397 you have stated, Mr. Warmack, that you considered that a proper method of allocation of the expense in Account 520.

Is the expense in Account 525, "Death Benefits," allocated between plant channels on Respondent's Exhibit 101 in the same method that is used for the allocation of expense in Account 520?

A. No, sir.

Q. How is the expense in Account 525 allocated between bulk plant channels on Respondent's Exhibit 101?

A. It is allocated to channels on the basis of their gallonage, excluding direct shipment gallonage, as stated on page 21 of Respondent's Exhibit 99.

Q. Now, assuming for the purposes of discussion that the death benefit payments are a marketing expense of respondent which may properly be used for the basis of this cost study, what is your opinion regarding the method of allocation used by the respondent, that is, allocating a part of death benefit expense to direct shipments, following the method of allocation applied to the expense in Account 520, but allocating death benefit expense betwen bulk plant channels on a different method than the supplies to Account 520?

A. In my opinion, from the standpoint of sound accounting, the method employed in the preparation and allocation of Account 525 entitled "Death Benefits", is improper and unsound, for the reason that if it is to
6398 be regarded as additional compensation, the same as the amount shown in Accounts 243, 244, 520, regarded by respondent company as additional compensation, then it should be allocated between all of the channels in exactly the same manner as these accounts have been allocated.

Q. And is that on the basis of the ratio of salaries in each channel to total salaries?

A. Yes, sir.

Q. If the expense of Account 525 were allocated between all channels on Respondent's Exhibit 101 on the basis of th amount of salaries falling into the respective channels, would the amount of expense in Account 525 in the tank wagon reseller channel be materially reduced?

A. Yes, it would.

6399 By Mr. Austin:

Q. What is the nature of the expense charged by the respondent to Account 250 on Respondent's Exhibit 101, "General Office Expense—Accounting Department"?

A. It represents a portion of the expense of the general office in Chicago—general office credit and accounting departments—which have been assigned to the Detroit field for the year 1940.

Q. Did you state that that was the expense of the general office credit and collection department and the general office accounting department?

A. Yes, sir.

Q. Do the expenses included in that account embrace not only salary expenses of employees but also Federal and State insurance contributions, retirement and annuity expense, and traveling expense and other incidental expenses?

A. Yes, sir, they include a portion of all of the costs incident to the operation of the credit and accounting departments in the general office at Chicago. That would even include depreciation on office building and every expense incident to the operation of that office for those particular functions.

Q. Do you mean every expense incident to the operation of that office which is charged to those departments?

A. Yes, sir. Of course, this is the proportionate 6400 part of that expense which the company assigns to the Detroit field.

Q. It appears on page 28 of Respondent's Exhibit 99 that the total monthly expense of these departments is charged to general prorata Sub-Account 7250. This total is allocated to fields on the basis of total gallons, excluding direct shipments, and it in turn is distributed to tank-wagon channels on the same basis.

A. That means in the separate fields and ultimately on the main distribution cost report in the general office on the basis you just stated.

Q. Does that mean that the expense of these departments, assigned to a particular field, is allocated between tank-wagon reseller, tank-wagon consumer and other-method channels in the field upon the basis of field gallonage in those channels?

A. Yes, sir, it does.

Q. Is any part of the expense in that account charged to the Detroit field in 1940 allocated to automobile supplies on Respondent's Exhibit 101?

A. No, sir.

Q. I note on Respondent's Exhibit 101 that a part of the expense in Account 250 is apportioned to direct-shipment channels. Will you state how that apportionment was made?

It was allocated to classes of direct-shipment
6401 customers in Respondent's Exhibit 101 on the same
ratios as used for field expenses of the departments, that is, the accounting department and the credit-collection department.

Incidentally, that is all regarded, for accounting purposes, in the Detroit field, as the accounting department, and that is what we have been referring to as the accounting department in the Detroit field.

Q. I think Mr. Boatwright's testimony was that the expense of the Accounts Receivable and credit sections of the field accounting department was used for the allocation of credit and collection expense from the general office, whereas the balance of the accounting department expense was used as a basis for allocating the expense from the general office accounting department.

A. That is correct, a separate separation was made in the allocation.

Q. Can you refer to the page of the record where that explanation is set forth, Mr. Warmack?

A. The separation is shown on page 127 of Respondent's Exhibit 100.

Q. I would also like to refer to Mr. Boatwright's testimony at page 5553 of the transcript in this connection.

Could you state a little more specifically how that separation was made in the allocation to direct-shipment channels?

6402 A. Yes, sir. The ratio of hours spent by employees in the field credit and accounts receivable departments on direct-shipment business to their total hours was applied to the credit and collection department expense of the general office, that is, that portion of the general office expense which had been assigned to the Detroit field for the purpose of making the separation of this class of expense as between direct shipment customers, and that separation is shown on page 127 of Respondent's Exhibit 100, and a similar ratio was obtained for the balance of the employees in the accounting department.

Q. In which accounting department?

A. In the accounting department in Detroit, and that ratio was applied to the general office accounting department, that portion of the general office expense which was assigned to the Detroit field, in order to make a separation of that class of costs to direct-shipment customers in the Detroit field for the year 1940, and that separation is shown on page 127 of Respondent's Exhibit 100.

Q. Now, on Respondent's Exhibit 101, what happens to the rest of the expense in Account 250 that is not allocated to direct-shipment channels by the methods which you have just described?

A. The remaining part of that expense is apportioned to the three channels on Respondent's Exhibit 101 6403 on the basis of gallonage, exclusive of direct-shipment gallonage.

Q. What three channels?

A. Tank-wagon reseller, tank-wagon consumer and the other-method channels, the three channels which we have been referring to as bulk-plant channels.

Q. Is the expense of the field accounting department in Acount 200 allocated between bulk-plant channels on Respondent's Exhibit 101 on a gallonage basis?

The Witness: What is the question?

(The question referred to was read by the reporter.)

The Witness: No, sir, it is allocated on a basis of effort, as established by a tabulation of the time in the Detroit office.

Q. Then, do I understand that in allocating a part of the expense in Account 250 to direct shipment business, the respondent in this cost study followed the allocation of expense in Account 200, but that in allocating the remainder of the expense in Account 250 between bulk-plant channels on Respondent's Exhibit 101 the respondent did not follow the allocation of expense in Account 200?

A. It did not, that is correct.

Q. What is your opinion of that method of separation of the expense in Account 250 for the purposes of this study?

May I amplify that question: In your opinion does such a method of allocation provide a proper basis of 6404 comparison between costs in the tank-wagon reseller channel and costs in the jobber-gasoline channel in Account 250?

A. In my opinion it does not, Mr. Austin, but I think that I should go farther than that with reference to that point.

Q. Well, I will ask you further questions, Mr. Warmack, but I wish you would first devote your attention just now to the methods of allocation just described and you may, if you wish, assume for the purpose of answering this particular question that the method used in allocating the expense in Account 250 to direct-shipment channels, that is, following Account 200, is an acceptable method. Just assume that for the purpose of this question. I think it will facilitate your answer here.

A. Yes, sir. On that assumption, the methods employed in the separation of that portion of expense appearing in Account 250 on Respondent's Exhibit 101 as being applicable to bulk-plant channels were not separated between the three channels in accordance with proper accounting methods.

Q. And if the expense in Account 250 had been allocated between all channels on Respondent's Exhibit 101 following the allocation of the expense of the field-credit, collection, and accounting departments, would the result be to materially decrease the amount of expense in Account 250 entered in the tank-wagon reseller channel?

A. Yes, sir, it would be.

6405 Q. I now wish to refer to pages 5557 to 5559 of the record where Mr. Boatwright stated that the general office accounting department includes many departments that are not carried in the field at all and whose duties do not parallel the duties of the field accounting departments.

Mr. Boatwright there stated that it wouldn't be logical to distribute the general-office accounting expense between bulk-plant channels by following distribution of effort of the field accounting department as between those channels. Assuming that to be true, Mr. Warmack, that is, assuming Mr. Boatwright's testimony to be correct regarding the activities of the field accounting department,—

A. Yes, sir.

Q. —in your opinion, has the respondent followed a correct or acceptable method of allocation in distributing expense in Account 250 to direct-shipment channels on the basis of the distribution of effort in the field-accounting department?

A. On that assumption, Mr. Austin, and based on that statement, it is my opinion that it has not.

Q. What is the reason for that opinion?

A. It is stated in the testimony by Mr. Boatwright at the pages just mentioned by you that the duties of employees in the credit department and the accounting 6406 department in the main office do not parallel the duties of the field office accounting and credit departments.

If they do not parallel the duties, then, in my opinion, it would be necessary to make a study of what influences the costs in the general office to the end of determining what functions in the Detroit field influence those costs, and such a study and ultimate analysis would have to be made in the apportionment of these costs of the general office if they are to be used in determining a cost differential.

In other words, if it is a fact that the general office costs must be applied on a basis of separation in what we have been terming more or less direct application, then it would be necesary to make a study and analysis of those costs as just explained to determine the influencing factors and the extent of influencing factors whereby measuring factors may be established, if that particular class of expense is going to be used for the purpose of proving a cost differential.

Q. Did you inquire whether any study had been made of the functions and expenses of the general office accounting department to determine what portion, if any, of the expense of that department is allocable on other than a gallonage basis between different channels or classes of customers?

A. Yes, sir.

6407 Q. Where did you make such inquiry?

A. I asked Mr. Houghton, and he was not able to furnish me any information with respect to any cost study having been made. At least he stated that he was not.

Q. Is it possible that a cost study of the general office accounting department, based upon its own activities as related to the entire business of the company, might afford some cost differential as between the different classes of customers or products?

A. Yes, sir, it is possible, but I want to call attention to this point: that is one of the most difficult problems that accountants have to face, and that is a separation of general expenses for the purpose of proving a cost differential.

Q. In view of Mr. Boatwright's testimony that the general accounting department includes departments that are not carried in the fields, what is your opinion as to whether a part of the expense of the general office accounting department may properly be apportioned to the Detroit field on a gallonage basis and used for the purpose of establishing a cost differential as between tank-wagon-reseller channel and jobber-gasoline channel?

The Witness: May I have that question?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

6408 By Mr. Austin:

Q. When I said allocated to the field on a gallonage basis, I am referring to the fact that the expense in that account is allocated between all fields on a gallonage basis, not distributing all of it to a particular field.

A. You mean all gallonage, or all bulk-plant gallonage?

Q. The record shows that the distribution of the expense of the general office accounting department between fields is on an all-gallonage basis, excluding direct-shipment gallonage.

A. Yes.

Q. At that point you get a part of an expense to a particular field. Now I am asking you whether that part of the expense so reaching the Detroit field may properly be used for the establishment of a cost differential.

Mr. Hanley: Off the record.

(Discussion off the record.)

6409 Trial Examiner Ballinger: Do you understand the question?

The Witness: Yes, sir; I believe I do, your Honor. It is not susceptible of a yes or no answer, in my opinion.

A. In the first place it would seem necessary to me that an allocation be made to fields on some basis, that some study made at some time would determine to be equitable and sound and reasonable from an accounting standpoint, and it might be that a study would show that a gallonage allocation would be sound and equitable and reasonable.

Now, Mr. Austin, if that were done, and it were found, as a result of some study as just outlined, that the gallonage allocation to the field were O. K., and satisfactory from an accounting standpoint, then you have another study coming right on top of that, that has to be made if this class of expense is going to be used for the purpose of proving a cost differential, to determine what factors influence that cost and how much they influence it.

By Mr. Austin:

Q. Well, would that study be made on the basis of field activities, or would it be a study of the activities of the department in Chicago?

A. It would be a study of the activities in Chicago, unless you could establish by some reasonable study that the activities in the general office reasonably followed 6410 the activities in the field office.

Q. No, I asked you to assume that that was not the case.

Mr. Hanley: That being the situation, the respondent moves to strike the answer of the witness, on the ground that it obviously is not responsive to the question propounded.

The Witness: Well, I can explain it on that assumption.

Trial Examiner Ballinger: The answer is stricken, and the witness may now proceed with his answer on that assumption.

By Mr. Austin:

Q. I ask you to assume two things, Mr. Warmack: First, that the gallonage basis was used between the field—and I think your answer was responsive on that part, if your Honor please—secondly, that according to Mr. Boatwright's testimony, the general office accounting department performs function and has certain activities which are not performed and that are not present in the field.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

Trial Examiner Ballinger: Read the answer from the point where I asked him "Do you understand the question?"

(The reporter read the record beginning with:)

"A. In the first place, it would seem necessary
6411 to me that an allocation be made to fields on some
basis," and ending with the last question as above recorded.

Trial Examiner Ballinger: That portion of the answer of the witness beginning with: "In the first place it would seem necessary to me that an allocation be made" may be stricken.

Mr. Hanley: The record having been re-read, and the Court having ruled that only a portion of the answer should be stricken, the respondent now moves that the entire answer be stricken, since the re-reading of the record disclosed that counsel for the Commission asked the witness in the original question to make an assumption which the re-reading of the record discloses the witness says he did not make in his answer, and that respondent is entitled to have the entire answer stricken, unless the witness says that his answer is responsive and was made on the assumption that he was originally asked to make.

Trial Examiner Ballinger: Motion denied.

By Mr. Austin:

Q. Mr. Warmack, from your study of Chicago, the activities of the accounting department, your discussions with Mr. Houghton, and your reading of this record, in your opinion is there any foundation to support, from an accounting standpoint, the allocation of the expense in Account 250 to bulk plant channels on a gallonage basis?

6412 A. Positively not.

Q. And is there any support for the allocation of this expense in that account between direct shipment channels, following the distribution of the expense in Account 200?

A. In my opinion there is not. We are dealing here with costs of a general nature, and when you are dealing with costs of a general nature it is necessary, very necessary, to make a proper, thorough, sound and complete analysis of the costs and studies of the functions influencing those costs, if you are to establish any measuring factors that are adequate.

As an alternative, if you should make a study of other costs which these costs may reasonably follow, thereby you may establish measuring factors for their separation. Failing either of the two, a separation, in my opinion, goes into wild flights of fancy.

Mr. Austin: I suggest that we now adjourn until two o'clock, your Honor.

Trial Examiner Ballinger: The motion is granted, and now at 12:30 o'clock p. m., the hearing stands in recess until 2 p. m. today.

(Whereupon, at 12:30 o'clock p. m., a recess was taken until 2 p. m. this day.)

6413 Afternoon Session—2:00 p m.

Trial Examiner Ballinger: Come to order. You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination by Mr. Austin.

Q. Turning now to Account 255 on Respondent's Exhibit 101 entitled "General Office Expense—General Manager's Department," it appears from Respondent's Exhibit 100 that this account contains the expenses of a number of departments or sub-departments in the respondent's general office at Chicago. A list of the sub-departments, the expense of which is included in this account, is stated on page 127 of Respondent's Exhibit 100, and it appears on page 122 of Respondent's Exhibit 100 that the expense in this account is the sum of the expense of several departments working under the supervision of the general manager.

The first three sub-departments are grouped together on page 127 of Respondent's Exhibit 100 for the purpose of allocating a part of the expense of those sub-departments to direct-shipment channels. Those three departments are, first, Supervision; second, Sales Research; third, 6414 Statistical—Personnel.

Mr. Boatwright stated on page 5568 of the record that supervision represents expenses incident to the following positions, as follows: The vice president in charge of the sales department, the general manager of sales, the man in charge of operating functions of the sales department, the assistant general manager of sales, and four assistant general managers.

There is also, at pages 5569 to 5571 of the record, some description of the duties and functions of the sales-research department and the statistical-personnel. As a result of your investigation of these departments in Chicago, Mr. Warmack, do you care to make any further statement as to the nature of the functions of the sales-research department or the statistical-personnel department as a basis for testimony regarding the expenses of those departments?

A. While in Chicago, Mr. Austin, I secured a statement showing the functions, given by the company, of the statistical and personnel department. If it is desired, I can give that in the record. It is a part of the statement here.

Q. I wish you would give that description because I believe Mr. Boatwright's description by his own admission at the time was not entirely complete, at least as to the statistical portion of that department.

A. Of course, Mr. Boatwright assisted in working up this, in preparing the whole story of the statistical and personnel department, while I was in Chicago.

6415 The functions of the statistical and personnel department of the general office fall largely under three broad classifications:

(a) Maintaining records, conducting investigations, and following through on problems of personnel for the entire organization, including sales department and other departments.

(b) Serves as the company representative and contact source on all questions of gasoline tax evasion and other rackets in the oil industry and is an active participant in numerous petroleum committees organized for the purpose of proper enforcement of these tax laws.

(c) Under present emergency conditions, members of this department serve as a company liaison representative on all questions of sabotage, espionage, and subversive activities with Army, Navy, Federal Bureau of Investigation, and other defense units.

During the year 1940, functions performed by this department fell almost entirely under (a) and (b) above.

(C) is an emergency condition and represents a portion of the effort under existing conditions.

That is a statement of the statistical and personnel departments.

6415 I also secured a statement in the offices on gasoline and refined oil department, but I do not believe that you have gone into that as yet, have you?

Q. Not as yet.

What is the total amount of the expense of the three sub-departments which is charged to the Detroit field and shown on Respondent's Exhibit 101 for 1940?

A. $26,680.27.

Q. Is a part of the expense of those three sub-departments allocated to direct-shipment business on Respondent's Exhibit 101?

A. Yes, sir.

Q. And how is that allocation made?

A. The allocation to classes of direct-shipment customer and product was based on ratios representing the effort in the Detroit field chargeable to jobbers by products and to other direct-shipment customers.

That statement is shown on page 422 of Respondent's Exhibit 100.

Q. I omitted a question which I should have asked you first, perhaps, and that is: How is a portion of the expense of the sub-departments assigned to the Detroit field?

A. The expense of these departments is allocated to fields on an all-gallonage basis, excluding direct shipments, and is in turn allocated among channels within a field on the same basis. That is taken from a statement on 6417 page 29 of Respondent's Exhibit 99.

Q. I think that I would like to have you state those methods of allocating a little more fully, Mr. Warmack. In the first place, when you say that there is an allocation to fields on an all-gallonage basis, excluding direct shipments, just what gallonage was used for that purpose?

A. Bulk-plant gallonage.

Q. I mean what gallonage of the company? Just explain what would be done in making such an allocation?

A. The bulk-plant gallonage of each field would be assembled and a prorata part of the total for the respective fields would be allocated to the field.

I don't know if that explains it sufficiently.

We have 27 fields in the company's setup. Each of those fields sell gasoline and other petroleum products. The bulk-plant gallonage of each field is shown separately. The ratio that the bulk-plant gallonage of one field bears to the total for all fields is the ratio applied to this total expense for the allocation of this class of expense to the field.

Is that O. K.?

Q. Yes. Will you proceed now and state what is done with the portion of that expense which is assigned to the Detroit field in distributing it between channels on Respondent's Exhibit 101?

6418 A. The portion of that class of expense which was allocated to the Detroit field was separated between channels in the field, that is, tank-wagon reseller, tank-wagon consumer, and other-method channel on the basis of bulk-plant gallonage, and that excludes direct-shipment gallonage.

Q. Was a part of it assigned to automobile supplies in the regular accounting procedure?

A. No, sir—I beg your pardon, a part of the total expense in Account 255 was assigned to automobile supplies in the regular accounting procedure.

Q. Do you know from what sub-departments that automobile supplies entry comes, or is it a prorata portion of all of them?

A. If I may review for a minute, I can probably answer your question.

It is stated on page 3 of Respondent's Exhibit 99 that a portion of the class of expense entitled "Sales Promotion Reseller."

Q. And there is also a department in the General Manager's Department, is there not, Mr. Warmack, entitled "Sales Promotion—Automobile Supplies." I believe that is referred to on page 31 of Respondent's Exhibit 99.

A. That is correct. Those are the only two references, I believe, to an allocation of costs to automobile supplies.

That is the cost appearing in this Account 255.

6419 Q. And is any part of the expense of the sub-departments which we were referring to, that is, the supervision, sales research and statistical-personnel charged to automobile supply business on Respondent's Exhibit 101?

A. No, sir. Of course, you will understand, Mr. Austin, that my answer is based upon what is in this record. I have not made a detailed analysis of this account in the offices of the company.

Q. Now, I believe you described how the expense of these three sub-departments, after being allocated in part to the Detroit field, is charged between tank-wagon reseller, consumer and other-method channels, and you previously testified that there was also an allocation to direct shipment customer and product on the basis of ratios representing the effort in the Detroit field.

Will you explain that a little more fully?

A. Yes, sir. The hours applicable to the direct-shipment business were determined by the respondent's accountants and the ratio that those hours bore to the total hours of employees in the Detroit field for the year 1940 was used to determine what portion of this class of expense respondent's accountants applied to the direct shipment business in the Detroit field.

The separation between the direct shipment channels was made on the same basis.

6420 Q. Is that the same basis that was used for allocating a part of Mr. Raupagh's salary to direct-shipment channels?

A. Yes, sir, for the most part of the salary, that is, that portion of the salary that was not directly assigned to direct shipments.

Q. Referring now only to the supervision sub-department in Account 255, what is your opinion as to whether the expense of that department which is assigned to the Detroit field may properly be allocated between channels in the Detroit field upon the basis of effort of employees in the field for the purpose of establishing a cost differential as between tank-wagon reseller and jobber gasoline.

(The reporter read the question.)

Q. (Continuing) Referring now only to supervision sub-department?

A. Well, I follow that thought, Mr. Austin, with respect to allocation of supervisory costs that they should follow in their allocation the effort of the persons supervised.

That means, of course, that if the person or group of people supervised are in fact supervised and the supervisory official's activities are not too remote from the person supervised, it is my opinion, from the standpoint of sound accounting, that that is a proper method of allocation.

In this particular instance there is, in my opinio
6421 a question as to using the effort of every employe
in the Detroit field. It seems to me that it would i
stretching the imagination to some extent to assume tha
the supervision in the general office went to the office boy
and charwomen or such other minor personnel in a fiel
office, but from the standpoint of sound accounting tha
plan is generally followed, that is, for the supervisor
compensation and expenses to follow the allocation of th
expenses of the persons supervised.

Does that answer your question?

Q. Yes.

Now, let us assume for the purpose of this next que
tion that it is decided that an allocation of the expen
of this sub-department charged to the Detroit field is to b
allocated to and between direct-shipment channels on th
basis of distribution of total effort of employees in th
Detroit field. What is your opinion as to the propriet
for the purposes of this cost study, of allocating the r
mainder of the cost of that sub-department between bul
plant channels on a gallonage basis and not according
distribution of effort of employees in the field.

The Witness: May I have that question?

Trial Examiner Ballinger: Read the question.

(This question referred to was read by the r
porter.)

6422 A. It is my opinion that the allocation on a bu
plant gallonage is incorrect from the standpoint
sound accounting. Effort would seem to be a more rea
sonable approach to the solution from the standpoint
sound accounting, and I believe that resort to the measu
ing factors as shown by gallonage might be consider
as a quick, ready measuring factor, without ever havi
established the factor as sound and correct, and that
would be accurate, from the standpoint of sound accoun
ing.

If the measuring factor established on the basis of e
fort is going to be used, then from the standpoint of sou
accounting it is my opinion that it should be used and n
be switched, whereby a portion of the expense will
measured on the basis of effort, and another portion
the expense measured on a basis of gallonage, unless

thorough accounting analysis of what I have termed "factual and objective cost study" were made, whereby it could be proven whether or not a gallonage factor would be the most reasonable and would afford the most accurate figures.

Trial Examiner Ballinger: Am I to understand from your answer that in substance it is that consistency should be adhered to unless there is very good reason disclosed, as a result of investigation, for a difference?

The Witness: Yes, sir; that is a part of it, Judge. Another thing, in my opinion, is what the attorneys

6423 call "best evidence."

Trial Examiner Ballinger: You will have to explain that when you apply it to an accounting proposition.

The Witness: From the accounting standpoint, your Honor, supervisory costs, in my opinion, should follow the costs and expenses of those supervised.

Trial Examiner Ballinger: That is what you would call "consistency", isn't it?

The Witness: I think that is good accounting. That assumes that the person supervised is not so remote from the supervisor that the supervisory activities would lose their identity, so to speak, as it moved down the line.

Resorting to dollar sales, units sold and such like, as a measuring factor, gets away from accounting, in my opinion, completely unless a study is made to determine that those methods are proper and sound, and that the results to be obtained by the use of them are reasonably accurate results.

By Mr. Austin:

Q. Did the respondent in the course of this cost study make a study—

Mr. Hanley: Objected to, unless it is shown that the witness knows.

Mr. Austin: If you will wait 'till I finish the question, Mr. Hanley.

Mr. Hanley: I am sorry. I thought you had finished.

6424 By Mr. Austin:

Q. Did the respondent, in the course of this cost study, make a study of the distribution of effort of the employees in the Detroit field, to determine the portion of such effort spent on the three classes of business represented by the direct shipment channels?

Trial Examiner Ballinger: If you can answer that question of your own knowledge, do so; if you are answering upon information furnished you, so state, and the source of your information.

A. Yes, sir. That information was taken from various places in Respondent's Exhibit 100, and I found that to be a fact in my review of the records of the respondent company in Detroit during the early part of this year.

By Mr. Austin:

Q. In the course of this cost study did the respondent make any study or determination of the proportion of effort of its employees in the Detroit field devoted to the business represented by the respective bulk plant channels?

Mr. Hanley: That is the question I objected to formerly, and is the question counsel asked, instead of the corrected one.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as above recorded.)

Trial Examiner Ballinger: If you know, you may answer.

6425 A. They did not. And that information was furnished me by Mr. Houghton in Detroit.

Trial Examiner Ballinger: Is your answer based solely on what Mr. Houghton advised you?

The Witness: Not solely, Judge. We have a cost report here which is Respondent's Exhibit 100, in which there is a rather complete outline of what the company did do in its cost survey, and there is not one word in this report that states that any study as to the distribution of effort between bulk plant channels was ever made.

Mr. Hanley: Of course, your Honor, I think the respondent has objected to these conclusive statements by the witness as to what the respondent did because Mr. Houghton told him something. Mr. Houghton may have told him something, and we haven't any objection to his saying what Mr. Houghton told him, if he states what he said to Mr. Houghton, but the conclusion of this witness that the respondent did not make the kind of a cost study that this witness has in mind, because Mr. Houghton said they had not made a cost study, is the purest kind of hearsay, and your Honor has ruled extensively against the respondent on hearsay objections in this case. There must have been a meeting of the minds of Warmack and Houghton, and Warmack and Gillis, or whoever he said he talked to, before this evidence is any good at all, or is binding in any way upon the respondent.

6426 This is a serious objection, for the reason that the respondent has continuously, over years of time, made numerous cost studies and is continuously making cost studies, I am sure, of a factual and definitely objective character. It is utterly unfair that we should be bound by what someone else says.

Trial Examiner Ballinger: The witness' answer goes no further than the basis stated for the answer.

Mr. Hanley: If your Honor please, we have asked that the witness be required to state specifically what he said to Mr. Houghton and what Mr. Houghton said to him, and has not been required as yet to specify. He has just given conclusive answers, and it is to that that my objection goes.

Trial Examiner Ballinger: Off the record.

(Discussion off the record.)

By Mr. Austin:

Q. When you were in Detroit, Mr. Warmack, in addition to talking with Mr. Houghton and other officials of the company, did you or did you not have access to the work sheets of Mr. Boatwright and his assistants, which were the basis for the preparation of Respondent's Exhibits 99, 100 and 101, and which outlined the work done by them in the course of this cost study?

A. Yes, sir; I have full access to all the working papers. I also had Mr. Houghton there to help me in my review of them.

6427 Q. Did you make any examination of those working papers; and did you acquaint yourself, according to your belief, with the methods and procedures that were followed by the respondent in the course of his studies?

A. I most certainly did.

Q. Will you now direct your attention to the sales research department and the statistical and personnel department, the activities of which departments have already been referred to, and would you state whether, in your opinion, the expense incurred by the respondent through those departments is an expense of a nature which is susceptible to allocation between customer or product channels in the particular field for the purpose of establishing a cost differential?

A. It is my opinion, Mr. Austin, based upon the functions of these departments, that the costs therein in each instance offer such a resistance to any separation that could possibly be made as between the classes of customers and the cost of serving those classes of customers in the Detroit field, that I don't know how on earth they could be separated on any reasonable or sound basis for the purpose of establishing a cost differential in the Detroit field. They are of such a general nature, is the reason for that answer.

Q. Is it or is it not your opinion that these costs are of such a nature that they may be assigned with a reasonable degree of accuracy to different classes of customers 6428 or products in a particular field?

A. It is my opinion that they can not. As I just stated, they are of such a general nature that I do not see how any separation could be made, from the standpoint of sound accounting, in order to secure a cost differential by the use of these particular costs.

You might consider this in connection with my answer: that if a considerable amount of time of either one of these departments were devoted primarily to one single field during a given period, to the end that they could be considered as current costs of distribution in that field, then I could conceive of a man making some study whereby such costs might be separated on some reasonably sound basis, but looking at them as general costs in the home office of the company at Chicago, I don't see how they could be separated with any reasonable degree of accuracy sufficient to determine a cost differential in one single field.

In further answer to that, if you could establish some class of expenses which could be assigned directly in a single field, and you could establish by proper study that this class of expense would be allocated and assigned on the basis of that expense in a field that was most susceptible to the separation for the purpose of determining cost differential, then a general cost such as this might—and I say "might" advisedly—might follow that allo- 6429 cation. I see no such refinement as that in the separation made by respondent.

Q. Has any such study or separation been made by the respondent of the expense of these sub-departments in distributing that expense among fields on a gallonage basis, and again, distributing it in the particular field on a gallonage basis as between channels?

Trial Examiner Ballinger: As far as you know or could ascertain.

A. Not so far as I know or could ascertain. I made inquiry with reference to this particular item of expense while I was in Chicago, and I was told that no such study had been made. Mr. Houghton told me that.

By Mr. Austin:

Q. If a study or analysis of these general offices, departments were made, Mr. Warmack, from the standpoint of sound accounting could such a study be made of the entire activities of the department, as related to the entire business of the company, or could such a study be made only of the portion of the department expense allocated to the single field on a gallonage basis?

A. It would have to be made of the total expense and all of the activities of the department in order, first, Mr. Austin, to determine what costs of the activities of this particular department in question would be applicable to the field, and then the separation would have to proceed
6430 from that point, that is, to determine how the portion applied to a field should then be apportioned as between customer classification, product classification, or both.

Mr. Hanley: You are expressing that as an opinion?

The Witness: Yes, sir.

By Mr. Austin:

Q. I don't believe I asked you as to the sales research and statistical personnel department, as to the method of allocation used by the respondent in charging a part of that expense to direct shipment channels on Respondent's Exhibit 101. Was the method used the same as the method used for the supervision expense?

A. Yes, sir.

Q. You may have answered that previously. And was the balance of the expense in the sales research and statistical personnel department shown on Respondent's Exhibit 101, assigned to the bulk plant channels in the same way that you stated for the supervision sub-department?

A. Yes, sir.

Q. And that was on a gallonage basis, was it not?

A. Yes, sir. It was assigned to bulk plant channels on Respondent's Exhibit 101 on the basis of bulk plant gallonage, which is exclusive of direct shipment gallonage.

Q. What is your opinion as to the soundness of the
methods of allocation applied to the expense of these
6431 two sub-departments on Respondent's Exhibit 101?

A. My opinion in connection with that very point, as given for the supervisory department, is the same as my opinion in answer to your general question.

Q. Well, you gave several expenses chargeable to the supervisory department, some of them based on supervision considerations, and I think you had better state your opinion specifically there for these too, if you can.

6432 A. Very well, sir.

Q. I am referring now to the use of the two methods of allocation which you have just described.

(There was a discussion off the record.)

A. In my opinion they are unsound from the standpoint of sound accounting and for exactly the same reasons given in answer to the identical question of supervisory cost, but I can restate that, if you want.

Q. Perhaps you better, for clarity.

A. In the first place, allocations were made between direct-shipment channels on the basis of effort of employees in the Detroit field, and an allocation of this class of expense was made to bulk-plant business on the basis of bulk-plant gallonage in the Detroit field, which, of course, is exclusive of direct-shipment gallonage.

If a basis of effort is proper and sound in one instance, in my opinion it is certainly proper and sound in the other instance, that is, if a basis depending upon the effort expended in the direct-shipment business is to be used, then, from the standpoint of sound accounting, and in order to be consistent, it seems to me and it is my opinion that the same basis should be used in the distribution of the cost as between bulk-plant channels, and that is especially true, unless a study were made to determine and
prove conclusively that the gallonage basis of allo-
6433 cation between the bulk-plant channels were sound
and reasonable and would afford an accurate separation of this class of expense.

Q. I wish to refer to one other sub-department, the expense of which appears in Account 255 on Respondent's Exhibit 101. That is the gasoline and refined oil department.

What portion of the expense of this department in the general office is assigned to the selling activities of the respondent?

A. 75 per cent.

Q. And what happens to the other 25 per cent?

A. It is charged to the manufacturing department of the company.

Q. Reference is made in this connection to page 29 of Respondent's Exhibit 99.

Before going further with the question of allocation, will you state briefly what the duties and activities of this department are?

A. I believe, Mr. Austin, that Mr. Boatwright testified to some extent with reference to that and when Mr. Marshall also was on the stand he testified to some extent with respect to the activities of the gasoline and refined oil department.

Q. Who is Mr. Marshall?

A. Mr. J. C. Marshall is the head of the department.

I have a statement here which was prepared in the
6434 Chicago office of the company which will be further enlightening on the activities or functions, if you would like that. It is a short statement.

Trial Examiner Ballinger: You may read it into the record.

Mr. Hanley: Who made it, please?

The Witness: Mr. Boatwright, I think, Judge, had the most to do with the making of the statement.

Mr. Hanley: Don't you know who made it?

The Witness: He handed it to me.

Mr. Harley: Oh.

Trial Examiner Ballinger: You may read it into the record.

The Witness: The functions of this department are outlined on page 5573 of the record and, upon inquiry, find that these functions represent the obligations and responsibilities of this department. The department head, Mr. J. C. Marshall, and his assistant, Mr. H. K. Apel, work in a supervisory function and follow activities both as to tank-car sales and tank-wagon sales. Because of the dual nature of functions performed, inasmuch as these two members do not now or have not in the past maintained a time record, they explained that an effort to split the time between the two functions would be largely arbitrary.

The next two men in the department are Messrs.
6435 E. C. Daly and E. K. Ballard, who work both on
tank-car and tank-wagon sales problems, prices, and contracts, with Mr. Daly giving major, although not exclusive, attention to the consumer side, while Mr. Ballard gives major, although not exclusive, attention to the reseller side of their marketing problems.

These four men in a supervisory capacity are assisted by a staff of ten members working in a clerical or stenographic position. Of these ten, two clerks devote the major part of their time to price problems, and on the other hand, one devotes the major part of his time to tank-car business.

By Mr. Austin:

Q. Is this department concerned directly with direct shipment business of the respondent?

A. Yes, sir.

Q. I call attention to the statement on page 123 of Respondent's Exhibit 100 as follows:

"This department handles all work in connection with bulk-station prices and sales to customers buying in large quantities for shipment direct from our terminals."

Now, Mr. Warmack, will you state first how a part of the 75 per cent of the expense of this department, which is charged to sales, is allocated to the Detroit field?

A. That is shown on page 30 of Respondent's
6436 Exhibit 99. The proportion of this expense which
is charged to the sales department is first allocated to the tank-wagon reseller, tank-wagon consumer and other-method channel on the basis of the total sales in gallons, excluding direct shipments or refined oils, tractor fuels, naphthas and gasoline, in each channel.

Q. What channels are you referring to, Mr. Warmack? Are you referring to channels on Form 189, or are you referring to something else?

A. I am referring to product channels; at least, I am reading here on page 30.

Q. I want to know what page 30 means when it talks about channels. Specifically, does it mean channels within a field, or does it mean channels as applied to the entire business of the company, if you know?

A. I think the next sentence clarifies it.

Q. Just please answer my question, if you can, first. Will you read the question back?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: Mr. Austin, all I have in the world to go by is these exhibits and this thing I have here in the record. I will have to give you my interpretation of them. That is the only thing I can answer from.

By Mr. Austin:

6437 Q. If you don't know any more than is on the exhibit, I don't think there is any point in trying to go beyond the exhibit.

Mr. Hanley: The respondent agrees with counsel's statement in connection with the entire examination of this witness.

Mr. Austin. May we have a five-minute recess?

Trial Examiner Ballinger: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Austin:

Q. You have quoted from Respondent's Exhibit 99, page 30, a statement to the effect that the expense of the gasoline and refined oil department, or 75 per cent of that expense, is allocated to tank-wagon reseller, tank-wagon consumer, and other method channels on the basis of total sales in gallons, excluding direct shipments of refined oils, tractor fuels, naphthas and gasoline in each channel. Will you state further how the expense so allocated to channels is then allocated to fields?

Trial Examiner Ballinger: Also state the source of your knowledge.

The Witness: It is allocated to fields on the basis of the proportion of sales of these products by fields,

6438 that is, the ratio that one field would bear to the total for the company.

Trial Examiner Ballinger: And what is the source of your knowledge?

The Witness: That is shown, your Honor, on page 30 of Respondent's Exhibit 99.

By Mr. Austin:

Q. Now, as a basis for the next question, I would like to refer to Mr. Boatwright's testimony at page 4966 of the record where he says:

"Direct shipments are not a part of the gallonage used in allocating expenses of the general office, general manager's department, either to the fields or to channels within a field."

What is your opinion as to the soundness of the use by the respondent of the gallonage method for distributing the expense of the gasoline and refined oil department between bulk-plant channels, eliminating direct-shipment gallonage from the gallonage used for the allocation?

A. In my opinion it is unsound from the standpoint of sound accounting.

This department is engaged in the handling of work incident to direct-shipment gallonage and also in connection with sales through bulk-plants and, in view of that fact, according to this allocation, the direct shipment 6439 sales would just take no part of this class of expense; although the records show that this department is concerned with that class of business.

That answer, of course, is directed to the regular accounting procedure of the respondent company.

Q. Have you an opinion as to what procedure should be followed for the purpose of determining what portion of the expense of this department is chargeable to the company's direct-shipment gallonage?

A. You say what procedure should be followed? Is that your question?

Q. That was the question, yes.

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: Mr. Austin, I don't know what procedure should be followed in making the allocation, but the proper procedure in my opinion for making the allocation could be established by some reasonable study of the functions and the activities of this particular department.

Q. Would that be for the purpose of determining what part of the expense of this department was incurred in connection with its direct-shipment business activities?

A. Yes, sir, it would be a study to determine what portion of the expense should be assigned to the bulk-plant

business and what portion of the expense should be
6440 assigned to the direct shipment business.

Q. If the portion of the expense which should be assigned to the direct-shipment business were determined, then, in your opinion, should that expense be applied to direct-shipment gallonage for the purpose of determining unit costs for direct shipment gallonage?

A. That is entirely conjectural. A study might disclose that that should be done and it might disclose that that should not be done.

Mr. Hanley: May I ask a question to clarify this, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: As a matter of fact, wasn't that kind of a study just the kind of a study that was made as reflected in Respondent's Exhibit 100, where an allocation of expense of the refined oils department was directly allocated on the unit basis to direct jobber shipments? Isn't that what you mean by a study?

I refer to the study as reflected and explained in Respondent's Exhibit 100 on page 123 and as reflected in the expense items allocated in jobbers—naphtha and gasoline channel, in Account 255 on Respondent's Exhibit 101.

The Witness: Judge Hanley, that is not the kind of a study that I have just been trying to describe, which in
my opinion would afford possibly proper methods
6441 for the allocation of this class of expense, if this
class of expense is going to be used in determining cost differentials. The page you refer to states that the allocation of expense to classes of direct-shipment customers and products was based on ratios representing the combined selling effort of the Detroit field, excluding any charges on jobber—other products.

6442 By Mr. Austin:

Q. Mr. Warmack, the allocation referred on page 123, Respondent's Exhibit 100, is an allocation of what part of the expense of the gasoline and refined oil department?

A. That portion of that class of expense which respondent assigned to direct shipment business in the Detroit field.

Q. Does the allocation described on page 123 of Respondent's Exhibit 100 have any reference to the method used by the respondent in determining how much of the expense of that department should be assigned to the Detroit field?

A. No, sir.

Mr. Austin: My previous question, your Honor, was directed to the method of allocation to the field, whereas this exhibit has only to do with the separation of the amount of expense already allocated to the field.

Q. Now, you have just stated, Mr. Warmack, I believe quoting from page 123 of Respondent's Exhibit 100, that the portion of the expense of this department assigned to the Detroit field is allocated to direct shipment channels on Respondent's Exhibit 101, according to ratios representing the combined selling effort in the Detroit field, no charge being made to the jobber-other products channel. In your opinion, does the distribution of effort of the employees in the gasoline and refined oil department, Chicago—referring now to the department as a whole—follow the distribution of effort of employees in the 6443 Detroit field?

A. Of course, without making a study, I could not say yes or no to that, but from the knowledge of what the selling effort is in the Detroit field, what the functions are of this department that I have been able to obtain knowledge of these matters, I should rather doubt that the efforts of this department would follow the efforts in the Detroit field.

Q. Is there any support in this cost study or in this record, in your opinion, for the use of distribution of effort of employees in the Detroit field as a means for allocating the expense of the gasoline and refined oil department assigned from Chicago?

A. I certainly have seen no study that would prove that to be the fact.

Q. Can you answer my question? I don't believe you have answered it.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:)

"Is there any support in this cost study or in this record, in your opinion, for the distribution of effort of employees in the Detroit field as a means for allocating the expense of the gasoline and refined oil department assigned from Chicago?"

Trial Examiner Ballinger: Is there or is there not?

The Witness: Your guess is as good as mine, 6444 Judge. I haven't seen any.

By Mr. Austin:

Q. You have no opinion on that?

A. It is my opinion that there is none.

Q. That is what I asked you in the first place.

A. I beg your pardon.

Q. You stated a while ago that 25 per cent of the expense of the gasoline and refined oil department is charged by the respondent to manufacturing, and 75 per cent of it to sales?

A. Yes, sir.

Q. Did you make any inquiry as to the basis or support, if any, which respondent has for such an allocation?

A. Yes, sir; I did.

Q. And would you state what inquiry you made and what you ascertained in that regard?

A. I asked Mr. Houghton where the company got the ratios from, and what the company had done to prove the reasonable accuracy of the ratios—that is, the separation factors—and Mr. Houghton states to me that it was the company's best judgment. As a result of that, I asked for any documentary evidence which would be the result of any possible study that may have been made. Mr. Houghton stated that he knew of no such documentary evidence or further information that he might offer to support this allocation basis.

Q. For the purpose of determining what part of 6445 the expense of the gasoline and refined oil department is chargeable to direct shipment business, what is your opinion of the method used by the respondent here of, first, allocating a part of the expense of that department to channels on a gallonage basis, exclusive of direct shipment gallonage; next, allocating a part of the expense in each channel to the field on a gallonage basis; and, third, then withdrawing from the result of the two previous gallonage allocations an amount which is assigned to direct shipment business on the basis of field effort?

A. In answer to the whole question, it is my opinion that the methods used are unsound and unreliable, and not productive of any accurate results from the standpoint of sound accounting practice and procedure.

Mr. Hanley: If your Honor please, that is a compound question, and was answered before there was an opportunity to object, and I do not care to strike the answer or move to strike the answer if I may ask the witness if he means by that answer that he sees nothing at all right about anything that the respondent did in the handling of the expense of the gasoline and refined oil department.

Trial Examiner Ballinger: You may.

Mr. Austin: I assume that that question is limited to the purposes of this cost study?

Mr. Hanley: It is limited to everything that he had
6446 been testifying about—it includes everything he has
been testifying about in connection with that department's expense.

Mr. Austin: Well, the testimony of the witness has been restricted to the purposes of the cost study.

Mr. Hanley: The answer may not be an answer.

Mr. Austin: I want to object to the question unless it be restricted to the cost study. In other words, the witness' testimony has not been directed to the propriety of what the respondent has done for its own accounting procedure. He has been discussing only what should be done or what has been done for the purposes of the cost study introduced in this case, and if Judge Hanley's question is so limited I have no objection.

Mr. Hanley: All right, I will limit it.

By Mr. Hanley:

Q. You may regard the question as limited, Mr. Warmack, to the discussions of that account in the testimony of Mr. J. C. Marshall, Mr. J. W. Boatwright, Respondent's Exhibit 99, Respondent's Exhibit 100, Respondent's Exhibit 101, and your own investigation, either in Detroit or in Chicago or anywhere else you may have ever made an investigation.

The Witness: May I have the question read?

(The reporter read the record as follows:)

"Mr. Hanley: If your Honor please, that is a compound
question, and was answered before there was an op-
6447 portunity to object, and I do not care to strike the
answer or move to strike the answer if I may ask the witness if he means by that answer that he sees nothing at all right about anything that the respondent did in the handling of the expense of the gasoline and refined oil department.

"Trial Examiner Ballinger: You may.

"Mr. Austin: I assume that that question is limited to the purposes of this cost study?

"Mr. Hanley: It is limited to everything that he has been testifying about—it includes everything he has been testifying about in connection with that department's expense.

"Mr. Austin: Well, the testimony of the witness has been restricted to the purposes of the cost study."

A. The answer, in response to Mr. Austin's question, was limited entirely to determining results from the allocation of this particular account for the purpose of proving a cost differential.

Q. Will you please answer my question? You have answered Mr. Austin's question.

A. I shall endeavor to, Judge Hanley.

Q. It is a simple one. If you see anything right about it, the answer is "Yes;" if you see nothing right

6448 about it, the answer is "No."

A. What do you mean by "right"?

Q. That is for you to decide.

A. You are asking the question.

Trial Examiner Ballinger: Answer the question if you can.

A. Your Honor, I stated, in answer to Mr. Austin's question, that I thought the methods employed were not productive of accurate results from the standpoint of sound accounting, and for the purpose of determining a cost differential. There could be a possibility in the various and sundry handlings of an account, the making of calculations, that the calculations would be just as right as rain, but when I am asked a question that nothing is right—

Trial Examiner Ballinger: From the standpoint of proper accounting?

A. Before I could answer that question, I would have to take this account and analyze every item in it, and see every calculation that has been made, before I could answer the question, your Honor. The word "right" is all-inclusive.

Mr. Hanley: I tried to limit the question, your Honor, to those things that this man has studied, and I am asking about the rightness of the procedures, not arithmetical calculations.

The Witness: As far as the rightness of precedure

6449 is concerned, as set forth in Respondent's Exhibit 100, for the purpose of determing the cost differential it is my opinion from the standpoint of sound accounting that the methods employed are not proven as being sufficiently accurate to prove a cost differential. The methods employed by the respondent, as set forth in Respondent's Exhibit 99, in its regular accounting procedure, which has nothing to do with a cost differential, and which are wholly and entirely for the managerial purposes of the company, I have no objection to, as far as the allocations are concerned, from any accounting standpoint. If they satisfy the management of the company they should satisfy everybody else in the world.

Mr. Austin: I move to strike that answer of the witness on the ground that it is unresponsive; that the witness was directed to the question which referred specifically only to this cost study, and his last answer is about something that he says did not affect the cost study.

Mr. Hanley: If your Honor please, I submit to the motion to strike, on the ground that it is unresponsive, and that the witness has not answered my question, and I will not pursue the matter any further. Of course, in agreeing to the motion to strike, I don't mean physically.

Trial Examiner Ballinger: The motion is granted. It will be stricken.

6450 Proceed, Mr. Austin.

By Mr. Austin:

Q. Is any of the expense of the gasoline and refined oil department, general office, allocated to direct shipment business in the company's regular accounting procedure?

A. No, sir.

Q. Was the company's regular accounting procedure used for the purpose of determining the amount of the expense, that is, the total expense, entered for this department in Account 255 on Respondent's Exhibit 101?

The Witness: Will you read the question?

(The reporter read the question as above recorded.)

Q. Do you understand the question, Mr. Warmack?

A. I would be glad if you would reframe it, Mr. Austin.

Q. I will try and explain it. I want to know how the amount of expense in Account 255, which appears in the total for that account on Respondent's Exhibit 101 was determined? And I can refer you to page 127 of Respondent's Exhibit 100, which gives the total expense for that department used in Exhibit 101, as $3,924.53.

A. That is gasoline and refined oil.

Q. Where did that figure come from, or how was it determined, if you know?

A. That figure represents the portion of the gasoline and refined oil department which was assigned to the Detroit field for the year 1940 in the company's regu-
6451 lar accounting procedure.

Q. Is that expense of $3,924.53 the identical amount of expense which was assigned for this account and department to the Detroit field by the company in its regular accounting procedure?

A. Yes, sir. I would like to clarify that. That is only one of the several parts of the account 255 which is assigned to the Detroit field.

Q. I understand, but I am referring only to the gasoline and refined oil department.

A. A just don't—off the record.

(Discussion off the record.)

Mr. Austin: I would like to ask for a recess, your Honor, and just talk to the witness for a moment and see whether there is anything else we want to take up this afternoon. I am not sure.

Trial Examiner Ballinger: We will take a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: We will come to order.

Mr. Austin: Your Honor, the witness has had rather a tedious period on the witness stand, and I have concluded the questions which I have prepared. I would like a reasonable period of time to check up what we have gone over, and decide whether there is anything
6452 that has not been covered, and I believe the witness is also preparing an exhibit, which I hope will be of use and may be introduced, and which will require some more work, in view of the fact that the witness was unexpectedly taken ill the day prior to the opening of these hearings. I therefore move that we adjourn until Saturday morning at 9:30.

Trial Examiner Ballinger: The motion is granted. Now, at 4:45 p. m., this hearing will stand adjourned, to be reconvened July 11, 1942, at the hour of 9:30 a. m., in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:45 o'clock p. m., July 9, 1942, the hearing in the above-entitled matter was adjourned.)

6453

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Saturday, July 11, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., Attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6454 PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing of Docket 4389, case entitled "In the Matter of Standard Oil Company of Indiana" is convened pursuant to notice at 9:30 a. m., July 11, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C. The last hearing was held in this same room, same city, July 9, 1942.

The reporter will note counsel for the Commission and the Respondent present.

You may proceed.

Mr. Austin: I will recall Mr. Warmack.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination by Mr. Austin (Continued).

Q. It appears from the testimony and exhibits, Mr. Warmack, that the Respondent has certain employees in the Detroit field which are called "plant supervisors, plant superintendents," and also "tank wagon and warehouse superintendent"; that these supervisors and superintendents have direct charge and supervision of the bulk plant and tank wagon and warehouse activities of the Respondent in the Detroit field.

It further appears that a portion of the salaries
6455 of these individuals entered in account 000 represents a portion of their time spent in a supervisory capacity. What is your opinion as to the method used by the Respondent for the allocation of salaries of these individuals between bulk plant channels on Respondent's Exhibit 101? The method used was the all-gallonage method, excluding direct shipment gallonage, as shown on page 19 of Respondent's Exhibit 99, with the exception of tank wagon superintendent, whose salary is allocated on a gallonage basis between tank wagon reseller and tank wagon consumer channels.

A. It is my opinion that these supervisory officials' time and activities should follow the allocation of the salaries and expense of the persons supervised. There is a possibility that certain parts of this class of expense might be assigned directly based on the activities of the supervisor, but as I have testified previously, it is my opinion that the supervisors' salaries and expense should follow the allocation of the salaries and expenses of the persons supervised, particularly and especially since the persons supervised are not so remote from the supervisor that he would not be really exercising any direct supervision over them.

Q. Is it your understanding that the plant superintendents and supervisors do exercise direct supervision over the bulk plant operations of the company, particularly in metropolitan Detroit?

6456 A. That is my understanding, Mr. Austin.

Q. Referring, now, to account 280, the construction and maintenance department at the general office. According to Respondent's Exhibit 99 the expense of this department is allocated to fields, and to channels on a gallonage basis, excluding direct shipment gallonage. It appears on page 125 of Respondent's Exhibit 100 that a portion of the expense of construction and maintenance which is charged to the Detroit field was in turn allocated in part to direct shipment business on the basis of the ratios as applied to the activities of the Detroit field construction department.

A. Do you mean applied to direct shipments on that basis?

Q. Yes, the allocation between bulk plant channels is on a gallonage basis, according to Respondent's Exhibit 99.

A. But to direct shipments on a basis of effort?

Q. Well, it is except—I am just quoting from the exhibit, Mr. Warmack.

A. Yes, sir.

Q. Does that mean, Mr. Warmack, that the same method of allocation and the same percentages were applied to the expenses in account 280 on Respondent's Exhibit 101 that were applied in allocating the expense of the field construction department entered in accounts 000 and 001?

The Witness: May I hear the question read?

6457 Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Yes, sir.

By Mr. Austin:

Q. You have given some testimony regarding the method of allocations used by the Respondent in distributing expense of the field construction department between channels on Respondent's Exhibit 101. Does your testimony in that respect equally state your opinion as to the method of allocation used for the expense in account 280?

A. Yes, sir. It does. There is one other point that I think should be brought out there.

Q. Yes.

A. I question the measuring factor used by the Respondent in the first place in assigning this class of expense of the general office as between fields. In that instance, a gallonage factor is used, and in my inquiries made at the company's office early this year, I was unable to obtain anything to support such a separation.

If that class of expense is going to be separated between fields and used for the purpose of determining a cost differential, then it is my opinion that every measuring factor all along the line be determined and proven by some cost study or analysis. Otherwise the separation borders largely on the arbitrary.

6458 Does that answer your question, Mr. Austin?

Q. Yes, Mr. Warmack.

Will you now refer to account 260 which contains the expense of the advertising department at the general office in Chicago.

A. Yes, sir.

Q. At page 124 of Respondent's Exhibit 100 is stated that, "Expense of this department applicable to jobber distribution was obtained by applying the ratio of jobber costs in account 075 to total advertising expense in account 075."

You have given considerable testimony regarding the advertising expenditures of the company charged to account 075, Mr. Warmack. What is your opinion as to the use by the Respondent in this cost study of the expense of the advertising department in Chicago falling into account 260 for the purpose of establishing a cost differential?

A. It is my opinion, Mr. Austin, that the methods employed in the separation of this account for the purpose of establishing a cost differential, and as set forth in Respondent's Exhibit 100, page 124, are unreliable, unsound, and not based upon anything which can even be considered as approaching sound accounting procedure.

Q. What is your reason for that opinion, Mr. Warmack? I would like to have you go into the matter sufficiently, at least, to tie up with your previous testimony on account 075, if you can.

6459 A. The expense included in this account 260 entitled "Advertising Department" is applicable to all of the expense of the company's advertising department at its home office. This expense is then of necessity separated between fields. That portion of the expense which was assigned to the Detroit field, and which was used in the company's separation of the costs for the purpose of determining a cost differential, was separated in accordance with the separation of account 075 in the Detroit field. Account 075 in the Detroit field turns largely to advertising for consumer acceptance such as newspaper advertising, billboard advertising, and various and sundry classes of advertising which turn largely to that class of advertising which is for consumer acceptance.

Advertising for consumer acceptance was not assigned to jobber business; that is, no part of it was assigned to jobber business.

It is my opinion that that was erroneous and not proper. I have previously testified at length on that. In view of the fact then that you are picking up an expense and using a measuring factor which I consider improper, why, naturally, if your measuring factor is incorrect, whatever is measured by it, the result will be incorrect, unsound, and unreliable.

6460 Q. Are you referring now to the measuring factor applied to account 260?

A. I am referring to the measuring factor applied to account 260 which according to Respondent's Exhibit 100, page 124, the measuring stick of which was taken from account 075.

Mr. Austin: Your Honor, I would like a short adjournment, and I would like to have time for Mr. Warmack to see what progress is being made upon the sheets that we are planning to offer in evidence.

Trial Examiner Ballinger: We will take a recess for five minutes, or such longer time as may be necessary.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin: I would like to have this sheet marked for identification, your Honor.

Trial Examiner Ballinger: The reporter will mark the document Commission's Exhibit 133 for identification.

(The document referred to was marked "Commission's Exhibit 133" for identification.)

Mr. Austin: This sheet marked Commission's Exhibit 133 for identification is a sheet which I have asked Mr. Warmack to prepare, and which is now offered in evidence for the purpose of showing the effect of the elimination
from Respondent's Exhibit 101 of the accounts and
6461 expenses which it will be the contention of the Com-
mission's attorney have not been sufficiently proved and established by the Respondent to afford a basis for establishing a cost differential in this case.

The accounts and expenses which have been eliminated are those which it will be contended are either improper for use at all for the purposes of this cost study, or which it will be contended have been improperly allocated, or which it will be contended have not been sufficiently proven to justify their acceptance as a part of Respondent's cost justification in this proceeding.

The accounts and expenses listed on this exhibit in many instances are accounts and expenses which, due to the extensive nature of the task which the Commission had in analyzing Respondent's accounting system and cost study, we have not found it practicable to explore or analyze. Therefore, in offering this exhibit it is not conceded that any of the costs and expenses listed thereon are proper expenses for establishing a cost study, nor is it conceded that even if the expense may be proper expenses for that purpose, that the allocations and treatment of those expenses made by the Respondent are correct, or are accepted as establishing the differential shown at the bottom of the sheet.

However, it is not the purpose of the Commission's attorney, for the purpose of this proceeding solely,
6462 to attack the differential shown as the result of the
expenses listed on this sheet beyond perhaps in some instances doing as the Respondent did with its Exhibit 31-Q, and claiming that in some cases the expenses on this sheet are such as to favor the Respondent in so far as they are not separated with entire accuracy.

To sum up again, it is offered solely for the purpose of showing what is attacked by the Commission in this proceeding, and what is not, and not as any offer to show what it is conceded the Respondent has actually established in the way of a differential.

If this is not entirely clear, and Respondent's counsel has any questions as to the purpose, I will be glad to have him ask such questions.

Mr. Hanley: If your Honor please, I will just confess it is about as clear to me as a London fog now.

You are offering this as an exhibit now, are you not?

Mr. Austin: Yes.

Mr. Hanley: May I ask a few questions of the witness?

Trial Examiner Ballinger: You may.

Mr. Austin: Well, I will state, if I may, before you ask any questions, there are a few accounts on here, perhaps
eight or ten accounts, as to which the figures are
6463 not the same as the figures entered in the tank wagon
reseller and the jobber naphtha and gasoline column on Respondent's Exhibit 101.

If this is received in evidence I will question the witness and have it appear on the record as to just how those figures were arrived at. The balance of the figures on this sheet are the actual figures taken from Respondent's Exhibit 101, from the tank wagon reseller and the jobber naphtha and gasoline column; in other words, showing the differential that is shown on Respondent's Exhibit 101 for those accounts.

Mr. Hanley: Mr. Warmack, in the few moments at my disposal since this has been handed to me, I have checked a few of these accounts against the figures appearing on Respondent's Exhibit 101, and I find that the same—from the statement of your counsel just made—indicates that there may be some which are different.

Will you please point out which of these accounts in Commission's Exhibit 133 for identification have figures different from those appearing on Respondent's Exhibit 101?

The Witness: Yes, sir.

(There was a discussion off the record.)

Mr. Hanley: Mr. Warmack, as I understand counsel's explanation of this exhibit, Commission's Exhibit 133 for identification, certain of these accounts have been lifted bodily from Respondent's Exhibit 101 without any
6464 change in figures; is that correct?

The Witness: That is correct.

Mr. Hanley: I understand from what you said a moment ago that some of these accounts in Commission's Exhibit 133 showed different figures from what the same numbered accounts show in Respondent's Exhibit 101.

The Witness: That is correct. They do.

Mr. Hanley: Have you now, Mr. Warmack, placed an "X" mark against the account—which "X" mark appears in the left hand margin of Commission's Exhibit 133 for identification—against each account number which shows different figures in Commission's Exhibit 133 for identification from the same corresponding numbered account shown on Respondent's Exhibit 101?

The Witness: Yes, sir.

Mr. Hanley: Are those particular accounts so identified by an "X" mark the following numbered accounts:

025, entitled "Direct rental expense,"

055, entitled "Vehicle Tank Expense—other than mounted on company chassis";

066, "Miscellaneous Operating Expenses";

200, "Office Expense—Salaries Accounting";

208, "Credit Information Expense";

243, "Taxes, Federal Insurance Contributions";

244, "Taxes, Unemployment Insurance";

6465 255, "General Office Expense—General Manager's Department";

520, "Annuities and Retirement Plan Expense";

525, "Death Benefits"?

The Witness: Yes. Those accounts that you have just called are marked "X" alongside the account numbers and represent the accounts which show a change from figures as shown in your Respondent's Exhibit 101.

Mr. Hanley: Are all other accounts appearing on Commission's Exhibit 133 for identification identical in figures with the figures that appear in the corresponding account number in Respondent's Exhibit 101?

The Witness: Yes, sir. That, of course, is subject to check for some typographical change or error. I have not checked this sheet since it was prepared, Judge Hanley.

Mr. Hanley: Referring to the third line from the bottom on the left entitled "Total Unit Gallons" opposite which in the first column on the right appears the figure 69,301,586. What does that mean, Mr. Warmack?

The Witness: That means the total gallons in the Detroit field for the year 1940 sold through tank wagon reseller channel, and that figure was taken exactly as it appears in the third line from the bottom of the tank wagon reseller column on Respondent's Exhibit 101.

6466 Mr. Hanley: In the same line, and in the last column appears the figure 15,296,828. What does that represent?

The Witness: That represents total gallons as shown in Respondent's Exhibit 101 under the channel and at the foot of the page, representing total gallonage sold through jobbers; that is, gallons of naphtha and gasoline.

Mr. Hanley: Referring you to the dollar totals on Commission's Exhibit 133, I will ask you if those are the total of the respective columns of figures under which they appear?

The Witness: Yes, sir. That is the total of each of the columns.

You will understand, Judge, that I have not checked those since it was prepared.

Mr. Hanley: Well, subject to any arithmetical correction that may be necessary.

Trial Examiner Ballinger: That is what it is intended to represent.

Mr. Hanley: And of course I assume, Mr. Warmack, that those totals give consideration to the changed figures in these various accounts which you indicated as being different from what appears on Respondent's Exhibit 101?

The Witness: Yes, sir.

Mr. Hanley: What does the dollar denominated figures under "Tank wagon reseller" column, as follows:
6467 0.7102 represent?

The Witness: This represents the average per unit cost of the tank wagon reseller business, using the cost of $492,114.20 as shown on Commission's Exhibit 133 for identification, divided by the total units; that is, 69,301,586 for that channel.

Mr. Austin: I move to strike the entire answer on the ground that it is immaterial.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: I will reframe the question.

Referring you to the figure at the bottom of tank wagon reseller column on Commission's Exhibit 133, as follows: .7102 cents. What does that mean?

The Witness: That means an average cost per unit of .7102 cents per gallon in the tank wagon reseller column, representing the relationship of total gallons, as shown at the bottom of the column, to the expense as shown on Commission's Exhibit 133 for identification, of tank wagon reseller business amounting to $492,179.20.

Mr. Hanley: And please explain the figure .0318 cents, appearing at the bottom of the jobber, naphtha and gasoline column.

The Witness: It represents the average cost per gallon applicable to jobber, naphtha and gasoline in the
6468 Detroit field for 1940, using only the cost as shown on Commission's Exhibit 133 for identification, of $4,877.91, divided by the total gallons of jobber, naphtha and gasoline in the Detroit field for 1940.

Mr. Hanley: Now, are we to understand, Mr. Warmack, that these average per unit cost figures of .7102 cents for tank wagon reseller, and .0318 cents for jobbers, naphtha and gasoline represent what you say the Respondent's costs were for the year 1940?

Mr. Austin: I object to that question, your Honor.

Mr. Hanley: Well, I have got to know what this exhibit means.

Mr. Austin: I am not offering this exhibit as representing Mr. Warmack's opinion at all. I am offering it as showing the contention of counsel for Commission. That is why I didn't ask Mr. Warmack any questions myself in offering it in evidence, and consequently, in view of that explanation, I object to any questions directed to Mr. Warmack as to whether this exhibit or any part thereof represents his opinion as to the cost which the Respondent has proved in this proceeding. I don't object to any questions regarding computations on here, because that was done by Mr. Warmack, and I am prepared to show what was done with each of these ten accounts where adjustment has been made. I will do that by questioning the witness.

6469 Mr. Hanley: If your Honor please, it makes no difference what counsel offered this exhibit for. If it, in fact, represents this expert accountant's computation of what he regards as the Respondent's costs, we are entitled to know it before this exhibit is received. He can answer it "yes" or "no". I don't care what he says.

Trial Examiner Ballinger: Not in the opinion of the Examiner. The Examiner understands that Commission's Exhibit 133 for identification has been presented for the sole purpose of displaying those items in Respondent's Exhibit 101 which the Commission does not now nor proposes to assail.

Am I correct?

Mr. Austin: Absolutely correct.

Mr. Hanley: Will you read that statement by the Examiner?

(The reporter read the Examiner's statement as above referred to.)

Mr. Hanley: I will ask you, Mr. Warmack, having heard the statement of the Court, if that is a correct statement and explanation of your position in respect of Commission's Exhibit 133?

Trial Examiner Ballinger: For identification.

Mr. Austin: Well that, I take it, is also objectionable, your Honor. I don't think it is a very clear question.

6470 In any event, I think that the position as to what accounts are to be assailed is one for the Commission to determine, rather than for the witness.

Mr. Hanley: Very well. I will submit to the objection.

Mr. Warmack, as an accountant for the Commission, and testifying on behalf of the Commission in this case, do you find any fault with, complaint about or criticism of the accounting figures or procedures as they appear on Commission's Exhibit 133?

Mr. Austin: I am willing that he should answer that if you can.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

The Witness: There are many figures appearing on

Commission's Exhibit 133 for identification that I would certainly question the accuracy of if they are going to be used for the purpose of proving the cost differential. Many of these figures I just have not gone into, Judge Hanley, in my studies, that is, my review of the record in the company's offices, and the procedure employed in the separation of the costs.

Does that answer your question?

Mr. Hanley: Well, if that is your answer, it answers my question.

6471 The Witness: I might say there are some of these figures that might be proper—

Mr Hanley: Well, now, I think we have gone far enough on this, so I can understand it, Judge. I just want to have this clear: As I understand it, the Commission now states that it will no longer and does not now, will not in the future, assail the accounts of Respondent as they now appear on Commission's Exhibit 133, as to their figures or procedure, which means that now, for the purposes of this trial, the Commission concedes all of the accounts appearing on Commission's Exhibit 133.

Trial Examiner Ballinger: For identification.

Mr. Hanley: And also appearing on Respondent's Exhibit 101 in identical form.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: I will state it this way. It is understood that this concession means that it goes to all accounts appearing on Respondent's Exhibit 101 and Commission's Exhibit 133, when the figures are identical, but that such concession on the part of the Commission as to those accounts on Commission's Exhibit 133 which are identified by an "X" mark, are conceded in the amount as it appears on Exhibit 133, and that such "X" marked accounts as the corresponding account appears in Respondent's

6472 Exhibit 101, are not conceded identically as they appear as to amount in Respondent's Exhibit 101.

Is that your position?

Mr. Austin: That statement as to concession is all right, Judge, for the purposes of this proceeding only. I think you did not state that.

Mr. Hanley: I said "this case."

Mr. Austin: Further, with the minor exception that I reserve the right to argue or point out that some of the

differential shown on Commission's Exhibit 133 for identification may favor the Respondent, in so far as they are not entirely accurate. For instance, there are several accounts listed on Commission's Exhibit 133 for identification as to which the witness, Mr. Warmack, testified that part of the expense in such accounts should have been allocated to automobile supply. We have not made such allocation for the purposes of preparing this exhibit. If we had, it would have resulted in a slight reduction from the amount in tank wagon reseller channel for some of these accounts which are listed on Commission's Exhibit 133 for identification; therefore, as to those accounts, there is a slight overstatement on Commission's Exhibit 133, of the amount in the tank wagon reseller channels, according to the testimony of Mr. Warmack, but aside from any such overstatement or understatement which we believe
6473 favor the Respondent, and which we do not intend to attempt to compute or argue, except in the manner I have just stated, your understanding of my purpose in offering this exhibit is correct.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Hanley: It is not very often, if the Court please, that I am reluctant to refuse what somebody thinks is a concession to me, but this Commission's Exhibit 133 for identification is now objected to for the reason that it is immaterial on the following grounds:

It is immaterial, first, because if the Commission concedes these accounts to be correctly set up by the Respondent, the exhibit is unnecessary, and the testimony either has been or will be developed from the witness Warmack anyway.

Furthermore, the concession, if it be a concession, is in the nature of an Indian gift, in that the witness who prepared it has testified that he does not concede the accuracy of the procedures of the Respondent in preparing the figures that, in part at least, are reflected on Exhibit 133, and that counsel for the Commission reserves the right to argue on the question of the propriety and accuracy of the accounting procedures of the Respondent.

Further, that certain figures appear in the accounts
6474 on Exhibit 133 differently than the same account figures appear on Respondent's Exhibit 101, and there has been no explanation of how such changes were arrived

at, and Respondent is wholly without understanding as t
what the so-called "concession" in that respect, if any
might be, or might entail, or might bind the Responden
to, and Respondent is not entitled to be bound by th
acceptance of any so-called "concession" until it is clea
what such concession may be and to what extent it ma
bind the Respondent.

Further, that the entire exhibit is immaterial and ir
relevant, and indeed, useless as a matter of evidence, fo
the reason that if it represents the position of counse
for the Commission in his approach to the argument an
presentation of his case, it simply amounts to an argument
and he may use it or refrain from using it, irrespective o
its existence in the evidence.

Trial Examiner Ballinger: The Examiner will withhol
ruling on the objection until counsel for the Commissio
is afforded an opportunity to offer any testimony he ma
desire, explanatory of the difference in the figures appear
ing on Commission's Exhibit 133 for identification, an
Respondent's Exhibit 101.

Mr. Austin: May I say this, your Honor: Judg
Hanley in his objection made the statement tha
6475 counsel for the Commission reserved the right t
argue the propriety or correctness of the accountin
procedure used by the Respondent in the amount shown o
Commission's Exhibit 133 for identification. I do not re
serve any such right and do not propose to devote any tim
or argument to the procedure used as to the accounts liste
on that exhibit for identification, except those account
which are marked with an "X", and where adjustmen
is made.

The only reservation I made as to the accounts wher
the amounts shown are taken directly from Respondent'
Exhibit 101 was that I reserve the right to point out i
it is desirable that the differential shown at the foot o
the exhibit is an overstatement rather than an understate
ment of what the testimony will show that Responden
has proved.

Of course, when I referred to the differential at th
bottom, I might apply that to any particular account.

Trial Examiner Ballinger: The record sufficiently se
forth—

Mr. Hanley: I think, Judge, I will withdraw my obje
tion and just make an objection on the ground of materia

ity. I mean I will withdraw that long objection I made and just object on the ground of materiality. I don't see how this thing can help or hurt either side in this case, really I don't, so I will withdraw it.

Trial Examiner Ballinger: The specific objections 6476 interposed to the introduction of Commission's Exhibit 133 for identification are now withdrawn and the general objection on the ground of immateriality is interposed.

The objection is overruled and Commission's Exhibit 133 for identification is admitted in evidence.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 133 was received in evidence.)

Mr. Austin: With reference to the suggestion previously made by the Examiner, I have drafted a short statement here which I should like to have permission to have typewritten at the bottom of Commission's Exhibit 133—and I will, of course, be glad to have the same thing done on Mr. Hanley's copy. It reads as follows:

"All of the above account figures are taken from the tank wagon reseller and jobber gasoline columns on Respondent's Exhibit 101, except figures opposite accounts marked X, which have just been adjusted.)

It is agreeable that that be typewritten on these exhibits.

Trial Examiner Ballinger: Without objection, the addition will be made to Commission's Exhibit 133.

By Mr. Austin:

Q. Mr. Warmack, will you explain how the expense figure opposite account 025 on Commission's Exhibit 6477 133 was arrived at?

A. Yes, sir. On the same basis that account 021, entitled "Commissions" had been assigned to the tank wagon reseller column. In other words, the ratio that the expense assigned to tank wagon reseller column, representing commissions in account 021, bears to the total amount of commissions, that same ratio was used in assigning truck rental expense to the tank wagon reseller column.

Q. What was the figure for truck rental expense, account 025, on Respondent's Exhibit 101?

A. $37,793.36.

Q. And the figure now entered on Commission's Exhibit 133 is $22,992.31. Is that correct?

A. Yes, sir.

Q. Mr. Warmack, is the expense in account 021 all cated between all three channels, that is, bulk plant cha nels including other methods, on Respondent's Exhibit 10

A. Yes, sir.

Q. I understood you to just state that the percenta applied to account 025 in preparing Commission's Exhib 133 was the percentage reached by taking the ratio commissions in the tank wagon reseller channel to total co missions. Is that correct?

A. No, sir; it was only the commission between ta wagon reseller channels and tank wagon consum
6478 channels which was used in the allocations, the sa as between the two channels. Those two were us in the allocation, that is, the re-allocation as set forth Commission's Exhibit 133 in account 025.

Mr. Hanley: May I ask one question?

Did you adjust account 025 by the same method of location that is used by Respondent in allocating acco 021?

The Witness: Between the reseller and consumer c umns, as shown on Respondent's Exhibit 101, yes, sir.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Mr. Austin: Your Honor, I move that we adjourn un Monday afternoon at 2:00 o'clock, so that Mr. Warma may have an opportunity to prepare his written sta ment, which may be either introduced as an exhibit read into the record, at your Honor's discretion.

Trial Examiner Ballinger: In the absence of objecti the motion is granted, and now, at twelve o'clock noon t hearing stands adjourned, to be reconvened at 1:00 p. July 13, 1942, in Room 532, Federal Trade Commissi Building, Washington, D. C.

(Whereupon, at 12:00 o'clock noon, July 11, 1942, hearing in the above-entitled matter was adjourned.)

6479

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Monday, July 13, 1942.

Met, pursuant to adjournment, at 1:00 o'clock p. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6480 PROCEEDINGS.

Trial Examiner Ballinger: The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana" is reconvened pursuant to notice, at 1:00 p. m., July 13, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in the same place, July 11, 1942.

The reporter will note counsel for the Commission and Respondent present.

Mr. Austin: I request a recess until two p.m.

Trial Examiner Ballinger: A recess is granted, and the hearing now stands in recess until 2:00 p. m.

(A recess was taken.)

Trial Examiner Ballinger: Reconvened at 2:00 p. m. Proceed.

Mr. Austin: I did not bring up a copy of the record with me, but I believe we were at the point of having introduced in evidence Commission's Exhibit 133, and thereupon Mr. Warmack was about to explain the adjustments made in the figures shown on Respondent's Exhibit 101 for the ten accounts marked "X" on Commission's Exhibit 133 for the purpose of reaching the figures entered on that exhibit in the tank wagon reseller and jobber, naphtha and gasoline columns.

6481 WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Austin.

Q. I would be glad, Mr. Warmack, if you will start in with the first of the ten accounts, which is account 025, and explain what computations or allocations were made for the purpose of reaching the figures for those accounts shown on Commission's Exhibit 133.

A. The allocations of this account on Commission's Exhibit 133 of commissions as shown in account 021, on Respondent's Exhibit 101 were used: that is, the commissions as shown—the commissions shown in the tank wagon reseller column and the tank wagon consumer column on Respondent's Exhibit 101, which amount to a total of $362,661.17, made up of $110,300.46 shown in the tank wagon reseller column of Respondent's Exhibit 101, and $252,360.7 shown in the tank wagon consumer column of Respondent's Exhibit 101.

The $110,300.46 was related to the total of $362,661.1 whereby the percentage of 30.414 per cent was arrived at

This percentage was applied to the total truck renta expense of $75,597.79, shown in account 025 on Respondent's Exhibit 101, whereby the figure of $22,922.31 wa 6482 arrived at, and which appears in the tank wagon reseller column of Commission's Exhibit 133.

In the case of the allocation of account 055, whereby $2,374.42 was assigned to the tank wagon reseller colum on Commission's Exhibit 133, the same methods were use in this instance as was used in the re-allocation of accoun 025, just explained.

Q. Mr. Warmack, in your previous testimony regardin these accounts, I think you said that some part of the expense of these accounts should have been allocated by the Respondent to the other methods channel for the purpos of this cost study due to the fact that some of the othe methods products sold through commission channels ar delivered on side racks of these trucks.

Did you attempt to make any such allocation of th expense in accounts 025 and 055 to the other methods channel for the purpose of the preparation of Commission' Exhibit 133?

A. No, sir. I did not, for the reason that I did not know what portion of that class of expense might be applicable to the other methods business. It is my understanding, Mr. Austin, that a considerable part of this other methods business is shipped directly from the terminal or refineries, or other point designated by the Respondent company, to the customers directly in rural territories, and of course,
6483 I would not know from the records at hand, or what
I have examined, just what portion of this direct truck rental expense should be applicable or applied to the other methods business—perhaps I should say what portion of this truck rental expense should be applicable or applied to the other methods business.

Also, that portion of account 025 representing other vehicle tank wagon expense other than mounted on company chassis, probably none of that should apply to the other methods business.

Q. I thought your testimony referred only to account 025 ~~not~~ to 055, the latter account, 055, being only the tank expense; is that correct?

A. Yes, sir.

Q. Of course, in asking you that question about account 025, I was referring to other methods products shipped through bulk plants, and not direct shipment business. Anything shipped direct from other places than the bulk plant is classified by the Respondent as direct shipment. I was only referring in my question to products handled through bulk plants.

A. I see. I have not gone into that particular problem.

Q. In any event, you have retained for the purpose of the preparation of Commission's Exhibit 133, as I understand it, the Respondent's regular accounting pro-
6484 cedure of allocating the entire expense of account 025
to the tank wagon reseller and tank wagon consumer channel; is that correct?

The Witness: What is the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Yes, sir. All of that expense is allocated to those two channels on Commission's Exhibit 133, but I have just explained, in different proportions from what Respondent had previously allocated it.

By Mr. Austin:

Q. Will you now proceed, Mr. Warmack, with your explanation of the figure opposite accounts 066, and 200, and also 208, on Commission's Exhibit 133?

A. Yes, sir. In the respective accounts 066, 200, and 208, in Commission's Exhibit 133, credit card charges for each of the accounts as shown in Commission's Exhibit 132 were deducted from charges for the Respondent's account as shown in Respondent's Exhibit 101, the difference between the amounts for the respective accounts shown in Respondent's Exhibit 101 and the amounts of the Respondent's account, Commission's Exhibit 132 appear—

Mr. Hanley: Do you not mean Commission's Exhibit 133?

The Witness: No, sir. Commission's Exhibit 132—appear in the two columns for the respective accounts on 6485 Commission's Exhibit 133.

By Mr. Austin:

Q. Will you now proceed to account 243.

A. Yes, sir. The salary accounts shown on Commission's Exhibit 116 were taken, and the figures applicable to each of the separate salary accounts were tabulated, taking the figures applicable to each from Respondent's Exhibit 101. The ratios of salaries thus determined falling in the tank wagon reseller column and the jobber, naphtha and gasoline column, with the total of such salary accounts were then applied to the total of account 243 in order to determine the amounts to each of the two columns shown in Respondent's Exhibit 133.

The same procedure was used in arriving at the figure for account 525 on Commission's Exhibit 133.

Q. Which account do you wish to take up next?

A. I would take up next account 255, but I should like to call attention first to the fact that although some portions of account 243 and 525 may be applicable to the five salary accounts shown on Commission's Exhibit 116, and included in the total thirteen salary accounts shown thereon, no portions of the total expense of accounts 243 and 525 appearing in Respondent's Exhibit 101 were deducted in making the allocations on Commission's Exhibit 133.

Q. Perhaps I can ask you a question or two, Mr. 6486 Warmack, that will help to clarify that. How many salary accounts are there listed on Commission's Exhibit 116?

A. Thirteen.

Q. How many of those salary accounts are included among the accounts listed on Commission's Exhibit 133?

A. Eight.

Q. Does that leave a balance of five of those salary accounts which are not included on Commission's Exhibit 133?

A. That is correct.

Q. Will you state those accounts by numbers?

A. Yes, sir.

Q. Please do so.

A. Account 000, account 001, account 004, account 005, account 215.

Q. Now, in determining the amounts entered on Commission's Exhibit 133 opposite account 243, did you make any deduction for Federal Social Security or insurance contributions upon the salaries of those five accounts which are not included on Commission's Exhibit 133?

A. No, sir, no deduction was made because those accounts were taken out and whatever portion is applicable to those accounts remains in Commission's Exhibit 133.

Q. Is the same true as to account 525, death benefits?

A. Yes, sir.

6487 Q. Are you now able to proceed with an explanation of account 255?

A. Yes, sir.

Q. I think, perhaps, Mr. Warmack, it would be better to take up 244 first and 520 next; they are more nearly like the two we have been discussing.

A. Very well.

Q. Suppose you proceed with account 244.

A. It involves a little explanation. Of the 13 salary accounts on Commission's Exhibit 116, five of the accounts were not included on Commission's Exhibit 133.

Q. Are those five accounts the ones you have just enumerated a moment ago?

A. Yes, sir.

Q. Proceed.

A. The total of those five accounts in dollars is $305,874. To that figure there was applied 3.03 per cent, the Michigan Unemployment Insurance tax, which gives a figure of $9,267.98. That amount was deducted from a total of $40,439.97, shown for account 244 in Respondent's Exhibit 101, leaving a balance of $31,171.99, which was adjusted or distributed to the tank wagon reseller and the jobber, naphtha and gasoline column on Commission's Exhibit 133 on the basis that the total salaries of the respective columns of the eight salary accounts appearing in Commission's Exhibit 133, bear to the total of such salaries.

6488 In the case of account 520, the total in that account of $157,014.35, as shown on Respondent's Exhibit 101, was not used in making the calculation, and in lieu thereof a figure of $26,226.38 was used representing the contributions by the company to match the contributions by employees for the purposes of annuities and retirement in the Detroit field for the year 1940. Using that figure the same procedure was used in arriving at the figure shown on Commission's Exhibit 133, as just described for account 244.

Q. Now, in saying that the same procedure was used, Mr. Warmack, you explained for account 244 that you applied to the total of the five salary accounts, included in Commission's Exhibit 116, but not included on Commission's Exhibit 116, but not included on Commission's Exhibit 133, the Michigan tax rate of 3.03 per cent.

What figure or what percentage did you apply to the total of those five accounts in making your calculations for account 520?

A. I used two per cent instead of 3.03 per cent figure.

Q. What is that 2 per cent figure? Where did you get it?

A. That figure is shown on or near the center of page 92 of Respondent's Exhibit 100, where it is stated that, under account 520, the rate of 2 per cent is applicable on the first $250 per month, and 5 per cent is applicable to any income over that amount. I only used the two ~~per cent~~ figure because I did not know what amount to apply

6489 the five per cent to, Mr. Austin, so if I was in error, I would just leave it in there. In other words, that was the best I could do.

Q. Then, is any deduction made from the expenses in account 520, in preparing Commission's Exhibit 133, for the additional three per cent applied, as stated on page 92 of Respondent's Exhibit 101, to the portion of salaries in excess of $250 per month?

The Witness: What is the question?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

The Witness: No, sir. No part of that was deducted, although some of those salaries was not included in Commission's Exhibit 133; those are the five salaries I have just spoken about. I had no figure with which I could make a calculation.

By Mr. Austin:

Q. Account 255 remains to be explained.

A. The figures shown in Commission's Exhibit 133 for account 255 are $7,875.23, as shown in tank wagon reseller column, and $23.16 in the jobber, naphtha and gasoline columns, that figure shown in the tank wagon reseller column is made up of two parts; that is, $6,440.70 and $1,428.53.

In determining the first figure of tank wagon reseller—
the tank wagon reseller gallonage in the Detroit field
6490 for 1940 representing 65.8 per cent of the total bulk
plant gallonage for the field for the year was related
to the item marked "real estate and operating expense" $9,905.81, on Respondent's Exhibit 100, page 127, in arriving at the total of $6,440.70.

Q. What is the regular accounting procedure of the Respondent in allocating their general office and real estate department expense to the fields and to channels?

A. On a basis of bulk plant gallonage by months.

Q. Did you make an allocation by months or on an annual basis?

A. No, sir. I made it on an annual basis. That was the only figure I had available.

Q. May that result in some slight difference in the figure in applying that to this gallonage?

A. I would think it would make very little difference. I made tests on that while I was in Detroit, and I do not think it would make a great deal of difference. I did not find it made a great deal of difference on the other accounts. I did not make tests on this particular account.

In arriving at the other figure of $1,428.53, that is the one just referred to, the percentage of 47.3, as shown in Respondent's Exhibit 99, page 31, as being applicable to the tank wagon reseller business was applied to an item
amounting to $3,020.15, representing sales promotion
6491 resale and shown in Respondent's Exhibit 100, page

127. The item of $23.16 as shown in Commission's Exhibit 133 for account 255 representing costs applied by Respondent's accountants to jobber, naphtha and gasoline on Respondent's Exhibit 101, is made up of two parts, the first part is $20.39, representing a portion of sales promotion, wholesale expense, as contrasted with the one just mentioned being the retail resale expense—as shown on page 127 of Respondent's Exhibit 100, and the item of $2.77 representing sales promotion resale as shown on the same page.

Q. Are the component parts of that figure of $23.16 in the jobber, naphtha and gasoline columns opposite account 255 on Commission's Exhibit 133, taken directly from the Respondent's Exhibit 100?

A. Yes, sir. It is on page 127.

Q. Are the two amounts which you have stated the amounts which were charged by the Respondent to jobber naphtha and gasoline for the sales promotion wholesale and sales promotion retail sub-departments of the general manager's department?

A. Yes, sir.

Q. Why was no part of the expense of the sales promotion wholesale sub-department assigned to the tank wagon reseller in the preparation of Commission's Exhibit 133?

A. Because that department is not concerned with tank wagon reseller business.

6492 Q. Did the Respondent in the preparation of its exhibits 100 and 101 charge any part of the expense of that department to the tank wagon reseller channels?

A. No, sir.

Q. I notice once or twice that you have referred to Commission's Exhibit 101, did you not mean Respondent's Exhibit 101?

A. Yes, sir.

Q. And if you referred to Respondent's Exhibit 133, were you referring to Commission's Exhibit 133?

A. Yes, sir. I may have made a slip of the tongue.

Mr. Austin: If your Honor please, I would like to call attention to additional correction that should be made on Commission's Exhibit 133 opposite account 507, the title of that account is shown as "Miscellaneous" and that should be "Losses—Miscellaneous"; and I would like to have permission to correct the title of that account, Trial Examiner Ballinger: Without objection, permission is granted.

Mr. Hanley: It may be corrected.

(There was a discussion off the record.)

Mr. Hanley: If your Honor please, it is suggested that the now revised Commission's Exhibit 133 be retyped to include the explanatory notes, and the marked accounts,
and any changes in account nomenclature on the ac-
6493 counts which they may desire to include, and that
the new Exhibit No. 133 be filed as the official exhibit offered by the Commission.

Trial Examiner Ballinger: Commission's Exhibit 133 may be re-typewritten with proper corrections, may be submitted to counsel for the Respondent, and when approved, will be substituted for Commission's Exhibit 133 heretofore admitted in evidence.

Mr. Hanley: It may be understood now, if your Honor please, that this substitution is a matter of convenience and there will be no objection other than the objections already made to the exhibit.

Trial Examiner Ballinger: On the ground of immateriality?

Mr. Hanley: Yes, sir.

Mr. Austin: I have no further questions of the witness, your Honor.

Trial Examiner Ballinger: I think the Examiner understands that Respondent would prefer to defer cross-examination to commence tomorrow morning; is that correct, Judge Hanley?

Mr. Hanley: Judge, I can go on if you wish, but I would deeply appreciate it if you can give me until tomorrow morning.

(Witness temporarily excused.)

Trial Examiner Ballinger: The hearing will be ad-
6494 journed.

And now, at 3:15 p. m., the hearing stands adjourned to be reconvened July 14, 1942, at the hour of 9:30 a. m., in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 3:15 p. m., July 13, 1942, the hearing in the above-entitled matter was adjourned.)

6495

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Tuesday, July 14, 1942.

Met pursuant to adjournment, at 9:30 a. m.

Before: Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6496

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana," is reconvened pursuant to notice, at 9:30 a. m., July 14, 1942, in Room 532, Federal Trade Commission Building.

The last hearing was held at the same place, July 13, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

Mr. Hanley: Counsel for the Commission having excused the witness on direct examination, the Respondent now renews all motions both general and specific to strike the testimony as the same may have been objected to, or motions may have been made to strike from time to time.

At this time the Respondent moves to strike all of th testimony of the witness Warmack upon the followin grounds and for the following reasons:

Respondent understands that the Robinson-Patman Act permits of a justification of a cost differential and that there necessarily derives therefrom an obligation on the part of the Federal Trade Commission, which is the administrative body of such Robinson-Patman Act, to learn by factual study what are the cost differentials that
6497 may apply in any particular inquiry.

It is understood that an accountant for the Com mission, namely, William J. Warmack, was assigned to make a cost study with particular reference to exhibits offered by the Respondent, namely, 99, 100, and 101; it is further understood that Mr. Warmack, as accountant for the Commission, did in fact spend approximately two months in the Detroit office of the Respondent, and thereafter spent some time in the Chicago general office of the Respondent. It appears that the factual study made by Mr. Warmack did not determine any alternative methods of accounting within reasonably calculable limits, or at all, as distinguished from those methods which Mr. Warmack criticized; it does not appear from the evidence of Mr. Warmack that there is any different differential of cost as positively testified to by the witnesses for the Respondent; it does not appear from the testimony of Mr. Warmack that there is any dispute or question raised by him as to the accuracy of the arithmetical calculations or factual statements appearing in Respondent's Exhibits 99, 100, and 101; it does appear that the testimony of the witness Warmack is merely a rehash and a recitation and a reading by him of Respondent's Exhibits 99, 100, and 101.

It appears that the witness Warmack declines and refrains from giving any testimony as to the influence upon
the cost differential as may be derived from his de-
6498 sire or inclination to depart from the methods and
procedure employed by the Respondent.

Further, the witness Warmack has used vague, indefinite, relative, and indeterminate terms such as: "material"—"large or small reduction"—"rough estimate"—"increase"—"decrease"—"great"—"very great"—"small"—"very small"—"more"—"less."

That until and unless the witness indicates an influence or effect upon the differential positively testified to by the Respondent, the evidence of the witness Warmack is without value, or probative effect, and up until now no such evidence has been given by the witness Warmack.

With specific reference to Respondent's Exhibit No. 31, Respondent moves to strike all of the testimony of the witness Warmack inasmuch as he has testified that he made no specific study of the underlying data, record, and facts which went into Respondent's Exhibit 31, and which dealt with the year 1937.

Further, that any study of the one-half cent differential accorded Ned's Auto Supply Company for 1937 has

become moot and is no longer an issue in this litigation, whereas in the spring of 1938 Ned's Auto Supply Company began to purchase as a jobber, having at that time their own storage facilities, and being able to receive deliveries in tank car or tank transport amounts, gaso-
6499 line and other petroleum derivatives.

That the testimony of the witness Warmack is largely predicated upon the premise that there were no studies made by the Respondent company which resulted in the allocations as they appear on Respondent's general accounting form 189, Commission's Exhibit 119.

That in truth and in fact there were and have been and are continuously being studies made by the Respondent, with which the witness Warmack is well familiar, having to do with the propriety of the allocations, cost separation and distribution as it appears on Respondent's accounting form 189, Commission's Exhibit 119.

For the foregoing reasons the Respondent at this time moves that all of the testimony of Commission's witness Warmack be stricken and deleted from the record.

Trial Examiner Ballinger: As the Examiner understands, there are two motions submitted by counsel for the Respondent. The first motion embraces both objections to questions asked by counsel for the Commission, and motions to strike answers of the witness Warmack. There was also a continuing objection with right reserved to counsel to move to strike the testimony of the witness Warmack at its conclusion.

The objection now renewed, and the motion to strike now renewed are denied and overruled.

6500 As to the second motion now submitted, it may more appropriately be addressed to the Commission.

The Examiner, therefore, believing that it should be passed on by the Commission, has no alternative other than to deny the motion.

Mr. Hanley: May Mr. Warmack take the stand?

Trial Examiner Ballinger: William J. Warmack resumed.

Mr. Austin: Before we do that, at this time, your Honor, it may be well for me to offer to have Commission's Exhibit 133 again marked since pursuant to the stipulation on the record yesterday we have had the exhibit recopied, and, if your Honor please, at this time I would like to substitute this sheet for the one before and have it again remarked.

Trial Examiner Ballinger: The document now presented by counsel for the Commission will be marked Commission's Exhibit 133 and substituted for the original Exhibit 133, which may be withdrawn from the record.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley.

Q. Mr. Warmack, you have been engaged for a 6501 good many years as an accountant for the Federal Trade Commission, have you not?

A. Yes, sir.

Q. I do not care to take you over the qualifications that you have already testified to. I am inclined to grant your qualifications.

I wish you would tell us, however, exactly how much time you spent in Detroit, and in Chicago, and in Washington in connection with your study of this particular case.

Mr. Austin: I object to that question so far as it relates to Washington, your Honor. I think that the amount of time that the witness may have spent with the Commission is more or less of a private matter, and the amount of time which he may have spent on this matter or any other particular matter here in the office in consultation and so forth is not a matter which the witness should be called upon to give factual testimony about.

I doubt very much whether he could, anyway, or whether he could make much more than the roughest sort of an estimate. I do not believe I could. I do not object to the question as to Detroit or Chicago, at all.

Trial Examiner Ballinger: Before the Examiner rules, he will ask the witness a question.

(To the Witness): Did you keep any memoranda 6502 as to the time spent on this case?

The Witness: No, sir.

Mr. Hanley: Well, if I may rephrase the question perhaps I can avoid the objection.

Trial Examiner Ballinger: The question is withdrawn?

Mr. Hanley: Yes, sir. I withdraw the question.

By Mr. Hanley:

Q. First, Mr. Warmack, tell us how much time you spent in Detroit and in Chicago in your study of this particular question.

The Witness: Your Honor, I do not have the exact dates right before me.

A. I can give you approximately what they are, Judge Hanley.

Trial Examiner Ballinger: Answer to the best of your information.

By Mr. Hanley:

Q. That is all I want. I do not want the exact dates.

A. I believe that I went to Detroit around the twelfth of January, 1942, and stayed until about the fifth or sixth of March, 1942.

I stayed in Detroit until March 4, or 5, or 6, when I went to Chicago. And I was in Chicago for five or six or seven days.

6503 Trial Examiner Ballinger: During that time were you continuously engaged on this case?

The Witness: Yes, sir. Practically so. I did cover one little bit of work in Detroit, but it was relatively small.

By Mr. Hanley:

Q. Now, I do not think you have told us how much time you spent in Chicago. You did go to Chicago after you finished your work in Detroit, did you not?

Trial Examiner Ballinger: Read the last portion of the witness' answer to the preceding question.

(The reporter read the following:

"I stayed in Detroit until March 4, or 5, or 6, when I went to Chicago. And I was in Chicago for five or six or seven days.")

Mr. Hanley: I withdraw the question. I find he has answered it.

The Witness: Yes.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Hanley:

Q. As a matter of fact, you were in Chicago, were you not, Mr. Warmack, on several former occasions before you went to Detroit at all, you and Mr. Lundball?

A. We were in Chicago around the eleventh, or twelfth, or thirteenth of November, 1941. Mr. Lundball and I were there. At that time I believe that is 6504 the only occasion I had to go to Chicago except the other occasion just related in connection with this case. I conferred with Mr. Boatwright in Detroit about October 2, 3, 1941. At that time I was engaged in other work in Detroit and vicinity. I took those days to confer with Mr. Boatwright at his request.

Q. Following that trip on your part to Chicago—you and Mr. Lundball?

A. Yes, sir.

Q. Did Mr. Boatwright make a trip to Washington to confer with you here in Washington?

A. Yes, sir. He conferred with us here—I am speaking from memory, of course, Judge Hanley, and not from any record of time before me. I am sure that he came here and conferred with me on the matter.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Having examined the transcript of evidence, Mr. Warmack, are you able now to make any more specific answer as to the visit of Mr. Boatwright to Washington, and your conference with him?

6505 A. I do not see right here, Judge Hanley, in this record,—(Witness indicates transcript of testimony,) —that you handed me, the place where it is specifically stated what date Mr. Boatwright came to Washington. Would you please show it to me?

Q. Well, I do not think it is very important, Mr. Warmack; did he, as a matter of fact, come to Washington and confer with you?

A. Yes, sir. He most certainly did.

Q. Irrespective of the date, that happened, did it?

A. Yes, sir.

Q. It did?

A. Yes, sir.

Mr. Austin: What is the month, or what is it that you are speaking of? Mr. Warmack does not seem to be able to tell us.

The Witness: I was under the impression that Judge Hanley was speaking with reference to a conference here held subsequent to the conference which was held in November in Chicago. That was the conference, if my memory serves me correctly, just before Christmas. I think that is the right date, but I do not know just the exact date.

Trial Examiner Ballinger: Do you mean Christmas 1941?

6506 The Witness: Yes, sir.

By Mr. Hanley:

Q. But there was a conference?

A. Yes, sir.

Q. And Mr. Boatwright came down here to Washington and talked to you and to Mr. Austin and to Mr. Lundball?

A. Yes, sir.

Q. And subsequent to that, the Respondent's Exhibits numbered 99, 100, and 101 were prepared and introduced in this litigation; is that right, Mr. Warmack?

A. I will have to look at the date. He said subsequently?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I withdraw the question.

Trial Examiner Ballinger: The question is withdrawn.

By Mr. Hanley:

Q. Mr. Warmack, there came a time when there was introduced into this record Respondent's Exhibits 99, 100, and 101. Do you know that?

A. Yes, sir, I do. They were.

Q. And you have studiously examined each one of those exhibits, have you not?

A. I have, I think, made a pretty fair review of 6507 them, Judge, at least.

Q. Mr. Warmack, do you dispute or question any arithmetical calculation or statement of fact that appears in any one of those three exhibits?

Perhaps I should say to you now that I am not asking you anything about your opinion as to the propriety of the accounting procedure. I am asking you simply as to arithmetical calculations and statements of fact.

The Witness: If I may have the question read?

Trial Examiner Ballinger: Read the question.

(The question referred to was read by the reporter.)

Trial Examiner Ballinger: We will have a recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: Your Honor, I think there was a pending question.

Trial Examiner Ballinger: Read the pending question to the witness.

(The reporter read the question as follows:

"Q. Mr. Warmack, do you dispute or question any arithmetical calculation or statement of fact that appears in any one of those three exhibits?

"Perhaps I should say to you now that I am not asking you anything about your opinion as to the propriety of the accounting procedure. I am asking you simply 6508 as to arithmetical calculations and statements of fact:")

The Witness: Judge Hanley, I do not question any arithmetical calculation or computation.

I do question the statement of facts, especially or particularly that statement of fact appearing on page 1 of Respondent's Exhibit 99 which reads:

"A memorandum is maintained by each salesman showing the amount of time in selling products applicable to each channel of distribution during the last month of each quarter."

I question that statement.

By Mr. Hanley:

Q. Would you please give us the result of your examination into the question of fact, Mr. Warmack?

A. Yes, sir.

While in Detroit early this year I requested Mr. Houghton, who was assigned by the company to work with me in Detroit, to produce whatever memorandum or memoranda the Respondent company had, which was referred to in that statement. Whereupon, Mr. Houghton advised me that there was no such memoranda available; that is, memoranda which shows the time spent by each salesman. No such memorandum was produced.

Q. Well, Mr. Warmack, is there any memorandum kept by the salesmen which you saw, whether this cor-

6509 rectly expresses the matter which is contained in it or not, was there any memoranda which you saw?

A. Yes, sir. I saw memoranda prepared by salesmen which showed the names of the persons called upon, and which showed the product involved or dealt upon, at each call, but there was no notation or figure or anything on those daily reports which I am referring to and which are referred to here as a time record, which showed the time spent on the separate products or channels of distribution by any one salesman. If there were any such memorandum, I never saw it.

Q. All right, Mr. Warmack, reverting to my question as to whether or not you dispute or question any arithmetical computation or statement of fact appearing in Respondent's Exhibits 99, 100, and 101, is there any other question that you have except as to the first line on page 1 of Respondent's Exhibit 99?

A. There are many questions that I have raised in connection with these three exhibits—.

Q. (Interposing.) Just a minute, Mr. Warmack. You understand I am not asking you now about your opinions as to accounting procedure.

I am asking you simply as to arithmetical computations and factual statements.

A. Yes, sir. And your question is: Are there any other statements or questions of fact—

6510 Q. (Interposing.) Any others than this one that you have just raised pertaining to the first sentence on page 1 of Respondent's Exhibit 99 having to do with memoranda of salesmen's time spent.

A. I do not recall any other, Judge Hanley.

Q. Mr. Warmack, did you investigate the records of all of the different classes of salesmen in connection with this statement—

A. (Interposing.) No, sir.

Q. —in the first sentence on page 1 of Respondent's Exhibit 99—I mean by that the automotive salesmen, lubricating salesmen, and so forth.

A. I requested Mr. Houghton to produce any memorandum or memoranda that was prepared by any salesman whatsoever covered in account 064, and that covers the salesmen which you have just mentioned.

I did not ask for a memorandum with respect to salesmen covered in account 002.

Trial Examiner Ballinger: What class—

By Mr. Hanley:

Q. Did you inquire—

Trial Examiner Ballinger: —of salesmen are covered in account 002?

The Witness: Account 002 entitled "Salaries Sales, Promotion" was not studied in our field study, your
6511 Honor, it being a small account relatively in size and that was one account which I did not cover in my field investigation.

By Mr. Hanley:

Q. Did you take occasion in your studies in Detroit, Mr. Warmack, to examine the instructions that were given to salesmen as to how they should report their time spent?

A. I asked for all information of any kind whatsoever bearing upon that one subject of salesmen.

Q. Well, did you get it?

A. And I got the daily time reports prepared by some of the salesmen.

Q. What salesmen?

Trial Examiner Ballinger: Did they furnish you any instructions issued by the company to the salesmen with reference to daily time reports?

The Witness: No, sir. I have never seen any such data or memoranda.

By Mr. Hanley:

Q. Do you know whether or not any such instructions exist?

A. No, sir.

Q. You never saw any such?

A. No, sir.

Q. But did you see some reports from salesmen indicating their time spent; that is, the allocation of their time as they worked?

6512 A. You speak about time, Judge; I saw nothing that would show anything about time except the men worked that day, and called upon a certain group of customers.

Q. That is what I am talking about.

A. I do not like to call them time reports, because there is no time shown on them except the day's work.

Q. Well, you call them what you like, but will you tell the Court exactly what you did or saw in the way of reports by salesmen as to what they did?

A. I have answered that question, Judge Hanley.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. What salesmen were they, what classes of salesmen were they, Mr. Warmack? Now, that has to do, Mr. Warmack, with any salesman whose records you saw that reported anything in the way of time spent.

A. I am sure that I reviewed some of the time or, let us call it "daily reports of salesmen" covered in account 004. I have no record to show all of the classes of salesmen referred to: that is, the time reports prepared by those salesmen.

I asked for information to be submitted to me for examination showing all time spent on calls as referred
6513 to on page 1 of Respondent's Exhibit 99, and a group
of time reports or daily reports, I might call them, were submitted to me, a large, large stack of them, Judge Hanley, showing all salesmen or all classes of sales—that I am unable to say. I am able to say this, that I ran through these reports, these daily reports and not a single one of them showed any time spent by any salesman any place.

Q. Well, now, in order that we may have this thing entirely clear, Mr. Warmack, your question about the first sentence on page 1 of Respondent's Exhibit 99 has to do with the fact that you were unable to find a time allocation in the activities of Respondent's salesmen: is that true?

A. That is correct. I should like to amplify the statement I just made, however, if I may, Judge Hanley.

Q. Surely, go right ahead.

A. With respect to time spent.

You did make a study of time spent by industrial salesmen during the month of August to establish a portion of their time to the direct shipment business and more particularly to the jobber business. Those were time records kept. That qualifies the statement which I just made.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

6514 Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Now, Mr. Warmack, in the course of your studies in Detroit and Chicago, and latterly in Washington, in which you gave attention to this case, did you determine at any time the influence in figures in dollars and cents upon the cost differential as indicated by Respondent's Exhibit 101 in respect of any of your criticisms of the procedure used by the Respondent?

The Witness: May I have the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: May I have the question again?

Trial Examiner Ballinger: Read it again.

(The reporter again read the question.)

The Witness: I am sure I made calculations, calculations and computations.

By Mr. Hanley:

Q. Mr. Warmack, will you please refer to Respondent's Exhibit 101.

A. Yes, sir.

Q. Under the tank wagon reseller column, which is the first column of figures on the exhibit, there appears the amount 1.67 cents. Do you find that?

A. Yes, sir.

6515 Q. Do you understand that that represents the Respondent's claim that that is the cost of selling gasoline and naphtha through the reseller channels?

A. Yes, sir, the cost per gallon.

Q. Cost per gallon?

A. Yes, sir.

Q. Now, referring to the fourth column under "Direct Shipment Customers—Jobbers, Naphtha and Gasoline," you will note at the bottom of the page .16 cents. Do you find that figure?

A. Yes, sir.

Q. Do you understand that it is the claim of the Respondent that the difference between the figure 1.67 and .16 resulting in 1.51 cents, is the cost differential that exists?

The Witness: May I have the record read?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: I understand that that is the claim of the Respondent, Judge Hanley.

By Mr. Hanley:

Q. Now, adverting to my former question, Mr. Warmack, in your analysis in Detroit and in Chicago and any-
where else that you have made a study of this case,
6516 did you determine what influence in figures in dollars
and cents there may have been upon the cost differential by the application of your method as distinguished from the accounting methods used by the Respondent?

The Witness: May I have that question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Judge Hanley, a study was never made. The procedure was never applied which I was advocating in separating costs for the purpose of proving a cost differential by the Respondent in the Detroit field. Therefore, to come to an exact figure in dollars and cents would be a physical impossibility.

For example, I advocated at the very beginning of this thing—of this study when a conference was held with Mr. Boatwright in August, 1941, that a study to first determine whether the commission agent business should be included with the regular salaried station agent business, and that in my opinion should be the place to begin. As far as I know, no such study has ever been made.

By Mr. Hanley:

Q. Well, we will reach that in due time, Mr. Warmack. I am just asking your now simply a question as to whether or not in the course of your studies you reached
any conclusions in figures in dollars and cents that
6517 alter or modify the claimed differential of the Re-
spondent of 1.51 cents?

A. What studies I have made certainly would modify the facts—

Q. (Interposing.) Mr. Warmack, can you answer this do you or do you not?

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Surely, I made plenty of computations, Judge, and I came to the conclusion that the claimed differential of 1.51 cents per gallon to tank wagon reseller customers, jobber, naphtha and gasoline customers, had not been properly proved from the standpoint of sound accounting.

By Mr. Hanley:

Q. All right, Mr. Warmack, how much is it in figures in dollars and cents?

A. I have not been required to make any such computation.

Q. I am asking you whether or not you did?

A. I did not.

Q. Do you know how much it is off?

A. I do not.

Q. Do you know whether it is one one-hundredths of a cent or ten one-hundredths of a cent?

A. I certainly do not.

6518 Q. Are you just unable to say whether that 1.51 is a correct figure or whether any other figure is a correct figure?

A. I am unable to say.

Q. Sir?

A. I am unable to say. I do say that from the standpoint of sound accounting it is not properly proven.

Q. Are you unable to say whether from the standpoint of sound accounting, as you understand it, that the figure may be greater or less?

A. No, sir.

Q. You do not know?

A. No, sir.

Q. Is it possible, Mr. Warmack, that assuming your premises of sound accounting as you have explained them in answer to your counsel's questions, that instead of being a differential—a cost differential of 1.51 cents there might result a cost differential of 1.61 cents—do you know that?

A. I could not possibly know it, Judge Hanley; that is conjecture pure and simple.

Q. I know it is conjecture, Mr. Warmack, but do you know it?

A. Do I know what?

Do you know whether or not that could result?

6519 A. No, sir.

Q. Have you made a figuration?

A. No, sir.

Q. What? Why?

A. A figuration would not be a proper thing, you have to make a cost study.

Q. So far as you know that might happen; is that right?

A. I certainly do not know whether it would or not, Judge Hanley.

Q. That is all I am asking, Mr. Warmack, is whether or not you know.

A. Well, I do not know.

Q. Have you made any calculation at all, Mr. Warmack, in Detroit or in Chicago or in Washington, or in any place which reflects your idea of what cost differential is?

A. No, sir.

Q. You never have?

A. I have not.

Q. Are you prepared to say now, as an acountant, and leaving out of the picture the methods and the procedure, are you prepared to say now that the result, the cost differential of 1.51 is erroneous?

A. I certainly am not prepared to say that it is correct or incorrect, but I am prepared to say that it has not been proven—

6520 Q. (Interposing.) Listen: I did not ask you that. You have answered the question.

A. I beg your pardon.

Mr. Hanley: Off the record.

(There was a discusion off the record.)

Mr. Hanley: I move that we adjourn until one-thirty o'clock, p. m.

Trial Examiner Ballinger: The motion is granted.

And now, at 11:30 o'clock a. m., the hearing stands in recess until 1:30 p. m.

(Whereupon, at 11:30 o'clock a. m., a recess was taken until 1:30 o'clock, p. m., of the same day.)

6521 Afternoon Session—1:30 p. m.

Trial Examiner Ballinger: Come to order. Reconvened. You may proceed.

Mr. Warmack, will you resume the stand?

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination (Continued)—by Mr. Hanley.

Q. Mr. Warmack, I believe you have testified that you have participated in the preparation of various studies of the Federal Trade Commission relating to cost accounting; is that true?

A. Well, that is a pretty broad statement, Judge, they have been making cost studies since I was a boy, I am sure that I did not participate in them prior to 1929, or when I came with the Commission.

Q. Well, I will tell you that I have particular reference to a study published by the Federal Trade Commission under date of June 23, 1941, which has to do with a letter of the Acting Chairman of the Federal Trade Commission transmitting a report of the Commission. This is denominated as House Document No. 287 in the 77th Congress, First Session.

Will you look at it, please, Mr. Warmack, you may 6522 be able to recognize it.

A. Yes, sir. I do recognize it.

Q. Did you participate in the preparation of that document?

A. To some extent; yes, sir.

Q. I now call your attention to page 2 of the book just identified, and I will ask you if you agree with the following statement:

"Distribution cost accounting is of comparatively recent date. It is still a developing field and is becoming increasingly important as the part played by the distributing function in the nation's total economy becomes more important."

Do you agree with that statement?

A. Most assuredly; yes, sir.

Q. Quoting from page 12 of the book, I will quote and ask you if you agree with the quoted statement, Mr. Warmack:

"It became evident early in the Commission's inquiry into distribution cost accounting that there is a dearth of good case material. This situation is the result of the fact that until recently little attention had been given to this branch of accounting. The methods that are in use are undergoing change. This evolution is due, in part, to new methods of distribution in industry generally and, more especially, in those industries where a high degree of concentration of an industry has been brought about
6523 and, in part, to a greater social control, as expressed in recent legislation, to comply with which additional accounting information is necessary."

Do you agree with that statement?

A. Yes, sir. I should like to call attention to this with respect to a dearth of good material which you quoted, that statement, of course, must be weighed in the light of what has been done in the way of cost accounting generally.

Q. Go right ahead, Mr. Warmack. Well, what has been done?

A. I beg your pardon?

Q. What has been done?

A. Well, I believe in the last war, why, cost accounting; that is, accounting for production costs reacher a rather high state of development, and it is rather unusual for large manufacturers at the present time to not be able to furnish production costs, but we are talking, why—or you are referring me there to distribution cost accounting, and the point that I wish to make about the dearth of cost material, or case material, should be weighed in the light of the attention that has been given to production cost accounting, we will say, during the past twenty-five or thirty years.

Q. Mr. Warmack, let us advert to your own testimony given at the outset of your direct examination.

I think you testified as follows:

6524 "That distribution cost accounting is still in the pioneer stage of its development."

Did you make that statement?

A. I did.

Q. And just what did you mean by that statement?

A. Well, I meant that as compared with production cost accounting, why, it has not reached the stage of refinement that production cost accounting has.

Q. Now, is it or is it not a fact that competent accountants arrive at serious differences of opinion as to the proper methods of allocation of expenses in arriving at results for distribution cost accounting?

The Witness: What is the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I have heard differences of opinion, Mr. Hanley, expressed by competent accountants.

By Mr. Hanley:

Q. And is it not true, Mr. Warmack, that when such differences exist that each side might have a strong and logical support for their respective positions?

A. Well, if they do not have, they think they have, Judge Hanley, they can put up very good arguments.

Q. Well, Mr. Warmack, all I am asking you is, don't these accountants have just honest differences of opinion as to what they think is the best way to allocate
6525 expenses; that is all in the world I am asking.

A. Yes, sir, I appreciate that, Judge, but you are asking me a very, very broad, all-inclusive, all-exclusive question—that accountants may disagree honestly on one point, but on all of the other points involved there we may agree wholheartedly upon. Now, when you ask me, do we have great differences of opinion, unless we brought down the point at issue, it would be rather hard to generalize on them, Judge Hanley.

Q. Well, now, when that difference exists, and I take it it does exist from time to time—I am right about that, am I not, now?

A. It exists in this case, sir.

Q. Isn't that just a difference of judgment on the part of the accountants who may be handling the account?

A. Well, I am sure I do not impugn the good faith in this case.

Q. I am just asking you now as an expert accountant, Mr. Warmack, is it not true that many expert accountants have and that among expert accountants there is a difference of opinion about the treatment of various types of accounting and distribution, and allocation, and separation of costs?

A. Well, I am sure that all accountants do not agree on every cost separation. The point to be considered
mostly in that is the degree of accuracy that you are
6526 striving for, Judge Hanley.

Q. Well, that does not quite answer the question, Mr. Warmack.

Irrespective of the degree of accuracy, is it or is it not true that accountants differ in their judgment as to how to allocate various types of costs?

A. I think that your statement is perfectly true, as is demonstrated by this case, and the point brought out in this case, but I do not mean to say by that that every accountant in the country disagrees with every other accountant in the country on these various and sundry kinds of separations. I certainly would not object myself to separations for one purpose, and the same separations I would object to strenuously for another purpose.

Q. So far as you know, Mr. Warmack, has there ever been, either by great degree or otherwise, any norm or yardstick established as to what is the proper cost accounting procedure under the Robinson-Patman Act?

A. I do not know if there has been, Judge Hanley.

Q. If there has been you do not know about it; is that what you mean to say?

A. I do not know about it.

Q. You do not?

A. I do not know about it directly as such; that means, that a court or a tribunal would pick up a class of cost and
lay down some ironclad rule for the separation of that
6526-A cost, if I get what you mean, I have heard of no
such thing, and I think it would be very unfortunate if such a thing were to come to pass.

Q. Now, I call your attention to page 25 of the Federal Trade Commission book referred to a moment ago, and will ask you if you agree with the following statement:

"Manufacturers, as such, have two principal functions, the production of goods and their distribution. The combined costs of performing these two functions may be segregated into the two classes, production and distribution costs. This segregation requires an allocation of all costs jointly incurred for the two functions, such as general and administrative costs. Such allocation, it must be admitted, is sometimes difficult and the result approximate."

Do you agree with that statement, Mr. Warmack?

A. Yes, sir.

Q. I call your attention to page 32 of the same book, and ask you if you agree with the following statement:

"Perhaps the reason that only a limited number of concerns have endeavored to determine selling sales promotion and other distribution costs through special analyses, and only a very few have established continuous distribution cost accounting systems, lies in the difficulty of finding a practical approach to the problem. This particularly 6527 applies to the determination of selling and sales-promotion costs applicable to commodities and customer classes, because the activities giving rise to such costs are of a less routine character than are the other distribution activities and are subject to less direct control. The relationship between the various functions involved in selling and sales-promotion and any quantitative units of measurement thereof is often very elusive. Because of the intangible association of selling and sales-promotion activities and the results accomplished, there is greater need for control of costs, but for the same reason the problem is very complicated."

Do you agree with that statement, Mr. Warmack?

A. I would like to read that statemtnt, Judge, as it is from the book.

(Mr. Hanley hands the document to the witness.)

Q. There it is marked.

A. I agree with the statement as shown, but I think the statement is very misleading if taken all by itself, and not incorporated in this record by reference the fact that the statement taken on page 31—

Q. (Interposing): Well, suppose this—

A. —and the further paragraph after the portion you quoted.

6528 Q. Well, supposing this, you take the statement as read, itself, and just make any comment that you choose to make.

A. I should think that this statement without reading in this, incorporating in the section—that is known as Section 1, "methods of allocating selling and sales-promotion costs" Section 1, introduction, and we are just hitting a few high lights, speaking principally from the basis of a broad view of the situation—

Q. (Interposing): Mr. Warmack, do you mind just taking the question that I asked you, whether or not you agree with that statement, then if you care to make any comment in amendment of your answer, all right; but please don't refer further to the book, just make any comments that you have.

Trial Examiner Ballinger: First.

The Witness: I cannot answer any of his statements picked out like you are picking something out of the Bible, without reading all the book.

Trial Examiner Ballinger: Can you not answer the statement as to whether or not you agree with that statement or disagree with it, and if you agree or disagree you may state your reasons.

The Witness: I agree with the statement if it is read as a continuing part of Section 1 marked "Introduction" on Chapter 2.

By Mr. Hanley:

6529 Q. Mr. Warmack, won't you make any statement that you want to make?

A. I agree with the section—

Q. Do you or do you not agree to that statement?

A. Well, taken in whole, I agree with it, but I do not agree with any paragraph taken alone and separate and apart as being all-inclusive and all-exclusive of the whole story.

Q. I now call your attention to page 38 of the same book and ask you whether or not you agree with the following statement:

"When time studies are conducted through the use of sales representatives' reports or observers to ascertain the time applicable to each commodity-customer cost objective for each salesman who sells a variety of commodities and calls on various classes of customers, it is frequently necessary to make certain more or less rough calculations. In complex situations of that kind, there are often no alternatives except to obtain part of the needed data on an estimated basis."

The question was whether you agreed with that statement?

The Witness: Let me see the book.

Mr. Hanley: There is just the—

Trial Examiner Ballinger: (Interposing): Mr. Warmack, this is a simple question. Cannot you answer?

6530 The Witness: I agree to that, your Honor, if taken with all of the rest of the text in Section 3, beginning with page 35 of this document.

Trial Examiner Ballinger: Mr. Warmack, can you not state what there is in the rest of this chapter that would either detract from or add to, or alter the portion that has been read to you?

The Witness: Judge, I can take this and read it every bit through.

I have not seen these cost studies made by the Commission for a year or two, and when we are taking out little short paragraphs, in the first place—for what was this particular statement made? If you take one single part by itself it is misleading, it is not conclusive of anything that can be accepted or not accepted in itself alone. It has to be taken into account as a whole.

Trial Examiner Ballinger: Mr. Warmack, will you read the portion Judge Hanley handed to you, and see if you can not answer that question.

Mr. Austin: If you do not know whether you agree with the statement without reading all of the text, you may say so.

The Witness: I do not know and I can not know what is in this document without reading the entire section that he is taking these little short sentences out of.

6531 Trial Examiner Ballinger: Let the Examiner see the document, please.

The Witness: It is at page 38.

Trial Examiner Ballinger: Very well.

The Witness: Are we off the record, Judge?

Mr. Hanley: No, we are on the record, Mr. Warmack.

The Witness: This document was not prepared, Judge, for the purpose of showing anybody how to develop costs for the purposes of proving a cost justification. Not at all. It deals with the broad aspects of the problem of cost—of distribution cost accounting. I see nothing in this to tell me where the Commission says to make a separation one way or to make a separation another way for the purpose of proving a cost differential.

Trial Examiner Ballinger: Mr. Warmack, will you read the first sentence in the portion read to you by Judge Hanley which reads as follows:

"When time studies are conducted through the use of sales representatives' reports or observers to ascertain the time applicable to each commodity-customer cost objective for each salesman who sells a variety of commodities and calls on various classes of customers, it is frequently necessary to make certain more or less rough calculations."

Now, do you know that to be a fact or do you not?

6532 The Witness: It may be necessary; in some instances it may not be necessary to, the rough calculations may be quite sufficient in some instances. It all depends, Judge.

Trial Examiner Ballinger: Would it be humanly possible to ascertain with any degree of accuracy a time study—

Mr. Austin: I object to that question.

Trial Examiner Ballinger: The objection is overruled.

Mr. Austin: I believe I have the right to state the grounds for my objection.

Trial Examiner Ballinger: You may.

Mr. Austin: The question is too broad to be intelligible, in my opinion, and is not susceptible to a definite answer because it cannot be answered unless applied to an approximate, at least, set of facts and circumstances.

The Witness: That can be my only answer, as set forth in the objection raised by the Commission's counsel.

Trial Examiner Ballinger: One moment. You are called upon here to state reasons not urged by Commission's counsel, but you are here to state your own reasons, and in your own language.

The Witness: You would have to be more specific, Judge, or I could not answer your question. "Each"—each case must stand by itself, and alone.

6533 By Mr. Hanley:

Q. Mr. Warmack, I do not care to press the question if you do not care to state whether you agree or disagree with the language quoted in my question from page 38.

I will now ask you this, whether or not you agree with the following quoted language, also from page 38, same volume:

"It is obviously very difficult, and frequently impossible, even for observers to ascertain the actual time engaged in each of these direct selling activities applicable to each commodity when the salesman handles numerous items. Perhaps the only basis of ascertaining the estimated time applicable to each commodity would be for the observers or the salesmen to report the approximate segregation of the interview time applicable to each commodity. The balance of the salesmen's time, exclusive of the interview time, would then have to be prorated to commodities on some reasonable basis according to the circumstances, such as the ratio to direct time."

Do you or do you not agree with that statement?

A. Yes, sir; I agree to th t statement, as qualified by the remaining portion of that paragraph of this chapter. That is a statement that is taken out in the middle of a paragraph.

6534 Q. Mr. Warmack, do you agree to the statement as read?

A. Not without qualifying it, Judge.

Q. All right, you make the qualification.

A. The qualification is written here.

Q. No, I am not willing to accept that answer, you can qualify it if there are any. You make the qualifications.

A. I agree to the statement, your Honor, as stated, as set forth completely.

Trial Examiner Ballinger: Now, Mr. Warmack, that answer is not satisfactory.

The Witness: I am sorry, Judge.

Trial Examiner Ballinger: If you do not agree with the portion that has been read by counsel, then please state what there is in that report that would cause you to disagree or to modify it. If you desire time in which to examine it, you may have it.

Mr. Hanley: The Respondent is perfectly willing that the witness may have whatever time he desires in that respect.

The Witness: Judge, in order for me to do that for all of these questions, I would have to read at least a portion of the sections of which these short excerpts are being taken. I cannot just read one little paragraph and come to any opinion that I would care to express upon it.

Trial Examiner Ballinger: Mr. Warmack, you are fairly familiar with that report?

6535 The Witness: I have not seen it for two years.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes to afford the witness an opportunity to examine the section.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Read the pending question.

(The question referred to was read by the reporter.)

Mr. Hanley: Judge, may I start over, please, and restate the question, and present the whole thing over?

Trial Examiner Ballinger: The previous question is withdrawn.

By Mr. Hanley:

Q. I refer you, Mr. Warmack, to the quoted portion of the question, namely, that portion of the book quoted from page 38 as follows:

"It is obviously very difficult, and frequently impossible, even for observers to ascertain the actual time engaged in each of these direct selling activities applicable to each commodity when the salesman handles numerous items. Perhaps the only basis of ascertaining the estimated time applicable to each commodity would be for the observers or the salesmen to report the approximate segregation of the interview time applicable to each commodity. The balance of the salesmen's time, exclusive of the inter- 6536 view time, would then have to be prorated to commodities on some reasonable basis according to the circumstances such as the ratio to direct time."

I now ask you whether or not you agree or disagree with that statement as I have reread it. If there be any disagreement or modification you are, of course, entitled to state whatever it is that you have by way of modification of your opinion, but I am asking you definitely whether or not you agree or disagree with that statement?

A. Yes, sir; I agree with it, or I agree, rather, with the whole context beginning at least at the middle of page 38, beginning, "When time studies are conducted," and reading through to "available for sound judgment" at the top of page 39.

Mr. Hanley: If your Honor please, may I have an answer from the witness as to whether or not he agrees or disagrees with this particular statement without reference to the book?

I have given him every opportunity to state any modifications that he may have in connection with his agreement or disagreement of his. We cannot put in the book this way.

Mr. Austin: I think the witness has answered the question. He has stated that he agreed with it qualifying 6537 it only when read in connection with certain specified portions of the text which portions he has definitely referred to.

Trial Examiner Ballinger: The Examiner suggests that the book be marked for identification, and admitted in evidence, so that the portions referred to by the witness may be considered in connection with his answer, if there is anything in the additional matter referred to by the witness that modifies or explains the statements read by counsel that is proper for consideration.

Mr. Hanley: Well, I am sure that I do not know that I care to make any objection to that if counsel desires to offer the book, your Honor, but I do believe I am entitled to an answer from this witness as to what he thinks. He is the expert offered by the Commission.

I just think I am entitled to an answer to that question. Now, whether he gets it out of the book, or out of his head, or out of the air, I do not think it makes much difference to me, but I think I am entitled to an answer.

Mr. Austin: We have no objection to the witness reading the portions that he referred to that he said should be read in connection with the statement, but it seems to me that he gave a very definite answer.

Trial Examiner Ballinger: Off the record.

6538 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I will just ask you this, Mr. Warmack, and see what you have to say to this statement in regard to cost distribution accounting.

A. Will you speak louder, Judge, so I can hear you?

Q. I say, I would like to see if you can answer this, and I would like to see what your answer would be to this statement of cost accounting—cost distribution accounting:

"It is obviously very difficult, and frequently impossible, even for observers to ascertain the actual time engaged in each of these direct selling activities applicable to each commodity when the salesman handles numerous items. Perhaps the only basis of ascertaining the estimated time applicable to each commodity would be for the observers or the salesmen to report the approximate segregation of the interview time applicable to each commodity. The balance of the salesmen's time, exclusive of the interview time, would then have to be prorated to commodities on some reasonable basis according to the circumstances, such as the ratio to direct time."

What have you to say to that statement of cost distribution accounting?

6539 A. With reference to your statement, "It is obviously very difficult, and frequently impossible, even for observers to ascertain the actual time engaged in each of these direct selling activities applicable to each commodity when the salesman handles numerous items," now, you speak of "each"; "each" of what? Each of what activities?

Q. Now, I am asking the question.

A. You will have to tell me what you mean by "each."

Trial Examiner Ballinger: Supposing those conditions.

The Witness: He has to tell me what "each" means that he has referred to.

By Mr. Hanley:

Q. Mr. Warmack, I am not telling you anything. I am asking you a question.

A. Well, Judge, I asked counsel for the Respondent what he means when he was asking me that question by "each."

Q. Well, after all, Mr. Warmack, I did not write this book, you did. I do not know what you mean.

A. It is obviously very apparent that it is an impossibility on my part to make an answer to anything now in connection with this matter of direct selling activities until I know what you mean by "each."

Q. I do not know anything except the question, it is only that I am asking you, Mr. Warmack.

6540 A. Well, I have to know what "each" means, so I cannot answer it otherwise, there are too many possibilities.

Q. Well, do you just decline to answer the question?

A. If you tell me what you mean by "each" in your question, perhaps I could give you an answer to it.

Q. No, no, just tell me, do you decline to answer the question?

A. I cannot answer it unless you tell me what "each" means. Do you want to tell me what "each" means?

Q. Do not ask me questions, please, Mr. Warmack.

Tell me whether or not you care to answer the question.

A. I cannot answer it because it is incomplete.

Q. Or whether you decline to answer.

A. I cannot answer unless you amplify it.

Trial Examiner Ballinger: Mr. Warmack, cannot you find the full and complete explanation of the word "each" in a chapter of the book?

The Witness: Judge, that is just exactly what I have been telling you.

Trial Examiner Ballinger: Will you please turn to it and tell us what the word "each" in the phrase "each of these activities" refers to?

The Witness: Your Honor, I will be happy to do so, but Judge Hanley asked me what each meant and I assumed that he knew what it meant or he would not have
6541 asked me.

Trial Examiner Ballinger: You state you could not answer the question until he told you what the word "each" refers to. Now, will you please examine the book and see what the word "each" refers to, and answer the question.

Mr. Austin: This question was asked apart from the book, as I understand it.

Trial Examiner Ballinger: It was asked irrespective of the book, but he can answer it by reference to the book.

Mr. Austin: I do not think he can answer that way at all. He is asked the question now with no reference to the book.

Trial Examiner Ballinger: The previous answer he made referred to the book.

The Witness: Counsel for the Respondent asked me with reference to the question "each of these selling activities," I am trying to find out by reading this what the counsel for Respondent meant when he used the words "each of these selling activities" if he has an answer to it.

Mr. Hanley: If your Honor please, my question is as it is. I have asked it. I hope for an answer. If the witness does not care to answer it, or declines to do so, that will be entirely satisfactory to counsel for the Respondent.

Trial Examiner Ballinger: Let us wait and let him
6542 have an opportunity to examine the document—have an examination made of the document by the witness so that he may determine what the word "each" refers to as embraced in the question propounded to him.

The Witness: I am trying to do that by reading from this document.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Mr. Warmack, I asked you a question as to whether or not you agreed with a certain quotation which I made from the bottom of page 38 of the document which we have been discussing, namely, House Document No. 287 of the 77th Congress, First Session.

I now understand that you are in agreement with the statement which I quoted to you if it be read along with that portion of the document beginning on the middle of page 38, with the quotation: "when time studies are conducted," and ending on page 39 with the phrase "available for sound judgment."

Am I right?

A. You are correct, Judge Hanley. I think that should be taken in the light of the statement at the bottom of page 17 of the document you have referred to.

6543 Q. Page 17?

A. Yes, sir. Which is a note at the bottom of the page, and reads as follows:

"As for the accounting processes in the Commission's so-called Robinson-Patman cases, only as a given case with all the detail of conditions and circumstances in which it is set comes before the Commission for study can it render its opinion as to the soundness of the accounting practices and results which may in that case be in question. While it is desired that the results of the inquiry shall be helpful in such cases, it is not intended that any conclusions reached here should forestall fresh examination and consideration of all accounting-analyses involved in any later legal proceeding before the Commission and independent decision in regard thereto."

Mr. Hanley: If your Honor please, in respect of the remarks of the witness in connection with the notation on the foot of page 17 of the document in question, it is moved to strike all of such remarks for the reason that they are a legal conclusion and this witness is being interrogated as an expert accounting witness.

He was asked a question as to his opinion only as an

~~expert accounting witness, relative to an expert accounting~~ matter.

6544 He answered such a question with the aid and advice of adverse counsel as he has just answered it.

I think, if your Honor please, that the Respondent is entitled to have that answer stand as an answer of an expert accounting witness without any complication by way of legal conclusion as to what the effect is in respect of the Robinson-Patman Act, as is the effect of the notation in this footnote.

Mr. Austin: I understand the witness' statement to be that he considers that that note at the bottom of page 17 qualifies general statements in the book as applying to specific cases.

There is no relevancy in any of this examination unless it applies to this specific case, and consequently, when he is asked about statements in the book that have that note obviously qualifying all statements in the book as they are read in relation to specific cases, if it is not read in connection with this specific case it has no relevancy, if it is, then I think this note becomes relevant.

Trial Examiner Ballinger: The Examiner strikes—first, the Examiner will direct the attention of counsel for the Commission to the statement appearing on page 17 in which the note is referred to.

Mr. Austin: Let me see if I can find it.

Trial Examiner Ballinger: Right at the top of the

6545 page.

Mr. Austin: I think, yes, I think that is further explanatory of the purposes of the whole volume, and perhaps the paragraph referred to by the Commissioner should be read in connection with the note.

Trial Examiner Ballinger: Motion to strike is granted. And that reference to the footnote on page 17 is stricken, not physically.

Now, the Examiner understands that the answer to the question propounded by counsel for the Commission is contained in that portion of the document commencing on page 38 with the phrase "When time studies are conducted" and ending with the first paragraph ending on page 39, the last words being "in the light of the statistical data available for sound judgment."

The Examiner directs the reporter to incorporate the matter which the witness adopts as his answer, in the record at this point.

The matter referred to is as follows:

"When time studies are conducted through the use of sales representatives' reports or observers to ascertain the time applicable to each commodity-customer cost objective for each salesman who sells a variety of commodities and calls on various classes of customers, it is
6546 frequently necessary to make certain more or less
rough calculations. In complex situations of that kind, there are often no alternatives except to obtain part of the needed data on an estimated basis. It is conceivable, for instance, that little difficulty would be encountered in obtaining the time consumed in each interview or contact with each customer. The time of these contacts could be accumulated by customer classes and, of course, the balance of the salesmen's time not consumed in actual contacts could be prorated directly, or as an overhead item, to customer classes. This is a fairly simple process.

"It does not, however, provide any data for use in making allocations to the respective commodities. Each commodity sold may, in some cases, be rather directly responsible for a portion of the interview time, and less directly responsible for a portion of the balance of the salesmen's time outside the interview. In other words, during the interview, each commodity may be responsible for a portion of the time spent in writing orders from the 'want book,' the time consumed in selling from samples, the time consumed in selling from printed advertising matter, the time required in checking the customer's stock, the time consumed in demonstrations, the time needed to install
displays, and similar other activities performed to
6547 sell each specific commodity. It is obviously very diffi-
cult, and frequently impossible, even for observers to ascertain the actual time engaged in each of these direct selling activities applicable to each commodity when the salesman handles numerous items. Perhaps the only basis of ascertaining the estimated time applicable to each commodity would be for the observers or the salesmen to report the approximate segregations of the interview time applicable to each commodity. The balance of the salesmen's time exclusive of the interview time, would then have to be prorated to commodities on some reasonable basis ac-

cording to the circumstances, such as the ratio to direct time. This portion of salesmen's time represents time in their own office, in traveling, and in waiting for customers, and other working time not actually consumed in the direct selling activities. The bases for such prorations naturally must be established in accordance with the circumstances of each particular costing problem in the light of the statistical data available for sound judgment."

Mr. Austin: I would like to request at this time that
the document which we have been referring to, and which
is entitled "Case Studies in Distribution Cost Accounting
for Manufacturing and Wholesaling—letter from the
6548 Acting Chairman, Federal Trade Commission trans-
mitting Report of the Commission on Case Studies in
Distribution Cost Accounting for Manufacturing and
Wholesaling, June 23, 1941.—Referred to the Committee on
Interstate and Foreign Commerce;" 77th Congress, 1st
Section, House Document No. 287, be marked for iden-
tification.

Trial Examiner Ballinger: Request granted, and the document referred to will be marked as Commission's Exhibit 134 for identification.

(The document referred to was marked Commission's Exhibit 134 for identification.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Mr. Warmack, I call your attention to page 50 of the same document which has now been marked Commission's Exhibit No. 134 for identification, and ask you if you agree with the following quoted language:

"When advertising is devoted to more than one com-
modity, its costs may be allocated in proportion to the
amount of space allocated to each. When there is no specific
allotment of space, any basis of allocation may be in some
degree arbitrary and have little relation to the costs, as,
for example, the dollar-sales basis. A more satisfactory
basis might be the number of units of commodity sold, or
the equal distribution of the costs among all of the
6549 commodities handled; or such other bases may be
used as are considered more equitable in the judg-
ment of those most familiar with the advertising program."

A. Yes, sir. I certainly agree with that quotation but I must again say, Judge, that means that I agree with the context of this document beginning at the bottom of page 48, with the words, "Bases of allocation," and ends with the words at the end of the first paragraph on page 51 entitled, "promote the sales of each commodity to each customer class."

Mr. Hanley: The respondent moves to strike the answer of the witness beginning "I must again say, Judge," to the end, as a voluntary statement and not responsive to the question.

The question having been fully answered by the witness in his previous statement—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: The question is withdrawn.

Trial Examiner Ballinger: The question is withdrawn?

Mr. Austin: And the question is out?

Mr. Hanley: Yes.

By Mr. Hanley:

6550 Q. I will ask you, Mr. Warmack, as to your opinion as an expert accountant in connection with the following statement:

"When advertising is devoted to more than one commodity, its costs may be allocated in proportion to the amount of space allocated to each. When there is no specific allotment of space, any basis of allocation may be in some degree arbitrary and have little relation to the costs, as, for example, the dollar-sales basis. A more satisfactory basis might be the number of units of commodity sold, or the equal distribution of the costs among all of the commodities handled; or such other bases may be used as are considered most equitable in the judgment of those most familiar with the advertising program."

Your attention is directed, Mr. Warmack, to the fact that there is no reference to any book or document in that question. I am asking you that as an expert accounting witness.

The Witness: Your Honor, that question simply could not be answered taken by itself. Now, dropping over to page 40—

Trial Examiner Ballinger: (Interposing): Now, one moment, that question is not based upon anything contained in any book. It was being—

The Witness: (Interposing): I cannot answer it
6551 the way it is framed; that is all.

Trial Examiner Ballinger: Your answer is?

The Witness: To answer the question—the answer to the question is, and properly, that I cannot answer the question unless I am allowed to interpolate.

Trial Examiner Ballinger: You may answer the question and make any explanation you desire, but now in doing so, I am going to ask you not to refer to any book.

The Witness: Well, he read the question, reading out of this book at page 50—which is Commissions' Exhibit 134 for identification.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Will you tell me just what kind of advertising he is referring to?

Trial Examiner Ballinger: No.

The Witness: Then I agree to that especially in view of the fact that your question states after giving a number of measuring factors which would be used, "or such other bases may be used as are considered most equitable."

In other words, you can use those or any of the rest that you want to—I agree to that, that you say are equitable, sound and proper.

By Mr. Hanley:

6552 Q. Is that the answer, Mr. Warmack?

A. That is my answer, to be definite and specific you will have to come down to what kind of advertising you are talking about.

Q. I will ask you now, as an accountant, Mr. Warmack, whether you agree with the following statement:

"Generally, a time basis of allocation is impracticable because of the difficulties involved in ascertaining the time. The number of orders received or handled appears to provide a practicable and satisfactory basis for allocating certain credit and collection costs, and products and groups of products such as the routine costs of approving orders for credit before they are filled; while number of customers or accounts offers a more satisfactory basis for allocating the costs in connection with assembling credit data concerning customers and in collecting accounts."

A. With reference to that point, Judge, what are you talking about, time basis of what?

Q. I do not know.

A. How should I know?

Q. I am asking you as an expert.

A. You are taking this out of a book, you will have to tell me what you mean.

Q. Do you understand the question?

6553 A. The first sentence is predicated upon something that comes ahead in the book from which you are reading.

Trial Examiner Ballinger: Mr. Warmack, disregard the book.

The Witness: That is what I am doing.

Trial Examiner Ballinger: And the question is asked you. Can you answer it or not?

The Witness: Not in the way it is framed, your Honor. I should like for the reporter to read the first sentence, he stated quite a long question.

Mr. Hanley: In other words, you cannot answer the question?

Trial Examiner Ballinger: The question is very clear to the Examiner.

The Witness: O. K. May I inquire then with respect to the sections of the question?

Trial Examiner Ballinger: You may.

Read the first sentence of the question.

(The reporter read as follows:

"Generally, a time basis of allocation is impracticable because of the difficulties involved in ascertaining the time.")

The Witness: There, Judge, I want to know impracticable for what? Time of who? Are we talking about warehouse superintendents, or talking about salesmen, 6554 or is he talking about some other class of employees? I do not know what he is talking about.

Trial Examiner Ballinger: You are dealing with a situation in which generally that condition prevails.

The Witness: For everybody?

Trial Examiner Ballinger: That is his statement.

The Witness: He said "generally."

Mr. Austin: Your Honor, what is the purpose of this line of questioning? Is it to test the knowledge of the witness as an accountant? Is it on his qualifications?

I have rather assumed heretofore that that was what it is.

Mr. Hanley: In part, you are right, Mr. Austin; in part, you are wrong.

I do not seriously question the general qualifications of Mr. Warmack as an accountant. I think I have made that clear on this record.

I do seriously question any offer to regiment cost accountants under the Robinson-Patman Act to a point where you can go beyond reasonably calculable cost differentials, and thus provide a foundation for the issuance of any kind of an order from the Federal Trade Commission other than an order of dismissal.

And I am very, very serious about that.

Mr. Austin: Well, I think there is some question

6555 as to the relevancy and materiality of this line of questioning, although I have not previously objected on that ground.

I do not think there is any materiality or relevancy to the direct testimony in asking the witness whether he agrees with accounting statements made by John Smith or somebody else. If the book is brought in here, or the statement is made by another accountant, and Mr. Warmack is asked whether he agrees with that statement, I see nothing to be gained by answers to such qustions.

Mr. Hanley: I would say—

Trial Examiner Ballinger: (Interposing): There is no necessity for protracting the discussion. The question has been propounded. It is very clear to the Examiner.

If it is not clear to this witness and he is unable to answer it, he may so state and this record will portray the situation.

The Witness: Very well, your Honor, if this may be read.

Mr. Austin: I ask to have a ruling to my objection upon the ground of relevancy and materiality.

Trial Examiner Ballinger: Your objection is overruled.

The Witness: Your Honor, if I may have the question read.

Mr. Austin: May I have a continuing objection to

6556 further questions of this type on the ground of relevancy and materiality?

Trial Examiner Ballinger: You may have a continuing objection.

Read the entire question to the witness.

(The reporter read the question.)

The Witness: Your Honor, I do agree with the statement; I would agree with it naturally if it were made to cover the situation covered in the Federal Trade Commission cost study of some couple of years ago. I am agreeing with the statement to this extent that any given situation may require consideration, studies, analyses for the purpose of getting a greater refinement in the separation of this class of costs in a given situation if such cost is to be used in establishing cost differentials.

Mr. Hanley: I think I will withdraw any motion at this time, or refrain from making any.

Trial Examiner Ballinger: Very well.

By Mr. Hanley:

Q. Mr. Warmack, as a cost accountant, tell me, please, if you will agree with the following statement:

"The term 'cost' is not self-explanatory. Cost accountants themselves differ widely in their conceptions of cost and it is hardly to be expected that lawyers and judges without accounting training will agree any more fully, unless definitions and rules for the ascertainment of cost have been set up in advance and unless these definitions and rules are sufficiently precise to be capable of being followed, and sufficiently reasonable so that neither seller nor buyer is injured by being forced to abide by them." 6557

A. It is a fact, Judge, that cost accountants do differ in many questions of cost accounting.

Q. Well, the question is to you, whether or not you agree with that statement.

A. I think the statement is a little broad and I would say that I would agree with the statement merely in principle, but the statement that "it is hardly to be expected that lawyers and judges without accounting training will agree any more fully, unless definitions and rules—"

Mr. Hanley: (Interposing): Well, I think you are quite right, Mr. Warmack, in taking exception to that part of the question.

I do not expect you to know what lawyers and judges will do, so I will really ask you simply: Do you agree with the statement as to the uncertainty of the cost accounting principles?

The Witness: I agree to this part, Judge, if I may state it—"the term 'cost' is not self-explanatory." That is correct.

6558 "Cost accountants themselves differ widely in their conceptions of cost and—" I agree to that.

Q. Do you agree with that?

A. I would say no, I think they differ, but just how much they differ, I do not believe that I am in a position to say.

Q. Well, based on your best judgment.

A. I do not believe I am in a position to state on that point.

Q. Do you think they differ widely?

A. Well,—

Mr. Austin: I object to that question, I think the question as to whether or not cost accountants differ widely is too indefinite because "widely" is subject to such great differences of opinion.

Trial Examiner Ballinger: The witness has stated that he is not in a position to know and if he is not, he cannot answer the question.

The Witness: I do not know just how widely they differ on those things. You may be able to get some study on that point made, or maybe possibly by the American Institute of Accountants or maybe some things like that possibly have been gone into by this Commission at some time, but just what points they differ on, and how widely they differ, is, I rather think, a matter of conjecture.

6559 By Mr. Hanley:

Q. Mr. Warmack, I am just about to ask the Court to recess, and just before I do, I wonder if you could tell me whether this document which I think Mr. Austin has now had marked Commission's Exhibit 134 for identification, was that prepared by the Commission or the accountants for the Commission primarily in connection with the Robinson-Patman Act?

A. I would prefer to take the statement of the Commission in that regard.

Q. Would you like to have time to look into that?

A. Yes.

Trial Examiner Ballinger: We will take a five minute recess in order to give the witness an opportunity to look into the situation referred to.

(A short recess was taken.)

Trial Examiner Ballinger: On the record. Proceed.

Mr. Hanley: I will ask that the question be read to th witness.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Not particularly the Robinson-Patma Act. Of course, the question may be answered properly b the document itself in the first paragraph on page 1 of th document.

May I read it?

By Mr. Hanley:

6560 Q. Please, just please give us your own reaction t it, Mr. Warmack. If it helps you to read from any pa of the book to refresh your recollection, but I would jus like your own testimony about it.

Trial Examiner Ballinger: Aside from the statemen appearing in the book, have you any independent knowledge?

The Witness: Well, Judge, only what is in the book I know that the Commission made a study, and th Commission states in the book why it made the study, an I think that that has been and is a better stated opinion b them than I could offer as stating the reason for makin this study. I would prefer to take the Commission's reaso for making the study rather than my own.

Trial Examiner Ballinger: Have you any independen knowledge of the reason the Commission made this study

The Witness: No more than what I have read in th book itself.

Mr. Hanley: Well, I think that answers the questio Judge.

The Witness: I think that I should state that the answe to the question is in paragraph 1 on page 1 of Commission's Exhibit No. 134 for identification, and on page 1 it goes further and states the origin, the scope, and th method of the inquiry.

6561 By Mr. Hanley:

Q. Mr. Warmack, I do not want to go into it unless it is essential to do so. Now, will you please give m your own independent knowledge?

Mr. Austin: He stated he had none.

Mr. Hanley: Well, perhaps he has not, but if he ha not, I wish he would say so definitely.

By Mr. Hanley:

Q. Did not the Robinson-Patman Act inspire the attack or the approach to the cost distribution accounting on the part of the Federal Trade Commission's accountants, and is not that reflected in what has now been marked Commission's Exhibit 134 for identification?

A. I would not think that that exactly is the reason that caused the Commission to make this study. This Commission has long been very interested in the subject of the inquiry, namely, distribution cost accounting. It states exactly in the document why the study was made, and that is the Commission's statement and I will stand on that statement, Judge.

Q. Mr. Warmack, I do not care about that, if you will tell me what you know about this thing, that is all I am asking.

Trial Examiner Ballinger: Have you any independent knowledge?

The Witness: No, sir. I do not know anything
6562 about it, all I know is what the Commission has said, as it is set forth in the book.

By Mr. Hanley:

Q. That is sufficient. That is all you know?

A. Yes, sir. The Commission was interested, Judge,—

Q. (Interposing): Mr. Warmack, I ask you this question as an expert accounting witness, and ask if you agree to the following statement:

"Once the question as to cost elements have all been answered, however, the cost formulae are only begun. The problem of the application of these elements to particular products and transactions are far more numerous and difficult of solution. At this time we are in the position of a cook who knows only that a cake is composed of flour, eggs, shortening, sugar, salt, leavening agent, milk, and flavoring without having the least idea how much of each ingredient to use or how to commingle or bake them."

Do you agree with that statement?

A. I do not understand it, Judge Hanley. May I read it?

Trial Examiner Ballinger: The witness says he does not understand the question. Read it.

(The reporter read the question.)

The Witness: Do you mean, Judge Hanley, by that statement that we have a very intricate problem of accounting and we are setting that up by analogy with a person trying to bake a cake? 6563

By Mr. Hanley:

Q. Mr. Warmack, I do not mean anything by my statement. I have just asked you a question. For your information, however, if it will be of any aid to you, I have quoted that statement from page 221 of a book entitled "The Cost Principle in Minimum Price Regulation" by Herbert F. Taggart, which is Commission's Exhibit 77 in this case, and I am just asking you whether or not you agree with that statement.

Mr. Austin: That is Commission's Exhibit 77?

Mr. Hanley: It is.

By Mr. Hanley:

Q. You will understand, Mr. Warmack, that I am referring you to the book. I am asking you the question as an expert accounting witness, and I suggest the book as an aid to you, if it be of any aid, but I am asking the question of you as an expert accounting witness.

Trial Examiner Ballinger: Can you answer the question?

The Witness: I will have to state my understanding of what it states, Judge; that is the only way I can answer it, sir.

Trial Examiner Ballinger: Do you mean that you do not understand the question or that you want to state your understanding of the question? 6564

The Witness: My understanding of the question, yes, sir.

Trial Examiner Ballinger: You may do so, and then answer it.

The Witness: The question asked me:

"Once the question as to cost elements have all been answered, however, the cost formulae are only begun. The problem of the application of these elements to particular products and transactions are far more numerous and difficult of solution."

I take that second sentence to mean that the problem of the application of the elements to particular products and transaction are far more numerous than the cost elements involved.

I agree with that statement.

By Mr. Hanley:

Q. Do you agree with it in principle, Mr. Warmack?

A. Yes, sir. It is a difficult problem to make a cost study, an analysis, especially with many classes of customers being served, or many kinds of products being involved, but that is what I understand the question to mean?

Q. Very well. Thank you.

Mr. Warmack, as an accounting expert, do you agree with the following statement:

6565 "Simply put, the fact is that cost accounting does not consist of a set of fixed rules universally recognized and universally applicable. For one thing cost accounting is too new to science—it is a long way from the degree of maturity which partially characterizes certain other branches of accounting. For another and perhaps more important thing, trade and industry are far too complex to be neatly classified for the application of uniform costing rules, even if these could be developed.

"Complexity of industry is the despair of trade association organizers, but it is the life of competition."

The Witness: I would like to answer this in part, if I could.

Trial Examiner Ballinger: The question is a rather long question and if the witness desires he may answer it in fragments.

Mr. Hanley: Surely.

The Witness: I will endeavor to answer that in parts, Judge Hanley.

Mr. Hanley: All right.

The Witness: That portion of your question which read:

6566 "Simply put, the fact is that cost accounting does not consist of a set of fixed rules universally recognized and universally applicable—or applied."

In my opinion, that is a very broad statement. I subscribe to it in principle. As a matter of fact, we might call attention to that in answer to that, an example which I think is very much in point.

We have the depreciation of machines in manufacturing cost, and there are many ways of depreciating those machines.

We have in manufacturing costs certain manufacturing overhead cost which must be allocated in some manner. Are we going to use machine hours, man hours, or various other methods adopted and used by various manufacturers.

The next part of the question which reads:

"For one thing cost accounting is too new to science—it is a long way from the degree of maturity which partially characterizes certain other branches of accounting."

Trial Examiner Ballinger: Do you agree with that statement?

The Witness: Yes, sir, I agree with that statement, especially with respect to distribution cost accounting, Judge. I think that accounting for manufacturing costs has been developed farther than accounting for distribution.

By Mr. Hanley:

6567. Q. Well, confining your answer primarily to distribution cost accounting and to distribution costs which are concerning us in this litigation, Mr. Warmack, what is your opinion?

A. With respect to that particular part of the question?

Q. Yes, sir. Distribution cost—marketing costs.

A. The statement that it is a lang way from the degree of maturity which partially characterizes certain other branches of accounting, I subscribe to that.

Trial Examiner Ballinger: One hundred per cent?

The Witness: Yes, sir.

The further part of the question reading:

"For another and perhaps more important thing, trade and industry are far too complex to be neatly classified for the application of uniform costing rules, even if these could be developed."

There is no doubt that that question should properly be addressed to the subject of manufacturing costing, but as applied to distribution cost, I certainly agree with it.

By Mr. Hanley:

Q. Well, now, just to make it specific, Mr. Warmack, and bringing to your attention the Respondent's form 189, and putting it into the statement which you have just read, what is your opinion?

A. It is my opinion that that statement just quoted would be proper in comparing your form 189 with, we will say, some other industry's statement.

6568 I rather think that it would be a very, very difficult thing for some company engaged in some other line of business to set up a statement that could be comparable in any way, or any reasonable way at least with Respondent's Exhibit, Form 189—I don't remember the exhibit number at the moment.

Q. Did you ever see anything like it before, Mr. Warmack, in any of your experience as an accountant?

A. Not exactly like it, no, Judge Hanley. I don't think I read all of that quotation when I was answering that question, Judge. I think that the portion that I was answering should have been, "even if these could be developed."

Trial Examiner Ballinger: You read that.

The Witness: Very well.

The next part of the question reads:

"Complexity of industry is the despair of trade association organizers, but it is the life of competition."

I do not believe I am qualified to answer that.

By Mr. Hanley:

Q. If you do not care to do so, Mr. Warmack, I am perfectly willing to withdraw that part of the question.

A. Thank you.

Mr. Hanley: Withdrawn.

6569 Trial Examiner Ballinger: The witness disposed of it by saying that he is not qualified to answer it.

Mr. Hanley: I am just withdrawing that part of the question. I do not think that has anything to do with the particular part of the inquiry anyhow.

By M. Hanley:

Q. Mr. Warmack, I have asked you on the voir dire examination whether you had ever had occasion to make any study of any petroleum company prior to this study, and as I recall your answer you said that you thought in a general survey that some petroleum companies were involved, but that you had not made any individual study of any particular petroleum industry heretofore; is that true?

A. Yes, sir. That is correct. Some may have been covered in this distribution cost study. I do not remember exactly, and if they were I may have had something to do with looking over some of the information gathered.

With respect to the petroleum industry, I have not made any studies. I have reviewed what is in the Commission's files.

Q. Now, I am sure you are familiar with the Robinson-Patman Act, Mr. Warmack?

A. Yes.

Q. Purely from an accounting standpoint, and as an expert accountant, have you ever interpreted the term "cost" as it is used in the Robinson-Patman Act?

6570 The Witness: Will you read that, please?

Trial Examiner Ballinger: Read the question.

(The question was read by the reporter.)

The Witness: No, not as such, no.

By Mr. Hanley:

Q. In your judgment as an expert accountant, does the term "market cost" or the term "average costs by classes of customers" rather, mean "cost"?

A. I am sorry, I do not get your question.

Mr. Austin: I think it is very involved.

Trial Examiner Ballinger: Suppose you restate it.

Mr. Hanley: Very well.

By Mr. Hanley:

Q. In your judgment as an expert accountant, does that term mean "average costs by classes of customers"?

A. It could, yes, sir, it could in some instances.

Q. In your judgment as an accountant, what does it mean?

A. In my judgment as an accountant, in some instances yes, and in some instances no. In some instances it would not be proper to so apply it.

Q. Would your answer mean, Mr. Warmack, that it is maybe yes and maybe no?

A. That is correct, because in particular instances it might, and in other instances it might not. You would have to be governed by the particular facts and circumstances with which you were dealing. 6571

Q. Could it or does it in your judgment mean—

Mr. Austin: (Interposing): Just a moment. I object to the question as to the form in which it is put, because in the form in which it is put it calls for a legal interpretation, and I do not believe that the witness is qualified to answer those questions.

Now, for example, there may be some questions I think that he will be qualified to answer. The Respondent's counsel would be qualified to ask him if the Robinson-Patman Act used the words "cost of manufacturing, sales, and delivery." That probably is used in connection with the accounting practice to some extent, so that if the witness were asked about the manufacturing cost or about the selling cost, I would not object, but the way the question is framed as to what "cost" means as used in the statute, I do not believe that is an accounting question. I believe it is a legal question.

Mr. Hanly: If your Honor please, I am just going to defer to your Honor's ruling about this because I just very frankly confess I do not know. I do not know whether that is a legal question or whether that is not a legal question.

Trial Examiner Ballinger: The Examiner under-
6572 stands that you are trying to ascertain how this accounting witness understood the term when he made his study.

Mr. Hanley: Right. I am trying to find out what his thinking is about this law and the application of it, Judge.

That is what I am trying to find out.

Trial Examiner Ballinger: As it may reflect his opinion and his conclusion.

The Examiner sees the point there.

Mr. Austin: I think in view of that explanation that the question is clearly objectionable because the witness' idea of what the law is is not important, the witness is not called upon to interpret the law in any of his accounting studies.

The witness has to do with cost of sale and cost of delivery, and entirely apart from what the law means.

The law refers to the cost of sale and cost of delivery, and the witness is concerned with cost of sale and cost of delivery, but not as to what the law means, or what his view of the law is.

I want to make my objection perfectly clear, the witness might be asked what is manufacturing cost or what is selling cost, or what is delivery cost, without reference to the law, but the application of the law to this case is a question which is not for an accountant.

6573 Trial Examiner Ballinger: You are correct so far as the question of law is concerned, this witness cannot testify with reference to that, but he can testify as to his understanding of the term "cost."

Mr. Austin: Without reference to the law.

Trial Examiner Ballinger: Yes.

Mr. Hanley: That is why I am asking him, or at least that is what I am intending to ask him.

Trial Examiner Ballinger: Certainly, as he employed it in his work.

Mr. Austin: Then that may be, but your questions were asked based upon the Robinson-Patman Act.

Mr. Hanley: Perhaps I should reframe the question; perhaps counsel is right.

By Mr. Hanley:

Q. Without bothering your head about the applications of the Robinson-Patman Act, Mr. Warmack, please tell us what you think is comprised in the term "market cost"?

A. All expenses incurred directly or indirectly in connection with marketing.

Q. Mr. Warmack, would you regard the interest on the capital investment as a marketing cost, assuming that the capital investment was necessary, a necessary investment to further the marketing activities of the Respondent company?

A. That is a very moot question, Judge Hanley, in any case, and before I could answer your question

6574 I would have to study the question of interest and investment, and the interest on investment also.

Q. Well, you are familiar with our form 189?

A. Yes.

Q. Let me offer you as an example the E. L. A. accounts which I think you have already denominated as capital investment.

A. Now, what do you want to know about E. L. A. accounts, Judge?

Q. I do not want to know anything about the E. L. A. accounts, particularly. I am just offering you an example. You asked for an example, and I offered you that. I am just offering you the E. L. A. accounts as a possible illustration. I do not know whether it is a good one or not.

The Witness: May I have the last two questions and the answer I gave to the first one read back?

Trial Examiner Ballinger: Read back the last two questions and the answer.

(The reporter read the last two questions and answer.)

The Witness: Your Honor, before I could answer that question I would have to get—I would have to give some consideration and in order to do that and to answer it properly I would have to then inquire with respect to 6575 points more specifically pointed to the question, and then I maybe could give an opinion on the matter.

Trial Examiner Ballinger: You do not feel qualified to answer the question now?

The Witness: No, sir.

By Mr. Hanley:

Q. Mr. Warmack, before any adjournmnt is taken by the Court tonight, can I give you any further aid in your investigation of that question? If I can, just tell me, what I can do which may be of help to you, if I think I want an answer to it. If I do not, I will withdraw the question in the morning, but I think I want an answer.

The Witness: It is your desire to know if any—if, in my opinion, interest on investment used in marketing are proper costs for the purpose of proving cost differentials? Is that the question, Judge Hanley?

By Mr. Hanley:

Q. If any interest charge may be a proper cost of marketing which is appropriate to calculate the cost differential.

A. Each question with respect to that particular point; your Honor, would have to be stated separately and independently—an answer could not be given from the witness stand without studying the question to arrive at a reasoned answer. I might state that Respondents in this case, in its cost study, have not used interest on investment for the purpose of determining their cost differ- 6576 ential.

Mr. Hanley: Well, if your Honor please, I was under the impression that there was some such item in Respondent's form 189.

I now learn that that is not true, and I think that being the case I should not want to pursue this inquiry further. I am just sorry; I just thought that there was one or two of them in there.

(Witness temporarily excused.)

Mr. Hanley: May I at this time request that we adjourn, if your Honor please, until 9:30 o'clock a. m., tomorrow?

Trial Examiner Ballinger: The motion is granted.

And now, at 4:45 p. m., the hearing stands adjourned to be reconvened in Room 532, Federal Trade Commission Building, at 9:30 a. m., Washington, D. C., July 15, 1942.

(Whereupon, at 4:45 o'clock p. m., July 14, 1942, the hearing in the above-entitled matter was adjourned.)

6577

Room 532, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, July 15, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois), appearing for the Respondent.

6578 PROCEEDINGS

Trial Examiner Ballinger: Come to order. The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana," is convened pursuant to notice, at 9:30 a.m., July 15, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held in the same place on July 14, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

Mr. Warmack, will you come around and resume the stand?

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued).

Q. Mr. Warmack, yesterday I asked you about your studies in Detroit and Chicago, but did not pursue the matter very far.

A. Yes, sir.

Q. Will you please tell us now exactly how much time you spent and how you spent it?

A. In Chicago and Detroit?

6579 Q. In Detroit and Chicago.

Trial Examiner Ballinger: Dealing with them separately.

The Witness: On this particular case?

By Mr. Hanley:

Q. That is right, of course.

A. You understand I have worked in Detroit on other work.

Q. Yes, I understand, Mr. Warmack, but I am talking about this case.

A. I am under the impression, Judge, that I gave that in my testimony in Detroit, but I will be glad to try to give it again.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Just give me your best recollection as to how much time you spent in Detroit and how much time you spent in Chicago.

A. All told I would say about two months. That covers my best recollection at the moment.

Q. What were you doing?

A. What?

Q. What were you doing?

A. I was reviewing the data underlying the Respondent's Exhibits 99, 100 and 101.

6580 Q. During most of that time were you assiduously engaged in examining the underlying records, data, information, and accounts of the Respondent company?

A. Yes, sir.

Q. And who, if ayone, assisted you?

A. Mr. Len Houghton.

Q. Who is Mr. Len Houghton, as you understand it?

A. Mr. Len Houghton, as I understand it, was an accountant attached to the sales research division of the company at its Chicago office.

Q. Do you regard Mr. Boatwright and Mr. Houghton as able and competent accountants, Mr. Warmack?

A. I have no reason to question their ability as able and competent accountants, Mr. Hanley.

Q. Did you request of Mr. Houghton information to enable you to make your studies, Mr. Warmack?

A. Well, that is a pretty broad question. I could have made the studies without Mr. Houghton's assistance, but it would have entailed some time.

Trial Examiner Ballinger: Read the question to the witness.

(The reporter read the question as follows:

"Q. Did you request of Mr. Houghton information to enable you to make your studies, Mr. Warmack?")

The Witness: That question is hard to answer. 6581 Surely, I requested that information, but the information was already made available before Mr. Houghton was assigned to assist me, in January.

By Mr. Hanley:

Q. Let me ask you this, Mr. Warmack, did you have certain information from the Respondent company prior to the time you went to Detroit?

A. Oh yes, I had considerable information from the Respondent by virtue of previous contacts and considerable information as set forth in Respondent's Exhibits 99 and 100, as well as other exhibits.

Q. After you went to Detroit and after Mr. Houghton began to work with you; did you get additional information, upon your request?

A. Yes, sir.

Q. Did you ask Mr. Houghton to provide that information?

A. Yes, sir.

Q. From the Detroit office?

A. Yes, sir.

Q. Did he do so?

A. Yes, sir.

Q. How much?

A. He provided me with an abundance of information.

Q. On any occasion, did he fail to provide you with anything that you asked for that existed in the records and data and accounts of the Respondent company?

6582 A. Not as far as I know. He failed to furnish information that I asked for, but it was his statement that such data was not available, and of course, I would not question that point.

Q. Do you recall—

Trial Examiner Ballinger: (Interposing.) When you say "not available," do you mean it did not exist?

The Witness: He stated that some of it that I asked for—Judge Ballinger—did not exist.

By Mr. Hanley:

Q. Do you recall testifying in this case in Detroit on February 25, 1942, Mr. Warmack?

A. Yes, sir.

Q. I will ask you if you were asked the following questions and if you gave the following answers:

"Q. Has the Respondent made available to you all records and files, data, accounts, work sheets of any nature that you wanted since you have been here?

"A. Everything that I have requested has been made available to me in the way of records.

"Q. Has the Respondent made available to you qualified accountants to facilitate your work?

"A. Yes, sir.

"Q. And have the personnel that has from time 6583 to time been furnished for your use facilitated your work since you have been here?

"A. They certainly have and they have been most cooperative.

"Q. Has there ever been a time when you have been denied or refusd access to any record that you wanted?

"A. No, sir."

Were those questions asked you and did you make those answers on February 25, 1942, in Detroit, in this hearing?

A. May I review the record? What is the page? 5688?

Q. It is in the page where that sheet is.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Yes, sir, I remember that testimony. There is one point that I would like to explain, your Honor?

Trial Examiner Ballinger: You may.

The Witness: The question was asked me by Judge Hanley, as shown by page 5688 of the transcript of the record in this case:

"Has the Respondent made available to you all records and files, data, accounts, work sheets of any nature that you wanted since you have been here?"

To which I made the following answer:

6584 "A. Everything that I have requested has been made available to me in the way of records."

In answering that question, your Honor, I certainly did not intend to convey any meaning that the Respondent had made available any records that were non-existent. They had made available all records that I had requested, which they said they had. Those that they said were non-existent, surely, they could not make available any such data.

Trial Examiner Ballinger: And you accepted their word with reference to the existence or non-existence of records?

The Witness: I did, your Honor. I had no alternative. I certainly did not impugn good faith.

By Mr. Hanley:

Q. Now, Mr. Warmack, I direct your attention to the testimony which you gave July 2, 1942 in this hearing beginning on page 5935, beginning with the question by the Trial Examiner at the bottom of that page:

"Trial Examiner Ballinger: Go ahead, Mr. Witness."

First, I will ask you if these questions were asked you and if you gave these answers:

"The Witness: I was not given any information of any kind; that is, documentary information, in the Detroit field, to support the accuracy of these meth-
6585 ods or the results to be obtained from the use of
these methods.

"And that goes to all of the accounts accounted for in Form 189 in the Detroit field."

"Trial Examiner Ballinger: You say you were not furnished any information to support?

"The Witness: Yes, sir.

"Trial Examiner Ballinger: Do you mean that you were not furnished any information either documentary or oral?

"The Witness: I was not. I would get a lot of arguments, Judge, but what I wanted to know was if the gallonage allocation is sufficient, either gallonage between tank wagon reseller, tank wagon consumer, and other methods or if a part of the costs are allocated in them what part of them between tank wagon reseller and tank wagon consumer, which I believe will be the case of this triple naught account.

" 'Well, why?' "

" 'Well, why? We do it that way.' "

" 'Well, why? What did you ever do to prove that that is the right way to do it, from a cost accounting standpoint?' "

"Mr. Hanley: Prove it to you.

"The Witness: And if you did do anything
6586 where is the documentary evidence of what you did?'

"And I got nothing."

Now, Mr. Warmack, tell me out of this whole bunch of testimony which you have given here today, which you gave on February 25, in Detroit, and which you gave on July 2, 1942, is the accurate testimony.

Did you or did you not get information from the Respondent company?

A. Yes, sir. I got information from the Respondent company, a large amount of information.

What has been spoken of in the record and which you have just read may not be exactly clear as to what it means, but if you would turn back a little further you will find that we were talking about the use of gallonage factors for the allocations.

And if your company, Judge Hanley, has ever proved that the gallonage factors used in this allocation afford sound and accurate results, then I challenge the Respondent to produce that information.

They have not produced it.

Q. Well, Mr. Warmack—

Mr. Austin: (Interposing): Your Honor, I move t
strike the last answer of the witness as not responsive t
the question.

Mr. Hanley: I concede the motion.

6587 Trial Examiner Ballinger: The entire answer?

Mr. Austin: I would like to have the answe
read. I do not know that it goes to the last sentence,
believe I would like to have it read back, in order to mak
it more responsive to my motion.

Trial Examiner Ballinger: Read the question and a
swer.

(The reporter read the question and answer as above s
forth.)

Mr. Austin: I move to strike the answer of the witnes
beginning with the words “if your company,”

Mr. Hanley: The Respondent will concede the motion.

Trial Examiner Ballinger: Motion is granted.

(The reporter read the question and the present a
swer as follows:

“Now, Mr. Warmack, tell me out of this whole bun
of testimony which you have given here today, which y
gave on February 25, in Detroit, and which you gave o
July 2, 1942, is the accurate testimony.

“Did you or did you not get information from the Re
pondent company?

“A. Yes, sir. I got information from the Responde
company, a large amount of information.

“What has been spoken of in the record and which y
have just read may not be exactly clear as to wh
6588 it means, but if you would turn back a little furth
you will find that we were talking about the use
gallonage factors for the allocations.”)

By Mr. Hanley:

Q. Irrespective of what you were talking about, M
Warmack, when you requested information of Mr. Houg
ton or anybody else in the Detroit office, did you get t
information if it existed in the records of the Responde
company?

A. Of course, Judge Hanley, I had no way of knowi
except that they told me that it existed.

Q. What is your opinion?

A. It is my opinion that if it existed I got it.

Q. Is that what you think?

A. Yes, sir.

Q. Do you believe, Mr. Warmack, that you got everything that you desired and requested that existed in the records, files, data, and accounts of the Respondent company?

A. I believe that, Judge Hanley.

Q. I assume, Mr. Warmack, that you requested everything that you thotight was necessary to your study and investigation; did you not?

A. I endeavored to, Judge Hanley.

Q. Now, you have used the terms, Mr. Warmack, in reference to a cost study:

"That it was shown to be sound accounting"; or

6589 "It was established to be sound accounting," or

"It was proved to be sound accounting";

Do you remember the use of those terms many times in connection with your testimony?

A. I should be happy if you would show me where they were used.

Q. Do you not remember, Mr. Warmack, and have you not used those statements time and again in connection with your testimony?

A. I have used many terms, Judge Hanley, but if you will refer to any particular page in the record I would be happy to learn of it.

Q. I mean,—I am not referring to any particular page in the testimony, I am just referring to your use of those terms. Do you not remembe. them? What is your best answer?

A. O.K. Read the terms.

Q. I will restate the question. You have repeatedly, for two weeks, used the terms that cost study should show, or should establish, or should prove certain things; now, I am not asking you what it should prove, I am asking you what you meant by the term "show"—"establish"—or "prove"—and I am asking you as to whom it should be shown, established, or proved—you, the Federal Trade Commission, Mr. Lundball, or Mr. Seubert, the president of the Respondent company, who happens to be a

6590 good accountant, or who—just what do you mean?

A. I mean, proof of the correctness.

Q. To whom? Proof to you?

A. From the standpoint of accounting, proof proved t the world.

Q. Oh, well, Mr. Warmack, let's be reasonable abou this thing, please. To whom—

A. (Interposing): To the world.

Q. —must it be proved?

A. If it is done correctly, it is proven to the world

Q. Yes—

Mr. Hanley: The Respondent moves to strike th answer of the witness as not fairly responsive to the ques tion, and respondent asks the Court to admonish the wit ness that that kind of an an answer is not helpful an means nothing in this lawsuit.

Trial Examiner Ballinger: The motion is granted. Th witness is directed to answer the question.

The Witness: Judge, I do not know how to answer i any better than that.

(There was a discussion off the record.)

Mr. Austin: Your Honor, I think the whole recor shows and the witness' testimony shows that he is tes tifying as an expert, and giving his opinion.

6591 Now, obviously, when he states that somethin is proved or not proved, he is talking about it bein proved or not proved in his opinion.

Trial Examiner Ballinger: Mr. Austin, I think that i the case, and if that is the case then the witness may s state.

Mr. Hanley: Surely, Judge—.

Mr. Austin: (Interposing): I think it is inherent.

Mr. Hanley: It is just exactly what?

Mr. Austin: Whether the company has a thing to b proved to the satisfaction of the Standard Oil Company' men, or to whoever it is, it is really the witness givin his opinion as to whether in his opinion the thing ha been proved.

Trial Examiner Ballinger: I think that counsel for th Respondent is entitled to a definite answer so that th record may be complete.

By Mr. Hanley:

Q. Can you answer that question, Mr. Warmack?

The Witness: What is the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. I will restate the question. You have repeatedly, for two weeks, used the terms that cost study should show, or should establish, or should prove certain things; now, I am not asking you what it should prove, I am asking 6592 you what you meant by the term 'show'—'establish'—or 'prove'— and I am asking you as to whom it should be shown, established, or proved—you, the Federal Trade Commission, Mr. Lundball, or Mr. Seubert, the president of the Respondent Company, who happens to be a good accountant, or who—just what do you mean?")

The Witness: Judge Ballinger, I have used these terms, giving my opinions as to methods and procedures from the standpoint of sound accounting.

Trial Examiner Ballinger: In so doing you were merely expressing your own individual judgment; is that true?

The Witness: Yes, sir. That is correct.

Trial Examiner Ballinger: Well, then, can you answer the question directly?

The Witness: Yes, sir, who was I going to prove it?

By Mr. Hanley:

Q. What I am asking you, Mr. Warmack, is: What do you mean when you say the procedure is proven or shown or established? Proven, shown, or established to whose satisfaction? Now, you tell me, please.

A. In my opinion, when I used those terms I had reference to the use of sound accounting principles and procedures and to the results when speaking of determining costs were meant by me to produce the figures that would be accurate and sound and as nearly correct as it 6593 could be. In other words, the most correct figure that could be established.

Q. All right, Mr. Warmack, when you speak of sound accounting, you are speaking, are you not, of your opinion of sound accounting?

A. Well, I do not happen to be different from everybody else in the world.

Mr. Hanley: I object and move to strike the answer.

Trial Examiner Ballinger: The answer is stricken.

Mr. Hanley: I ask that the question be read.

Trial Examiner Ballinger: Read the question.

(The question was read by the reporter.)

By Mr. Hanley:

Q. Please answer the question.

A. Well, surely, Judge, it is my opinion, he knows it is my opinion.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Read the last question.

(The question referred to was read by the reporter as follows:

"Q. All right, Mr. Warmack, when you speak of sound accounting, you are speaking, are you not, of your opinion of sound accounting?")

6594 The Witness: Yes, sir, I am.

By Mr. Hanley:

Q. And no one else?

A. I am only speaking for myself, Judge.

Q. And again, so we will be very sure about it, when you use the words and the terms "shown"—"established"—and "proven" in respect of procedures, you were referring to having those procedures shown, established, and proven to your own individual satisfaction; is that true?

A. That is correct, in accordance with what I consider to be, Judge Ballinger, sound accounting.

Trial Examiner Ballinger: Strike that.

Mr. Austin: I object, your Honor, to it being stricken. I think it is a part of the answer.

Trial Examiner Ballinger: The addition adds nothing to the answer.

The Witness: I think it does.

Mr. Austin: I think it does to some extent, the question was so framed that I think it does.

The Witness: The question is an all-inclusive situation.

Trial Examiner Ballinger: All right, I will let it stand. Off the record.

Mr. Hanley: I will concede, Judge, if it will help 6595 any.

Trial Examiner Ballinger: Very well. Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Judge Ballinger asked you—

Mr. Hanley: Before going on with that, Judge, I wonder if we might have a recess now. I want to go into this 31 thing.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: May I proceed, your Honor?

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Mr. Warmack, I now direct your attention to Respondent's Exhibit 31, which has to do with the separation of cost of Ned's Auto Supply Company for the year 1937 from the rest of the same reseller group. I am sure you are familiar with Exhibit 31, are you not?

A. Yes, sir.

6596 Q. Will you please refer to page 5778.

A. Yes, sir.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Now, during your stay in Detroit, or in Chicago, or in Washington, or elsewhere, Mr. Warmack, did you make any study of the underlying data, figures, facts, records, and accounts that went into the Respondent's Exhibit No. 31?

A. Judge Hanley, I would not say that I made none, but I would say that my studies in Detroit and Chicago this year, that to the company's office, that we have been speaking of, were concerned primarily with the year 1940.

Q. May I call you attention, please, Mr. Warmack, to page 5778 of the record.

I will ask you if you were asked the following questions and if you made the following answers. I will take the answer:

"A. I would not say that I did not make any test check for the year 1937. I would say this, Judge, that my study of the company's records went almost entirely into questions of cost, the separations of those costs, in the Detroit field, for the year 1940, for the reason that I believe that it has been admitted in evidence in this case 6597 that practically the same methods were used for the separation of those costs in 1937 that were used in 1940 and practically the same items of cost went into the respective accounts in 1937 as in 1940.

"Judge, you asked me did I make any, or did I make none, or did I make one, or did I make a hundred. I don't know whether I made one or made a hundred. I say that I went into this matter, and I don't know if I made test checks for 1937 positively as such. In our studies we made hundreds of test checks."

Did you make those answers?"

A. Yes, sir, I made those answers.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Can you tell me what you meant by that?

A. The first answer that you read, beginning with the words "I will not say that I did not make any test check for the year 1937." That is the beginning of the answer which you read.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

6598 Trial Examiner Ballinger: On the record.

The Witness: May I hear my answer as far as I have given it, read?

Trial Examiner Ballinger: Read it.

(The reporter read the partial answer as follows:

"The first answer that you read beginning with the word 'I would not say that I did not make any test check for the year 1937.' That is the beginning of the answer which you read.")

The Witness: (Continuing): Refers, as made in the answer, to comparable methods employed for the separation of cost between—or for the years 1937 or 1940, I was referring to the methods of separation employed by Respondents in its form 189; that is, the respective accounts on that form.

Since this question was asked me, I have reviewed my work sheets and papers, and I find that I did ask about information respecting the estimates as set forth on Respondent's Exhibit 31-L.

I believe that that was about the extent, Judge Hanley, to which I went into the 1937 records which furnish underlying information for the preparation of Respondent's Exhibit 31-A through 31-O inclusive.

By Mr. Hanley:

Q. Do you mean by that, Mr. Warmack, that you made a study of 31-L, but not the balance of 31?

6599 Mr. Hanley: 31-L, for the information of the Court, has to do with the time of certain salesmen, namely, L. L. Robinson, T. G. Moulenberg, Paul Coutchie.

By Mr. Hanley:

Q. Did—

A. Does that answer your question?

Q. Not completely. Does your answer mean that the only study that you made of Respondent's Exhibit 31, which includes pages 31-A through 31-Q; that the only study that you had to do with was page 31-L?

A. Oh, no, I have studied the whole exhibit.

Q. Have you studied the whole exhibit?

A. Yes, sir, 31-A to—

Q. (Interposing): Have you studied the whole exhibit?

A. Yes, sir.

Q. Have you studied that carefully, Mr. Warmack?

A. I have studied parts of it carefully.

Q. Well, have you studied all of it carefully?

A. Well, that is a matter of opinion, Judge.

Q. Well, it is your opinion I am asking for. Have you studied it carefully?

A. I particularly studied some parts of it, and I have reviewed it all carefully.

Q. You say that now?

A. What?

6600 Q. You say that now?

A. I have just stated that for the record.

Q. I have asked you—I think I asked you this before, but I am forced to ask you again, Mr. Warmack, were you not asked this question, and did you not make this answer—

"Q. —

Mr. Austin: (Interposing): What is the page?

Mr. Hanley: Page 5778.

Mr. Austin: Thank you.

By Mr. Hanley:

Q. "A. I would not say that I did not make any test check for the year 1937. I would say this, Judge, that my study of the company's record went almost entirely into questions of cost, the separations of those costs, in the Detroit field for the year 1940, for the reason that I believe that it has been admitted in evidence in this case that practically the same methods were used for the separation of those costs in 1937 that were used in 1940, and practically the same items of cost went into the respective accounts in 1937 as in 1940."

Now, to begin with, that is your opinion, is it not, Mr. Warmack?

A. Yes, sir.

Q. Do you know it to be a fact that there was a change in the accounting methods of the Respondent company between 1937 and 1940, and, in fact, in 1940? 6601

A. Yes, sir. I certainly do know that that is a fact, but when you say a change, do you mean a change of one account or do you mean a change in all of the great number of accounts that are on these sheets?

Q. I am asking you what your understanding is?

A. I have stated my understanding.

Q. Was there a change, or wasn't there?

A. Yes, sir. There was a change.

Q. Now, I wish you would tell us just very honestly, please, Mr. Warmack, did you or did you not make a study of the underlying facts, data, records, and accounts which went into Respondent's Exhibit No. 31 for the year 1937?

The Witness: Judge, the record is clear on that.

By Mr. Hanley:

Q. Please answer the question, Mr. Warmack.

Trial Examiner Ballinger: Answer the question.

Mr. Austin: I think it is repetitious, your Honor. I think it has already been answered twice this morning.

Trial Examiner Ballinger: Well, this is cross-examination.

Mr. Austin: It was answered, and the questions that were asked by Respondent's attorney—

Mr. Hanley: I never asked that.

6602 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. The witness may answer.

Read the question to the witness.

(The reporter read the question as follows:

"Q. Now, I wish you would tell us just very honestly, please, Mr. Warmack, did you or did you not make a study of the underlying facts, data, records, and accounts which went into Respondent's Exhibit No. 31 for the year 1937?")

The Witness: Again, I will answer it, Judge Ballinger.

I have studied Respondent's Exhibit 31-A to 31-Q, and I inquired, when I was in Detroit, respecting information as shown on Respondent's Exhibit 31-L, and that I believe is the extent to which my work on Respondent's Exhibit 31-A to 31-Q has gone.

I have studied particularly information in this record dealing—

Trial Examiner Ballinger: (Interposing): Confine it to Exhibit 31-A to Q.

The Witness: What is that last part of my answer?

Trial Examiner Ballinger: Read the witness' answer.

(The reporter read the answer).

6603 The Witness: With advertising costs for the year 1937; that is, information set forth on Respondent's Exhibit 31-O and 31-P, and additional supporting data which are in the record.

By Mr. Hanley:

Q. Will you please state, Mr. Warmack, exactly what you did in Chicago or Detroit or elsewhere in your study of the 1937 costs of the Respondent company, particularly in respect of Exhibit 31, and if you have any work sheets, will you please produce them?

A. I requested information with respect to estimates made on Respondent's Exhibit 31-L, and especially any documentary notes, or evidence underlying those estimates, and I was furnished none.

That, as I have stated, covers—

Q. (Interposing.) Have you any work sheets?

A. —the extent of my work on that study, I believe, in the field.

Q. Have you any work sheets?

A. No, sir.

Q. For the year 1937?

A. No, sir.

Q. You just asked the question, and you did not get an answer, and you quit?

A. Surely, I got an answer.

6604 Q. What was the answer? Tell me first what the question was.

A. The question was, any supporting documentary information underlying the estimates made on Respondent's Exhibit 31-L—that was the question.

Q. Mr. Warmack, I do not want your conclusions about what you asked. Please state exactly what you said.

A. I said:

"Mr. Houghton, will you please furnish me with any documentary evidence which you may have, or documentary information which will support your statement on Respondent's Exhibit 31-L, which reads:

"'However, not all the time of these individuals was spent on calling on Ned's accounts. It was estimated by Mr. Raupagh and Mr. Blough that Robinson spent 35 per cent of his time at Ned's, of which 7 per cent was on gasoline; Moulenberg spent 25 per cent, of which 5 per cent was on gasoline; Coutchie spent 25 per cent, of which 5 per cent was on gasoline.'"

"After calling Mr. Houghton's attention to that, I asked him the question:

"'What do you have in the way of documentary information which will support those estimates?'"

Q. Now, you meant by that, I assume, Mr. Warmack, support to your satisfaction; is that right?

6605 A. Well, Judge,—

Q. Well, you can answer that, Mr. Warmack.

A. I am fixing to give you an answer if you will be quiet.

I asked him for any written statement, any facts, any piece of paper that had writing on it that would support those estimates.

Mr. Hanley: Will you please read the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Mr. Austin: I object to that question. The witness was asked what he said. Now he is about to be asked to answer on something above and beyond what he stated, or what he said. Now, what he said is what he said. What he meant is not material, and should not be permitted unless he explained to Mr. Houghton what he meant.

Mr. Hanley: That is just the point. Did he explain to Mr. Houghton? There must have been a meeting of minds.

Trial Examiner Ballinger: The objection is sustained. The witness has not fully answered the previous question. The matter from where the witness stopped in his answer to the previous question is stricken.

You may go back now and state what Mr. Houghton told you in answer to your question.

The Witness: I was not asked that. I was asked what I asked Houghton.

6606 Mr. Hanley: And then you were asked just prior to that what he said to you and what you said to him.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: I will vacate my previous ruling and permit counsel for the Commission to make a further objection.

Mr. Austin: Now, may I say further, your Honor, in that objection, that what Mr. Warmack meant is immaterial. It seems to me that the meaning of his words must be determined from the words themselves would mean to Mr. Houghton. It is what the words meant to Mr. Houghton that would be important, not what Mr. Warmack meant, otherwise than his expression; otherwise, I do not think the question is proper.

Mr. Hanley: If your Honor please, I heartily agree with counsel that if we can ever get the witness to tell us that, but I have not even been able to do it up to this time.

Will you please read the last question again and I will ask the witness to answer it.

Trial Examiner Ballinger: Read the question.

(The reporter read the following question:

"Now, you meant by that, I assume, Mr. Warmack, support to your satisfaction; is that right?").

Trial Examiner Ballinger: Is that the one you now
6607 desire to address yourself to?

Mr. Hanley: Now, Judge, that does not ask for any conversation.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

The Witness: Not necessarily, to my satisfaction, Judge Hanley.

I just wanted to see what the Respondent company had to support these estimates, whether it would be satisfactory or unsatisfactory.

Trial Examiner Ballinger: In other words, do I understand you merely inquired for facts?

The Witness: Yes, sir.

By Mr. Hanley:

Q. Now, are you undertaking to testify, Mr. Warmack, that there was no support at all for the method used by the Respondent company in making this particular allocation of expense?

A. No, sir.

Q. Is it not a fact that you are just testifying that the support, whatever it may have been, did not satisfy you, as an individual accountant?

A. I did not see any support.

6608 Q. Well, you did not see anything that satisfied you; is that what you are saying?

A. I saw nothing to satisfy or did not satisfy me.

Trial Examiner Ballinger: Judge, the witness has testified that he asked for the basic facts upon which the statements were predicated, and that they were not furnished to him.

Mr. Hanley: All right.

By Mr. Hanley:

Q. Perhaps I can get at it this way, Mr. Warmack.

You spent many weeks in the offices of the Respondent company in Detroit, and some of that time was spent in Chicago.

That is true, is it?

A. That is very true.

Q. Did you see many accountants working in the Detroit office?

A. Yes, sir.

Q. When you went to Chicago, did you meet a Mr. Frank L. King?

A. I believe that I did, Judge Hanley, but I do not recall the name right this moment. My papers would show.

Q. Try and remember this, if you can, Mr. Warmack; I am sure you were introduced to Mr. King, and if you remember it, state, please, who Mr. Frank King was.

6609 A. I certainly do not know.

Q. As you understood it.

A. I certainly do not know.

Q. Were you on the seventeenth floor of the Respondent's building in Chicago?

A. I believe I was.

Q. Do you remember that?

A. Yes, sir.

Q. Do you remember that that was the accounting floor for the marketing accounts?

A. No, sir; I do not remember the floor.

Q. Well, without reference to the number of the floor, were you on the floor which you understood to be the accounting floor?

A. Yes, sir.

Q. For the marketing department?

A. Yes, sir.

Q. And have you any idea how many accountants were there?

A. No, sir, but there was a large group.

Q. Could you make any estimate at all, Mr. Warmack? I frankly will confess to you I do not have a fixed idea how many there were there, so your guess is just as good as mine.

A. I would not hazard a guess.

Q. Well, there were a great many of them?

6610 A. Yes, sir.

Q. Dozens and dozens of them?

A. I think so, yes, sir.

Q. Do I understand it to be a fact that that entire floor filled with these operatives and accountants was given over to the marketing accounting business of the Respondent company?

A. Well, Judge, I did not inquire into that.

Q. Perhaps you did not.

A. I do not know if I was told that or not.

Q. I do not want you to tell me what you do not know.

A. Mr. Houghton may have stated that. He took me to many floors and told me what the operations were, that went on in the home office on those respective floors.

Q. After having had that experience, are you prepared to say that the Respondent has made no effort and no studies in respect of allocations of time and effort put forth by the various salesmen serving Ned's Auto Supply Company during the year 1937?

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: No, sir. I am not prepared to say anything concerning that, Judge Hanley.

By Mr. Hanley:

6611 Q. The fact is you are just not prepared to say anything about 1937 so far as the efforts of the Respondent company are concerned; is not that the fact, Mr. Warmack?

A. No, sir.

Q. You just have not made the study?

A. That is not the fact, Judge Hanley.

Q. All right. You tell us.

Mr. Hanley: I wish I could get out of this witness what study he made for the year 1937. I ask the Court to instruct this witness to say exactly what study he made in 1937.

Trial Examiner Ballinger: Mr. Warmack, you may pick up Respondent's Exhibit 31-A to Q, and review it, page by page.

Mr. Austin: I would like to know whether that question is directed to what he did in the field, or what studies he made of the record and the exhibits apart from his field examination.

Mr. Hanley: If your Honor please, I do not care where he did it.

Trial Examiner Ballinger: He may go into any matters that he investigated and touched on that question.

Mr. Austin: Well, as already stated, your Honor, the entire account, and said he studied the entire testimony, and I submit that is a complete answer to the question, 6612 and as long as he has already stated that three times generally and one time this morning, once specifically, I think that is enough.

Trial Examiner Ballinger: That apparently is entirely satisfactory to counsel for the Commission, but this is cross-examination and it may not be entirely satisfactory to counsel for the Respondent.

He is entitled to inquire into it.

Mr. Hanley: If your Honor please, what I really want to know is what this witness did in the matter of an investigation of the underlying data, records, and facts and accounts that went into the preparation of Respondent's Exhibit 31.

That is what I want to know, whether or not this witness knows anything about it.

Trial Examiner Ballinger: Can that be determined in any way that by a review, page by page, of Respondent's Exhibit 31-A to Q?

Mr. Hanley: Perhaps not. I do not care how the question is answered, if I can just get an answer.

Trial Examiner Ballinger: You may answer it in any way you can, now.

Answer it in your own way.

Mr. Hanley: Start with 31-B.

Mr. Austin: Well, now, your Honor, as far as that 6613 is concerned, the direct examination was limited to certain schedules in Exhibit 31. I object to any questions on the balance of Exhibit 31 as not proper cross-examination, they were not touched upon at all either generally or specifically on direct examination.

Mr. Hanley: Oh, if your Honor please, Exhibit 31 is an integral thing. It cannot be broken up into pages.

Mr. Austin: Well, it is broken up, every part of the schedule is treated separately, and separated from the others.

Mr. Hanley: That is an unfair thing, Mr. Austin.

Mr. Austin: I do not consider it unfair.

I started in direct examination on Respondent's Exhibit 31-H.

I do not object to cross-examination on the following, but I do object to cross-examination on the previous portions of that exhibit because we gave no testimony on direct concerning them.

Your Honor will note the first page shows each one of these schedules of differentials listed.

Mr. Hanley: Mr. Austin, do not do that, do not practice law that way.

Mr. Austin: That is the only way I know to practice it, and I consider it proper. He is going to cross-examine on something on which he did not give direct testimony on, and I object to that.

6614 Mr. Hanley: I withdraw those remarks.

Trial Examiner Ballinger: Judge Hanley, do you agree that the direct examination was confined to pages commencing with page H and continuing how far, Mr. Austin?

Mr. Austin: Schedule 2-B, which includes pages H and I, and then schedule 4 which includes pages J, K, L, M, N, O, P, everything down to Q, and there may have been something regarding Q.

Trial Examiner Ballinger: Page 7, and extending to page 16 of Respondent's Exhibit 31? Is that correct?

Mr. Austin: Yes, sir.

Mr. Hanley: If your Honor please, I am not sure exactly what pages on Respondent's Exhibit 31 were examined upon by Commission's counsel in the direct examination of this witness.

I represent to the Court, on behalf of the Respondent company, that Exhibit 31 is respondent's justification of the one half cent differential accorded to Ned's Auto Supply Company, that that exhibit is an integral unit, and the mere fact that it may be composed of a number of pages is utterly immaterial.

The thing is a whole within itself, and no part of it can be examined without a resulting influence on the result
of the exhibit itself, which is contained in what hap-
6615 pens to be page 31-A.

It is a justification, so far as the Respondent is concerned, of that one half cent differential.

I do not care how many pages counsel may have asked about, if he went into Exhibit 31, the Respondent is entitled to go into Exhibit 31 in its entirety.

Trial Examiner Ballinger: Respondent's Exhibit 31-A portrays the result of cost computations on various items; the totals being portrayed at the foot of the columns.

Counsel for the Commission has inquired into only certain of the items that entered into the totals and which the exhibit portrays in detail, commencing with page 7 and extending to the end of the exhibit.

The Examiner rules that the cross examination should be confined to the particular integral portions inquired into by counsel for the Commission.

Mr. Hanley: All right. Now, am I to understand just what portions those are, if your Honor please, as—

Mr. Austin: (Interposing): May I state that, your Honor?

Trial Examiner Ballinger: The exhibit, commencing with page 7, I believe.

Mr. Hanley: I suppose you may, you are doing most of it:

Mr. Austin: The record will show it.

6616 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

On the first page of Exhibit 31, opposite item No. 2, is marked "Market Expense Item Not Influenced by Ned's Auto Supply Company." That is dealt with commencing on page 6 of the exhibit, which is also—

Mr. Hanley: (Interposing): Do you mean that we cannot go into this exhibit in its entirety; is that what your ruling means?

Trial Examiner Ballinger: That is what I am ruling—considered on page 7, which is the commencement of that portion of the exhibit dealing with Commission's direct examination.

Counsel for Respondent is at liberty to inquire into anything appearing in the exhibit commencing with page 7 and extending to the end of the exhibit.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Hanley:

Q. Mr. Warmack, did you examine Respondent's Exhibit No. 33?

Trial Examiner Ballinger: Off the record.

6617 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Perhaps I had better reframe the question. Did you examine Respondent's Exhibit 33-A through 33-E?

A. Yes, sir.

Q. Did you make any study of the underlying data, facts, figures, and records which went into the preparation of Respondent's Exhibit 33?

A. Is not that the Oklahoma study?

Q. That is what it is, but you ought to know if you studied it.

A. Well, I am looking at it, at this moment, Judge. I am sure that I did not examine into any of the facts, figures, which are the underlying figures and data and so forth which went in to make up Respondent's Exhibit 33-A to 33-E, inclusive.

Q. That being the fact, are you prepared to express any opinion as an expert accountant relative to the conclusion reached in Respondent's Exhibit 33?

Mr. Austin: I object to that.

I did not know just what the purpose was of bringing in this exhibit at this time, and I do not know yet, but there is no direct examination on it, so I think the exhibit becomes immaterial in any event.

I am considering a motion to strike the exhibit
6618 from the record at some later date. However, in any
event, I do not think it is proper cross-examination
now.

Mr. Hanley: I concede the fact, if your Honor please, that the statement of counsel is accurate, that there was no mention made of it in his direct examination.

Trial Examiner Ballinger: Well, does that in any wise pertain to any item appearing on Respondent's Exhibit 31-A to 31-Q, inclusive?

Mr. Hanley: 33 has not anything to do with it, Judge, it is an entirely separate question.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Hanley:

Q. Now, Mr. Warmack, directing your attention to that portion of Respondent's Exhibit 31, beginning on page H, which I think is page 7—

Trial Examiner Ballinger: Page 7.

By Mr. Hanley:

Q. —to which the Court has limited this examination.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Directing your attention, Mr. Warmack, to account
001 on page 7 of Respondent's Exhibit 31-H; you
6619 testified on page 5784 of the record that a part of
that cost was properly applicable to serving the
customers and that, of course, Ned's was one of those customers.

I will ask you now, if you know, were the Respondent company's records in 1937 set up on a customer basis?

A. Kindly explain what you mean by "customer basis," Judge?

Q. I do not know. What do you think?

A. If you do not know what you are asking, I do not know how to answer it.

Trial Examiner Ballinger: The Examiner directs that the answer and the colloquy between counsel for the Respondent and the witness be stricken.

The witness is directed to answer the question as propounded.

Mr. Austin: If he can, I assume.

Trial Examiner Ballinger: The direction presupposes that he will answer only as to his knowledge.

Mr. Hanley: Counsel for the Respondent also agrees to that.

The Witness: Judge, may I ask you off the record—

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

6620 Q. Do I understand that you do not understand the question, Mr. Warmack?

A. Yes, sir. I ask that you amplify it, please.

Q. As an accountant, do you understand what the term setting up accounts on a "customer basis" means?

A. Setting up accounts on a customer basis?

Trial Examiner Ballinger: Read the question.

(The reporter read the question originally propounded, as follows:

"Q. Directing your attention, Mr. Warmack, to account 001 on page 7 of Respondent's Exhibit 31-H, you testified on page 5784 of the record that a part of that cost was properly applicable to serving the customers and that, of course, Ned's was one of those customers.

"I will ask you now, if you know, were the Respondent company's records in 1937 set up on a customer basis?")

The Witness: You would have to amplify that before I can answer that.

By Mr. Hanley:

Q. As a matter of fact, Mr. Warmack, in the entire accounting form 189, were not the marketing expense items of the Respondent company set up on a customer basis?

A. Individual customers; is that what you mean?

Q. I am asking you the question, Mr. Warmack, if you do not understand the question, just say so, and 6621 decline to answer.

A. I do not understand the question as put. That is why I inquired, for that reason, and I did not get an answer.

Q. Now, assuming for your information that accounts set upon a customer basis means a costing system which applies to individual customers, assuming that, or rather, assuming the absence of it—if I make myself clear—do I, now, Mr. Warmack?

A. Well, I will have to get this straight.

Q. If that were not done, and—would not a schedule analysis of the duties of the individuals whose salaries enter into the salesmen's accounts be necessary to determine whether any particular costs were incurred on any particular customer?

The Witness: Judge, may I have the question?

Trial Examiner Ballinger: Do you understand the question?

The Witness: I do not understand the question.

Mr. Hanley: I will reframe the question.

Trial Examiner Ballinger: That is a rather involved question.

Mr. Hanley: I will withdraw it.

Trial Examiner Ballinger: Question withdrawn.

By Mr. Hanley:

Q. Let me first refer you to account 001.

6622 A. Yes.

Q. Now, you have testified, Mr. Warmack, as follows:

"That a part of that cost is properly applicable to serving all customers."

Now, you say further that Ned's is one of those customers. Do you remember that testimony? It is at page 5784.

A. Yes, sir.

Q. Then, I asked you if the company records in 1937

7

were set up on a customer basis, and you declined to answer that question; that is true, is it?

A. I can answer the question if you explain what you mean by "customer basis." I can.

Q. Well, I am just asking you what happened. You did not answer that question; did you?

A. No, I did not.

Q. Did you?

A. I did not for the reasons stated, Judge. I think the record will show that.

Q. Then I suggested to you that the "customer basis" meant an individual customer.

And now I ask you this question.

If the records are not set up on an individual customer basis, would not a schedule analysis of the duties of the
individuals whose salaries enter into this account—
6623 being account 001—be necessary to determine
whether any costs incurred on any particular
customers?

A. May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Judge, I can state what I think the question means and answer it.

Trial Examiner Ballinger: You may do so.

The Witness: I think the question means:

For costing purposes if costs are not kept separately; that is, costs serving separate customers; that is, would it be necessary to make an analysis of each of the classes of costs incurred or involved in the serving of that individual customer.

Is that what you mean, Judge?

By Mr. Hanley:

Q. Well, is that what you mean; is that your idea?

~~A. Yes, sir; that is what I understand what you meant. I did not understand your question.~~

Q. I am sorry. If you do not understand the question, I do not want you to attempt to answer, Mr. Warmack.

A. I see.

Q. I am satisfied with your answer.

A. Well, ~~I~~ have not answered, I have just stated what
I thought you meant, if that is all right I will try to
6624 answer the question as I have just recited it.

Q. All right. You answer it as you understand it.

A. It is my opinion that a study and analysis would have to be made of each of the separate groups of cost incurred in connection with the functions involved in the serving of one customer, but that is not complete without stating that the whole function would have to be studied, and an accounting would have to be made, your Honor, whereby the whole cost of that function would be properly and thouroughly analyzed, and not just to make a study to determine if one single customer were being served as the result of one or more functions what the cost was to serve him, because it would be incomplete if the full coverage were not made of the total cost with respect to each function.

Mr. Hanley: I ask to have the answer read.

Trial Examiner Ballinger: Read the answer.

(The reporter read the answer.)

Mr. Hanley: The Respondent now moves to strike the answer of the witness beginning with the words "one thing further." Is that where you began your explanation?

The Witness: That is part of the answer.

Mr. Hanley: I now make a motion to strike from there on.

Off the record.

Trial Examiner Ballinger: Off the record.

6625 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I withdraw the motion to strike just made and will make this motion:

Respondent moves to strike the answer of the witness beginning "but the function" on the ground that it was a voluntary statement, that it is unresponsive, that it is not relevant to the question, or the rest of the answer, and is unexplained and is not understandable, standing alone, and that the answer is, as it appears, is a complete answer to the question as propounded.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. The motion to strike is granted.

Mr. Austin: I would like to ask the witness a question.

Trial Examiner Ballinger: You may.

Mr. Austin: Was your answer directed solely to account 001, Mr. Warmack?

The Witness: No, sir.

Mr. Austin: Well, it is my understanding that the question was limited to account 001, and I request that the question be reread.

Trial Examiner Ballinger: Well, the Examiner, 6626 in view of the witness' answer, directs that the entire answer be stricken, and the question reread to the witness, and that he answer it.

The Witness: I cannot answer it as read, your Honor; I have stated my understanding of the question and I can answer that.

Trial Examiner Ballinger: Answer it in the light of your understanding.

Mr. Hanley: Of course, that is the best we can hope for anyhow.

Will you please reread the question to the witness?

Trial Examiner Ballinger: Reread the question to the witness. You had better read his understanding of it also.

Mr. Hanley: I do not know what his understanding is and do not care.

Trial Examiner Ballinger: His answer must be limited to this one account.

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: Now read his understanding.

6627 (The reporter read the answer.)

Mr. Hanley: May he not now reread it, just the ~~question alone? May he not restate it, your Honor, or perhaps I should better restate it if he does not under~~stand it.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Your Honor, I will just have to call this to the Respondent's attorney's attention in connection with that question which reads:

"If the records are not set up on an individual customer basis would not a schedule analysis of the duties of an individual whose salaries enter into this account"— do you mean right there for the purpose of determining cost of serving that customer?

By Mr. Hanley:

Q. Mr. Warmack, I mean just exactly what the question says. You say you have made a study of the Respondent's records, you should know better than I know. I just mean what my question says. If you cannot answer it, please just say so.

Trial Examiner Ballinger: Judge, the inquiry made by the witness of counsel appears to the Examiner to be a fair one. Cannot you throw some light on it?

6628 Mr. Hanley: Judge, I do not know. I want this on the record, if your Honor please. There has been considerable discussion about the meaning of the question just propounded by Respondent's counsel, and I would like to have all of that discussion appear on the record.

Trial Examiner Ballinger: Very well.

Mr. Hanley: And not be taken from it.

Trial Examiner Ballinger: Very well.

Mr. Hanley: The purpose of the question and certain ensuing examination will be also designed to test the knowledge of the present witness in respect of the cost of the Respondent in serving Ned's Auto Supply Company as distinguished from other members of the tank wagon reseller group of the Respondent's customers.

So far as the Respondent is concerned, there is no mystery asked of the witness.

It is simply designed to ascertain what the witness knows, if anything, about the method of the Respondent of keeping costs in respect of individual members of the reseller tank wagon customers group or in the alternative, what would be necessary in the matter of a cost study to determine costs in respect of any single customer in that group, as distinguished from the rest, if the company records were not set up on a customer basis.

Trial Examiner Ballinger: Now, in the light of 6629 the statement just made by counsel for the Respondent, do you understand the question and can you answer it?

The Witness: Well, if you please, ask him to read that question and let me write it down, I can tell you. I do not understand it, but I think I understand what the Judge wants, what he means.

Mr. Hanley: Judge, may we have our noon recess while Mr. Warmack looks at it?

Trial Examiner Ballinger: The request of counsel for the Respondent is granted.

And now, at 12:17 p. m., the hearing stands in recess until 2:00 p. m.

(Whereupon, at 12:17 o'clock p. m., the hearing was recessed to reconvene at 2:00 o'clock p. m.)

6630 Afternoon Session.

2:00 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination (Continued).

Mr. Hanley: If your Honor please, I believe there was a question on the record that the witness wanted to study during the noon recess.

Trial Examiner Ballinger: Are you prepared to answer the question?

The Witness: Yes, sir. I think so.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. Then I suggested to you that the 'customer basis' meant an individual customer.

"And I now ask you this question:

"If the records are not set up on an individual customer basis would not a schedule analysis of the duties of the individuals whose salaries enter into this account—being account 001—be necessary to determine whether any costs were incurred on any particular customers?")

6631 Trial Examiner Ballinger: Proceed.

The Witness: I do not know whether it would be necesary to determine whether any costs were incurred in account 001 on any particular customer.

It is my understanding that the costs in 001 represent clerical costs of supervisory officials.

It is my opinion that according to Respondent's accounting procedure, these clerical costs follow the costs of the supervisory officials.

By Mr. Hanley:

Q. Mr. Warmack, in connection with the 1937 year, and Respondent's Exhibit 31, did you make any analysis of acount 001?

A. No, sir.

Q. Do you know the influence, if any, of any criticisms that you may have of the treatment of 001 on Respondent's Exhibit 31?

The Witness: May I have the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: How would I know, Judge. I could not tell you.

6632 By Mr. Hanley;

Q. Is that your answer, Mr. Warmack?

The Witness: Read it.

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. Do you know the influence, if any, of any criticisms that you may have of the treatment of 001 on Respondent's Exhibit 31?")

Trial Examiner Ballinger: Do you know it?

The Witness: Yes, sir. I know this, Judge Ballinger. I know that a portion of the costs included in account 001 is properly applicable in some part to the serving of Ned's Auto Supply Company.

By Mr. Hanley:

Q. All right. Tell us, Mr. Warmack, what part?

A. I do not know. I have not made an analysis, and the only way you could know, Judge Hanley, would be to make an analysis.

Q. And you did not make it?

A. I did not make it.

Q. Very well. Did the files, records, correspondence maintained by the employees of the Respondent company, whose salaries are entered into account 001, have anything to do with Ned's Auto Supply Company in 1937?

The Witness: I will have to have that read.

6633 Trial Examiner Ballinger: Read the question.

Mr. Hanley: I will repeat it.

By Mr. Hanley:

Q. Did the files, records, and correspondence maintained by the employees of the Respondent company, whose salaries are entered into account 001, have anything to do with Ned's Auto Supply Company, in 1937?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Mr. Warmack, do you know—before you answer the last question on the record, I will ask you this:

If, as a matter of fact, you did or did not investigate the underlying data, files, records, and correspondence maintained by the employees whose salaries are entered into account 001 during 1937 in connection with your study—if you made any study—of Respondent's Exhibit 31 having to do with the year 1937?

The Witness: What is the question?

Trial Examiner Ballinger: Read the question.

(The reporter read so much of the question as follows:

"Q. Mr. Warmack, do you know—before you answer the last question on the record, I will ask you

6634 this:

"If, as a matter of fact, you did or did not investigate the underlying data, files, records, and correspondence maintained by employees"—)

The Witness: I did not investigate such data.

Mr. Hanley: Will you please finish the question.

(The reporter read the remaining part of the question as follows:

"whose salaries are entered into account 001 during 1937 in connection with your study—if you made any study—of Respondent's Exhibit 31, having to do with the year 1937?")

The Witness: I gave an answer to that.

By Mr. Hanley:

Q. Have you any further answer, Mr. Warmack?

A. I answered your second question, Judge Hanley, right there.

Q. Now, will you please answer the next preceding question?

A. What is it?

Mr. Hanley: Will the reporter please read it.

Trial Examiner Ballinger: Read the question.

(The reporter read the following question:

"Very well. Did the files, records and correspondence maintained by the employees of the Respondent com-
6635 pany, whose salaries are entered into account 001, have anything to do with Ned's Auto Supply Company in 1937?")

The Witness: I certainly do not know.

By Mr. Hanley:

Q. What duties did you find were performed by these employees which gave rise to any cost of serving Ned's Auto Supply Company in 1937?

A. I made no study of that point.

Q. Who actually handled Ned's account in 1937, among the various supervisors of the sales force, or among the salesmen in the sales force?

The Witness: Did you ask the men's name?

Mr. Hanley: Read the question.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

By Mr. Hanley:

Q. I just asked you the question—

The Witness: I would like to have the question again, please.

Trial Examiner Ballinger: Please read it again.

(The reporter again read the question.)

The Witness: As to supervisors, I do not know; as to salesmen, it is my understanding that Messrs. Robinson, Moulenberg, and Coutchie served as salesmen in calling on Ned's business during 1937.

6636 By Mr. Hanley:

Q. And that information is derived, is it not, Mr. Warmack, from Respondent's Exhibit 31?

A. 31-L; yes, sir.

Q. 31-L?

A. Yes, sir.

Q. And that is the only source of your information; is it not?

A. Well, I have read the testimony that was given, Judge Hanley, with respect to this particular point.

Q. Well, just answer my question.

A. Well—no.

Q. Have you any other information—I am asking you for it, Mr. Warmack.

A. I stated, your Honor, that I read the testimony.

Mr. Hanley: May I ask that that question be read again?

Trial Examiner Ballinger: Read the question again.

(The reporter read the question as follows:

"Q. Who actually handled Ned's account in 1937, among the various supervisors of the sales force or among the salesmen in the sales force?")

By Mr. Hanley:

Q. Have you any other information, Mr. Warmack, other than that which you have derived from Respondent's Exhibit No. 31, if so, please state what it is, and what the source of it is. 6637

A. The only information I have, Judge Hanley, is what secured from reading the testimony given us in this case.

Q. By whom?

A. By witnesses for the Respondent—I remember testimony on that point by Mr. Blough.

Mr. Austin: Mr. Blough was the witness for the Commission.

The Witness: That is right.

By Mr. Hanley:

Q. Mr. Warmack, is account No. 001 related to salesmen's salaries?

A. I will have to inquire, Judge Hanley: Do you mean salesmen's salaries as shown in 004, or which salesmen's salaries do you mean?

Q. Mr. Warmack, I wish you would please not ask me questions. I am just asking you what you know.

Trial Examiner Ballinger: Is it related to any salesmen's salaries?

By Mr. Hanley:

Q. You have made some kind of a study of this thing. Now, please just answer the question on that basis of whatever study you have made. If you do not know, why, say it, Mr. Warmack; that is perfectly satisfactory to me.

6638 A. I think I have stated that I made no analysis of this account 001 for the year 1937, and it is my understanding that the expenses which were concerned in account 001, account entitled "Salaries—Supervision—Others" represents compensation paid to office clerks, and costs of that nature of the supervisory officials of the company.

And it is further my understanding that the supervisory officials of the company included Mr. Hamer, who is an assistant manager in the Detroit field, for reseller; and Mr. Blough, assistant manager in the Detroit field, for wholesale business; if those two gentlemen are to be considered as salesmen, then this account relates to salesmen; if those two gentlemen are not to be considered as salesmen, then this account does not relate to salesmen; your Honor, that is the best answer I can give.

Q. Very well.

Did you ascertain whether Mr. Rupagh spent any time on this account in 1937?

A. No.

Q. And at the outset, may I inquire if you know who Mr. Rupagh is?

A. Yes, sir.

Q. Just for the sake of the record, state who he is.

A. Mr. Rupagh is the manager of the Detroit field.

Q. Now, your answer is that you did not make any investigation as to whether or not he spent any time?

6639 A. No, sir.

Q. Now, supposing, Mr. Warmack, that Mr. Rupagh did—and I state to you, and I think I am right, that the record discloses that Mr. Rupagh did spend some direct time in connection with Ned's Auto Supply Company—is there not a logical basis for considering account 000 and 001 on a different basis in Respondent's cost analysis as reflected by Exhibit No. 31?

Trial Examiner Ballinger: Are you familiar with that account?

The Witness: Yes, sir. I would like the question if ou please, your Honor.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: In my opinion, there is, most assuredly , but that answer does not go particularly to Rupagh's ccount, it goes to the premise from which the cost analysis made, as reflected by Respondent's Exhibit 31-A to Q.

Trial Examiner Ballinger: Well, you agree, then, there as a logical basis for a distinction in computing that acount; do you?

Mr. Austin: May I have the question read?

Trial Examiner Ballinger: No, I want him to answer my question.

640 Mr. Austin: It is your question that I would like to have read.

Trial Examiner Ballinger: Certainly, read it.

(The reporter read the question.)

Mr. Austin: I was not sure whether you said "for the istinction" or "for a distinction."

Trial Examiner Ballinger: "For a distinction."

Mr. Austin: Thank you.

The Witness: Now may I have the question.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: There may be, Judge.

Trial Examiner Ballinger: Do you agree or not that here was?

The Witness: I do agree that there could have been a roper separation made of this particular class of cost.

3y Mr. Hanley:

Q. Mr. Warmack, of course, Mr. Warmack, I suppose I an swim up Niagara Falls backwards; but that does not nswer any questions.

Did you make a study of this account? Are you preared to say from any study that you made what your pinion is?

A. With respect to what, please?

Q. With respect to the allocation of this particular account.

641 I will make it more specific, Mr. Warmack, did you or did you not determine whether or not M. Rupagh,

individually, spent any time on Ned's Auto Supply Company in the year 1937?

A. I did not individually determine that to be a fact.

Q. Do you know whether or not it is a fact?

A. I certainly do not know.

Q. Well, I think that settles it.

A. Yes.

Q. If he did spend direct time, Mr. Warmack, according to your theory of accounting, account 001 would not necessarily follow 000, would it, in so far as Mr. Rapagh's salary is concerned?

A. Part of it would.

Q. What part?

A. I am certain I could not give you a figure, Judge, as to what part it would follow.

Q. I am not asking for a figure. If you can just tell me in any kind of language what part of that, would you please?

A. I could answer your question, Judge Hanley, by an example.

Q. All right. You may answer the question.

A. Mr. Rupagh has stenographic assistants and other clerical assistants incident to his work, as well as other supervisory officials in the Detroit office.

6642 It is entirely possible that his activities influence the activities of those clerical assistants. And in view of that, it is a reasonable assumption, in my opinion, that the cost of such assistants should logically follow the allocations of the supervisor's time.

Q. Mr. Warmack, is not that purely conjectural on your part?

A. In this particular case?

Q. You say you had made no study of what Mr. Rupagh did.

A. In this particular case you ask if it is conjectural?

Q. Yes.

A. I am certain that I do not know if any stenographer or any clerical assistants worked for Mr. Rupagh's office in 1937, of my own knowledge.

Q. Apparently you do not know, Mr. Warmack, but assuming the fact to be—and I think it is a fact on the record—that M. Rupagh did lunch, and had conferences in his office with members of the Ned's Auto Supply Company from time to time during 1937—and during other years, as a matter of fact—what have you to say as an expert accountant as to whether or not account 001 would follow in any degree to the extent of a direct effort of Mr. Rupagh in connection with Ned's Auto Supply?

A. I certainly do not, and I could not know, without going into this matter further.

6643 Q. Well, did you make any investigation of that at all while you were in Detroit?

A. I certainly did not.

Q. Did you discuss the matter at all with Mr. Rupagh or with anybody else?

A. No, sir. You see, that includes—I may have discussed that with Mr. Houghton—I would not say that I did not, but I do not recall just now.

Q. Now, do you know from anything that you did, whether or not the Respondent's accountants analyzed, studied, or examined the files of the employees of the Respondent concerning account 061 to ascertain whether or not any cost was incurred in connection with Ned's Auto Supply?

A. Do I know that of my own knowledge?

Mr. Hanley: Will you just please read the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Well, may we be off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Back on the record.

The Witness: May I hear the question again?

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

6644 "Q. Now, do you know from anything that you did, whether or not the Respondent's accountants analyzed, studied, or examined the files of the employees of the Respondent concerning account 001 to ascertain whether or not any cost was incurred in connection with Ned's Auto Suppy?")

The Witness: I certainly do not know of my own knowledge whether the Respondent's accountants made any studies or not, and I could not know.

By Mr. Hanley:

Q. What?

A. And I could not know.

Q. Did you undertake to learn, Mr. Warmack?

A. No, sir. I think that was testified to by Mr. Boatwright, Mr. Boatwright told us about it on his examination by Mr. Austin.

Q. Mr. Warmack, do you thoroughly understand that the Respondent's Exhibit No. 31 is an effort to segregate one member or one customer in the tank wagon reseller group from the rest of the tank wagon reseller group?

A. Yes, sir. I understand that, Judge Hanley.

Q. Did you make any effort at all, while you were in Detroit, to determine the cost of the Respondent in serving the members of that particular group?

The Witness: May I hear the question again?

6645 Trial Examiner Ballinger: Do you mean individual members?

By Mr. Hanley:

Q. Yes, I mean individual members, Mr. Warmack.

A. No, sir.

Q. I am sure I asked you this before, Mr. Warmack, perhaps you will tel us again just how much of a study did you make about the year 1937?

Mr. Austin: Objected to as repetitious.

Mr. Hanley: I agree it is, Judge. I am sure I asked that question before.

Trial Examiner Ballinger: The matter has been fully gone into. Objection sustained.

Mr. Hanley: I am just trying to find out how much this witness did.

By Mr. Hanley:

Q. Mr. Warmack, who was in charge of the real estate and tax department in the Detroit field in 1937, if you know?

A. I do not know.

Q. Did you talk with anybody in Detroit in connection with that matter?

A. No, sir.

Q. Did any one tell you anything about ant contacts that may have been made by the real estate department of the respondent company with Ned's Auto Supply Company during the year 1937?

6646 A. I do not remember them discussing that question, Judge Hanley.

Q. Did you make any inquiry?

A. I do not recall that I did; I rather think that I did not.

Q. Do you know whether the company aided Ned's in the acquisition of any pieces of property during the year 1937?

A. I certainly do not.

Q. Do you know whether or not the files of the real estate and tax department of the Respondent company indicate anything in relation to any contract with Ned's Auto Supply Company during the year 1937?

A. I do not know.

Q. Do you know, as a matter of fact, whether Ned's Auto Supply, itself, had a real estate and tax man, and other officials who handled their tax and real estate problems?

Mr. Austin: Objected to as irrelevant and immaterial, and the witness would not know what Ned's Auto Supply Company did since we are concerned only with the Respondent in this case.

Trial Examiner Ballinger: Objection sustained.

By Mr. Hanley:

Q. Based upon what you have said about your knowledge, or lack of it, concerning the real estate and tax
6647 records of the Respondent company, I want to ask
you this, Mr. Warmack.

A. Yes, sir.

Q. Did you make a factual and objective study to determine whether the accountants for the Respondent company made an examination of the files, correspondence, data, and records of the real estate and tax department of the Respondent company for the year 1937 and were correct and accurate in their treatment of the cost entered in the three accounts, numbers 1215, 1216, and 1217?

Trial Examiner Ballinger: Judge, it appears to the Examiner that you have about three questions embraced in that one omnibus question.

Mr. Hanley: Well, Judge, if you think that, I will split it up.

Trial Examiner Ballinger: I think it would be better to split it up.

Mr. Hanley: I will be glad to withdraw the question and restate it, if your Honor thinks I should do so.

Trial Examiner Ballinger: Question withdrawn.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Read the previous question.

(The reporter read the question.)

Mr. Hanley: May it be understood that I withdraw the question?

6648 Trial Examiner Ballinger: Question withdrawn.

By Mr. Hanley:

Q. I will restate this question, Mr. Warmack:

Did you make a factual and objective study to determine whether the accountants for the Respondents had made an examination of the files, correspondence, records, and data of the real estate and tax department of the Respondent company for the year 1937?

A. Your Honor, the answer to that question would have to be, No, but I should like to explain that I do not understand the terms "factual"—"objective study"—to determine what their accountants had done; that is not my understanding of what those terms, as previously used have meant in this record.

I did not look into that matter, so the answer to the question would be—No.

Q. You have stated several times, Mr. Warmack, that in your opinion many of these accounts including 001, 215, 216, 217, were not handled on the basis of sound accounting.

You have now stated that you did not make any particular study of the data, records, facts, and accounts underlying an analysis of those accounts as they are reflected in Respondent's Exhibit 31.

I ask you now upon what do you base your opinion that the conclusions of the Respondent are not sound ~~account~~ing?

6649 A. With respect to each account—which accounts, will you please, Judge?

Q. 001, 215, 216, and 217.

A. Yes. I shall be glad to.

Q. Please do so.

A. It is my understanding account 001 entitled "Salaries—Supervision—Others" shown on Respondent's Exhibit 31-H in the amount of $4,550.06 represents that part of clerical assistants and similar expense incurred in the Detroit field for the year 1937 incident to supervisory activities and that that figure of $4,550.06 was separated on the company's regular accounting form 189 for the Detroit field on the basis of gallonage including Ned's gallonage and—

Q. (Interposing.) Mr. Warmack,—

A. I have not answered the question, Judge.

Q. I am sorry. Go ahead.

Trial Examiner Ballinger: Proceed.

The Witness: My first question, then, goes to the amount of $4,550.06, which was allocated on a gallonage basis, and I have never as yet been able to look at any documentary evidence which would show me that a study had ever been made by the Respondent company to support such an allocation factor as was used here in the regular accounting procedure.

Inasmuch as Ned's gallonage is used for the allocation
of this particular class of expense, in the absence of
6650 a study, which has not been made in my opinion thor-
oughly and properly, this figure of $4,550.06 must be
questioned from the standpoint of sound accounting. To my satisfaction, it seems demonstrated by the allocations made that a part of this expense is properly applicable to Ned's inasmuch as supervisors in the Detroit field must, to some extent, supervise the general activities of the field.

That answers your question with respect to 001 account.

Now, we will take up the 215 account entitled "Expenses—Salaries—Others"; for which there is shown on Respondent's Exhibit 31-H—

Q. (Interposing.) Well, just a moment, if you please.

Do you know whether there were any other expenses incident to the handling of Ned's business from any other study that you did or did not make?

A. I could not know that.

I have not answered your original question.

Q. In connection with account 1215?

A. Do I know?

Q. Now, listen, Mr. Warmack. I do not want you to testify to anything you do not know. You have said you did not make a study for the year 1937.

A. I have studied this document (indicating Exhibit 31).

Q. I am not asking you questions now about the
6651 general accounting procedure of the Respondent com-
pany in connection with its form 189. We will get to that in due course. I am not asking you that now.

I am asking you what you know.

A. Of my own knowledge?

Q. As a matter of fact, of your own knowledge about the facts relative to 1937.

The Witness: Your Honor, I know nothing with respect to the activities—

Trial Examiner Ballinger: (Interposing.) Judge, the witness has stated repeatedly that he has no personal knowledge of what had actually been done by the company, and that his testimony was based upon the statements of the company either appearing in the records or statements of representatives of the company to him in the office.

Mr. Hanley: Well, there were very, very few statements made about 1937.

Trial Examiner Ballinger: That is true with reference to 1937.

Mr. Hanley: 1937 was pretty sparse.

Mr. Austin: There is a good deal of testimony in the record about 1937, upon which the witness is entitled to rely.

Mr. Hanley: On the other hand,—well, there is only one way that I can handle it, in view of the attitude of
6652 the witness.

The Witness: Your Honor, I have not answered the first part of the former question. I have only answered a part of it.

Trial Examiner Ballinger: The witness has stated that he has not finished the answer to the original question.

Turn back to the question. Do you desire it reread?

The Witness: Yes, sir.

Trial Examiner Ballinger: Read the question.

Mr. Austin: The reporter is now going to read the question?

Trial Examiner Ballinger: Yes.

Mr. Austin: I would like to have that read on the record, because it is a long way back.

Trial Examiner Ballinger: That will be done.

(The reporter read the question as follows:

"Q. You have stated several times, Mr. Warmack, that in your opinion many of these accounts including 001, 215, 216, 217, were not handled on the basis of sound accounting.

"You have now stated you did not make any particular study of the data, records, facts, and accounts underlying an analysis of those accounts as they are reflected in Respondent's Exhibit 31.
6653 "I ask you now upon what do you base your opinion that the conclusions of the Respondent are not sound accounting?")

Mr. Hanley: I would like to have a recess at this time.

Trial Examiner Ballinger: We will recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Austin: If your Honor please, I suppose the witness has forgotten the question now that he was addressing himself to. Also, I understand he gave an answer to it.

In order that the record may be clear at this point, I am going to ask particularly that the question and everything that followed it up until the conclusion of his answer so far as he has given it be placed on the record so that the record will be complete in that regard.

The reporter will know where that is.

Trial Examiner Ballinger: The reporter will now read beginning with the question down to the point where the witness says he was cut off, and that will be spread on the record so that it will be clear.

(The reporter read the following:

"Q. You have stated several times, Mr. Warmack, that in your opinion many of these accounts including 6654 001, 215, 216, 217, were not handled on the basis of sound accounting.

"You have now stated that you did not make any particular study of the data, records, facts, and accounts underlying an analysis of those accounts as they are reflected in Respondent's Exhibit 31.

"I ask you now upon what do you base your opinion that the conclusions of the Respondent are not sound accounting?

"A. With respect to each account—which accounts, will you please, Judge?

"Q. 001, 215, 216, and 217.

"A. Yes, I shall be glad to.

"Q. Please do so.

"A. It is my understanding account 001 entitled 'Salaries—Supervision—Others' shown on Respondent's Exhibit 31-H in the amount of $4,550.06 represents that part of clerical assistants and similar expense incurred in the Detroit field for the year 1937 incident to supervisory activities and that that figure of $4,550.06 was separated on the company's regular accounting form 189 for the Detroit field on the basis of gallonage including Ned's gallonage and—

"Q. (Interposing.) Mr. Warmack,—

"A. I have not answered the question, Judge.

"Q. I am sorry. Go ahead.

6655 "Trial Examiner Ballinger: Proceed.

"The Witness: My first question, then, goes to the amount of $4,550.06, which was allocated on a gallonage basis, and I have never as yet been able to look at any documentary evidence which would show me that a study had ever been made by the Respondent company to support such an allocation factor as was used here in the regular accounting procedure.

"Inasmuch as Ned's gallonage is used for the allocation of this particular class of expense, in the absence of a study, which has not been made in my opinion thoroughly and properly, this figure of $4,550.06 must be questioned from the standpoint of sound accounting. To my satisfaction, it seems demonstrated by the allocations made that a part of this expense is properly applicable to Ned's inasmuch as supervisors in the Detroit field must, to some extent, supervise the general activities of the field.

"That answers your question with respect to 904 account.

"Now, we will take up the 215 account entitled 'Expenses—Salaries—Others'; for which there is shown on Respondent's Exhibit 31-H—.")

The Witness: For which there is shown for account 215 on Respondent's Exhibit 31-H the amount of $8,912.32.

6656 The expenses in that account cover and include expenses of the tax department and expenses of the real estate department in Respondent's Detroit field.

I first question the accuracy of the amount of $8,912.32 as shown on Respondent's Exhibit 31-H for this account. That figure was taken from the tank wagon-reseller column on Respondent's form 189, the Detroit field, for the year 1937.

That account was separated in 1937 on the basis of gallonage sold by the Respondent in the Detroit field for the year 1937. I question the accuracy of that allocation factor; that is, the gallonage basis, or the results to be obtained by the use of that allocation factor, as I have never seen any documentary evidence or figures of any kind which would support such an allocation factor, or prove the reasonable accuracy of the results of the use of the factor.

These employees, as I understand it, covered in account 215 entitled "Expense—Salaries—Others"; their duties

covered tax problems of the Respondent company and real estate problems of the Respondent company; and they at least included those activities in connection with the tax department, and the activities of the indivduals in that department have to do with taxes paid by the respondent company in the Detroit field and other general activities in the Detroit field such as taxes on bulk plants, taxes on
6657 office building.

And from the standpoint of sound accounting, your Honor, I certainly cannot see how some part of this class of expense could be considered as not being applicable to the serving of gasoline to the largest customer in the Detroit field.

By Mr. Hanley:

Q. When you have finished, let me know, please.

A. That answer will apply to accounts 216 and 217, inasmuch as the expenses shown on Respondent's Exhibit 31-H of those two accounts, which were arrived at, as I understand it, in the same manner as the expense was arrived at in the case of account 215, but inasmuch as the expenses of those two accounts follow the expenses in the account 215, the same objection raised with respect to the separation of account 215, and the fact that some part of that expense surely must apply to each and every gallon of gasoline sold in the field.

Trial Examiner Ballinger: Does that finish your answer?

The Witness: Yes, sir.

By Mr. Hanley:

Q. As a matter of fact, Mr. Warmack, the total gallonage in the field including Ned's gallonage was used as a divisor, was it not, in connection with these accounts, concerning which you have testified?

6658 A. Yes, sir.

Q. Does that make any difference in your answer at all?

A. That adds to the fact, to my conviction that inasmuch as Respondent company saw fit to use the gallonage, it certainly realized the fact that that gallonage should be charged to some extent with this class of expense.

Q. You saw Ned's outlets when you were in Detroit, did you not, Mr. Warmack?

A. I drove by two or three of them, Judge.

Q. What is your candid opinion as an accountant and as a layman as to whether or not those are unusual gasoline outlets, from the standpoint of volume?

A. Well, Judge Hanley, they are certainly large, beautiful stations.

Q. What is your candid opinion as an accountant and as a layman, as to whether or not the Respondent company could serve those outlets at a less per unit cost than it could serve the ordinary service or filling station?

Trial Examiner Ballinger: Per gallon?

By Mr. Hanley:

Q. Per gallon, per unit cost?

A. It is my opinion, Judge Hanley, that with gallonage increase; that is, sales per unit, the per unit of sales increases correspondingly the cost per unit decreases.

Q. Well, you are familiar with the gallonage, are
6659 you not, Mr. Warmack, in connection with sales to
Ned's Auto Supply Company?

A. I believe that that is shown in this record, Judge. I was just looking for it. I believe the record will show that for the year 1937 something over four million gallons were sold to Ned's Auto Supply Company by the Respondent company.

Q. In your judgment, is that a very,—very much more than is ordinarily sold to a service station, Mr. Warmack; that is, any single service station?

A. In my judgment, Judge, it is. I understand that that covers sales to several stations.

Q. Yes. What is your judgment as an accountant as to whether or not it would reasonably cost Respondent less per unit to sell to Ned's than it would cost the Respondent to sell to the ordinary service station?

A. I should think that it should cost sales per unit to sell to Ned's less, without making any independent study.

Q. Have you made any calculation as to how much less it might cost to sell to Ned's than to the average station.

A. No, sir.

Q. To the ordinary service stations?

A. No, sir.

Q. Are you prepared to say what the influence in
6660 figures in dollars and cents is upon Respondent's Ex-
hibit 31 as based upon your criticisms of the methods of accounting and procedures used by the Respondent?

A. Not at this moment I cannot, Judge Hanley.

Q. The Exhibit shows 0.529 cents differential. Are you prepared to say what difference you think there should be in that differential, if any, as the result of your criticisms of the accounting procedures used by the Respondent?

A. In dollars?

Q. In figures in dollars and cents.

A. No, sir.

Q. Would it be greater or less, or do you know?

A. From my studies of this set of exhibits, Respondent's Exhibit 31-A to 31-Q, inclusive, it would be my opinion, based upon the facts as set forth in these exhibits, that it would be less.

Q. But you have not figured that out, have you?

A. I have not made any independent study as to the effect or the change studies which I would consider proper and appropriate would make.

Q. Would it be one-tenth of a cent, or would it be ten one-hundredths of a cent, or would it be one cent, or what?

A. I certainly do not know.

Q. And advertising to the four accounts previously discussed by you, namely, 001, 215, 216, and 217, in your
6661 opinion as an accountant, Mr. Warmack, is there any
means other than that of a gallonage allocation that is more proper from an accounting standpoint to use to allocate expenses on these accounts?

A. Addressing yourself specifically to Respondent's Exhibit 31-H?

Q. Yes, I am talking about the accounts that I indicated.

A. I certainly do not know. In other words, to answer your question properly would mean that a study would have to be made, and methods employed, and you would have to determine the logic of your methods, and your procedure, and I just could not answer your question, sir.

Q. Well, I am asking you, do you know any better method—I do not care what kind of procedure you have to go through, Mr. Warmack, to find the answer. I am asking you, do you know now of any better method, right now, this minute?

A. I know this, that the method that the Respondent has used is certainly questionable, and a proper study may develop a better method.

Q. Now, when you say that it is questionable, does not that mean that you just do not know any better method?

A. I know that any method—

Mr. Hanley: (Interposing.) Now, if your Honor please, may I have an answer to that question?

Trial Examiner Ballinger: Yes.

The Witness: May I have the question read?

6662 Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Yes. I know a better method.

By Mr. Hanley:

Q. All right. State it.

A. A method whereby a portion of this cost is allocated to the preferred customer, Ned's Service stations.

Q. All right. Follow it out, how do you do it?

A. Make a study.

Q. Is that a study (indicating)?

A. Yes. It is a study, after a fashion.

Q. Just what is the matter with it, Mr. Warmack; what would you do?

A. You have set up, Judge Hanley, an isolated cost of serving one single customer, and all of these costs which you say or which we all know would offer a great resistance to a separation as between customers, you just arbitrarily say that they do not apply in any part to Ned's, and I criticize that from the standpoint of sound accounting.

Q. I understand that you do, Mr. Warmack.

Now, please tell me this: We are trying to find out what it costs to serve Ned's.

A. You want to find out from this study?

Q. On behalf of the Respondent, you tell us what would
you do as an expert accountant as distinguished from
6663 what the Respondent's accountants have done in an
effort to segregate those costs.

Now, just start right in and go right down the line and tell us what would you do as an accountant.

A. I would first make a study of the factors influencing each class of expense.

Q. Did you do that?

A. I was not called upon to do it.

Q. Did you do it?

A. I did not.

Q. Why?

A. Because I was not called upon to do it.

Q. You were sent to Detroit for two months, were you not, Mr. Warmack, to make a cost study; is that not true?

A. No, to review the facts underlying these documents.

Q. Is that not true?

A. No, it is not true.

Q. Were you not sent to Detroit to make a cost study?

A. If you will tell me what you mean by "cost study" because that is a very elusive term.

I was sent to Detroit to study the records of the Respondent which underlie these data which the Respondent has submitted to the Commission.

Q. And in making that statement, the data are Respondent's Exhibit 31; is that no true?

6664 A. 31-A to Q.

Q. And you did not make any study of the underlying data, did you, Mr. Warmack?

A. Relatively none. I did not go into these matters particularly, Judge Hanley.

Q. Tell us, will you not, please, Mr. Warmack, is it not true that you have no idea at all what it costs the Respondent company to serve Ned's Auto Supply Company as distinguished from any other customer, from any study that you ever have made any time, any place; now, is that not the fact?

The Witness: May I have that question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I certainly could not know what it cost to serve Ned's, or what it cost to serve any other customer served by the company in 1937.

By Mr. Hanley:

Q. I think that is what we have been trying to find out all of this time.

A. I see.

Q. Now, Mr. Warmack, you are familiar, I assume, with the evidence to the effect that this one-half cent differential was accorded to Ned's from about the fall of 1936 until the spring of 1938, and that at that time it was discontinued and that approximately thirty days later, in the spring 6665 of 1938, Ned's went on a tank wagon or jobber basis of buying?

Mr. Austin: Tank car.

By Mr. Hanley:

Q. Tank car—I am sorry—is that your understanding of the testimony, Mr. Warmack?

A. Yes, sir. I do not remember those exact dates, Judge, but it is my understanding that that is substantially what happened; I think that is about correct with reference to the dates.

Q. Now, you have criticized the study made by Mr. Boatwright and his assistants as reflected by Respondent's Exhibit 31 as to the cost to the Respondent of serving Ned's during that period from the fall of 1936 to the spring of 1938. You are aware, I assume, that that study was made some time in 1940, late 1940; is that your understanding?

A. It is my understanding, Judge, that this study was made either late 1940 or early 1941.

Q. Can you suggest any better method of cost separation or segregation to be applied as of late 1940 or 1941 to determine the cost to the Respondent of serving Ned's than was employed by the Respondent as exemplified in Respondent's Exhibit 31?

A. I believe that I can.

Q. Well, what would you do?

A. I will have to answer that generally—

6666 Q. (Interposing): I do not want you to answer it generally.

I would like to have your answer specifically, if you will, please, Mr. Warmack.

A. Well, to answer it specifically, Judge, I would have to study the functions involved much more thoroughly than this record will appraise them, but I can give you a general answer to that.

Q. Well, Mr. Warmack, until and unless you have made a specific study of the problems involved, which you have stated you did not do, do you feel your self competent and are you willing to assume the responsibility as an expert accountant to say that the methods employed by the Respondent's accountants are not sound, fair, and acceptable accounting methods?

Mr. Hanley: Now, just a moment, I would like to have you read that question to the witness before he answers it.

Trial Examiner Ballinger: Read the westion.

(The reporter read the question.)

The Witness: I will answer that this way: In my opinion, the methods employed are not productive of true and correct results.

Trial Examiner Ballinger: One moment. The answer is not responsive to the question.

6667 Mr. Hanley: Of course, it is not, Judge.

Trial Examiner Ballinger: Read the question again to the witness.

(The question was again read by the reporter.)

Trial Examiner Ballinger: You can answer that question "yes" or "no."

By Mr. Hanley:

Q. You can answer that "yes" or "no."

Trial Examiner Ballinger: And then offer an explanation.

The Witness: I do not know if it is susceptible to a "yes" or "no" answer or not.

Judge Ballinger, in the first instance, I have made a study, I have studied this record, I have studied this document, and as a result of that study I can answer the rest of the question.

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Is that your answer to the question?

A. I will answer the rest of it now. Read the rest of it.

Trial Examiner Ballinger: Read the entire question again.

(The reporter read the question as follows:

"Q. Well, Mr. Warmack, until and unless you have
made a specific study of the problem involved, which
6668 you have stated you did not do, do you feel yourself
competent and are you willing to assume the responsibility as an expert accountant to say that the methods employed by the Respondent's accountants are not sound, fair, and acceptable accounting methods?")

The Witness: The answer is "no," based upon the studies I have made in these matters and my knowledge, the answer is "no" is that the methods employed are not productive of accurate results sufficient to prove the cost differential.

Trail Examiner Ballinger: Mr. Warmack, you have testified many times to the effect that no conclusion could be arrived at until a study, careful study was made to determine which method of accounting should be adopted, have you not?

The Witness: That is correct, Judge.

Trial Examiner Ballinger: Now, did you make any study or investigation to determine what particular method of accounting should be adopted to ascertain the facts here desired?

The Witness: No, sir.

Mr. Hanley: I move to strike the answer of the witness in view of the question of the Trial Examiner, and the answer of the wtiness made thereto.

In view of the fact that it now appears that the
6669 witness again repeats his former testimony that he
did not make a study of the facts, data, information, and records for 1937 underlying Respondent's Exhibit 31, and he is not entitled to testify as an expert or otherwise in connection therewith until and unless a proper foandation is laid, which this witness has failed to lay.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. I will hear from counsel for the Commission.

Mr. Austin: I think it is perfectly simple. The witness says he made a study of this exhibit, and he is able to testify as an accountant that in his opinion the methods of accounting used were unsound and not productive of correct results, and it would not be necessary for him, in order to form that opinion, to make a study on his own account to determine just what other methods should be used.

In other words, his testimony that the methods used here are incorrect is apart from and does not depend upon his having made some other study of his own to determine what better methods should be used.

And I think it is perfectly consistent. He may very well have studied the method that has been used and know
that it is wrong without attempting to say exactly
6670 what should have been done. The man may know
that one method is wrong and another method would be better without having gone into a study to determine what the better method is.

Mr. Hanley: I do not care to argue it, but if I may ask the witness another question, I would like to get a question of fact definitely developed. I think it is in the record but I will try to get an answer.

Trial Examiner Ballinger: Before the Examiner rules?

Mr. Hanley: If I may.

Trial Examiner Ballinger: The Examiner withholds his ruling.

By Mr. Hanley:

Q. Mr Warmack, I am going to ask you this question, and it is not a question about your opinion—I do not care what your opinion is—I want a factual answer, and I want it "yes" or "no";

Did you or did you not make any factual and objective study of the Respondent's records for 1937 underlying and supporting Respondent's Exhibit 31?

Now, answer that "yes" or "no", Mr. Warmack, please.

A. I did not.

Mr. Hanley: If your Honor please, I think that indicates the ruling of the Court. He says he just did not make the study.

6671 Trial Examiner Ballinger: The Examiner was prepared to rule on the matter before the last question.

The Examiner sustains the motion, and the matter is stricken. It will remain in the record, so it will be available.

Mr. Austin: Is the record clear as to what is stricken?

Trial Examiner Ballinger: The ruling of the Examiner is that the answer the witness gave to Judge Hanley's question which reads as follows:

"Q. Well, Mr. Warmack, until and unless you have made a specific study of the problems involved, which you have stated you did not do, do you feel yourself competent and are you willing to assume the responsibility as an expert accountant to say that the methods employed by the Respondent's accountants are not sound, fair, and acceptable accounting methods?"

The answer to that question is stricken.

The Witness: There were two answers to that, Judge.

Trial Examiner Ballinger: If there are two answers they are both stricken.

Mr. Hanley: I move that we adjourn until tomorrow morning at 9:30 a. m., July 16.

Trial Examiner Ballinger: The motion is granted.

6672 And now, at 4:10 p. m., July 15, 1942, the hearing stands adjourned to reconvene at 9:30 a. m., July 16, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:10 p. m., July 15, 1942, the hearing in the above-entitled matter was adjourned.)

6673

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Thursday, July 16, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6674

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing in Docket No. 4389, case entitled "In the Matter of Standard Oil Company of Indiana," is reconvened pursuant to notice, at 9:30 a. m., July 16, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at the same place, July 15, 1942.

The reporter will note counsel for the Commission and the Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Hanley.

Q. Mr. Warmack, I wish you would please refer to Respondent's Exhibit 101.

A. Yes, sir.

Q. Starting with the top account 006, please state as breifly as you can, and still make what you regard as a complete answer, what your objection is to the methods used by the Respondent in allocating expenses. I want to summarize this thing. Some day some lawyer is going to have to write a brief.

6675 Trial Examiner Ballinger: Are you familiar with the question?

The Witness: Yes, sir. I have put all of that information in the record at previous times.

Mr. Austin: I am a little doubtful about that, myself; the witness has testified on those matters.

Is it proper cross-examination just to ask the same questions over again?

Trial Examiner Ballinger: Yes, sir.

Mr. Austin: Is that proper cross-examination to ask the same questions that he was asked on direct, and have him repeat his testimony?

Trial Examiner Ballinger: In the opinion of the Examiner, it is within the province of the counsel for the Respondent.

Mr. Austin: Have you your notes, Mr. Warmack, that you used on your direct examination?

The Witness: Yes, sir. I think I can find them. May we be off the record, Judge?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I do not care to have you indicate, Mr. Warmack what already appears in Respondent's Exhibits. All
6676 I am asking you is for your objection in what the Respondent did—not what the Respondent did, but your own objection.

Trial Examiner Ballinger: That is, your objections to the methods employed.

The Witness: I will have to call attention to the method to object to it, I believe, your Honor.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

The Witness: In the first place, I question the accuracy of the figures as set forth on Respondent's regular accounting form 189 in the seperate distribution channels for this particular account, inasmuch as those allocations were made on a basis of gallonage. The gallonage measuring factor, as far as I have been able to learn in my studies, and the accuracy to be derived from the use of it, has never been proven by this Respondent for the year 1940, or for any year.

That is my first objection to it.

The next objection would be: No part of this class of expense is assigned to automobile expense, it being my understanding that this covers managerial salaries, the salaries of supervisors in the Detroit field, some part of which salaries, in the absence of sufficient information to
prove that those supervisors did not supervise in any
6677 way any activities in the sale of automobile supplies,
or of that class of expense, in my opinion should be, some of it, applied to automobile supplies. Respondent's cost study has not gone into that point as far as I have been able to learn.

In the separation of the account between channels, as set forth on Respondent's Exhibit 101, the cost study made by the Respondent from which it obtained information for the preparation of Respondent's Exhibit 101 at its very outset was begun on the wrong premise.

It started with the assumption that the gallonage allocations were correct, that they had been properly proven, and that the amount allocated to the tank wagon reseller business of the Respondent in the Detroit field for the year 1940, in the Respondent's regular accounting procedure, was accurate and correct.

As far as I have been able to learn from my studies, that figure has never been proven to be accurate and correct by any factual and objective cost study in 1940 or at any time.

Starting with that premise, Respondent's accountants made a study in which or by which they endeavored to determine what portion of cost incurred in the Detroit field for the year 1940 could be considered as applicable to di-
rect shipment business, that information not being
6678 kept in the regular accounting procedure.

To determine that information, Respondent's accountants did not go to the extent to determine what portion of the cost would be applicable to the tank wagon reseller column on the basis of their study, but they did leave a figure in that column allocated on a gallonage basis which had never been proven as accurate and correct, and they set up costs in the jobber, naphtha and gasoline column, which were to be compared with the costs in the reseller column in determining the cost differential on the basis of effort of employees in the field.

Therefore, in this triple naught account entitled "Salaries—Supervision" on Respondent's Exhibit 101, we have a figure in the tank wagon reseller column of $31,114.25 which Respondent contends represents the cost of this class of expense applicable to tank wagon reseller business; whereas, in the jobber, naphtha and gasoline column, we have $320.20, which Respondents contend is all of the supervisory costs incurred in connection with this direct shipment business, and which was arrived at—the latter figure of $320.20—on a basis of effort as compared with the figure of $31,114.25 in the reseller being arrived at on a basis of bulk plant gallonage.

By Mr. Hanley:

Q. When and if you get to the end of your answer, 6679 you tell me, if you please, Mr. Warmack.

A. Yes, sir. I shall be happy to.

Therefore, in summary, the methods employed are inconsistent, unsound, and are not productive of proper and correct results.

Q. Have you finished?

A. Yes, sir.

Q. You have twice used the words that the methods of allocation employed by the Respondent were not proven. What do you mean by that—proven to whom?

A. Proven to anybody in the world.

Q. Mr. Warmack, is that your answer to that question?

A. Yes, sir. That is my answer to that question and I would like to explain that answer.

Mr. Hanley: (Interposing.) The Respondent moves to strike the answer of the witness as a purely unfair answer to the question, a question to the witness as an expert witness, and when he says the matter is not proven as a matter of accounting he should be able to state, and should state what he means by "proven" as an accounting matter:

If I may get off the record just a moment, Judge?

Trial Examiner Ballinger: All right. Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

6680 The motion is granted and the answer is stricken.

By Mr. Hanley:

Q. Mr. Warmack, before you answer the question, may I direct your attention to the fact that you spent a day testifying to the fact that all accountants were not in agreement about cost distribution?

That is true, is it not? I refer particularly to distribution cost accounting.

A. I do not know if I spent an hour or a day.

Q. Do you not remember, Mr. Warmack?

Trial Examiner Ballinger: Is it true that accountants are not always in agreement?

The Witness: That is very true, Judge—Judge Ballinger. He asked me if I spent a day.

By Mr. Hanley:

Q. I advert to the question I asked you; you have twice used the word in connection with the answer to the question as to account 000, that it is not proven—I would ask you now "proven" to whom?

A. Well, it is not proven to my satisfaction, Judge Hanley, as being accurate and supported by any documentary evidence representing any study of any kind at any time. I asked specifically for that information—

Q. (Interposing.) Now, just answer the question, Mr. Warmack. There are 126 of these accounts and I am
6681 going to go over every single one of them.

A. That is all right with me.

Q. Do you mean that it was not proven to your satisfaction?

A. I mean that you did not give me anything to show it—no documentary evidence.

Q. Well,—

Mr. Hanley: May I have an answer to these questions?

Trial Examiner Ballinger: One moment. Read the question to the witness.

(The reporter read the question.)

The Witness: It was not proven at all. You just did not have anything to support it.

By Mr. Hanley:

Q. Mr. Warmack, it was or was not proven to your satisfaction, is that what you mean when you say it was not proven?

Mr. Austin: I think the witness has stated twice what he meant.

The Witness: Judge, they did not have a single thing to prove anything with.

Trial Examiner Ballinger: One moment. Is that your opinion, is it?

The Witness: Judge, I prayed to them to give it to me.

Trial Examiner Ballinger: One moment. Was that your opinion, that they did not have anything to prove it?

6682 The Witness: That is what they told me.

Trial Examiner Ballinger: Was that your opinion?

The Witness: Yes, sir, that has to be my opinion—the answer—and of course I do not impung the good faith of these people, and I believe that they told me the truth, and I believed what they told me.

By Mr. Hanley:

Q. Now, do you disagree with the gallonage method of allocation in account 000, Mr. Warmack?

A. No, sir.

Q. I thought you criticized that. Did you or did you not?

A. I can state this, Judge Hanley, which will apply to that, and I believe it will be an answer to your question: I do not know if the gallonage method is proper or improper, and I could not know unless it were proven and established as a proper method by some cost study analysis.

Q. Again meaning proven to you; is that right?

A. (There was no answer.)

Q. Do not look at your counsel. Just answer the question, please, Mr. Warmack, it is a simple one.

Mr. Hanley: Will you please read the question to the witness.

Mr. Austin: I think proven means proven in his opinion, does it not?

Mr. Hanley: I suppose so, Mr. Austin, but the 6683 witness will have to answer.

The Witness: It certainly was not proven to me and I did not and do not see—if no figures could be offered to support it that it could be proven to anyone.

Mr. Hanley: Judge, I am sorry, but I will have to move to strike that answer of the witness.

Trial Examiner Ballinger: The last portion of the answer is stricken.

The Witness: Well, Judge, we want the facts in this record, do we not?

Trial Examiner Ballinger: Mr. Warmack, you are on the witness stand and you will answer the questions propounded to you.

The Witness: I want to tell the truth, and I am going to tell the truth.

Trial Examiner Ballinger: The Examiner inquires exactly what you mean by that.

The Witness: He asked me if this were proven to my satisfaction, and I stated that it was not proven to my satisfaction, that I had requested not once but many times that the Respondent's accountants furnish me with any documentary evidence, any paper with writing on it which the Respondents may have as a result of any cost study and analysis ever made by the Respondents even in the Detroit
field or elsewhere that would support the gallonage
6684 factors and they did not give them to me, and they
told me that they did not have them, and I think that
the record will show that.

Trial Examiner Ballinger: Therefore, it was not proven to your satisfaction?

The Witness: That is correct, your Honor?

By Mr. Hanley:

Q. All right, now, Mr. Warmack, I hope that we can get along a lot faster on each of these single accounts from here on, but in view of your statement I think that it would be well to lay some foundation.

You are familiar with this Respondent's regular accounting form 189?

A. Yes, sir.

Q. You were in the Detroit office for about two months?

A. Yes, sir.

Q. That is true, is it?

A. A little less than two months.

Q. You were in the Chicago office for at least a number of days?

A. Yes, sir. Probably less than a week.

Q. You met Mr. King, the chief accountant in charge of marketing operations, did you not?

A. Yes, sir. I met Mr. King.

Q. You saw I think perhaps hundreds of account-
6685 ants working on the marketing accounts of the Re-
spondent company; is that not true?

A. I do not know.

Q. Well, in your judgment, how many did you see?

A. I have no idea how many I saw, and I do not know if all the people I saw were accountants.

Q. Well, all right, Mr. Warmack. Did you see people working covering the entire seventeenth floor of the general office of the Respondent company, which people were working on the marketing accounts of the Respondent, or did you not?

A. I would like to answer your question but I can not answer that question.

Q. Well, if you can not answer it, say so.

A. I was on the seventeenth floor, I was on the eighteenth floor, I was on the fifteenth floor, and the other floors, and saw many people working.

Q. Well, answer the question, if you don't know that is all right, Mr. Warmack.

A. Very well.

Q. But please answer these questions, Mr. Warmack.

A. Very well.

Q. Now I ask you if you assume to say that there is no basis in studies or accounting practice for the allocation of accounting account 000 as made by the Respondent on Exhibit 100.

6686 A. No, sir. I do not say that there is no basis. I just say you did not give it to me if you had one.

Q. That is to say, you did not get anything that satisfied you?

A. I did not get anything.

Q. That is all.

A. I did not get anything.

Q. Mr. Warmack, you spent two months there, didn't you?

A. Yes, and on many days of that time I asked for this material, which was never furnished to me.

Q. Just answer my question. You spent two months in the Detroit office?

A. I believe the record will show that I went to Detroit January 11 and I left there around March 5: I think that is correct, and I believe that is about the time I put in on this case.

Q. I think that is. Now, just exactly what were you doing?

Were you not investigating, Mr. Warmack, the very basis of this system of accounting that is employed by the Respondent?

Is not that what you were assigned to do by the Commission?

A. Well.

The Witness: I would like to hear the question read, your Honor.

6687 Trial Examiner Ballinger: Read the question.

(The reporter read as follows:

"Q. I think that is. Now, just exactly what were you doing?")

The Witness: In answer to your first question, just what was I doing, I was making or endeavoring to make a study of the underlying data of the company from which Respondent's Exhibits 100 and 101 were prepared, and a good portion of that time I spent just trying to get this kind of information; that is, support for these gallonage figures which I have never gotten.

May I have the second part of that question read?

Trial Examiner Ballinger: Read it.

(The reporter read the following:

"Were you not investigating, Mr. Warmack, the very basis of this system of accounting that is employed by the Respondent?")

The Witness: I was making a study of that—in answer to the second part of your question.

May I hear the third part of the question read?

Trial Examiner Ballinger: Read it.

(The reporter read the following:

"Is not that what you were assigned to do by the Commission?")

Mr. Austin: Well, I do not think that the witness 6688 needs to answer that, it is, your Honor, what he was assigned to do by the Commission, and that is of no concern to the Respondent, it seems to me.

Mr. Hanley: It seems to me that it is. He is put on here as a witness against the Respondent.

Mr. Austin: Those instructions are confidential.

Trial Examiner Ballinger: The Examiner does not consider it proper to go into instructions given the witness by the Commission.

Mr. Hanley: Very well. I will confine myself to just what you did, Mr. Warmack.

By Mr. Hanley:

Q. Let me ask you this, just writing stories about the way they make their accounts, is that the way they do it; and is it not a fact that they just make the figures from the original data, the vouchers, and so forth?

A. They are supposed to write the truth, and any stories they write they are supposed to give the figures.

Q. I—

Trial Examiner Ballinger: Where do they get the figures from?

The Witness: From the original records, your Honor.

By Mr. Hanley:

Q. Now, Mr. Warmack, did you see or did you 6689 look for the original records for the underlying account or that underlie account Triple Zero?

A. Part of them.

Q. Well, what part in fact was it that you got that you have in mind when you are criticizing this account?

A. Well, I certainly know what I am talking about, Judge Hanley.

Q. How many did you look at?

A. How many what?

Q. Original documents and vouchers?

A. Why, I have a whole book of copies of them right here, if you would want to look at them. I do not know how many I looked at.

Q. I am just asking you to tell me, Mr. Warmack, please.

A. I—

Q. (Interposing.) I want to know what you did at Detroit.

A. I made a regular accounting study to determine just what Respondent company does in its regular accounting procedure in the Detroit field and to what greater refinement than that, if any, that it went to in its late—as you know—cost study of which Respondent's Exhibit 101 was the result.

Q. All right. You made that kind of a study, that is right.

A. I made a study of that account, just a short study.

Q. All right, Mr. Warmack. Just tell us please what the influence is in figures in dollars and cents on 6690 the cost differential as the result of your study and your criticism of account 000 on Respondent's Exhibit 101.

A. I do not know.

Q. Well, we will see how much of a study you made.

A. I did not make a study to determine any proper method of allocation.

I made a study to determine if you had followed sound accounting principles, and in my opinion you have not, and that has been my study only, and I cannot give you a figure as you have just asked.

Q. Well, this applies to account—pass please to account 001.

A. Yes.

Q. Did you examine into that account?

A. To some extent, yes, sir.

Q. In your studies in Detroit?

A. To some extent, yes, sir.

Q. Well, what is the matter with it, in your view as an expert accountant?

A. The same comments given with respect to account 000 entitled "Salaries—Supervision" will apply equally to this account 001 entitled "Salaries—Supervision—Others" except for the figures I quoted.

Q. Very well. What is the influence in figures in dollars and cents of your criticism of account 001 of 6691 the differential 1.51?

A. The same answer—

Q. (Interposing.) Asserted by the Respondent as the cost differential in this case?

A. The same answer with respect to account 000 will apply to account 001, inasmuch as account 001 follows the Triple Naught account in its allocations.

Q. Having made no calculations, Mr. Warmack, do you know whether or not it would increase or decrease or alter the differential?

Mr. Hanley: Just a moment. Will you please read that question to the witness, and listen to it please, Mr. Warmack.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I could not know that.

By Mr. Hanley:

Q. Please pass now to account 002.

Did you make a study of that account, Mr. Warmack?

A. No, sir.

Q. Did you make any study at all of that?

A. No, sir. You are speaking, Judge Hanley, of your underlying records in the Detroit and Chicago office; I made no studies there of that account.

Q. I am asking you what you did now.

A. I have studied our records, these records and
6692 these particular accounts, and these reports.

Trial Examiner Ballinger: Do you mean exhibits?

The Witness: Yes, sir, exhibits, Respondent's Exhibits 99, 100, and 101.

By Mr. Hanley:

Q. Well, I understand it to be true, just to be entirely fair to you, Mr. Warmack, that you have read Respondent's Exhibits 99, 100, and 101, which exhibits treat all of the accounting or account numbers as they appear on Respondent's Exhibit 101?

A. Yes, sir.

Q. That part is true, is it?

A. Yes, sir.

Q. Now, my question goes into your study of the underlying data, facts, records, and accounts.

A. Yes, sir.

Q. In respect of account 002.

A. Yes, sir.

Q. While you were in Detroit for two months and in Chicago for approximately a week?

A. Well, I was away from Washington a little less than two months all together.

Mr. Austin: Your Honor, perhaps I had better make objection at this time, which, if sustained, may save a little time.

6693 Commission's Exhibit 133 lists certain accounts, and aside from those that are marked with an asterisk, the figures are taken from Respondent's Exhibit 101, and the differential produced by those figures for those respective accounts of differentials are not attacked for the purpose of this proceeding.

Consequently, I object to any questioning upon any of the accounts listed on Commission's Exhibit 133, except the ten marked with the asterisk, upon the ground that there is nothing to be accomplished by such an examination, and that it would simply encumber the record, and in many cases result in questioning the witness upon matters upon which he was not questioned on direct examination, and there is no issue as to those accounts, and therefore no necessity for testimony.

Trial Examiner Ballinger: Were they inquired into on direct examination?

Mr. Hanley: All of them.

Mr. Austin: Some of them were, a few of them; the majority were not.

Mr. Hanley: If your Honor please, I submit that the Respondent is not bound by Commission's Exhibit 133.

I propose to ask this witness as to his views in connection with each of these accounts, if he approves them, as he may do, in view of the concession in Commission's
6694 Exhibit 133 that will finish the inquiry into that
particular account; but the Respondent is by no means bound by any exhibit which the Commission may put in here.

Trial Examiner Ballinger: Judge, if the Commission does not controvert certain items in the account appearing as Respondent's Exhibit 101, there is no issue of fact.

Mr. Hanley: There is no issue of fact, if your Honor please—

Trial Examiner Ballinger: Not as to that account, as to that item.

Mr. Hanley: There is no issue? I admit that was a weasel-worded, Indian gift, and I just cannot be bound by it. I am perfectly willing to have the witness say that he approves the account, and if he does, that ends the inquiry at that one question, Judge, but I want to know what he thinks about every one of these accounts.

Trial Examiner Ballinger: The Commission has conceded for the purpose of this case the accuracy of certain items appearing in Respondent's Exhibit 101, as portrayed in Commission's Exhibit 133. Now, as to those items there can be no issue of fact. They are conceded for the purposes of this case.

Mr. Hanley: Well, if they are conceded, Judge, I am not sure that they are conceded, however.

Trial Examiner Ballinger: They have been, and
6695 the Examiner now so states on the record, and if the
Examiner is not correct counsel for the Commission will correct me.

Mr. Hanley: Will you, please, Mr. Austin?

Mr. Austin: They are conceded for the purposes of this case. As I said before, we do not intend to claim that the Respondent is not entitled in this proceeding to claim the differential shown in this exhibit—

Trial Examiner Ballinger: And you refer to Commission's Exhibit 133?

Mr. Austin: That is right.

Mr. Hanley: All right. May it be conceded that account 002 entitled "Sales Promotion" Respondent's Exhibit 101 is conceded as accurate by the Commission as indicated by its Exhibit 133?

Trial Examiner Ballinger: For the purposes of this case.

Mr. Hanley: Yes, sir, of course, that is all we are interested in.

Mr. Austin: If you will limit your concession to the figures entered—in the amount of expense entered in the tank wagon reseller and jobber, naphtha and gasoline columns, respectively, I might concede it, but I would rather make the concession as to the amount of expense which is the only thing we are concerned with, than to say that the account, as a whole, is correct.

6696 Mr. Hanley: Well, Judge, do you see that that is the whole trouble as far as the Respondent is concerned, there is no concession, because he is always attaching too many strings to it.

Trial Examiner Ballinger: Judge, the only question in this case goes to the accuracy of the figures in tank wagon and the direct shipment columns.

Mr. Hanley: That is right and I have been objecting on that basis all through the case.

Trial Examiner Ballinger: Now, those figures for the purposes of this case are conceded to be correct?

Mr. Austin: That is correct.

Mr. Hanley: All right, if we may depend upon that, but I just never got a concession like that before.

Trial Examiner Ballinger: You may depend upon that statement.

By Mr. Hanley:

Q. Now, Mr. Warmack, I ask you now about account 003; what, if anything, is wrong with that, in your judgment as an accountant?

Mr. Austin: That is one of those we were just talking about.

Mr. Hanley: If it is in here I want to ask about it.

Trial Examiner Ballinger: The figures appear in the tank wagon and direct shipment columns on Respond-
6697 ent's Exhibit 101 and they are the figures which are conceded to be correct, for the purposes of this case.

Mr. Austin: For the purposes of this case. I hope we do not have to go into all of these accounts.

Mr. Hanley: Well, I am going to go into every single one of them.

Mr. Austin: I made my concession to save time. If it is not going to save time, which was the sole reason for it, I think I will withdraw the concession—I think I will withdraw the concession and I will stand on the concession as it is stated at the time the exhibit was offered.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection of counsel for the Commission is, in part only, sustained.

Prior to the admission of Commission's Exhibit 133 in the record, counsel for the Commission stated that for the purpose of this case only, the differentials between the figures appearing in the tank wagon and direct shipment columns on Respondent's Exhibit 101 in so far as they were portrayed on Commission's Exhibit 133, were conceded, but that counsel for the Commission reserved the right at the final hearing to argue the question as to
6698 the correctness of the accounting methods employed by the Respondent.

Mr. Austin: Your Honor, perhaps I should interrupt—

Trial Examiner Ballinger: Just a moment.

Mr. Austin: I do not think that is quite correct.

Trial Examiner Ballinger: Now, if it is not, I want it corrected, Mr. Austin.

Mr. Hanley: That is the whole trouble here, Mr. Austin, you have not made a concession.

Trial Examiner Ballinger: If you will turn back to it, and let us see what the record shows at that point. That may take a little time.

We will take a five minute recess for that purpose.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Read my statement as it was stated before the recess, and I will ask Mr. Austin and Mr. Hanley to listen to it.

in the light of the examination of the record made during the recess.

(The reporter read the statement of the Examiner as follows:

"The objection of counsel for the Commission is, in part only, sustained.

"Prior to the admission of Commission's Exhibit 133 in the record, counsel for the Commission stated that for the purpose of this case only, the differentials
6699 between the figures appearing in the tank wagon
and direct shipment columns on Respondent's Exhibit 101 in so far as they were portrayed on Commission's Exhibit 133, were conceded, but that counsel for the Commission reserved the right at the final hearing to argue the question as to the correctness of the accounting methods employed by the Respondent.")

Trial Examiner Ballinger: Mr. Austin, so far as I have had it read by the Reporter, is that correct?

Mr. Austin: Yes, sir. That is correct.

Trial Examiner Ballinger: Then I will proceed.

The Examiner refers to the record commencing at page 6460 for the factual basis of the statement just made. In view of the concession of counsel for the Commission, the examination of this witness on all items of account appearing on Commission's Exhibit 133 will be limited to the method of accounting employed—

Mr. Austin: (Interposing.) Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

—except the accounts marked with an asterisk relative to which counsel is at liberty to go fully into the matter if he cares to do so.

Mr. Hanley: Off the record.

6700 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

Mr. Austin: In view of the fact that my objection has not been sustained in full, and in view of the fact that at the bottom of page 6460 of the record, or on that page, the purposes of the limitations of Commission's Exhibit 133 are explained fully, and the position of counsel for the Commission is also explained fully on those pages of the record beginning with page 6460, I notice, and continuing thereafter, I prefer to withdraw any concessions as to the correctness of the figures or otherwise which I have made this morning in connection with the discussion of the objection and prefer to stand upon the statements made in connection with the offering of Commission's Exhibit 133 at pages 6460 and following on the record.

Trial Examiner Ballinger: Notwithstanding the withdrawal of the concession, the Examiner will confine the cross examination within the limits above defined.

Mr. Hanley: The Respondent now requests that the Court grant permission to the Respondent to examine in connection with each account appearing on Respondent's Exhibit 101 irrespective of Commission's Exhibit 133 as to the two following propositions:

First: The propriety of the accounting procedures
6701 in the judgment of the expert witness on the stand;

Second: The influence in figures and dollars and cents upon the cost differential as disclosed by Respondent's Exhibit 101.

This request is made on the basis of the fact that the alleged concession made by the Commission by its Exhibit 133 is a misnomer and is not a concession at all, but is so hedged with reservations as to constitute no admission of the accuracy of any of the evidence offered by the Respondent.

Trial Examiner Ballinger: The first request comes clearly within the scope of the Examiner's previous ruling, and would be permissible.

The second request is probably outside of the scope, but if counsel for the Respondent deems it material to his case, he may ask questions along the line indicated in his request.

Mr. Hanley: Very well.

By Mr. Hanley:

Q. I think we had reached, Mr. Warmack, account No. 003, and if you approve, that is all that is necessary to say in view of this discussion about Commission's Exhibit 133—if you do not approve, please state briefly what your criticisms are.

Trial Examiner Ballinger: Now, when you use the word "prove" do you mean just the proof of the
6702 differential, or is it the proof of the method of accounting?

Mr. Hanley: Proof of the method of accounting, if your Honor please. As I understand it, the witness has already testified that he does not question or dispute the arithmetical calculations and the figures that appear on the several exhibits of the Respondent; so, when I say "Do you approve," I mean do you approve the accounting methods.

By Mr. Hanley:

Q. Of course, Mr. Warmack, if you disapprove of the arithmetical calculations, I want you to say so at any time —I just understand that you did not do so from your former testimony.

A. That particular account—that is account 003 entitled "Salaries — Sales Promotion — Others" — was not studied by me in my field examination in Detroit and Chicago when I spent a little less than two months investigating the data underlying Respondent's Exhibit 101 and Respondent's Exhibit 100 earlier this year. Therefore, I do not approve and I do not disapprove this.

I do not know anything about it.

Q. I call your attention to Commission's Exhibit 133 on which that particular account appears identical as it appears on Respondent's Exhibit 101. Do you agree or do you disagree that that is an accurate calculation?

A. I know nothing about it.

6703 Mr. Hanley: Off the record, Judge.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I now call your attention, Mr. Warmack, to account 004 entitled "Salaries—Salesmen"—

Mr. Hanley: I withdraw that.

By Mr. Hanley:

Q. Please advert to 003 for a moment.

A. Yes, sir.

Q. Is there or is there not in your view any influence in dollars and cents in figures on the differential, the cost differential, as indicated by Respondent's Exhibit 101, as the result of your study of account 003?

A. Judge, there could not be.

I stated I did not study the account. I do notice that in that particular account there is some portion of that expense assigned to automobile supplies. That is a little interesting.

Q. Well, what is the effect on the differential?

A. I do not know.

Q. What?

A. I do not know.

Q. You do not know?

6704 A. I do not know.

Q. Would it increase or decrease it?

A. I do not know, I—

Q. (Interposing): Averting—

The Witness: What would increase or decrease? You say, would it increase or decrease? What?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Do you understand the previous question, Mr. Witness?

The Witness: I am afraid I do not, Judge.

Trial Examiner Ballinger: You may answer it.

The Witness: May I have it read, please?

Trial Examiner Ballinger: Read the question referred to.

(The reporter read the following question:

"Q. Well, what is the effect on the differential?")

The Witness: I just do not understand what he is talking about.

Mr. Hanley: May I ask a question?

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. Mr. Warmack, the differential as disclosed by Respondent's Exhibit 101 is 1.51 cents, as between the cost of selling to tank wagon reseller customers and to
6705 jobber or tank wagon customers.

I am now asking you if any study that you made in respect of account 003 results in any influence in figures in dollars and cents upon that differential of 1.51 cents, as to whether or not it increases it or decreases it, and if so, how much.

A. The answer is "No, sir"; for the reason that we did not study the underlying records of account 003.

Trial Examiner Ballinger: You say "we"; whom do you refer to?

The Witness: I refer to?

Trial Examiner Ballinger: Yes.

The Witness: Myself and any other members of the Commission's staff that might have occasion to study it.

By Mr. Hanley:

Q. Well, did any other study it?

A. I stated that it was not studied by me nor by any other member of the Commission that I knew, therefore I could not answer your question, Judge Hanley, except by "no."

Q. Now, adverting to account 004, "Salaries—Salesmen"; did you study that account?

A. Yes, sir.

Q. Well, what is wrong with that account in your view as an accountant?

6706 A. It would be easier to say what is not wrong with it.

Trial Examiner Ballinger: Answer the question.

The Witness: Judge, this account—what?

Trial Examiner Ballinger: Answer the question.

The Witness: Very well.

By Mr. Hanley:

Q. Just as briefly as you can, please.

A. This will not be brief, I assure you, Judge Hanley. This class of expense entitled "Salaries—Salesmen", which is Respondent's account 004 is made up of a large group of salesmen who are classified or separated by the company into several sub-groups.

The salaries of these salesmen range from below two hundred dollars per month to around four hundred dollars per month.

In Respondent's regular accounting procedure in the separation of this class of expense between distribution channels no effect is given to this large spread in difference of salaries. I do not object to that from the standpoint of the company's regular accounting procedure, but most assuredly object to it from the standpoint of proving a cost differential.

Q. Will you explain that and explain also what you mean by proving—proving to whom?

A. Respondent prepares during the third month of each quarter during the year, distribution sheets, which 6707 show proportions of the respective sub-groups of salesmen included in this account 004, and those distribution sheets are used for the separation of this class of expense to distribution channels during the next three ensuing months, but the estimated time or estimated proportions of time which each of the sub-groups of salesmen are expected to spend in the serving of customers falling in the separate channels during the next three ensuing months in each instance are all added together irrespective of the salary range within the groups, or as between groups, and so forth, and composite percentages are arrived at, and those composite percentages are then applied, by months, to the expense in this account and separated according to channels.

There is much more detail than I have gone into here in connection with this, or as is shown on Respondent's Exhibit 100—

Q. (Interposing): Please do not read from Respondent's Exhibit—

A. —page 2.

Q. —I am just asking you what your criticisms are, Mr. Warmack.

A. —page 2, and cost of those other and various factors and I could take one month item by item and show you just how wrong it is.

6708 Q. Did you?

A. I certainly did.

Q. All right. Show us.

A. I will get the working sheets, Judge.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: Perhaps this would answer the situation, Judge.

By Mr. Hanley:

Q. I think you have testified to this, Mr. Warmack—

A. Yes, sir.

Q. —would it suit you by way of an answer if you refer to your former testimony on the subject, if it is not or if it is in here—if it does not, why, do not concede that.

A. I would suggest that that should have been done at the outset here.

Mr. Austin: Just answer the question, and do not volunteer anything.

Mr. Hanley: Just answer if that is sufficient to satisfy you, if not—

The Witness: Quite sufficient to me, but I can give you the whole story if you wish.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

6709 Trial Examiner Ballinger: On the record.

The previous testimony of the witness will be found on pages which will be stated by counsel when they locate it.

By Mr. Hanley:

Q. Mr. Warmack, what is the effect in figures in dollars and cents of your ideas as to the way that account 604 ought to have been handled on the cost differential of 1.51 cents resulting from Respondent's Exhibit 101?

A. I do not know.

Q. Did you make any calculation?

A. No, sir.

Q. Did you calculate that one month you talked about?

A. I have made a thorough analysis of one month and—

Trial Examiner Ballinger: One moment.

Read the question.

(The reporter read the question.)

The Witness: Tell me what you mean by "calculation", "calculate one month," I would like to know "I talked about" and I will answer it.

Mr. Hanley: Will you please go back to the answer of the witness? I am sorry, Judge, to have to take this time.

Trial Examiner Ballinger: Very well. The reporter will
read the answer of the witness, the last long answer
6710 given by the witness, and everything following that.

(The reporter read the material referred to.)

Trial Examiner Ballinger: Proceed.

The Witness: May I hear the question now?

By Mr. Hanley:

Q. Did you calculate that one month you talked about?

A. I have made a thorough analysis of one month from the standpoint of determining just how the accounts were handled, how this cost moved through and was placed in the separate channels; not an analysis and study made independently by me to determine what the cost differential was or should be for that month.

This analysis goes to the point of exactly what the company did, and I could not say in dollars and cents what effect any separate separation of costs would make on the cost differential of 1.51 cents claimed by Respondents in Respondent's Exhibit 101.

Q. Well, did your analysis go to what, in your judgment, as an accountant, you think the company ought to have done, Mr. Warmack?

A. I could never tell what that ought to be, I could never tell what they ought to have done, Judge, without making a study of their whole situation, myself, to determine what methods would have to be employed, and then employ those methods or in determining if they were workable.

6711 Q. Well, did you ever make such a study?

A. No, sir.

Q. Did you make it during the two months that you were in Detroit—

A. (Interposing): No, sir—and I do not think it could be made—

Q. —or while you were in Chicago?

A. No, sir.

Q. Have you ever made it?

A. No, not for this company—

Q. (Interposing): All right. Now, tell me if you will, please, and if you know, whether or not your criticism of the Respondent's handling of account 004 "Salaries—Salesmen" has any effect one way or another upon the differential, the cost differential of 1.51 cents as indicated by Respondent's Exhibit 101?

The Witness: May I hear the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not know what a thorough study and analysis of this class of expense and the functions involved would show, Judge Hanley.

Mr. Austin: If your Honor please, the witness I think was interrupted a moment ago at the end of a statement he was making, just now, on the record, and I do not think the state of the record now is to state that the 6712 witness intended, and I think he should be given an opportunity to complete or correct what he said if he did not do so. I would like to go back about two or three questions and answers in order to do that.

Trial Examiner Ballinger: Read the question referred to.

(The reporter read the following question and answer:

"Q. Did you make it during the two months that you were in Detroit—

"A. No sir—and I do not think it could be made—")

Trial Examiner Ballinger: Do you desire to amplify that answer?

The Witness: What I was trying to say is in the absence of a thorough cost analysis—I would be glad if that might be added.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Now, do you desire to correct any of the testimony that has been reread to you off the record?

The Witness: I desire to complete my statement which was stopped when I was interrupted, Judge.

6713 Trial Examiner Ballinger: Proceed.

The Witness: My answer was—

Trial Examiner Ballinger: The reporter will repeat at this time the question and answer so far as given to which the witness wishes to make an addition.

(The reporter read the following:

"Q. Did you make it during the two months that you were in Detroit—

"A. No, sir,—and I do not think it could be made—")

The Witness: No, sir, I do not think it can be made by me or any other accountant in such a short time.

By Mr. Hanley:

Q. Is that the conclusion of your answer?

A. Yes, sir.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Do I understand that the proper method of accounting could not be arrived at or determined on Respondent's account 004 appearing on Respondent's Exhibit 161, in a two months' effort?

The Witness: It is my opinion it could, Judge.

Trial Examiner Ballinger: I understood you to 6714 just state on the record that it could not be ascertained and determined within a two months' period—

The Witness: (Interposing.) No, sir.

Trial Examiner Ballinger: —or did you say that it could not be determined and computed within the two months' period?.

The Witness: I do not believe I stated that either, Judge.

Trial Examiner Ballinger: Read what the witness did say.

(The reporter read the following:

"A. No, sir, I do not think it can be made by me or any other accountant in such a short time.")

The Witness: I had outlined in that answer, your Honor, briefly the procedure—

Mr. Hanley: Just one moment. I would like to have that read, the question of the Trial-Examiner to the witness and his reply.

Trial Examiner Ballinger: Read it.

(The reporter read the material referred to.)

Mr. Hanley: Now, do I understand that the witness is attempting to answer any pending question? I do not believe there is any pending question.

Mr. Austin: That is a question by the Examiner.

Trial Examiner Ballinger: Do you care to make
6715 any further statement in answer to the Examiner's last question?

The Witness: Yes, sir, I shall be glad to tell you what I meant, Judge Ballinger.

Trial Examiner Ballinger: You may do so.

The Witness: In my previous answer.

Trial Examiner Ballinger: Please do so.

The Witness: Previously, I answered that, to determine properly from the standpoint of sound accounting what separation should be made, it would be necessary to employ the methods in the separation of this class of expense which in fact would be measuring factors developed by thorough cost studies and analysis.

Mr. Hanley: Well; just a moment, Mr. Warmack, that is not responsive.

The Witness: Well, can I finish my answer?

Mr. Hanley: No, not until I make my motion, please.

Trial Examiner Ballinger: Let the witness finish.

Mr. Hanley: May I make the motion?

Trial Examiner Ballinger: Not until the witness finishes his answer

The Witness: Will you please read it to me as far as I have gone?

Trial Examiner Ballinger: Read it to the witness as far as it has been stated.

(The reporter read the answer so far as given, as 6716 follows:

"The Witness: Previously, I answered that, to determine properly from the standpoint of sound accounting what separation should be made, it would be necessary to employ the methods in the separation of this class of expense which in fact would be measuring factors developed by thorough cost studies and analysis.")

The Witness: (Continuing.) I have not made such a study, your Honor, and in my opinion, in order to determine a cost differential I doubt if such a study could be made to cover this particular account, and the other accounts which would have to be separated in Respondent's Exhibit 101 for the purpose of determining a cost differential within the space of a two months' period.

That is what I intended to answer, your Honor.

Trial Examiner Ballinger: What the Examiner had in mind was some idea of the approximate time and effort it would require to make a study which you have suggested should be made with reference to each item appearing on Respondent's Exhibit 101.

The Witness: Your Honor, you see, studies could be made of all these, could be made more or less together. What I had particular reference to was in this particular account—

Mr. Hanley: Off the record.

6717 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: I move that we adjourn until 1:30.

Trial Examiner Ballinger: The motion is granted. And now, at 12:10 p. m., the hearing stands in recess until 1:30 p. m.

(Whereupon, at 12:10 o'clock, p. m., a recess was taken until 1:30 o'clock p. m., the same day.)

6718 Afternoon Session.

1:30 p. m.

Trial Examiner Ballinger: Come to order.

WILLIAM J. WARMACK, resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (continued).

Q. Directing your attention, Mr. Warmack, to account No. 005 "Salaries—Advertising", please state as briefly as you can, what you think is wrong with the way that the Respondent has handled that account, and what you think ought to be done with it.

A. That account is allocated between channels on Respondent's form 189 on a basis of gallonage exclusive of a portion of the account which may have been allocated directly, if any.

The same objection that I have raised in this regard with respect to the usage of the gallonage factor; that is, bulk plant gallonage as a measuring factor before thorough accounting study which would support the usage of the gallonage factor as a measuring stick, so to speak, for the separation of its costs.

In addition to that, Respondent's accountants in the late cost study reflected in Respondent's Exhibit 100 and Respondent's Exhibit 101 endeavor to isolate out of 6719 charges which had been regularly allocated to distribution channels on Respondent's regular form 189 for the year 1940, endeavor to isolate out of those costs a portion of costs which they considered applicable to direct shipment business on a basis of effort.

There again we come to the point—

Q. (interposing.) "We" do not come to it. You state what you come to, please, Mr. Warmack.

A. I come to it, if you will just be quiet and give me time to answer I will answer your question.

Mr. Austin: He was using the "we" editorially.

The Witness: That a portion of the cost is separated on the basis of a partial study, and a portion of it is separated on the basis of gallonage, and then the one part that is separated on the basis of gallonage is to be compared with the part of that which is separated on the basis of time, and for the purpose of determining the cost differential, and in my opinion that is not sound cost accounting.

Mr. Hanley: I would like to have that last part read back. It does not mean anything to me.

Trial Examiner Ballinger: Read back the part referred to.

(The reporter read the answer referred to by counsel.)

6720 Trial Examiner Ballinger: Is that the way you want it?

The Witness: Yes, sir.

Trial Examiner Ballinger: Proceed:

By Mr. Hanley:

Q. Now, you made a partial time study, did you, Mr. Warmack, of what?

A. Well, I meant a partial time study by the Respondent.

Q. Do you know what kind of a study Respondent has made?

A. I am fairly familiar with the study that was made, Judge Hanley.

Q. Will you please just tell us what you know about the studies made by the Respondent, if you know, in respect of allocations in Respondent's regular accounting form 189, if you know, Mr. Warmack?

A. Well, I certainly know.

The charges to—

Q. (Interposing.) Now, just a moment, if your Honor please—

Mr. Hanley: I will address this to your Honor: If your Honor please, the Respondent objects to the witness answering the question of Respondent's counsel by reading form any exhibits presented in this case by the Respondent. The witness has said that he knows, and it is requested that the witness answer out of his own

6721 information, and not by reading from any exhibits presented herein by the Respondent.

Trial Examiner Ballinger: The objection is sustained. The witness may make answer without any reference to any exhibit offered by Respondent.

Mr. Austin: If your Honor please, the objection was that he not be permitted to read from the exhibit; now, if your Honor please, your Honor is saying that he cannot refer to it.

Trial Examiner Ballinger: If the witness knows, it is not necessary to make any reference to any document.

Mr. Austin: Yes, sir, I am not objecting to the ruling except that I think your ruling was a little broader than the objection. I wondered if you intended that.

Trial Examiner Ballinger: I intended the ruling to be just what it was.

Mr. Austin: In other words, the witness may refer to an exhibit in answering the question, it seems to me ordinarily—it seems to me he is entitled to do that because he is talking about this cost study.

Trial Examiner Ballinger: If he desires to testify with reference to figures he may go to exhibits and find the computation, but this is something that is of his own personal knowledge. He can testify to that without reference to any documents.

Mr. Hanley: Of course he can if he knows.

6722 Trial Examiner Ballinger: If he knows it himself.

The Witness: Your Honor, my knowledge comes from the records that have been presented and the information gathered in my studies. I have certainly not examined into the supporting vouchers, the supporting payrolls that went into this.

I accepted for the purpose of my study the total cost of this particular item, and went into the methods of separation, and I can tell you in response to the question of counsel for the Respondent—the answer as to the methods employed by Respondent as to the separation of these costs, and they are already in the record, but I will be glad to endeavor to tell you them again.

Trial Examiner Ballinger: Well, you can state that without reference to any document.

Mr. Hanley: Just answer the question, Mr. Warmack. That is all that you are now to do, please.

The Witness: May I hear the question again, please?

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. Will you please just tell us what you know about the studies made by the Respondent, if you know, in respect of allocations in Respondent's regular accounting orm 189, if you know, Mr. Warmack?")

Trial Examiner Ballinger: Off the record.

6723 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

The Witness: The only thing that I know is what is reflected in the records, Judge. I cannot know anything beyond that of my own personal knowledge, if you have ever made any.

By Mr. Hanley:

Q. Mr. Warmack, in your judgment as an expert witness, and an accountant who has testified for two weeks and some days, do you think that you have contributed any factual matters to this record other than as exhibited in Respondent's Exhibits No. 99, 100, and 101?

Mr. Austin: I object to that question, your Honor, what the witness thinks he has contributed is immaterial.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The objection is sustained.

By Mr. Hanley:

Q. Adverting to the same account, Mr. Warmack, 005, "Salesmen—Advertising," please state for the record what, if any calculation you made that modifies or alters the cost differential of 1.51 cents offered by the Respondent on Respondent's Exhibit 101?

A. May I hear the question?

6724 Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: As again—what account?

By Mr. Hanley:

Q. I specified the account.

A. Account 005 entitled "Salaries—Advertising" and not "Salesmen—Advertising" I have studied, but I have made no calculations similar to the one to which you refer.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Hanley:

Q. I direct your attention, Mr. Warmack, to account 006, "Salesmen—Drivers," please state as briefly as you can what your objection if any is to that account as set up by the Respondent on its form—Exhibit 101.

A. Your Honor, I do not object to the allocations made by the company to this particular account. I have not examined into those accounts, into the allocations, or into the figures; but because of the fact that each of the employees maintained time cards and those time cards are used in the distribution of their salaries among channels I just do not know how they can do it better. I think that is all right.

Q. Is there any effect one way or the other either by way of increase or decrease, and if so, how much upon the differential of 1.51 cents as disclosed in Respond-
6725 ent's Exhibit 101?

Trial Examiner Ballinger: Judge, he says he approves that method. What is there to be gained by going further into that?

Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. The question is withdrawn.

By Mr. Hanley:

Q. I will ask you to advert to account 008, "Warehouse Labor." Do you have any objection to that?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: Do you mean by that as to the method of accounting employed?

Mr. Hanley: That is right, or any other objection as to the allocation or the method used by the Respondent in preparing its form 189.

Trial Examiner Ballinger: Proceed.

The Witness: I have reviewed the records, Judge Hanley, dealing with account 008 entitled "Salaries—
6726 Warehouse Labor" Respondent's Exhibit 99, Respondent's Exhibit 100, and Respondent's Exhibit 101—

Trial Examiner Ballinger: (Interposing): Do you find any objection to the method employed; that is, the accounting employed?

The Witness: Yes, sir, I do find objection to it but not a serious objection, your Honor, not to the extent of having caused us to make a study of the account and the accounts which are related to account 008 in the company's offices in the field study which was made earlier this year at which time I—

Trial Examiner Ballinger: (Interposing.) Now, just what are your objections?

The Witness: —studied their accounts.

The account is separated in part in the company's regular accounting procedure on the basis of gallonage; that is, reseller gallonage, and consumer gallonage. I do not know if that measuring stick is correct or if it is not correct.

Trial Examiner Ballinger: Is that your sole basis of your objection?

By Mr. Hanley:

Q. Did you get the question?

A. Most assuredly, I cannot know the measuring factor used in the separation of costs and I question any measuring factor used in the separation of costs where those
6727 costs, ~~and~~ those separations go to determine a cost differential. I do not subscribe to guess work.

Mr. Hanley: The Respondent now moves to strike from the record Commission's Exhibit 133 inasmuch as the expert accounting witness advanced by the Commission has repudiated the concession in respect of account 008 on Commission's Exhibit 133 which is there conceded in its entirety as extracted from Respondent's Exhibit 101.

Trial Examiner Ballinger: The motion to strike is denied.

We will take a five minute recess.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Hanley:

Q. Mr. Warmack, I have been asking you to state specifically about individual accounts as they appear on Respondent's Exhibit 101; in the hope that we may shorten this examination, I would like to ask you, now, generally, if you have examined every single account on Respondent's Exhibit 101?

Now, just answer that "yes" or "no" if you can, please.

A. I cannot, Judge Hanley.

Trial Examiner Ballinger: What do you mean by "examine"?

The Witness: That is what I mean.

6728 By Mr. Hanley:

Q. Well, have you made any study of the accounts on Respondent's Exhibit 101?

A. May I inquire, your Honor? Judge Hanley, do you mean study of the records or these studies made in the company's offices of the underlying data?

Q. Well, let me put it this way—have you made a study as reflected by Respondent's Exhibits 99, 100, and 101, and by your own study of the underlying data when you were in Detroit and in Chicago for a period of approximately two months—

A. (Interposing.) I have made a study of each account as they are shown in Respondent's Exhibits 99 and 100, the data that is in those exhibits, and any other data that is in those records pertaining to each of those accounts. I have not studied the underlying data in the company's offices on which each of the accounts is based.

Q. Are you able to say, Mr. Warmack, what the influence in figures in dollars and cents may be as to any accounts on Respondent's Exhibit 101 in reference to the cost differential of 1.51 cents, or the cumulative effect in dollars and cents upon that differential in respect of your criticism of any of the accounts on Respondent's Exhibit 101?

The Witness: May I hear the question?

Trial Examiner Ballinger: Read the question.

6729 (The reporter read the question.)

The Witness: May I hear it again?

Trial Examiner Ballinger: Read it again.

(The reporter again read the question.)

The Witness: I have not made a calculation showing in dollars and cents the accumulative effect of any possible changes in figures as they are now set forth in Respondent's Exhibit 101 with respect to—

By Mr. Hanley:

Q. (Interposing.) You have—

A. —cost differential. I have endeavored to make calculations, showing in dollars and cents what effect there would be with respect to changes of figures in a few of the accounts on Respondent's Exhibit 101, and the effect that those changes would have on the cost differential of 1.51 cents per gallon claimed by the Respondent—

The Witness: May I hear my answer read?

Trial Examiner Ballinger: Read the answer.

(The reporter read the answer.)

The Witness: Does that answer your question?

By Mr. Hanley:

Q. No, it does not as yet, unless you have finished.

A. Well, I have finished.

Q. Very well, Mr. Warmack.

What is the difference that you have determined
6730 as the result of your calculation?

A. The result would be a reduction of the 1.51 cent per gallon cost differential, and that would be based primarily upon the elimination of account 075 and a part of account 520 from the tank wagon reseller column on Respondent's Exhibit 101.

Q. How much reduction?

A. Are you speaking, Judge, relative to the accounts or relative to the 1.51?

Q. 1.51.

A. I do not have that calculation before me.

Q. Have you ever made it?

A. Yes, sir.

Q. Well, if you have made it, Mr. Warmack, can you get it? Can you tell us how much?

A. I can make the calculation now, Judge Hanley, if you so desire.

Q. Mr. Warmack, I do not particularly desire—I am just asking you the question if you can answer it:

How much do you think the claim of the Respondent of the cost differential of 1.51 is reduced?

A. Upon the two accounts I spoke of?

Q. No, but whatever you say, how much do you think they are reduced in your judgment as an accountant?

A. I certainly could not tell you how much it would
6731 be reduced, giving effect to all of the criticisms with respect to all of the accounts on Exhibit 101. I pointed out two accounts about which—which must come out of there.

Q. Then, as a matter of fact, you have not made a calculation?

A. I have made a calculation.

Q. Well, if you have made a calculation, Mr. Warmack, will you please give us the result of it: How much in your judgment as an accountant should the differential of 1.51 be reduced if at all?

The Witness: Your Honor, if I may have a few minutes, I will make the calculation with respect to those two accounts. I do not have the calculation before me.

Trial Examiner Ballinger: Counsel for the Respondent has asked you to tell him the net result of all deductions that your think should be made, so that in making the calculation you would include with the two accounts you referred to, any other accounts.

We will now take a recess for five minutes in order to permit the witness to make the calculation.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: I would just like to ask what the state of the record is.

Trial Examiner Ballinger: There is pending a
6732 question that the witness desired time to make a computation that would enable him to answer the question.

Are you prepared to answer the question?

The Witness: Yes, sir. But I should like to hear the question again, please.

Mr. Hanley: Read both my question, the witness' answer, and the request of the Trial Examiner.

Trial Examiner Ballinger: Read those.

(The reporter read as follows:

"Q. Well, if you have made a calculation, Mr. Warmack, will you please give us the result of it: How much in your judgment as an accountant should be differential of 1.51 be reduced if at all?

"The Witness: Your Honor, if I may have a few minutes, I will make the calculation with respect to those two accounts. I do not have the calculation before me.

"Trial Examiner Ballinger: Counsel for the Respondent has asked you to tell him the net result of all deductions that you think should be made, so that in making the calculation you would include with the two accounts you referred to, any other accounts.")

The Witness: Your Honor, I have made a calculation giving effect to deductions made from the total cost of serving tank wagon reseller business and jobber, naphtha and gasoline business, as is shown on Respond-
6733 ent's Exhibit 101; that is, I have deducted from those
totals the costs in the respective channels columns on the exhibit for account 075 and the reduction in account 520.

In the case of account 075 the whole amount has been eliminated as far as figures in that account—in the respective columns are concerned.

Trial Examiner Ballinger: You eliminated the figures both as to tank wagon and direct sales accounts?

The Witness: Yes, sir. And in the case of account 520, that portion was eliminated which represented payment of annuities for prior years; that is, prior to January, 1939, and pensions paid in the Detroit field for the year 1940.

The latter amount was eliminated because of the fact that at the present time the Respondent company has charged in this same account the amounts that it contributes to the retirement plant costs which match the amounts contributed by the employees.

That makes the total deduction in the tank wagon reseller column of $192,425.00 which reduces the total expense as shown of $1,155,379.06 to $962,954.00.

The total expense in jobber, naphtha and gasoline column, as shown in Respondent's Exhibit 101, is reduced by $3,745.00, which reduces the total that is shown to $20,644.00.

I do not agree that that is all the reductions that
6734 can or should be made, but I do feel and it is my
opinion that those reductions; that is, these reductions which we have made and just explained, should be made from the costs as shown on this sheet, Respondent's Exhibit 101.

Trial Examiner Ballinger: What is the differential in cents?

The Witness: The differential in cents is approximately 1.255 cents per gallon after giving effect to those reductions. Instead of—

Mr. Austin: I—

The Witness: —instead of 1.51 cents per gallon as claimed by the Respondent company.

By Mr. Hanley:

Q. Mr. Warmack, you have now given a calculation which you say gives effect to your judgment in respect of account 075 and account 520.

A. Yes.

Q. You have?

A. Yes.

Mr. Hanley: I will now ask the reporter to read the question asked you by the Trial Examiner to which the last answer was given.

Will you please read that question, Mr. Reporter?

Trial Examiner Ballinger: Read the question.

(The reporter read the question of the Trial Examiner.) 6735

By Mr. Hanley:

Q. Now, Mr. Warmack—

The Witness (Interposing): Can I have the answer, after having heard the question read by the reporter?

By Mr. Hanley:

Q. —which are we to understand? Are we to understand that the result of your calculations is your judgment as an accountant as to how the represented cost differential of 1.51 cents on Respondent's Exhibit 101 should be altered in respect of all accounts?

A. No, sir.

The Witness: Your Honor, may I hear the answer to the previous question read, please?

Trial Examiner Ballinger: Read the answer to the previous question.

(The reporter read the answer to the previous question.)

By Mr. Hanley:

Q. Now, Mr. Warmack, you have given an answer as to what you think the influence on the claimed differential of 1.51 cents is in respect of your ideas about accounts 075 and 520.

The Examiner asked you, and I now ask you if that is all of the effect in respect of all the accounts that you think influence the differential of 1.51 cents—

6736 A. (Interposing) No, sir.

Q. —on Respondent's Exhibit 101, and if not, what are the other influences and how much?

Trial Examiner Ballinger: Will you enumerate the amounts?

The Witness: Those are three questions, Judge. Could I have them separately, please, and then I can answer them separately.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I would like to answer it broken up into several questions.

By Mr. Hanley:

Q. Do you not understand the question, Mr. Warmack?

A. No, sir.

Q. It seems to me quite clear, but I will try to rephrase it for you if you desire.

A. Please.

Q. The Examiner asked you to make a calculation as to the influence on the Respondent's claimed cost differential of 1.51 cents, giving consideration to all of the accounts on Respondent's Exhibit 101, which you questioned. You have given the influence, and you have calculated it, of account 075 and account 320, as you have recalculated those accounts, in line with what we understand to 6737 be your theories of accounting.

A. Those are only approximations.

Q. I have not asked you the question yet, Mr. Warmack.

A. Yes, sir.

Q. I now ask you the same question that the Examiner asked you: If those are the only two accounts that influence Respondent's claimed differential of 1.51 cents and if not, what other accounts influence that differential, and how much?

A. Every account in there influences it, Judge.

Q. How much?

A. I certainly do not know. Every account in Respondent's Exhibit 101 influences the differential. It would be possible to determine how much by taking the figures that you have here and relating the gallonage to those figures.

Q. Well, suppose you do it, I ask you to do it.

A. Well, I am not going to do it.

Q. How much? What do you say is the cost defferential of the Respondent as between reseller and tank wagon channel and jobber, naphtha and gasoline channel, how much is that difference?

Trial Examiner Ballinger: The witness has stated that he has not done it, and the request that he should now do it does not appear to the Examiner to be a reasonable request.

6738 Mr. Austin: May I hear that, please, Mr. Examiner?

Trial Examiner Ballinger: I said, the witness has stated that he has not done it heretofore, and the request that he now do it does not appear to the Examiner to be a reasonable request.

The Witness: Judge, if the calculation is all he is asking for with respect to these accounts—the question was, as I understand it, how much influence does each one of these accounts have on the cost differential, without asking whether the accounts are right or wrong—it won't serve anything and it won't mean anything as long as we do not determine whether they are right or wrong.

Mr. Austin: The question was, what was the effect of your criticism on the account.

The Witness: That is not the question.

Mr. Hanley: I am sorry, every one is asking my questions but me, it seems.

The Witness: May I hear the question?

Mr. Hanley: At this time, and in view of the ruling of the Court, the Respondent requests that the accounting expert witness advanced by the Commission, be required to make a calculation in respect of each account on Respondent's Exhibit 101 in relation to its influence, if any, upon the claimed cost differential of 1.51 cents.

Trial Examiner Ballinger: Can you make such a 6739 computation?

The Witness: Yes, sir.

Mr. Austin: Your Honor, that question, as phrased, just like Mr. Warmack has said, does not reflect anything of value because it says, what is the influence of each account on the differential, that would mean just taking each one of the accounts and showing how much each individual account contributes to the total differential, and it would be just a statement, by individual accounts, of showing what is right on here, and would not add to, alter, or subtract from anything that is now on this exhibit.

Trial Examiner Ballinger. And you are referring to Respondent's Exhibit 101 when you say that?

Mr. Austin: That is correct. I was referring to Respondent's Exhibit 101.

Trial Examiner Ballinger: Do you desire him to make a computation as to the effect of each particular account, that it would have upon ~~the~~ final differential?

Mr. Hanley: Exactly, your Honor.

Mr. Austin has been examining for weeks on cross-examination of Mr. Boatwright, and on direct examination of his own witness, and he has repeatedly said to your Honor that we were dealing in hundredths of a cent, and that it was a cumulative effect that he was interested in, in con-
nection with the cost differential as claimed by the
6740 Respondent company.

Now, if your Honor please, I am trying to shorten this examination if I can.

I propose to go down through this line of accounts on Respondent's Exhibit 101 and determine whether or not this witness made any calculation—and I am just sure he has not—in respect of any of these accounts.

I am now requesting that he be required to do the job that he was sent out to Detroit to do, and spent two months in Detroit ostensibly doing.

The Witness: Judge, I can do it in five minutes, or I can hand it to Mr. Munson, and if that is all he wants, why, we can give him that.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I do not think the witness should be required to make such a computation, for the reason that it would be simply a breakdown of the items on Exhibit 101, and will have no evidentiary value, and furthermore, if it is Respondent's desire to have that exhibit broken down so as to show the differential involved in each account, that should be done by the Respondent and not by the Commission.

Trial Examiner Ballinger: The objection is overruled
and the witness is instructed to make the computation
6741 for which purpose—based upon the witness' state-
ment as to the time necessary—an adjournment of five minutes will be taken.

The Witness: Judge, after looking at it I fear it is going to take much longer than any five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order. You may proceed.

Mr. Hanley: May we be off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: The request, as made by the Respondent, means that the expert accounting witness advanced by the Commission shall ma · a breakdown and arrive at the influence in figures in dollars and cents upon the claimed cost differential of the Respondent of 1.51 cents, all in relation to the criticisms and accounting methods approved by and adopted by the expert witness for the Commission, as distinguished from the accounting methods used by the Respondent and portrayed in Respondent's Exhibit 101, and explained in Respondent's Exhibit 99, and 100.

By Mr. Hanley:

Q. Can you do it, Mr. Warmack?

A. No, sir.

6742 Mr. Hanley: In view of the answer of the witness that he can not give a comprehensive answer relative to the influence of his criticisms of Respondent's accounting methods, it is moved to strike the answer of the witness relative to his testimony in connection with the influence of accounts 075 and 520 on the cost differential as claimed by the Respondent in the sum of 1.51 cents.

Trial Examiner Ballinger: The Examiner understood that the witness had made a computation as to the effect on the differential relative to the two accounts mentioned by him.

Is that correct?

The Witness: That is correct. That is what I made, a calculation or rather an approximation.

Trial Examiner Ballinger: The motion to strike is denied.

By Mr. Hanley:

Q. Did you say a calculation or an approximation?

A. I said both.

Mr. Hanley: In view of the statement by the witness that he now said that the calculation is and or approximation I move to strike the answer of the witness inasmuch as it is necessarily an inaccuracy if it is merely an approximation.

Trial Examiner Ballinger: The motion to strike is denied.

6743 By Mr. Hanley:

Q. Mr. Warmack, I think the last account that I asked you about was 008. I am not sure whether I asked you whether or not you were able to show what the influence of your ideas of the accounting about account 008 would have been on Respondent's claimed cost differential of 1.51 cents or not. If I asked you that I did not want to repeat it.

Trial Examiner Ballinger: Do you recall whether that question was asked you?

The Witness: I do not recall, Judge Ballinger.

Trial Examiner Ballinger: Well, answer the question, then.

The Witness: Will you read the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not know what influence this account, as it stands or as it would be if any changes were made thereon, would have on the cost differential of 1.51 cents per gallon asserted by the Respondent.

By Mr. Hanley:

Q. You do not know, I assume, whether it would increase it or decrease it, Mr. Warmack?

A. I do not know.

Q. And you have never made any calculation?

A. I have not.

6744 Q. I refer you now to account 021 entitled "Commissions"; what is your criticism, if any, of that account?

A. In the first place, it has no place in Respondent's Exhibit 101.

Q. Well, Mr. Warmack, it is just in there. Will you please tell us your criticism?

A. The first criticism is this: that it just should not be in there.

Trial Examiner Ballinger: That is not a sufficient explanation. Explain it.

The Witness: Well, I will be glad to explain my reasons. I have stated my objection, which is what I was asked.

Trial Examiner Ballinger: State your reasons.

The Witness: Account 021 entitled "Commissions" represents, as I understand it, for the most part, commissions paid to B-Station agents who operate small bulk plants for the Respondent company which are located, as I understand it, for the most part, in rural communities in the Detroit field.

The agents who receive these commissions perform the same services in the distribution of Respondent's products as are performed by regular salaried stations in cities, or densely populated areas in the Detroit field; therefore, my criticism goes to this point, Commission station busi-
ness is separate and apart, and for the purpose of de-
6745 termining a cost differential could not be considered
as salaried stations. That represents, your Honor, two separate and distinct methods of operation, and for the purpose of determining a cost differential it would first be necessary to determine that the cost of serving customers through commission agents are relatively the same as the cost of serving customers through the salaried station.

By Mr. Hanley:

Q. Do you know?

A. I most assuredly do not.

Q. Did you try to find out when you were in Detroit?

A. I did, and I should like to call attention to this also that I urged this point upon Respondent's accountant, Boatwright, in the conference in August of 1941 before he started making this study.

Q. Did you try to find out?

A. I made no independent study.

Q. Did you make any study?

A. No, sir.

Q. Mr. Warmack, the territory, as I understand it, that is included in this inquiry as Detroit is Dearborn, Detroit, Hamtrack, and Highland Park.

A. I do not know but the record will show.

Q. As you understand it?

A. Greater Detroit, Judge, I do not know the sep-
6746 arate sub-divisions.

Mr. Austin: That will be conceded, Judge.

Mr. Hanley: That will be conceded?

Mr. Austin: Yes.

Mr. Hanley: Thank you.

By Mr. Hanley:

Q. How many bulk plants or distributing stations does the Respondent company have in that territory which your counsel has now conceded is in contemplation in this inquiry?

A. I think I can look that up in the records. I do not know offhand.

Q. If you do not know can you say approximately?

A. If it is in the record I will be glad to say. I do not care to make any guesses.

Q. Are they all salaried stations?

A. It is my understanding that they are.

Q. Is it not a fact, Mr. Warmack, that the Dearborn station is a commission station and did you not find that out—

A. (Interposing.) The record will show.

Q. —when you were there, in Detroit, or did you try to find out?

A. I did not have to wait until I got to Detroit, it was acknowledged and by one of your own witnesses here three or four times that Dearborn was a commission station.

Trial Examiner Ballinger: When you went to De-
6747 troit to make your investigation, did you then know that the Dearborn station was a commission station?

The Witness: I know that from the testimony, your Honor.

Trial Examiner Ballinger: The testimony of whom?

The Witness: Answers given in the record by Mr. Boatwright.

By Mr. Hanley:

Q. Did you make any comparison or analysis of the Dearborn station in metropolitan Detroit area as compared with salaried stations?

A. No, sir.

Q. Why not?

A. I was not required to.

Q. Do you mean you were not required to by whom, Mr. Warmack?

A. By anybody.

Q. Were you not sent out there to make a study of that nature?

A. I made a study. I made a study, but not of that. I made a study of the entire accounting system which was definitely and positively wrong and erroneous from the standpoint of sound accounting principles and clearly so indicated.

(There was a discussion off the record.)

Mr. Hanley: If your Honor please, if this is an appropriate time, I will make a motion for an adjournment
6748 at this time and therefore I now move that we adjourn until 9:30 tomorrow morning.

(Witness temporarily excused.)

Trial Examiner Ballinger: The motion of counsel for the Respondent is granted.

And now, at 4:10 p. m., the hearing stands adjourned to be reconvened at 9:30 a. m., July 17, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 4:10 p. m., July 16, 1942, the hearing in the above-entitled matter was adjourned.)

6749

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Friday, July 17, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6750

PROCEEDINGS

Trial Examiner Ballinger: Come to order. The hearing of Docket No. 4389, case entitled, "In the Matter of Standard Oil Company (Indiana)" is reconvened pursuant to notice at 9:30 a. m., on the seventeenth day of July, 1942, in Room 532, Federal Trade Commission, Washington, D. C.

The last hearing was held at the same place, July 16, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

Mr. Hanley: Mr. Warmack, will you resume the stand, please.

Mr. Warmack: Yes.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued).

Q. Mr. Warmack, I want to ask you just two questions of each of these several accounts on Respondent's Exhibit 101, and my request is that you give as brief an answer as you feel it proper, from your own standpoint, to give.

A. Yes, sir.

Q. The first question is, in each case, what you
6751 think is the trouble from an accounting standpoint
with the account as set up by the Respondent.

The second question, in each instance, will be: What influence, if you have made any calculation as to the influence, in figures in dollars and cents upon the Respondent's claimed differential?

Now, I shall go back to certain of these accounts and question you in detail as to certain of them, but just now I want to go right through form 189.

Trial Examiner Ballinger: Judge, when you use the word "trouble" in your first question, you mean the witness' objections?

Mr. Hanley: I would like to hear the question read.

(The reporter read the question.)

Mr. Hanley: Yes, your Honor, that was an ill-advised use of terminology.

Trial Examiner Ballinger: I am merely trying to clarify it so there can be no possible question.

Mr. Hanley: I think your Honor is right, and I would like to qualify it.

Trial Examiner Ballinger: Read the question again.

(The reporter again read the question.)

By Mr. Hanley:

Q. Mr. Warmack, you have now just heard the re-
6752 porter read my explanation of the questions. I said
in that explanation that I wanted you to explain what you thought was the trouble in any account. In clarification of that, I mean I want you to explain what in your judgment as an accountant is wrong with the method used by the Respondent company in setting up each of these respective accounts on form 189, or Respondent's Exhibit 101.

A. Do you mean the separation made of them?

Q. Just whatever you think as an accountant is wrong with the method.

A. Yes, sir.

Q. I think the last account that we considered was 021, namely, "Commissions." I now refer you to account 024, "Expense of Transporting Standard Fuels Due to Lack of Storage," and I will ask you first, what in your judgment as an expert accountant is wrong, if anything, with the methods used by the Respondent company in establishing that particular account.

The Witness: Your Honor, can I ask the counsel a question off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Proceed.

By Mr. Hanley:

6753 Q. Mr. Warmack, do you remember the question?

A. No.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: In the case of account 024 entitled "Expense of Transporting Standard Fuels Due to Lack of Storage," that account has to do primarily with commission agent business, and in view of the fact that it is my contention that commission agent business should be separated from salaried station business, I think that this particular expense should be applied only to the commission agent business, if the expense is going to be used for the purpose of determining a cost differential in this case in the creating of the two classes of expense.

From that standpoint, I see no objection to the separation as shown on Respondent's Exhibit 101, for the reason that I have not studied and explored this account; that is, the records of the company underlying that separation.

By Mr. Hanley:

Q. With reference further—

Trial Examiner Ballinger: (Interposing:) That is one of the items that appears on Commission's Exhibit 153, is it not?

The Witness: Yes, sir.

6754 Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. With further reference to that same account, No. 024, what is the influence in figures and dollars and cents upon the claimed differential of 1.51 cents as reflected by your method of accounting—

A. (Interposing): I do not—

Q. —as distinguished from the Respondent's method of accounting, if you have made the calculation?

A. I do not know.

Trial Examiner Ballinger: Did you make any calculation?

The Witness: No, sir.

By Mr. Hanley:

Q. I now refer you to account No. 025 entitled "Truck Rental Expense" on Respondent's Exhibit 101 and will ask you what, in your judgment as an accountant, is wrong with the methods of accounting used by the Respondent in handling that particular account?

A. Account 025 entitled "Truck Rental Expense" is an expense incurred at least for the most part in connection with the commission agent business; that is the B-Station business.

6755 In my opinion, commission agent business and the salaried station business should be separated if this expense is to be used on these two groups of expenses; that is, the B-Station business and the A-Station business—A-Station business being salaried station—are to be grouped in determining the cost differential, then it is my opinion that the allocations of that particular class of expense as between channels should be separated in a different manner from that shown here.

It is possible that a proper study may show that some separation of that expense would apply to other methods business. Whatever portion of the expense which is applicable to the tank wagon business, it is highly probable that a proper cost study would show that the most of this class of expense is applicable to the tank wagon business.

It is my opinion that this class of expense should be separated on the basis of the commissions paid to the B-Station agents as between tank wagon reseller business and tank wagon consumer business.

Q. Did you make what you refer in your answer as a "proper cost study" in connection with this particular account?

A. No, sir. I did not make it.

Q. Referring you to Commission's Exhibit 133, it appears that you did make a change in the figures in respect
of account 025, "Truck Rental Expense" as they
6756 appear on Respondent's Exhibit 101, which I assume
entails that you made some kind of a study, Mr. Warmack; just what kind of a study did you make?

A. The figures that are shown there are calculations—

Trial Examiner Ballinger: Do you mean by "there" on Commission's Exhibit 133?

The Witness: The figures as shown on Commission's Exhibit 133 represent the reallocation of the total of truck rental expense between tank wagon reseller column and the tank wagon consumer column, on the ratio of the commissions paid to B-Station agent. Between—

By Mr. Hanley:

Q. Will you tell us—

A. (Interposing.) Excuse me, Judge Hanley, please, I had not finished my answer.

Q. Yes, go ahead.

A. I refer to the commissions as shown being paid to B-Station agents.

There is, I understand, some small commissions included there which would be paid, or which were paid to a few drivers operating out of B-Stations, but of course I do not have the information as to how much that may have been. I understood it was small.

Q. Mr. Warmack, in connection with your studies of account 025, did you investigate all of the vouchers, 6757 all of the records, data, and underlying accounts in the office of the Respondent company in Detroit which underlie the establishment of account 025 on Respondent's Exhibit 101?

A. Do you mean for the year 1940?

Q. 1940.

A. No, sir. I did review some of the vouchers.

Q. Is it a fact that your conclusion as to the impropriety of the Respondent's Methods of allocation in account 025 are based on a study of just a few of the vouchers and accounts and underlying records?

A. No, sir. That is not exactly correct.

Q. What is it?

A. I made inquiry with respect to the nature of this expense and did review some of the vouchers.

I found that this account was incurred right along with the commissions paid by the respondent to B-Station agents which are covered in account 021.

I found that the commissions were paid on what the company terms a "pay gallon" basis. That means that a gallon of gasoline delivered to one customer may carry what the company terms "one pay gallon" and a gallon of gasoline delivered to another customer may carry a higher pay gallon; for example, one gallon delivered may carry what we call "one pay gallon" and another one may carry "three pay gallons."

6758 The commissions are paid on the basis of pay gallons.

In view of that fact, in view of the fact that the trucks are used in the delivery of this particular product, and in view of the fact that the varying pay gallons are based to some extent upon the distance of the company's customer from the plant of the B-Station agent, it would seem reasonable and equitable to allocate truck expense also on the basis of pay gallons, in the absence of a study which would prove that to be inequitable.

I did not make such a study.

Q. I think you can answer this briefly, Mr. Warmack. Do you regard it from the standpoint of an accountant, as a proper expense, from a marketing standpoint, that there is a different ratio of cost applicable to some gallons of gasoline sold by the Respondent company as distinguished from some other gallons of gasoline sold by the Respondent company?

A. Yes, sir. I mean, that is speaking generally, Judge Hanley.

Q. Yes.

A. Yes.

Q. Now, in respect of account 025, what is the influence, if any, in figures and dollars and cents upon the claimed cost differential of 1.51 cents as reflected by Respondent's Exhibit 101 that results from your criticisms or changes in method of accounting and as applied to account 025, if you have made the calculation.
6759

A. I do not know. And I have not made that particular calculation. I do know that if the separation is made in this expense in accordance with my statement just made; that is, on the basis of commissions in the reseller and consumer column; the amount of $37,793.36 appearing in tank wagon reseller column on Respondent's Exhibit 101 would be reduced to $22,992.31, as shown on Commission's Exhibit 133.

Q. My question is this, Mr. Warmack: Would the result of your calculation, if you have made any, increase or decrease and if so by how much the claimed differential in cost of 1.51 cents as reflected by Respondent's Exhibit 101?

A. If calculations were made as just outlined it would be decreased. I will have to make the calculation if you want the figure.

Q. Have you made it?

A. No, sir.

Q. That is all I want to know, Mr. Warmack.

A. Yes.

Q. I refer you now to account 030, "Traveling Expense—Supervision" on Respondent company's Exhibit 101 and will ask you, as an accountant, what in your judgment is wrong, if anything, with the Respondent's method of handling that account from an accounting standpoint.
6760

A. The same objections which I raised to account 000 would apply also to this account. If you wish them stated at this point—

Q. (Interposing): No. I do not care to have you restate, if that is your answer.

A. Yes. That is my answer.

Q. What, please, is the result or influence, in figures, in dollars and cents of your views of accounting on that particular account 030, on Respondent's claimed differential of 1.51 cents?

A. I do not know.

Q. I refer you now to account .031—"Traveling Expense—Sales Promotion" and ask you what, in your judgment, as an accountant, is wrong with the Respondent's accounting methods in handling that particular account?

A. I did not make a study of that account, Judge Hanley, in my studies made in the company's office earlier this year, therefore I could not answer your question.

Q. Then, I assume it to be a fact that you have no ideas as to the influence on the differential?

A. No, sir.

Q. As the result of that account?

A. No, sir.

Trial Examiner Ballinger: Before you pass on,
6761 you gave the Respondent full credit in Commission's
Exhibit 133 for the amount it claimed in Respondent's
Exhibit 101 on this item, did you not?

The Witness: Well, it is shown on that exhibit, Judge. I do not subscribe—

Mr. Austin: (Interposing): What item are you talking about? I thought it was 030.

Trial Examiner Ballinger: 031.

The Witness: I do not subscribe—

Trial Examiner Ballinger: (Interposing): Here it is, right up here.

The Witness: —to the fact that this particular account or all of these particular accounts were properly allocated by the Respondent.

Trial Examiner Ballinger: Well, we are dealing now with one particular account.

The Witness: Yes, sir, as stated, your Honor, that I gave them on Commission's Exhibit 133, that is correct, that figure as shown on Respondent's figures on Respondent's Exhibit 101 are the identical figures on this Commission's Exhibit 133, but the fact that it is so shown, as far as I am concerned, is that I just did not make a study of that account in the company's offices.

Trial Examiner Ballinger: But merely conceded it?

The Witness: No, just did not make a study of it.

6762 By Mr. Hanley:

Q. Mr. Warmack, I now refer you to account 032 entitled "Traveling Expense—Salesmen" on Respondent's Exhibit 101, and ask you as an accountant what you think is wrong, if anything, with the accounting methods in respect of the Respondent's handling of that account?

A. The same testimony given for account 004 entitled "Salaries—Salesmen" will apply equally to this account 032 entitled "Traveling Expease—Salesmen."

Q. Now, will you please tell us what the influence of your ideas as an accountant and as to the proper method of handling that account is in figures in dollars and cents upon the cost differential of 1.51 cents as reflected by Respondent's Exhibit 101?

A. I do not know, and the only way that information could be ascertained would be for a study to be made in accordance with the way that I have outlined it—and such study has not been made.

Q. Well, did you ever make such a study?

A. No, sir.

Q. I will now refer you to account—what is the next one—033, entitled "Traveling Expense—Advertising," Respondent's Exhibit 101, and ask you what, in your judgment as an accountant, is wrong with that account, from an accounting standpoint, if anything?

6763 A. Do you mean wrong with the separations made with regard to Respondent's Exhibit 101?

Q. Well, just wrong from an accounting standpoint.

A. Well, there was nothing wrong with the account, it would be with the separations, Judge Hanley. We certainly do not question the fact that the company spent the money and incurred the expense.

The same testimony given for account 005, "Salaries—Advertising" would apply equally to this account; that is, account 033 entitled "Traveling Expense—Advertising."

Q. What is the effect or influence, if any, in figures in dollars and cents of your criticism of the Respondent's method of handling that account upon the claimed cost differential of the Respondent company as reflected in Respondent's Exhibit 101 of 1.51 cents.

A. I do not know. That can only be determined by a thorough cost study.

I have not made such a study.

Q. I refer you now, Mr. Warmack, to account 045 on

Respondent's Exhibit 101, entitled "Operation and Maintenance of Vehicles—Supervision"; please state what, if anything, is wrong in your judgment as an accountant in respect of the accounting methods of the Respondent in handling that account.

A. The same testimony given for account 006 entitled "Salaries—Supervision" will apply equally to 6764 account 045 entitled "Operation and Maintenance of Vehicles—Supervision."

Q. Please state what the effect in dollars and cents is of your ideas of the way that that account should be handled as applied to Respondent's claimed cost differential of 1.51 cents.

A. I do not know.

Q. Have you made any study thereof?

A. I have never made a study to determine what the influence would be on the claimed differential.

Q. I refer you now to account 046 entitled "Operation and Maintenance of Vehicles—Sales Promotion" on Respondent's Exhibit 101, and will ask you what in your judgment as an accountant is wrong, if anything, with the Respondent's method of handling that particular account.

A. Account 046 "Operation and Maintenance of Vehicles—Sales Promotion."

The same testimony given for account 031 entitled "Traveling Expense—Sales Promotion" and for account 002 entitled "Salaries—Sales Promotion" would apply equally to this account; that is, account 046.

Q. Please state what the influence is in figures, in dollars and cents, on your method of handling that account as applied to Respondent's claimed cost differential of 1.51 cents.

6765 A. I have not made a study of that account, Judge Hanley, and I do not know if there would be any changes from the figures shown in the account on Respondent's Exhibit 101. If a study were made—

Q. All right. I refer you to account 047 entitled "Operation and Maintenance of Vehicles—Salesmen"?

A. Yes.

Trial Examiner Ballinger: Before you reach that, the same figures appearing in the tank wagon reseller and jobber naphtha and gasoline column on Respondent's Exhibit 101 appears on Commission's Exhibit 133, do they not?

The Witness: Yes, sir.

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. I refer you now to account 047 entitled "Operation and Maintenance of Vehicles—Salesmen" appearing on Respondent's Exhibit 101, Mr. Warmack, and ask you the same question as to what is wrong, in your judgment as an accountant, with Respondent's method of handling that account.

A. Account 047 "Operation and Maintenance of Vehicles—Salesmen".

The same testimony given for account 064 and account 032 will apply equally to account 047.

Q. And what is the influence upon the cost differential of 1.51 cents as claimed by the Respondent?

6766 A. I do not know as no thorough cost accounting analysis has been made of that account.

Q. Have you ever made one?

A. No, sir.

Q. I refer you to account 048 entitled "Operation and Maintenance of Vehicles—Passenger Cars, and Trucks" and ask you the same question; what is wrong with that account?

A. The same testimony would apply—

Mr. Hanley: (Interposing): Just a moment. I do not mean to interrupt you but I think this will save some time. I am wondering if it may shorten this if the witness now understands the questions that I am now asking him in respect of these accounts, if I do not need to repeat them, there is just no occasion for doing so, if the witness understands what I mean, and if your Honor understands.

Trial Examiner Ballinger: I understand perfectly and I see no occasion for repeating the two questions if the witness has them clearly in mind.

Mr. Hanley: I do not care to repeat them if the witness does understand what the questions are.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. We will take a recess for five minutes.

6767 (A short recess was taken.)

Trial Examiner Ballinger: Come to order.

Mr. Hanley: There having come a time in the cross examination when it seemed advisable to prepare definite questions to ask of the witness which fall into a pattern, there were prepared questions now known as Questions

No. 1, 2, and 3, copies of which have been supplied to the witness, to the Examiner, and counsel for the Commission, which are as follows:

"Question No. 1:

Mr. Warmack, in your judgment as an expert accounting witness, what is wrong, if anything, with respondent's method of treatment and handling from an accounting standpoint of account number * * * ?

"Question No. 2:

Mr. Warmack, will you please indicate the influence by way of increase, or decrease, or any influence whatsoever, upon the respondent's claimed differential of 1.51 cents, as reflected by Respondent's Exhibit No. 101, of your comments which you have just made with respect to account number * * * ?

"Question No. 3:

Mr. Warmack, did you or did you not make any detailed study of the underlying data, facts, records, and accounts applying to account number * * * appearing
6768 on Respondent's Exhibit No. 101?"

It is the purpose of the Respondent to ask the witness to answer each of these three questions in respect of each account as it appears upon Respondent's Exhibit 101.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. I refer you, Mr. Warmack, to account No. 048 entitled "Operation and Maintenance of Vehicles—Advertising—Passenger Cars and Trucks" and I ask you the three prepared questions in respect of that account.

Please answer each of those questions separately.

A. Account 048 "Operation and Maintenance of Vehicles—Advertising—Passenger Cars and Trucks."

My answer in connection with that, of course, would be the same in connection with the answer to account 005 entitled "Salaries—Advertising," and therefore that would cover it.

Trial Examiner Ballinger: That is, your answers to the three questions are the same as they were to account 005?

The Witness: Yes, sir.

By Mr. Hanley:

Q. Now, referring to account 053 entitled "Operation and Maintenance of Vehicles—Trucks, Motor and Horse-Drawn (Excluding Advertising)", Mr. Warmack, will you please answer the three questions separately? 6769

A. Account 053, "Operation and Maintenance of Vehicles—Trucks, Motor and Horse-Drawn (Excluding Advertising)";

The testimony in connection with that account—

Trial Examiner Ballinger: Is that in answer to the first question?

The Witness: This is in answer to all three of them, Judge.

The testimony given by me in connection with account 006 "Salaries—Drivers" will apply equally to account 053.

I might state in connection with that that I have not made any study of account 053 entitled "Operation and Maintenance of Vehicles—Trucks, Motor and Horse-Drawn (Excluding Advertising)", and therefore I would not raise any objection to the methods employed by the Respondent in the allocation of this account.

By Mr. Hanley:

Q. I now refer you to account 054 entitled "Operation and Maintenance of Vehicles—All Other (Other than Office)", Mr. Warmack, and ask you the same three questions.

A. If I may—

Q. (Interposing.) To be answered separately if you can.

6770 The Witness: If I may give just a little further answer to that other question in connection with account 053 entitled "Operation and Maintenance of Vehicles—Trucks, Motor and Horse-Drawn (Excluding Advertising)", when I say I made no study, I made no study of the underlying data in the company's offices from which Respondent's Exhibits 100 and 101 were prepared of account 053.

Now, I can—

By Mr. Hanley:

Q. Please refer now to account 054 entitled "Operation and Maintenance of Vehicles—All Other (Other Than Office)," Mr. Warmack.

I ask you the same three questions.

A. The testimony given in connection with account 000, "Salaries—Supervision" applicable to superintent of maintenance applies equally to account 054 "Operation and Maintenance of Vehicles—All Other (Other Than Office)".

Q. In respect of all these questions?

A. Yes, sir.

Q. Mr. Warmack—.

A. Yes, sir.

Mr. Austin: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

6771 The Witness: In connection with account 054 en titled "Operation and Maintenance of Vehicles—All Other (Other Than Office)", question No. 1 which reads as follows:

"Mr. Warmack, in your judgment as an expert accounting witness, what is wrong, if anything, with respondent's method of treatment and handling from an accounting standpoint of account number:

in Respondent's regular accounting procedure of the class of expense is separated between tank wagon reseller, tank wagon consumer, and other methods, on a gallonage basis excluding direct shipments.

I question the allocation factor; that is, the gallonage as a basis for the separation because of the fact that I have never been able to secure any information which would substantiate the allocation factor; that is, if the Respondent has ever made a study to determine whether or not the usage of gallonage for the allocation factor results in accurate proportions of this account which it has assigned to the respective channels of distribution on company's form 189. Whatever portions of this expense which may have been assigned to the respective channels of Respondent's form 189 by direct application are not objected to.

I would object to allocating a portion of this expense to direct shipment business on the basis of effort, and a portion of the expense to tank wagon reseller, tank wagon consumer, and other methods channel on Respondent's 6772 Exhibit 101 on the basis of gallonage.

The figures are small, however, and I have not made any particular study with respect to this allocation.

By Mr. Hanley:

Q. Mr. Warmack, will you please specifically answer questions Nos. 2 and 3?

A. In answer to question No. 2, reading as follows:

"Mr. Warmack, will you please indicate the influence by way of increase, or decrease, or any influence whatsoever, upon the respondent's claimed differential of 1.51 cents, as reflected by Respondent's Exhibit No. 101, of your comments which you have just made with respect to account number—,"

the answer is I do not know.

In answer to question No. 3, reading as follows:

"Mr. Warmack, did you or did you not make any detailed study of the underlying data, facts, records, and accounts applying to account number 054 appearing on Respondent's Exhibit No. 101,"

the answer is I did review the information shown in Respondent's Exhibits 99 and 100, but I did not make a study of the underlying data of that particular account in Respondent's offices.

Q. I now refer you to account No. 060—

Mr. Austin: Do you not want to take up 055 next?

6773 Mr. Hanley: Yes.

By Mr. Hanley:

Q. I now refer you to account No. 055, entitled "Vehicle Tank Expense—Other Than Mounted on Company Chassis," and will ask you please to answer the three stipulated questions in connection with that account.

A. Account 055, "Vehicle Tank Expense—Other Than Mounted on Company Chassis,"

I object to the usage of that account in determining the company's cost differential for the reason that this class of expense is, as I understand it, expense incurred in connection with commission agent business; that is, B-Station business, as distinguished from salaried station business, or which we call A-Station business, and the testimony given in connection with account 021 entitled "Commissions" will apply in connection with account 055 entitled "Vehicle Tank Expense—Other Than Mounted on Company Chassis."

Trial Examiner Ballinger: Read the answer.

(The reporter read the answer.)

Trial Examiner Ballinger: Are you satisfied with the answer?

The Witness: Yes, sir.

By Mr. Hanley:

Q. Will you now please answer questions Nos. 2 and 3?
I just wondered, Mr. Warmack, if you would not state
6774 that you are answering question 1 and question No. 2,
and so forth.

A. My previous answer—I am still referring to account 055 "Vehicle Tank Expense—Other Than Mounted on Company Chassis"—my previous answer was to question No. 1.

In answer to question No. 2, the answer is—I do not know. Of course, that answer would presume that Respondent was including this class of expense in determining the cost differential as set forth on page 101—Respondent's Exhibit 101—the testimony—but it is my contention that it should not be so included, and if it is not included I do not know just what influence it would have upon the claimed cost differential.

The Witness: May I have my answer read?

Trial Examiner Ballinger: Read the answer.

(The reporter read the answer.)

The Witness: I guess that is O.K.

In answer to question No. 3—

By Mr. Hanley:

Q. (Interposing.) Just a moment, do you know from any studies that you have made whether or not the Respondent did include the material, accounts, data, and figures in account 055 entitled "Vehicles Tank Expense—Other Than Mounted on Company Chassis"—in its set up of Respondent's Exhibit 101, or any build up of Respondent's Exhibit 101?

A. Yes, sir. It did.

6775 Q. Then, if you know, please state what your conclusions are as an accountant, as I understand your last answer, you stated that there was a question in your mind depending upon whether or not the Respondent included certain material, facts, data, and amounts in account 055. You have now stated that you know that they did.

In view of that statement, will you please answer Question No. 2.

A. Yes, sir. In answer to question No. 2, previously I intended to say that I objected to the use of account 055 entitled "Vehicle Tank Expense—Other Than Mounted on Company Chassis"—in determining Respondent's cost differential.

I do not object to the allocation made between channels on Respondent's Exhibit 101 if it is to be used and if those figures stand in determining the cost differential they would not influence any change on the cost differential.

Trial Examiner Ballinger: That answer wuold be more appropriate to Question No. 1.

Mr. Hanley: Right. I am perfectly content that it stand, if your Honor please, as an answer to question No. 1.

By Mr. Hanley:

Q. And I now ask the witness to please answer question No. 2, and question No. 3.

Mr. Austin: Well, the witness did not give the 6776 answer in answer to question No. 1. It should not be put as an answer to question No. 1 unless he agrees to it.

Trial Examiner Ballinger: It will be treated as an answer to question No. 1.

Mr. Austin: I object to that.

The Witness: It is agreeable to me that it be treated as an answer to question No. 1. I think it is an answer to question No. 1.

I think it can be treated as a proper answer to both questions 1 and 2.

If the account is not used in the determining of the cost differential, I do not know exactly what influence it would have on the claimed cost differential of 1.51 cents per gallon. I have not made a calculation.

In answer to question No. 3, I have reviewed the records in this case, pertaining to account 055, but I have not studied to any worthwhile extent the underlying data of this account in Respondent's offices.

By Mr. Hanley:

Q. Mr. Warmack, you prepared Commission's Exhibit 133, did you not?

A. Yes, sir.

Q. And on Commission's Exhibit 133 you have included account 055; is that not true?

A. It is.

6777 Q. And you have changed the figures on your exhibit, Commission's Exhibit 133, as distinguished from the figures as appearing in that account on Respondent's Exhibit 101?

A. That is correct.

Q. Now, is it then that you did make some calculation in respect of account 055—"Vehicle Tank Expense—Other than Mounted on Company Chassis"?

A. That is correct.

Q. In the light of that calculation, please answer questions No. 2 and No. 3.

A. You are correct, Judge Hanley,—in further reviewing of this account I find that this account was studied probably further than just stated, and inasmuch as the expense shown here follows apparently the truck rental expense, it was re-allocated for the purpose of the preparation of Commission's Exhibit 133 on the same basis and in the same manner as that of account 025 entitled "Truck Rental Expense" was separated for the purpose of Commission's Exhibit 133.

I am sorry that I overlooked that for a second. That is a correction. I stand corrected on the previous statement.

Q. And is your last statement your answer to question No. 2?

A. I believe my last statement would be a proper answer to question No. 2, Judge Hanley.

6778 Q. Now, will you please answer question No. 2 and No. 3 in connection with account numbered 055.

A. In answer to the question No. 2, I have not made a calculation to determine just what effect the re-allocation of this account as shown on Commission's Exhibit 133 would have on the claimed cost differential of 1.51 cents per gallon nor of what effect it would have if the account were not even included in Respondent's cost determination of the claimed differential.

In answer to the question No. 3, I would state I did study the data in the records of this case in connection with this account.

Q. Meaning by that the exhibit, Mr. Warmack?

A. Yes, sir.

Q. And that is all?

A. I did not go into the underlying data in the company's offices to any worthwhile extent in connection with this account.

I believe that answers the question with respect to account 055 of "Vehicle Tank Expense—Other Than Mounted on Company Chassis."

Q. Well, the calculation that you did make as appears from Commission's Exhibit 133 is then based upon the records and facts as they appear in the exhibit admitted in this case; is that true?

6779 A. Yes, sir.

Q. Is that true?

A. That is correct. That is correct.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I refer now to account 060 entitled—

The Witness: I would like to refer again to the previous question—if the account is to be used in determining the cost differential, it is my opinion that the figures as shown for the account in Commission's Exhibit No. 133 should be used instead of the figures as shown on Respondent's Exhibit 101.

By Mr. Hanley:

Q. As I understand it, you express it as your opinion as an accountant?

A. Yes, sir.

Q. I refer you to account 060 entitled "Plant Maintenance" and ask you the three stipulated questions in connection with that account.

A. Account 060—"Plant Maintenance."

In answer to the question No. 1, with respect to account
060, "plant maintenance," in the company's regular ac-
counting procedure, that portion of the costs included
6780 in this account, when possible, are assigned directly
to channels on company's form 180, and in my opinion
that is proper and in accordance with sound accounting.

Q. Now, will you just go ahead and answer No. 2 and No. 3.

A. Well, I did not quite finish with No. 1, Judge Hanley.

Q. I thought you had.

Please proceed with your answer to question No. 1.

A. This class of expense is included in account 060—"Plant Maintenance"—is understood not to be incurred to any extent whatever in connection with direct shipments, herefore, any questions that can be raised in connection with separations made by Respondent's accountants would be separation made on a gallonage basis; that is, those osts which could not be assigned directly, a gallonage basis may be made and may be the best basis, but I have seen nothing in the way of a study to determine whether or not this allocation factor has been properly substantiated.

In answer to question No. 2, the answer is—I do not know.

I do not know if any other studies that have been made of this account would change the figures at all.

Answering question No. 3, the answer is—I did study and review the information in the records of this case pertaining to account 060, but I did not review or study any underlying data of the account in the company's
6781 office.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Mr. Warmack, I now refer you to account 060-A, entitled "Plant Maintenance—Service Station Owned Properties Complete" and ask you to answer the three stipulated questions in connection with that account.

Mr. Austin: Have you any objection to the witness answering as to A, B, and C.? I think they could be treated as a group.

Mr. Hanley: Well, I do not know if the witness believes them to be a group. I have no objection to the witness answering in any way he believes he ought to. It is up to the witness.

The Witness: Yes, sir. I can answer in connection with them.

Account 060-A, "Plant Maintenance—Service Station Owned Properties Complete";

Account 060-B, "Plant Maintenance (Service Station Owned Buildings on Leased Ground)";

Account 060-C, "Plant Maintenance (Privately Owned Service Station Leased—or P.O.S.S.L. Properties Leased Out)";

6782 In other words, my answer with respect to one will be the same as with respect to the answer to the others.

By Mr. Hanley:

Q. Very well.

A. Those three accounts have to do with that portion of plant maintenance expense which Respondents have determined as being applicable to leased service stations.

It is my contention that a study should be made or should have been made by the Respondent to determine the cost applicable to sales through leased service stations; that is, to operators of service stations who lease their stations from the Respondent company, as against sales to independent operators; that is, customers who do not lease their stations from the Respondent company.

If such a study were made this class of expense would, of course, be applicable only to the lessee stations.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: It could be possible from the standpoint of sound accounting that a study of this account may prove to be impracticable, but at least in my opinion a study should be made to determine if it is practicable to make such a separation.

There is a question in my mind as to whether or not
6783 this class of expense which is offset by rentals received by the Respondent company from the lessees of the station—there is a question in my mind if this class of expense has a place in determining a cost differential. I believe that completes my answer to question No. 1.

By Mr. Hanley:

Q. Go ahead and answer question No. 2 and question No. 3.

A. Answering question No. 2, I have not made a calculation as to the extent of any possible elimination of this or these three accounts—of the costs as set forth in Respondent's Exhibit 101 would have on the claimed cost differential of 1.51 cents per gallon. I have reviewed the data and the records of this case pertaining to these accounts, but I have not studied the underlying data of the same in the company's offices.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

We will be in recess.

(A short recess was taken.)

The Witness: Account 061—Rental Expense.

Answering question No. 1:

Account 061—Rental Expense is separated between dis-ribution channels on Respondent's Exhibit 101, form 189, in Respondent's Regular accounting procedure on a basis of gallonage excluding direct shipment gallonage. 784

My objection to the separation of this account on Re-pondent's regular form 189, which is the exact separation s shown on Respondent's Exhibit 101 is to the usage of gallonage factor for making the separation. The gallon-ge factor has never been proved as far as I have been ble to determine by cost study or analysis.

Answering question 2:

The answer is—I do not know.

Answering question 3:

The answer is—no, I did not.

Account 061-B—"Rental Expense (Leased Ground Used or Owned Service Station Buildings)";

Account 061-C—Rental Expense (P.O.S.S.L. Properties Leased Out):

Answering question 1:

Answering question 2:

Answering question 3:

My answers given in connection with accounts 060-A nd 060-B and 060-C will apply equally to these two ac-ounts, as to all three questions.

Account 062—"Water, Light, Fuel (Other Than Main ffice)":

Answering question 1;

Answering question 2:

785 Answering question 3:

The answers to questions 1, 2, and 3, the answers iven to those questions for account 060 apply equally to ccount 062.

Account 063—"Telephone And Telegraph (Other Than Main Office)":

Answering question 1:

This class of expense is separated to distribution channels on Respondent's form 189 and on Respondent's Exhibit 101 on a basis of gallonage excluding direct shipment gallonage.

This allocation factor has never been proved by any cost study or analysis as far as I have been able to learn in my studies of this account.

Inasmuch as the gallonage factor and the result or the results determined by the use of same have never been determined, I question the separation for this class of expense as shown on Respondent's Exhibit 101.

There is another question that arises in connection with this account: It is my opinion that this class of expense, account 063, entitled "Telephone And Telegraph (Other Than Main Office)" is very similar in nature to expense included in account 203, entitled "Office Expense—Telephone and Telegraph".

In Respondent's separation of account 203, that
6786 portion of expense which was considered applicable
to the direct shipment business was separated between channels on a basis of estimated effort of employees, while that portion of the account which was considered as being applicable to bulk plant business was separated between channels on a basis of bulk plant gallonage.

This would indicate to me that it might be possible to separate each of the two accounts on the basis of effort, and there is at least an inconsistency in the treatment of account 203 in this allocation between channels.

Answering question No. 2:

The answer is: I do not know.

Answering question No. 3:

The answer is: No, except that I have reviewed and studied all information pertaining to this account which is shown in these records.

Account 064, "Maintenance Expense—Rented Out Property (Other Than Service Station)":

Answering question 1;

Answering question 2;

Answering question 3:

There is no expense entered on this account on Respondent's Exhibit 101.

Account 065, "Rent Revenue."

Answering question 1:

6787 Answering question 2:

Answering question 3:

I have made no study of this account.

Account 065-A, "Rent Revenue (Service Station Owned Properties Complete)";

Account 065-B, "Rent Revenue (Service Station Owned Buildings on Leased Ground)"

Account 065-C, "Rent Revenue (P.O.S.S.L. Properties Leased Out)".

Answering question 1:

These accounts represent rent revenues received by the Respondent on service stations leased; the revenue is an offset to expenses incurred in connection with the landlord activities of the Respondent.

It is my opinion that the business of the Respondent which is conducted through leased service stations should be separated from the business of the Respondent whereby sales are made to service station operators that do not rent their stations from the Respondent; or that a study should be made to determine if such separation is possible and practicable, in the absence of such a study it is my opinion that while such a separation has been made as to many types of expense to which this revenue would be applied as an offset, in the absence of a study whereby all expenses
could be separated between the leased service station
6788 business and other business, as just outlined, whereby
the Respondent has grouped all of the costs; that is, the cost of serving these leased service stations, and the cost of serving other resellers, there is a question in my mind as to whether or not these rent revenues and the expenses incurred in connection with the landlord activities of the company should be used in determining the cost differential.

Answering question 2:

If a separation of cost as between costs of serving lessee stations and cost of serving non-lessee stations, if it were made a unit cost (per gallon cost) could be determined for each of the two classes of business.

Inasmuch as the landlord activities of the Respondent in connection with the leasing of service stations resulted in a net loss in the Detroit field for the year 1940 this would serve to increase the per gallon cost of selling gasoline to lessee stations and reduce the per gallon cost of selling gasoline to the non-lessee stations.

The extent of the influence on Respondent's claimed cost differential of 1.51 cents per gallon has not been determined because of the fact that Respondents have not made a complete separation of the costs of serving these two classes of business.

Answering question No. 3:

6789 I have not made a study whereby a complete separation of costs of serving lessee stations could be determined.

I have made a study of all information in these records dealing with the subject of cost of serving lessee stations.

Account 066—"Miscellaneous Operating Expense."

Answering question No. 1:

I have no objection to the allocations of that portion of this class of expense which were made directly to the separate distribution channels on Respondent's Exhibit 101.

There are many items of cost included in this account which, in my opinion, could not under any theory of probabilities be used to determine a cost differential between tank wagon customers and jobber, naphtha and gasoline customers.

However, this account has not been thoroughly studied except to determine a portion of this class of expense which is applicable to credit card costs, and which amount, in my opinion, could not properly be used in determining a cost differential.

Answering question No. 2:

The answer is—I do not know except for that class of expense which is applicable to credit cards and that is reflected in Commission's Exhibit 133.

Answering question 3:

6790 Except for determining the portion of this class of expense which was applicable to credit cards, no detailed study has been made of this account for the year 1940:

Account 066-A, "Miscellaneous Operating Expense (Service Station Owned Properties Complete)";

Account 066-B, "Miscellaneous Operating Expense (Service Station Owned Buildings on Leased Ground)";

Account 066-C, "Miscellaneous Operating Expense (P.O.S.S.L., Properties Leased Out)";

Answering question 1:

Answering question 2:

Answering question 3:

Reference is made to answers given for accounts 060-A, -B, and C, and 065-A, B, C, which apply properly to accounts 066-A, -B, -C.

Account 070—"E.L.A. Expense."

Answering question 1:

Answering question 2:

Answering question 3:

In answering questions 1, 2, and 3, I do not raise any objection to Respondent's separation of this class of expense between channels as shown on Respondent's Exhibit 101, for the reason that Respondent's Exhibits 99 and 100 indicate that the expense was allocated to channels by direct application.

6791 I made no study of the underlying data in the company's offices on this account.

Account 076, "Barrel Expense."

Account 077, "Freight on Empty Steel Barrels and Containers."

Account 078, "Losses on Containers—Lost."

Account 079, "Losses on Containers—Junked."

Answering Question 1:

Answering Question 2:

Answering Question 3:

No part of these classes of expense were assigned to tank wagon reseller business or jobber, naphtha and gasoline, as shown on Respondent's Exhibit 101. Therefore, expense have not been studied by me.

Account 080, "Drayage Outside."

Answering Question 1:

Answering Question 2:

Answering Question 3:

No figures appear in this account on Respondent's Exhibit 101.

Account 081, "Demurrage And Railroad Storage."

Answering Question 1:

Answering Question 2:

Answering Question 3:

Due to the fact that the total amount of this ac-
6792 count was only $23.09 for the year 1940, I have made
no study of the account.

Account 082, "Personal Injury Expense—Company Employees."

Answering question 1:

Answering question 2:

Answering question 3:

I have made no study of this account.

Account 083—"Samples."

Answering question 1:

Answering question 2:

Answering question 3:

I have not made any study of this account.

Account 084—"Safety Expense—Salaries and All Other Expense."

Answering question 1:

Answering question 2:

Answering question 3:

There is an inconsistency in the separation of the account between channels on Respondent's Exhibit 101.

A small portion of this account is assigned to jobber, naphtha and gasoline business, on the basis of estimated time, while the principal portion of this account is separated between the three bulk plant channels on the basis of bulk plant gallonage.

6793 I object to the usage of estimated time, or estimated effort for the assigning of a portion of the account to one channel, and the usage of a different method in assigning a portion of the account to other channels, in view of the fact that as far as I have been able to determine, neither of the methods employed in the allocation has been properly substantiated by a thorough cost study and analysis.

The account might be more properly allocated as between the channels on a basis of effort of all employees, or any other equitable basis; however, inasmuch as this account is small, a thorough detailed study has not been made of it, and any other separation than separation shown on Respondent's Exhibit 101 would have little if any influence on the cost differential of 1.51 cents per gallon claimed by the Respondent.

Account 087. "General Supplies Used."

Account 088. "Station Operators Tools and Equipment."

Answering question 1:

Answering question 2:

Answering question 3:

The same answers as given for account 060 apply equally to these accounts.

Account 088-A. "Station Operators Tools & Equipment (Service Station Owned Properties Complete)."

6794 Account 088-B, "Station Operators Tools and Equipment (Service Station Owned Buildings on Leased Ground."

Account 088-C, "Station Operators Tools and Equipment (P.O.S.S.L., Properties Leased Out)."

Answering question 1:

Answering question 2:

Answering question 3:

The same answer given for account 060-A, -B, -C, and as further amplified by answers to questions in connection with accounts 065-A, -B, and C, apply equally to these three accounts.

Account 200, "Office Expense—Salaries Accounting."

Answering question 1:

Tabulations were made of time of employees in the accounting department during the entire third month of each quarter of each year, whereby a composite percentage factors are determined for the allocation of this class of expense between channels on Respondent's regular accounting form 189.

In Respondent's late cost study, as reflected in Respondent's Exhibit 100, tabulations were made for one month's period during August and September, of the time which employees in the accounting department devoted to the three separate channels of direct shipment business, 6795 and an estimated portion of the time thus determined expressed in ratios to the total time of the employees during the month were used in applying a portion of this class of expense to the direct shipment business for the year 1940, as set forth on Respondent's Exhibit 101.

My objection here runs to the point that the tabulations made in August and September, 1940, were not made to cover all of the time of the employees during the month, whereby the time applicable to each channel might be properly determined.

Another objection raised in connection with the separation of this class of expense as between channels on Respondent's Exhibit 101 is that salaries of supervisors, the payments of which are made from the Chicago office, were assigned wholly and entirely to the petroleum products businesses, and no part of same was assigned to the automobile supplies business of the Respondent for the year 1940.

A further objection to the figures as shown in the sep arate columns runs to the question of that portion of the credit card costs which are included in this account?

In my opinion credit card costs cannot be used in determining a cost differential between tank wagon reseller business and jobber, naphtha and gasoline business.

Answering question 2:

Effect has been given to the elimination of that
6796 portion of this account which represents credit card
cost in the preparation of Commission's Exhibit 133. As to the influence which any further separation or changes in the figures in this account on Respondent's Exhibit 101 would have on the Respondent's claimed cost differential of 1.51 cents per gallon, I have no information and have made no calculations which would determine same.

Answering question 3:

The answer to question 3 is that—I did.

Account 209, "Office Expense—Tabulating Machines."

Answering question 1:

Answering question 2:

Answering question 3:

No figures for this account appear on Respondent's Exhibit 101.

Account 201, "Office Expense—Stationery and Office Supplies."

Answering question 1:

I object to the allocation made of this class of expense on Respondent's Exhibit 101 in that that portion of the expense considered to be applicable to the bulk plant business was allocated between the three bulk plant channels on a basis of bulk plant gallonage, whereas separations of this class of expense were made between direct shipment
channels on the basis of cost studies and analyses.
6797 From the standpoint of sound accounting, in my
opinion, this is an inconsistent and improper separation inasmuch as studies have never been made as far as I have been able to ascertain, which would properly support any allocation of this class of expense on the basis of gallonage.

If a cost study and analysis could be made to determine what portion of this class of expense would be properly assignable to the direct shipment channels, it is reasonable to assume that the same study could be made for the separation of the expense as between bulk plant channels.

A further objection to the separations was to the use of the figures as shown on Respondent's Exhibit 101 in the separate channels in connection with credit card costs. A considerable portion of this expense is incurred in connection with the handling of credit cards, and in my opinion, credit card expense cannot be used in determining a cost differential.

Answering question 2:

Answering question 3:

I have made a study to determine or to estimate what portion of this expense represents credit card costs, but I have not made a detailed cost study and analysis to determine what portions of the remaining expense would be applicable to the separate distribution channels as set forth on Respondent's Exhibit 101.

6798 Therefore, the influence that a proper separation of the expense would have on Respondent's claimed cost differential of 1.51 cents per gallon has not been determined.

Account 202, "Office Expense—Postage."

Answering question 1:

Answering question 2:

Answering question 3:

The same answers given for account 201 would apply equally to account 202.

Account 203, "Office Expense—Telephone and Telegraph."

Answering question 1:

Answering question 2:

Answering question 3:

The answers to questions 1, 2, and 3, were given as a part of my answer to questions in connection with account 063.

Account 204, "Office Expense—Exchange."

Answering question 1:

Answering question 2:

Answering question 3:

The same answers given for account 201 apply equally to account 204.

Account 205, "Office Expense—Operation and Maintenance of Vehicles—Office Automobiles."

6799 Answering question 1:

Answering question 2:

Answering question 3:

In answer to questions 1, 2, and 3, the allocations of this expense on Respondent's Exhibit 101 follow the allocation of petroleum products expenses in account 200, and the same answers given in connection therewith are applicable to this account, except that some portion of these two classes of expense may be applicable to credit cards, and any study—in fact, no study was made to determine just what such amounts may be. Inasmuch as these two classes of expense have been assigned to the separate petroleum products channels on Respondent's Exhibit 101, it would appear that some portion of these two items should be assigned to automobile supplies expense following whatever proportion of the expenses in account 200 which should properly be applicable to the automobile supplies business.

Account 206, "Office Expense—All Other—Water, Light, Fuel, Rent, etc."

Answering question 1:

Answering question 2:

Answering question 3:

The answers to these three questions would be the same as those given for account No. 205.

Account 207, "Outside Collection Expense."

6800 Answering question 1:

Answering question 2:

Answering question 3:

In answer to questions 1, 2, and 3, I have made no study of account 207.

Account 208, "Credit Information Expense."

Answering question 1:

The principal portion of this item of expense represents costs incurred in connection with credit cards.

Inasmuch as credit card cost is not a cost which will afford a cost differential, it is my opinion that that portion of this account representing credit card cost should be eliminated from Respondent's Exhibit 101.

Answering question No. 2:

In answer to question No. 2, effect has been given to the elimination of credit card expense contained in account 208 on Commission's Exhibit 133.

Answering question No. 3:

I have studied this account for the purpose of determining what portion of it represented credit card cost.

I have made no further study of this account.

Account No. 215, "Expense—Salaries—Others."

Account No. 216—"Expense—Traveling Expense—Others."

Account No. 217, "Expense—Operation and Main-6801 tenance of Vehicles—Automobiles—Others."

Answering question No. 1:

This class of expense was separated between the bulk plant channels on the basis of bulk plant gallonage, and that portion considered to be applicable to direct shipment business was thus determined, and was separated between the direct shipment channels on the basis of estimated effort of the employees. This is an inconsistent and improper separation in my opinion from the standpoint of sound accounting, because of the fact that if a separation of a part of this expense could be made on the basis of effort, it is reasonable to assume that all of the account could be separated between all of the distribution channels on the same basis in the absence of information which would show conclusively that such could not be done.

The gallonage allocation factor used in the separation of a portion of the account between the three bulk plant channels has never been proven as being accurate and sound by any thorough cost study and analysis, as far as I have been able to determine.

It is my understanding that a large portion of the expense included in these three accounts is incurred directly or indirectly in connection with leased service station properties. Therefore, if a separation were made of the expense incurred between the lessee and non-lessee service station properties the answer given in connection with 6802 account 060-A, -B, -C, would apply to the leased service station portion of this expense.

(Witness temporarily excused.)

Trial Examiner Ballinger: And now, at 4:55 o'clock, p. m., July 17, 1942, an adjournment in the above-entitled case is taken to reconvene at 9:30 o'clock, a. m., on Saturday, July 18, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon at 4:55 p. m., July 17, 1942, the hearing in the above-entitled matter was adjourned.)

6803

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Saturday, July 18, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois,) appearing for the Respondent.

6804

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company (Indiana)" is reconvened pursuant to notice at 9:30 a. m., July 18, 1942, in room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at this same place on July 17, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued.)

Q. Mr. Warmack, the last accounts we dealt with were 215, 216, and 217. Please complete your answers to those and then we will now proceed to your answering the three questions relative to each of the succeeding accounts.

A. I have completed my answer to question 1 so far as accounts 215, 216, and 217 are concerned.

Answering question 2: For accounts 215, 216, and 217, the answer is: I do not know.

Answering question 3: I did make a study and
6805 analysis of the underlying data for account 215; I
did not make an analysis of accounts 216 and 217.

Account 220, Expense—Employment Department—Salaries and All Other Expense.

Answering question 1: This class of expense was separated between the bulk plant channels on the basis of bulk plant gallonage, and that portion of the expense considered applicable to direct shipment business was separated between direct shipment channels on the basis of estimated effort of employees. This is an inconsistent and improper separation in my opinion, because of the fact that if a separation of a part of this expense could be made on the basis of effort, it is reasonable to assume that all of that account could be separated between the channels on the same basis.

It may be that this expense being of a general nature would have to be allocated on the basis of other expenses which are more directly allocable to channels than this expense is.

In answer to question 2: I cannot state in dollars and cents what influence a proper separation would have on Respondent's claimed cost differential of 1.51 cents per gallon, but if this total class of expense were separated
on the basis of effort in the Detroit field, it is very
6806 evident that it would serve to reduce the claimed
differential.

Answering question 3. While in Detroit, I made inquiry as to the duties and functions of the employment department, but I did not make a detailed study and analysis of all of the underlying data which goes to make up this account.

Account 225, Expense—Salaries—Sub-Station Auditors.
Account 226, Expense—Traveling Expense—Sub-Station Auditors.
Account 227, Expense—Operation and Maintenance of Vehicles—Sub-Station Auditors.

Answering questions 1, 2, and 3: These accounts were relatively small and I have not made a detailed study of either of the three accounts. It is noted that they were separated on Respondent's Exhibit 101 on the basis of gallonage, which measuring factor has not been established by any cost study and analysis of the Respondent company as far as I have been able to find out. I naturally cannot accept any arbitrary allocation factor which has not been properly proven, but I have made no calculations which would determine what influence—any change in the figures as shown in Respondent's Exhibit 101 these three accounts would have on the differential.

6807 Account 240, Donations.

Answering question 1: In the first place, it is my opinion that this class of expense is not a cost which will afford a cost differential. It is an expense incurred for the purpose of creating good will generally in the community, and generally cannot be considered as being influenced more by one class of customers than another. Therefore, it has no place on Respondent's Exhibit 101.

Answering question No. 2: If this account were not included in the costs as set forth in Respondent's Exhibit 101, it would reduce the differential claimed by the Respondent company by approximately one five-hundredths of a cent.

In answering question 3: I did not make a detailed study and analysis of the underlying data that goes to make up this account.

Account 400, "Bad Debts Collected—Written Off Prior Years."

Answering question 1: This is a credit account, as shown in Respondent's Exhibit 101, and in my opinion it has no place in the exhibit. In my opinion the account would not influence in any way or was not by the operations of the company in the year 1940.

Answering question 2: The removal of this account from Respondent's Exhibit 101 would serve to slightly in-
6808 crease the cost differential.

Answering question No. 3: I have not made any detailed study or analysis of this account.

Account 410, Profit and Loss On Resale Barrels;
Account 431, Budget Plan Income and Expense.

There is no entry in these accounts in the tank wagon reseller column or the jobber, naphtha and gasoline column, and there is nothing to indicate in the record that this class of expense or income would influence the Respondent's claimed cost differential.

Account 500, Losses by Accident—Property and Other Than Company Employees.

Account 501, Losses by Property Damage—Company and Other Than Company Property.

Account 502, Losses by Fire.

Account 507, Losses—Miscellaneous.

Answering questions 1, 2, and 3: These accounts have not been studied. Hence, the figures appearing on Respondent's Exhibit 101 for these separate accounts are not criticized, and it is noted, however, that separations have been made on a gallonage basis which, of course, would be questioned; that is, the allocation factor would be questioned if the accounts were studied.

6809 Account 508, Losses—Uncollected Charges for Stock Losses.

There are no figures in Respondent's Exhibit 101 for this account.

Account 510, Losses by Bad Debts.

Account 511, Expense Collecting Bad Debts—Current Year.

Answering questions 1, 2, and 3: These two accounts have not been studied and analyzed except as to determine what portion of credit card costs are contained therein, as set forth in Commission's Exhibit 132. As previously stated in answer to the questions pertaining to account 208, it is my opinion that credit card costs represent costs which cannot be used in determining a cost differential.

Account 512, Expense Collecting Bad Debts—Prior Years.

Answering questions 1, 2, and 3: This account has not been studied, except in connection with my study of credit card costs as set forth in my answers to questions in connection with account 208.

It is my opinion that expense incurred during 1940 in connection with collection of bad debts for prior years is not an expense which can be used in determining a cost differential for the year 1940.

6810 Account 675, Advertising—Other Costs (Including ELA).

Answering question 1: The charges to this account, excluding charges directly applicable to petroleum channels and to automobile supplies, were allocated to channels on Respondent's regular accounting form 189 by a ratio of gallons sold by each channel to total gallons sold by all channels, excluding direct shipment gallonage during each month for the year 1940.

The major portion of costs included in this account is for advertising for consumer acceptance, such as newspaper advertising, poster advertising, and direct mail, and so forth, which in my opinion should be allocated on the basis of gallonage sold through reseller stations whether served by the Respondent directly or indirectly. The purpose of this advertising is to create a demand in the mind of the public for the Respondent's products, and Respondent has no control over the consumer; that is, a driver of an automobile as to where he elects, or what station he elects to buy Standard Oil gasoline from. No part of this advertising cost for consumer expense has been assigned to jobber, naphtha and gasoline column in Respondent's Exhibit 101, which, in my opinion, is erroneous and unsound from the standpoint of sound accounting practice and procedure.

There is the possibility that some small portion of advertising cost included in account 075, which was incurred in
connection with point of sale advertising may afford
6811 some cost differential, but that portion of point of
sale advertising which is included in the account, has not been separated from the advertising expense incurred for consumer acceptance by the Respondent.

There are separations made on pages 26, 27, and 28 of Respondent's Exhibit 100 which show portions of point of sale advertising which Respondent assigned to direct shipment business, but there is insufficient information on the exhibit as to what portion of this class of advertising would properly be assignable to tank wagon reseller business.

Answering question 2: From the information at hand, that is, information set forth in Respondent's Exhibit 100, as stated in answer to question 1, it is impossible to appraise what if any influence the point of sale advertising would have on Respondent's claimed cost differential of 1.51 cents per gallon. Therefore, if the entire account 075 as set forth on Respondent's Exhibit 101 were removed entirely therefrom it would serve to reduce the cost differential by approximately .16 cents per gallon.

Answering question 3: I have studied all of the information dealing with account 075 which is contained in Respondent's Exhibits 99 and 100 and other records and testimony in this case.

I have not made a detailed study and analysis of the company's records at the company's offices which 6812 deal with this account.

Account 100, Depreciation Expense—Vehicles—Supervision.

Answering questions 1, 2 and 3: The same testimony given for account 000 applies equally to this account.

Account 101, Depreciation Expense—Vehicles—Sales Promotion.

The same testimony given for account 002 applies to this account.

Account 102, Depreciation Expense—Vehicles—Salesmen.

The testimony given for account 004 applies to this account.

Account 103, Depreciation Expense—Vehicles—Advertising.

The same testimony given in connection with account 005 applies equally to this account.

Account 106, Depreciation Expense—Vehicles—Trucks, Motor & Horse Drawn (Including Vehicle Tanks & Excluding Advertising Trucks).

The same answers given to questions in connection with account 053 apply equally to this account.

6813 Account 107, Depreciation Expense—Vehicles—All Others (Other Than Office).

The same answers given to questions in connection with account 054 apply equally to this account.

Account 228, Depreciation Expense—Vehicles—Office—Others—& Sub-Station Auditors.

In answer to question 1: In the company's regular accounting procedure this class of expense is alocated between distribution channels on all all-gallonage basis excluding direct shipment gallonage, while on Respondent's Exhibit 101 that portion of this class of expense which was considered to be applicable to direct shipment business was assigned thereto and distributed between the direct shipment channels on the basis of effort of the individuals to whom the cars were assigned. In my opinion this is inconsistent and unsound from the standpoint of sound accounting. If allocations can be made to direct shipment channels on the basis of effort of employees, it is reasonable to assume that the whole account could be spread as between all channels on the same basis in the absence of information to the effect that such could not be done. The gallon age allocation in the bulk plant channels has not been proven; that is, the measuring factor has never been proven, as far as I have been able to learn by any cost study and analysis.

6814 Answering question 2: I have not made a calculation as to what effect any changes in the figures on Respondent's Exhibit 101, giving effect to a sound and consistent reallocation of this account between the channels, would have on the Respondent's claimed cost differential of 1.51 cents per gallon.

Answering question 3: Inasmuch as this account, that is, account 228 entitled "Depreciation Expense—Vehicle—Office—Others—& Sub-Station Auditors," amounted to only $618.83 in the Detroit field for the year 1940, I have made no study of the underlying records of the company and have devoted little time to any study of this account.

(Witness temporarily excused.)

Mr. Hanley: I move that we adjourn until Monday morning, July 20, 1942, at 9:30 o'clock, a. m..

Trial Examiner Ballinger: Motion granted.

And now, at 12 o'clock noon, July 18, 1942, the hearing in the above-entitled matter stands adjourned to reconvene in Room 532, Federal Trade Commission Building, Washington, D. C., at 9:30 a. m., July 20, 1942.

(Whereupon, at 12:00 noon, July 18, 1942, the hearing in the above-entitled matter was adjourned.)

6815

Room 532, Federal Trade
Commission Building,
Washington, D. C.
Monday, July 20, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq. (910 South Michigan Avenue, Chicago, Illinois), appearing for the Respondent.

6816

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing of Docket No. 4389, case entitled "In the Matter of Standard Oil Company (Indiana)" is reconvened pursuant to notice at 9:30 a. m., July 20, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at this same place on July 18, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued).

Q. Mr. Warmack, have you finished answering all three questions with regard to each of the accounts on Respondent's form 189, Respondent's Exhibit 101?

A. No.

Q. Then will you please continue?

A. Account 110, Distribution Expense Plant (Building, Machine, Equipment, Furniture and Fixture).

Answering question 1: This type of expense is allocated to channels in Respondent's regular accounting form 6847 189 on the basis of gallonage excluding direct shipment gallonage. In Respondent's recent cost survey portrayed in Respondent's Exhibit 100, that portion of the expense which was applicable to the main office building was allocated in part to the direct shipment business on the ratio of man hours devoted to direct shipment in the main office to the total man hours of the main office, as set forth on page 41 of Respondent's Exhibit 100.

It was likewise separated between direct shipment channels on the same basis, while that portion representing by far the larger portion of this class of expense remaining after segregating the portion considered to be applicable to direct shipments on the basis of man hours, was allocated to bulk plant channels on Respondent's Exhibit 101, on the basis of gallonage.

In my opinion, it is unsound and not in accordance with sound accounting practice for Respondent to allocate a portion of this expense to one group of channels on the basis of man hours, and to arbitrarily allocate the remaining portion to the other distribution channels on a basis of gallonage, for the purpose of proving a cost differential.

With reference to that portion of this expense whic covers depreciation in bulk plants, here we have propert either involved wholly and entirely in the dispensing o the company's products through bulk plants, and no 6848 involved in direct shipment business—a separatio was made of this portion of the depreciation on th basis of bulk plant gallonage—in my opinion any allocation factor used in the separation of this expense whic has not been proved by an intensive cost study and analysis may be considered, at best as, in my opinion, an arbitrary factor arrived at by guess work or some kind of estimates. It means that the figures shown in the tank wago reseller column are rough estimates not established by an sound accounting study and that these figures are the compared with the figures shown in the jobber, naphth and gasoline column, in order to determine a cost differential. It is my opinion that such a method is not sound unreliable, and unsatisfactory for the purpose of accuratel establishing a cost differential which this class of expens will, in some part, afford.

Answering question 2: The answer is—I do not know

Answering question 3: The answer is—I made a review and study of the information set forth in the exhibits and testimony of this case. I did not make a study of the underlying data at the company's offices. I inquired in each instance with reference to the gallonage allocation factor and as to whether it had ever been determined by any cost study.

6819 110-A, Depreciation Expense—Plant (Building, Machine and Equipment, Furniture and Fixtures) (Service Station Owned Properties Complete)

110-B, Depreciation Expense—Plant (Building, Machine and Equipment, Furniture and Fixtures) (Service Station Owned Buildings on Leased Ground)

110-C—Depreciation Expense—Plant (Building, Machine and Equipmeint, Furniture and Fixtures) (P.O.S.S.L., Properties Leased Out)

Answering Questions 1, 2, and 3, the same answers given in connection with account 060-A, 060-B, and 060-C; as amplified by answers given for accounts 065-A, 065-B, and 065-C, will apply equally here.

Account 111, Depreciation Expense—Plant—ELA.

Answering question 1: Respondent's regular accounting procedure has this class of expense separated between distribution channels on the basis of gallonage excluding direct shipment gallonage. That portion of this class of expense appearing in Respondent's Exhibit 101 applicable to bulk plant channels is allocated on the same basis.

In order to determine what portion of this class of expense is applicable to the direct shipment business Respondent determined, in its late cost study, the total amount of its investment in equipment loaned to customers
6820 falling in the three direct shipment channels and related the distribution rate or percentage thereof thus arriving at the proper depreciation chargeable to the three channels. It is my opinion that this is an accurate method of determining this class of expense.

However, as previously stated, the remaining portion of the expense which was applicable to the bulk plant gallonage was separated between the three channels on the basis of bulk plant gallonage. This gallonage factor used for the allocation has never been proven as far as I have been able to learn by an intensive cost study and analysis or review of any kind in the Detroit field. It is, therefore, an unsupported estimate, and in my opinion the resulting figures as shown in the three bulk plant channels on Respondent's Exhibit 101 are arbitrary estimates and are not proven as being sufficiently accurate for the purpose of determining the cost differential.

Answering question 2: The answer is—I do not know.

Answering question 3: The answer is—I made a review and study of the information set forth in the exhibits and testimony of this case.

I did not make a study of the underlying data at the
company's offices. I inquired in each instance relative to
the gallonage allocation, and as to whether it had
6821 ever been determined by any cost study.

Account 112—Depreciation Expense—Real Estate Improvements.

Answering questions 1, 2, and 3: The same answers given for account 110 apply equally to this account.

Account 112-A, Depreciation Expense—Real Estate Improvements (S.S. Owned Properties Complete)

Answering questions 1, 2, and 3: The same answers given in connection with account 060-A, -B, -C, and 065-A, B, -C, apply equally to this account.

Account 115, Depreciation Expense—Equipment Steel Barrels.

Answering questions 1, 2, and 3: There are no figures in the tank wagon reseller column and the jobber, naphtha and gasoline, for this account on Respondent's Exhibit 101. The account has not been studied by me.

Account 116, Depreciation Expense—One Gallon Cans. No figures appear in Respondent's Exhibit 101 for this account.

Account 086, Taxes—Real Estate and Personal Property.

6822 Answering questions 1, 2, and 3: The same answers
given for account 110 apply equally to this account
except that this 086 deals with taxes and account 110 deals
with depreciation.

Account 086-A, Taxes—(Service Station Owned Properties Complete)

Account 086-B, Taxes—(Service Station Owned Buildings on Leased Ground)

Account 086-C, Taxes—(P.O.S.S.L., Properties Leased Out)

Answering questions 1, 2, and 3: The same answers given in connection with 060-A, -B, -C, and 065-A, -B, -C, apply equally to this account.

Account 243, Taxes—Federal Insurance Contributions.

Answering question 1: The principal objection raised in connection with this account is that a portion of the same was not assigned to salaries applicable to the automobile supplies business. In view of the fact that many of the salary allocations as between channels on Respondent's Exhibits 101 have not been properly established by cost studies and analyses, it would naturally follow that at least a portion of this account as assigned to channels is questionable.

Answering question 2: I do not know.

6823 Answering question 3: I made a review and study of the information set forth in the exhibits and testimony of this case; I did not make a study of the underlying data at the company's offices.

Account 244, Taxes Unemployment Insurance.

Answering question 1: The same answer given for account 243 for question 1 applies equally to this case.

Answering question 2: Inasmuch as it was possible to make computations, as explained on page 6487 of the record, of this account in the preparation of Commission's Exhibit 133, the amount $13,739.43 shown in the tank wagon reseller column on Respondent's Exhibit 101 was reduced to $9,917.19.

Likewise, the figure $121.56 appearing in jobber, naphtha and gasoline column, Respondent's Exhibit 101, for this account was reduced to $97.07.

Answering question 3: I made a review and study of the information set forth in the exhibits and testimony of this case.

I did not make a study of the underlying data at the company's offices.

Account 245, Taxes—All Other.

Answering questions 1, 2, and 3: The information shown in the records for this account tabulated in Respond-
6824 ent's Exhibit 99 and Respondent's Exhibit 100, have been reviewed, but no detailed study has been made of this account.

I wish to state, however, that inasmuch as the separations were made on Respondent's Exhibit 101 for the Michigan privilege fee on two bases; that is, a portion of this tax was assigned to direct shipment business on a basis of effort devoted to direct shipments by all employees assigned to the Detroit main office, and all of the remaining portion of that tax regarded as having to do with distribution of the company's products through bulk plants was separated between three bulk plant channels on the basis of gallonage, I question the inconsistency employed in the separation, especially in view of the fact that the gallonage factor, as far as I have been able to learn, has never been properly established by the Respondent. Any influence which any change of allocation would have on the cost differential could not be determined in the absence of a thorough cost study which would be required in order to establish allocation factors for the separation of this account.

Account 235, Insurance.

Answering questions 1, 2, and 3: This account has not been studied by me. The total amount for the account in the year 1940 on Respondent's Exhibit 101 is $980.40.

6825 Account 250, General Office Expense—Accounting Department.

Answering question 1: In Respondent's late cost study, as shown by Respondent's Exhibits 100 and 101, a part of the expense allocated to the Detroit field for account 250 was charged to direct shipment channels by using the same ratios which were applied to the expense of the field credit and collection and accounting departments in allocating the expense of those departments to direct shipment channels. This is explained at page 5553 of the record.

The ratio of hours spent by employees in the field to "credit"–"accounts receivable" departments on direct shipment business to their total hours, was applied to the credit and collection department expense from the general office. A similar ratio was obtained for the balance of the employees in the field accounting department which was applied to the general office accounting department expense, allocated to the field for the purpose of charging a part of that expense on direct shipment channels; the remainder of expense in account 250 not allocated to direct shipment channels remains distributed between bulk plant channels on Respondent's Exhibit 101 on a gallonage basis; that is, bulk plant gallonage. No part of the expense of this account is charged to automobile supplies, on Respondent's Exhibit 101.

There is testimony in the record by Respondent's witness Boatwright that the general office accounting de-
6826 partment includes many departments that are not carried in the field at all, and whose duties do not parallel the duties of the field accounting departments. This being true, it would seem to me that distribution of effort of the field accounting departments could not logically be used for distribution of general office expense to direct shipment channels.

As far as I have been able to learn, no cost study has been made of the functions and expense of the general office accounting department for the purpose of this case to determine what portion of the expense is properly allocable to the separate channels of distribution. It may be that a thorough study would develop that some of the activities of the general office credit and accounting department would properly afford a differential as between tank wagon reseller and jobber business. However, in view of the dissimilarity of the activities of the general office credit and accounting department and the field accounting department, as testified to by Respondent's witness Boatwright, the allocation of expense of the general office credit and accounting department to direct shipment channels on the basis of distribution of effort of the field accounting department is clearly improper, unsound, and is not supported by facts—with the estimated figures arrived at as appearing in Respondent's Exhibit 101 for the separate channels representing estimates only, and are not sufficient for
6827 the purpose of determining a cost differential.

Answering question 2: The answer is—I do not know.

Answering question 3: The answer is—I have reviewed all of the information contained in Exhibits and testimony in this case, and I have reviewed the methods employed in the separation of this class of expense in Respondent's regular accounting procedure.

In further answer to questions in connection with account 250—being General Office Expense—Accounting Department—that portion of which was allocated to the Detroit field for the year 1940 appearing in Respondent's Exhibit 101—it is my opinion that if a thorough and intensive cost study and analysis, giving effect to the separate functions of the department and the manner that they involve the cost were not made, that this class of expense could not be used in determining any cost differential. This class of cost is remote to the sale of gasoline and other petroleum products in the Detroit field, and that fact must be considered in organizing any plan to study in the general office for the purpose of determining a cost differential.

(Witness temporarily excused.)

Trial Examiner Ballinger: And now, at 12:10 o'clock p. m., the hearing will stand in recess for luncheon until 1:30 o'clock p. m.

6828 (Whereupon, at 12:10 p. m., a recess was taken until 1:30 p. m., this day.)

6829 Afternoon Session.

1:30 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination (Continued)

The Witness: Account 255, General Office Expense—General Managers Department.

Answering question 1: This account is separated into several sub-accounts which represent subdivisions of the general managers' Department, and we will first deal with the division known as "Supervision"—"Sales Research"—"Statistical—Personnel" Departments or subdivisions.

The expense of these three subdivisions of the genera managers department is distributed between fields on an all-gallonage basis excluding direct shipment gallonage and is, in turn, allocated among channels within a field on the same basis.

In respondent's late cost study as set forth in Respondent's Exhibit 100, Respondent's accountants charged a part of the expense of these three sub-accounts, which was allocated to the Detroit field, to direct shipment channels

by using ratios representing the estimated effort of
6830 all employees in the Detroit field charged to direct
shipment business, in the cost study. The remainder
f the expense of these three sub-departments remains in
he three bulk plant channels on Respondent's Exhibit 101,
nd is separated between the three channels on the basis
f bulk plant gallonage.

I question the propriety of the allocation of this class
f expense to fields on a basis of gallonage, and this is
specially true when a portion of the total gallonage (the
irect shipment gallonage) is omitted from the gallonage
actor for the purposes of separation unless the point can
e established by some proper accounting study that a
allonage measuring factor used for the separation will
fford reasonably accurate figures in the separation for the
llocation.

If the gallonage allocation were substantiated as being
ound and accurate, it is my opinion that the costs of
he supervision sub-department might be allocated to all
hannels in the field on the basis of the effort of em-
loyees supervised provided, however, that such super-
ision was not of a nature which might be considered as
oo remote.

In other words, the effort of the employees supervised
r the measuring factors established by a proper study
or an allocation of the compensation of those persons on
a basis of the persons thus supervised, but it could
6831 not be considered in my opinion that an allocation
factor based upon efforts of employees, or groups of
mployees, such as office boys, and so forth, could move
ll the way up the line and become a measuring factor,
which could properly be used for the allocation of the
ompensation of a supervisory official in a distant gen-
ral office.

In the case of the sales research department and the
tatistical-personnel department, a proper study would be
required of these particular classes, of the costs of these
particular departments, to determine whether or not such
costs would or would not afford a cost differential in the
particular field. And that is especially true in this case
because of the fact that the company maintains 27 sepa-
rate fields of distribution.

It may be said that a study would show, for example,
that the sales research department devoted much time to

the Detroit field in the years 1941 and 1942 which would not be properly chargeable to other fields, but even when this fact is established, it would be a very difficult problem to establish measuring factors for the further separation of these costs which are applicable to the Detroit field for the purpose of determining a cost differential.

The next department to be dealt with is that of "Gasoline and Refined Oil." The expense of this depart-
6832 ment is first split between manufacturing and sales
departments on a twenty-five—seventy-five ratio. The 75 per cent charged the sales department is then allocated between bulk plant channels on the basis of total company sales in gallons (excluding direct shipments) and refining oils, tractor fuels, naphthas, and gasoline in each channel. After allocation to channels of the entire company business, allocation to fields is based on the proportion of sales of these products, by fields, in each channel to total channel sales. During the course of my studies in the Respondent's offices I was not able to secure any substantiation in the way of documentary evidence of these measuring factors; that is, the 25-75 per cent ratio used in splitting this class of expense between the manufacturing and sales departments, as well as information which would substantiate the gallonage allocation.

A part of the expense of this department which was charged to the Detroit field was allocated to direct shipment channels on Respondent's Exhibit 101 by the use of ratios representing the combined selling effort in the Detroit field.

In other words, on Respondent's Exhibit 101 the expense is split between bulk plant business and direct shipment business on the basis of estimated effort in the Detroit field. The separation is further carried through where-
by that portion of the expense allocated to direct
6833 shipment business is allocated between direct ship-
ment channels on the basis of estimated effort while that portion of expense remaining in the bulk plant channels is separated on a basis of gallonage the measuring factors of which have never been established, as far as I have been able to learn, by cost study or analysis.

I would like to call attention to the fact that this department is concerned directly with direct shipment business. However, as previously stated, its expense is sep-

ated in the company's regular accounting procedure
the basis of bulk plant gallonage, which excludes direct
ipment gallonage, for the purpose of allocation.

The expense of this department; that is, the gasoline
d refined oil department may afford some cost differ-
tial, but in order to establish that fact as to the extent
such cost differential, it will be necessary to make a
orough study and analysis of the functions and the cost
this department.

I have not made any particular study of the remain-
g sub-departments of this account.

Answering question 2: The elimination of adjustments
ade in the sub-accounts of some of these departments
d giving effect to the fact that some of the departments
ere not studied to any great extent, and hence no ad-
stments were made thereto, the costs as set forth on
Respondent's Exhibit 101 for account 255 in tank
34 wagon reseller column aggregating $27,009.17 was
reduced to $2,875.23, as shown by Commission's Ex-
bit 133; likewise, the jobber, naphtha and gasoline col-
nn on Respondent's Exhibit 101, where a portion of this
count appears in the amount of $136.47, was reduced to
3.16.

The influence that this would have on Respondent's
aimed cost differential of 1.51 cents would be approxi-
ately three one-hundredths of a cent per gallon.

Answering question 3: I did make a study of the in-
rmation shown in the exhibits and testimony of this
count of the supporting items to sub-departments which
included in account 255. I also made a study of some
the underlying data of some of the accounts at the
espondent's offices in Chicago.

ccount 260, General Office Expense—Advertising De-
rtment.

Answering question 1: The methods employed by the
espondent in segregating and separating those costs be-
veen bulk plant channels and direct shipment channels
llowed and were based on the amounts of cost which were
parated between the two groups on Respondent's Exhibit
)1 in account 075; likewise, a portion of the expense
hich was thus assigned to the direct shipment business
was distributed between the direct shipment channels
35 on Respondent's Exhibit 101 in the same manner.

However, that portion of the expense which was assigned to bulk plant channels on Respondent's Exhibit 101 was separated on a basis of gallonage.

Answering question 2: The answers given in connection with account 075 apply to this account except as to the influence of the elimination of the account from Respondent's Exhibit 101 would have on the claimed cost differential of 1.51 cents per gallon; if this account were eliminated from Respondent's Exhibit 101, naturally the influence would be much less as only $3,529.47 is shown in the tank wagon reseller column and $86.28 is shown in the jobber, naphtha and gasoline column.

Answering question 3: I have reviewed the information as set forth in exhibits and testimony of this case so far as they relate to this particular account. I have made no study of the underlying data in the Respondent's offices.

Account 265, General Office Expense—Lubricating Department.

I have not studied this account.

Account 270, General Office Expense—Asphalt and Fuel Oil Department.

I have not studied this account, but I wish to call 6836 attention to the fact that any figures appearing for this account in the tank wagon reseller column or the jobber, naphtha and gasoline column, do not show on Respondent's Exhibit 101; in other words, there are no figures for this account in those columns.

Account 280, General Office Expense—Construction & Maintenance Department.

Answering question 1: This class of expense was separated between fields on the basis of gallonage excluding the direct shipment gallonage and that portion of the expense thus allocated to the Detroit field was separated between bulk plant business and direct shipment business on the basis of the ratios applicable to activities of the Detroit field construction department.

The portion thus assigned to the bulk plant business was separated between the three bulk plant channels on a basis of bulk plant gallonage. I question the measuring factor used by the Respondent in the first place in assigning this class of expense of the general office as between fields. The gallonage factor was used in this separation and in my studies in the company's offices I was unable to obtain any information which would support such a separation. Further, it appears to me that if a portion of this

class of expense could be assigned to one channel
837 on Respondent's Exhibit 101 on the basis of effort, it would seem reasonable to assume that all of the xpense could be assigned to the separate channels on Respondent's Exhibit 101 on the basis of effort:

Answering question 2: I do not know.

Answering question 3: I have studied all of the information contained in the exhibits and the testimony of this case, nd have made inquiries at the company's offices with respect to the methods employed in the separation of this lass of expense. I made no study or analysis of any of he underlying records of this account.

Account 290, General Office Expense—Pro Rata General Administrative.

Account 295, General Office Expense—Law Expense.

These two accounts are separated on Respondent's Exhibit 101 between all channels on the basis of all gallonage, herefore, this class of expense as shown on Respondent's Exhibit 101 affords no cost differential. If the accounts were eliminated or removed from Respondent's Exhibit 101, it would in no wise influence the claimed cost differential of 1.51 cents per gallon.

Account 503, Losses By Storm And Flood.

I have made no study of this account.

838 Account 505, Losses By Dismantling—Abnormal—ELA.

No figures for this account appear on Respondent's Exhibit 101.

Account 506, Losses by Dismantling—Abnormal—Other Than ELA.

Answering question 1: This is an expense incurred in connection with the landlord activities of the Respondent in connection with the remodeling of leased service stations. Answers given to questions in connection with accounts 060-A, -B, -C, and 065-A, -B, -C, apply equally to this account.

Answering question 2: The answer is—I do not know.

Answering question 3: I have made a study of the underlying data, facts, records, and accounts applying to account 506 in Respondents' Exhibit 101.

Account 513, Losses by Dismantling—Out Of Pocket Expense—ELA.

I have made no study of this account.

Account 514, Losses by Dismantling—Out of Pocket Expense—Other Than ELA.

Answering Questions Nos. 1 and 2: Answers given to questions numbered one and two for account 506 apply
6839 equally to this account.

Answering question 3: I made inquiries relative to this account, but I have made no study of the underlying records of this account in the company's offices.

Account 515, Experimental, Development And Research Expense.

The answers given to questions in connection with accounts 290 and 295 apply equally to this account.

Account 520, Annuities And Retirement Plan Expense.

Answering question 1: This account consists of three separate parts as follows:

Part 1, Contributions made by the company to match contributions made by employees engaged in the Detroit field, amount $26,226.38.

Part 2, Portion of trust fund contributed by the company for the retirement of employees in the Detroit field in 1940 to cover services of such employees prior to January 1, 1939, $108,508.83.

Part 3, Annuities paid to retired employees in the Detroit field for the year 1940, $22,279.06.

It is my opinion that parts 2 and 3, as previously defined, are expenses which were not incurred in marketing activities in the Detroit field for the year 1940, hence, they are not costs which can be used in determining cost dif-
6840 ferentials.

It is my opinion that costs of No. 1 as just outlined in the amount of $26,226.38 in the Detroit field for 1940 are proper costs which can be used in establishing a cost differential, but I question the allocation of this part of this expense on Respondent's Exhibit 101 inasmuch as no part of same was applied to employees engaged in the automobile supplies business of the company. It is my opinion that this class of expense should follow the allocations of the compensation of the employees to which it applies.

Answering question 2: The influence of the adjustments and eliminations as just outlined for this class of expense as far as they can be determined from the information at hand are reflected in Commission's Exhibit 133 and reveal roughly that it would amount to about .063 cents per gallon for the claimed differential of 1.51 cents per gallon.

Answering question 3: I did make a detailed study of the underlying data, facts, records, and accounts applying to Account No. 520 as appearing on Respondent's Exhibit 101.

Account 525, Death Benefits.

Answering question No. 1: This account may be considered as additional compensation to employees, and as
such should follow the allocations of the compensation
6841 of the employees between channels in establishing a
cost differential. The Respondent recognized this fact by allocating a portion of this expense to direct shipment channels on the basis of distribution of compensation between those channels following the percentages applied to the expense account in account 520.

Respondent's allocation of a portion of this expense between bulk plant channels on a gallonage basis, in my opinion, is erroneous.

Answering question No. 2: The influence that this adjustment would have on Respondent's claimed cost differential would be about .0028 cents per gallon, as reflected by the figures on Commission's Exhibit 133; this is on the assumption that the allocations of the salary accounts in Respondent's Exhibit 101 are accurate and correct, a fact which this witness does not admit.

Answering question No. 3: I did make a detailed study of the underlying data, facts, records, and accounts applying to account 525 appearing on Respondent's Exhibit 101.

Account 526, Military Pay Allowances.

No figures appear in this account on Respondent's Exhibit 101.

(Witness temporarily excused.)

6842 Mr. Austin: I move an adjournment until tomorrow morning at 9:30.

Trial Examiner Ballinger: Very well. The motion is granted.

And now, at 4:10 o'clock, p. m., July 20, 1942, the hearing in the above-entitled matter is adjourned to reconvene in Room 532, Federal Trade Commission Building, Washington, D. C., at 9:30 o'clock, a. m., July 21, 1942.

(Whereupon, at 4:10 p. m., July 20, 1942, the hearing in the above-entitled matter was adjourned.)

6843

Room 532, Federal Trad
Commission Building,
Washington, D. C.,
Tuesday, July 21, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federa Trade Commission.

Harold R. Hanley, Esq., (910 South Michigan Avenue, Chicago, Illinois) appearing for the Respondent.

6844

PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearin of Docket No. 4389, case entitled "In the Matter of Standard Oil Company (Indiana)" is reconvened pursuant t notice at 9:30 a. m., July 21, 1942, in Room 532, Federa Trade Commission Building, Washington, D. C.

The last hearing was held at this same place July 20 1942.

The reporter will note counsel for the Commission an Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued).

Q. I understand now, Mr. Warmack, that you have completed all of your answers to the three stipulated question in connection with each of the accounts appearing on Respondent's Exhibit 101; is that correct?

A. Yes, sir.

Q. Now, you were asked in connection with each of th accounts on Respondent's Exhibit 101, what the influenc way, if any, in figures in dollars and cents upon the differential of 1.51 cents appearing on Respondent's Exhibit 101.

6845 As I understand your answers you have indicated that you made no calculation and do not know what the influence would be if your accounting methods were applied in respect of any of those accounts with the exception of account 075, having to do with advertising; account 240, having to do with donations; and account 520, having to do with annuities; in respect of those last three accounts I understand you did make a calculation and did testify as to the influence in figures upon the differential of 1.51 cents.

Am I correct in that?

A. Yes, sir. I did make a calculation, or I might say computations giving effect to changes that may occur in those accounts.

With particular reference to account 075—that is the advertising account—there may be some portion of that cost, as I have previously testified, that would afford some cost differential. The information at hand, however, is not sufficient to make a segregation, so, the calculation that I made gave effect to the complete elimination of that account.

Q. I refer you, Mr. Warmack, to page 6733 of your cross-examination, on which page you were discussing accounts 520 and 075. You have indicated the results of certain calculations which you made.

Mr. Austin: What is the page?

6846 Mr. Hanley: 6733.

Mr. Austin: Do you have that, Mr. Warmack?

The Witness: I do not. I think it will be here shortly.

By Mr. Hanley:

Q. You have stated, after explaining that you made a calculation, that that makes a total deduction of the tank wagon reseller column of $192,425; which reduces the total expense as shown of $1,155,379.06 to $962,954.00; and that the total expense in the jobber, naphtha and gasoline, as shown in Respondent's Exhibit 101 is reduced by $3,745, which reduces the total that is shown to $26,644.00.

On the following page, 6734, you indicate that after giving effect to your calculation that the differential would be

1.255 cents instead of 1.51 cents, as claimed by the Respondent company.

Now, do you have your own copy, now, Mr. Warmack, or do you wish to see this?

A. No, sir. I have one of the copies here.

Trial Examiner Ballinger: Do you mean copy of the record?

The Witness: Copy of the record, yes, sir.

By Mr. Hanley:

Q. I am unable to understand your calculation, Mr. Warmack, both as to the amount of reduction and re-
6847 sulting amounts left in the accounts, and as to how you arrived at the differential of 1.255 cents, and as to whether that includes the results of your treatment of both accounts 520 and 075, and if so, what the division is.

At this time, Respondent requests that you supply the Respondent with a copy of the work sheets which are the foundation of this computation. If you do, I think it will perhaps greatly shorten the time necessary to arrive at an understanding on the part of the Respondent as to exactly what you are testifying to.

A. Yes, sir, Judge Hanley, that calculation was the calculation which we made, or which I made while on the witness stand, and yesterday while going over these matters I found that it was subject to a correction. I would like to have the calculation show on the record according to the correction, and if I may have just a few minutes I will recalculate this, and of course hand you the papers on which the calculation is made.

Q. Well, do you think it would save any time if you were to make that calculation, and make any correction you wish to make, during some recess period, Mr. Warmack, and give us a copy so that we can examine it, or do you think that you can do it fast enough right now to give us the information?

A. This may be the place to put it in the record, but I have not got the calculation in the form that would
6848 be presentable to you; that is, to satisfy me. I only have some rough notes here. It would only take me a few minutes to get this in shape.

Trial Examiner Ballinger: We will take a recess for five minutes.

Mr. Hanley: If your Honor please, before recess, I have one other calculation that I will want him to make.

Trial Examiner Ballinger: You may indicate that to the witness during the recess period, and inquire about it on the record later.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order. Proceed.

By Mr. Hanley:

Q. Mr. Warmack, just prior to the recess I asked you for your work sheets dealing with your calculations upon the making of a differential as reflected by your views of the proper treatment of accounts 075, 520, and 240. You, at that time, were not prepared to supply them but thought you could in a few moments; and I understand you are now ready to supply the Respondent the work sheets indicating what your calculations are, have you them ready?

A. Yes, sir.

I should like to put in the record at this moment, if I
may, the figures as calculated on the machine showing
6849 the reduction from the claimed cost differential of
1.51 cents per gallon for each of these three accounts.

Trial Examiner Ballinger: You may do so.

The Witness: In the case of 075, which is the advertising account, the net reduction giving effect to the elimination of that account from Respondent's Exhibit 101, the net reduction is .16073 cents per gallon.

In the case of account 520, the reduction will be .06366 cents per gallon, making a total reduction for those two accounts of .22439 cents per gallon.

In the case of account 240, which is "Donations" account, the reduction will be .00205 cents per gallon.

I have made calculations also, your Honor, with respect to reductions in account 244, which is entitled "Taxes Unemployment Insurance"; I should like to put that figure in inasmuch as I have a sheet here and expect to hand it to Respondent's counsel.

Trial Examiner Ballinger: You may proceed.

The Witness: The reduction in that account will be .0055 cents per gallon.

I also have made a calculation on reduction in account 525, and I should like to put that in at this moment if I may.

Trial Examiner Ballinger: You may. Are those reductions that you refer to reductions shown on Commis-
6850 sion's Exhibit 133?

The Witness: Yes, sir; giving effect to this reduction.

Trial Examiner Ballinger: Proceed.

The Witness: The reduction is .003 cents per gallon, the actual figure was .002999 and so forth, so I am giving the figure of .003.

Trial Examiner Ballinger: Do the figures that you have now presented change Commission's Exhibit 133 in any respect?

The Witness: No, sir.

The aggregate of the total reduction just given for each of the separate accounts is .23495 cents per gallon, which would be taken from the claimed differential of 1.51 cents per gallon.

I now hand the sheets on which the calculations are made, to Respondent's counsel.

Mr. Hanley: Read the last answer.

Trial Examiner Ballinger: Read the last answer.

(The reporter read the answer.)

By Mr. Hanley:

Q. Mr. Warmack, you have just now handed me work sheets which you have prepared and just finished testifying from.

A. Yes.

Q. Do these work sheets disclose the method by
6851 which you arrived at the several different differentials that you have testified to?

A. Yes, sir. The work sheets show the total reduction in Respondent's accounts in dollars and cents and the relationship of those reductions of the gallonage for the separate channels; that is, tank wagon reseller channels and tank wagon consumer channel. There were, with respect to two or three of those accounts slight reductions in the jobber, naphtha and gasoline column, but they were too small to have any appreciable effect in figures.

Q. Again referring you to pages 6733 and 6734 of your testimony about which I asked you earlier this morning, and which have to do with certain calculations and figures and a differential of 1.255 cents, I will ask you if the calculation that you have made reaches a different result from that and whether or not you care to make any correction with respect to your testimony on page 6733 and page 6734.

A. Well, as previously explained this morning, the calculations made as shown on pages 6733 and 6734 of the record, were calculations made by me here on the witness stand on July 16, and the calculations which I have just testified to on the record are calculations which I have made on the calculating machine this morning.

The calculations made this morning and just put in the record, of course, take the place of the calculation 6852 shown on page 6734 of the transcript.

Q. Then, as I understand it, Mr. Warmack, you are now abandoning the calculations and the result thereof as reflected on pages 6733 and 6734?

A. Yes, sir, I am putting in corrected figures which were actually calculated on the calculating machine and which are correct, arithmetically.

Q. Referring to page 6807 in which you were testifying in connection with account "Donations"—account No. 240.

A. Yes.

Q. You have indicated that your calculation would reduce the differential claimed by the Respondent company by approximately one five-hundredths of a cent; converting that to a decimal, do you mean two thousandths of a cent?

A. What page was that?

Q. 6807.

A. Yes, sir. I have just corrected that figure on the record, based upon calculations made this morning on the calculating machine; and this was an estimate made quickly on the witness stand, as is shown on page 6807.

Trial Examiner Ballinger: When you refer to calculation made rapidly on the witness stand, you are referring to what?

By Mr. Hanley:

Q. Mr. Warmack, referring to account 520 and the 6853 work sheets which you have now handed me, please explain exactly what figures you eliminated from account 520, and what they represent; first, and then secondly, indicate what figures you left in account 520, if any, and what it represents. Look at your notes if you desire.

A. I went into that particular matter extensively yesterday on the record, on pages 6839 and 6840 of the record, and I believe that the eliminations made there are explained, but if you would like that again in the record I will go into that matter further here.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Mr. Warmack, referring to your testimony on page 6839 and page 6840 in which you were discussing account 520; as I understand your answer you eliminated the amounts which relate to what you have denominated as "Parts 2 and 3" of the annuity plan, being respectively $108,508.83 and $22,279.06. Am I right thus far? It is my understanding furthermore that you have left in the account the amount attributable to Part 1, being the sum of $26,226.38; am I right in that?

A. Yes, you are right in both of those.

Q. When you made your allocation in your calculation of
this amount which you left in of $26,226.38, did you
6854 allocate that on the basis of the thirteen salary ac-
counts as the account was allocated by the Respondent in Exhibit 101, or did you make any change, and if so, what, in respect of your allocation to salary account of the sum of $26,226.38?

A. Yes, sir, I made a deduction in the account; that is, in the $26,226.38 of what I calculated to be the effect of the elimination of five of the thirteen salary accounts. I believe that is explained on pages 6486, 6488, 6489 of the record.

Q. Mr. Warmack, in connection with your last answer and the testimony to which you have referred, you have indicated that you have not allocated any of this $26,226.38 to five out of the thirteen accounts to which an allocation was originally made by Respondent on its Exhibit 101. What are those five salary accounts?

A. May I review my papers for a few minutes, your Honor?

Trial Examiner Ballinger: You may.

Mr. Hanley: If your Honor please, if the witness is going to review his papers, and he is going to take some time to do that, I think it would save some time if I ask another question, because he will probably need his papers.

Trial Examiner Ballinger: You may.

By Mr. Hanley:

Q. What is the effect upon the ratio of allocation resulting from your calculation wherein you refrained from 6855 making any allocation to the five salary accounts which you are going to name in a moment? I think it would be helpful to you to have that question while you are looking at your papers.

Trial Examiner Ballinger: We will take a recess for five minutes or such longer time as may be necessary for the witness to prepare himself to answer the question.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

The reporter will read the two questions asked before the recess.

Read the first question and take the witness' answer then, read the second question.

(The reporter read the first question as follows:

"Q. Mr. Warmack, in connection with your last answer and the testimony to which you have referred, you have indicated that you have not allocated any of this $26,226.38 to five out of the thirteen accounts to which an allocation was originally made by Respondent on its Exhibit 101. What are those five salary accounts?")

The Witness: Those salary accounts are as follows:

First account 000, entitled "Salaries—Supervision."

Second account 001, entitled "Salaries—Supervision Others."

6856 Third account 004 entitled "Salesmen's Salaries."

Fourth account 007 entitled "Salaries—Advertising."

Fifth account 215 entitled "Expense—Salaries—Others."

I took 2 per cent off of the $26,226.38; that is the two per cent of the salaries of those accounts off from the $26,226.38 leaving a figure of $20,108.90.

Trial Examiner Ballinger: How did you arrive at the figure of 2 per cent that you took off?

The Witness: That figure is shown on or near the center of page 92 of Respondent's Exhibit 100 where it is stated that under account 520 the rate of 2 per cent is applicable to the first $250.00 per month and 5 per cent is applicable to any income over that amount. I only used the 2 per cent figure because I do not know what amount to apply the 5 per cent figure to.

Trial Examiner Ballinger: Read the second question.

(The reporter read the second question as follows:

"Q. What is the effect upon the ratio of allocation resulting from your calculation wherein you refrained from making any allocation to the five salary accounts which you are going to name in a moment? I think it would be helpful to you to have that question while you are looking at your papers.")

Mr. Hanley: I withdraw the second question for 6857 the time being.

Trial Examiner Ballinger: Question is withdrawn.

By Mr. Hanley:

Q. Mr. Warmack, I referred you to page 6840 this morning. I do so again, and call your attention to this language from your answer:

"It is my opinion that costs of No. 1—" parenthetically that refers to Part 1 earlier in your answer, —"as just outlined in the amount of $26,226.38 in the Detroit field for 1940 are proper costs which can be used in establishing a cost differential—" and so forth.

Then I asked you if the only eliminations you had made from account 520 were not the amounts pertaining to Part 2 and Part 3; and you said, "Yes."

Then, I asked you if you had left in account 520 the sum of $26,226.38 appertaining to Part 1, and you said, "Yes."

Now, as a matter of fact, you did not leave in and you did not allocate in your treatment of account 520 all of the $26,226.38; did you?

A. No, sir; not all of that amount appears. I had previously testified as—

Q. (Interposing.) All right.

A. —may I amplify that, your Honor? I think it requires an amplification at least to refer to my testi-6858 mony on page 6488 and 6489, the record, which shows that 2 per cent of that $26,226.38 was deducted in making my calculation.

Trial Examiner Ballinger: It would be more in the nature of an explanation than an amplification, would it not?

The Witness: That is what I mean, your Honor.

Trial Examiner Ballinger: Proceed.

The Witness: I would like to call attention also to a statement made by Respondent, to page 6840 which reads:

"It is my opinion that costs of No. 1 as justifying the amount of $26,226.38 in the Detroit field for 1940''—there is a point ~~that in the~~ statement I did not mean to say "justify" I meant to state as just stated—what I meant was Part 1 and Part 2 and Part 3 on page 6839 of the

By Mr. Hanley:

Q. (Interposing.) I am not interested in that, Mr. Warmack. What I asked you, and what I was interested in was whether or not—was that you did make the answer that you left in the amount of $26,226.38, do you remember that?

A. Left in where?

Q. Account 520.

A. I did leave it in.

Q. All right, now, you say you reduced it to $20,108.90 by reason of the fact that you did some kind of a manipulation with five salary accounts that—

A. (Interposing.) I am afraid you just do not 6859 understand what happened.

Q. I wonder if you do. I am trying to ask you.

A. I made certain figures that I had—

Trial Examiner Ballinger: (Interposing.) One moment. Counsel will ask the questions and the witness will answer them.

By Mr. Hanley:

Q. Now, I would like to make this request of you, Mr. Warmack:

First: That you explain what the ratio effect is of whatever you did in making the deduction from the $26,226.38 to $20,108.90;

Second: How you treated the allocations as to these five accounts which you say you eliminated from the thirteen salary accounts originally on Exhibit 101 of Respondent;

Third: What the effect of all of your treatment is of that account on the eight salary accounts and the five salary accounts on the differential, or as you call it "net reduction" on the work sheets handed me this morning, on account 520 which "net reduction" is .06366 cents;

Fourthly: I would like to request you now if you would supply me with a copy of all of your work sheets indicating the methods that you used as outlined in the above question

and by preparing to answer the question, that you
6860 supply me with work sheets indicating your entire
treatment of this account, and your method of allocation?

Now, I am not insisting that that be handed to me at this moment, if you do not have it before you, but I would like to have it within a reasonable time,—

Trial Examiner Ballinger: (Interposing.) Judge Hanley—

Mr. Hanley: —and just a moment, if your Honor please —I am willing to defer the time for the witness to answer the question that I asked if he prefers, to wait until he has his work sheets.

Trial Examiner Ballinger: Judge Hanley, your question embraces three questions, and also a request. The reporter will read the first question to the witness and the witness will answer it.

The Witness: Judge, may I ask you a question off the record?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The reporter will read the first question.

(The reporter read the first question as follows:

"Q. Now, I would like to make this request of you, Mr. Warmack:

"First: That you explain what the ratio effect is
6861 of whatever you did in making the deduction from
the $26,226.38 to $20,108.90;")

The Witness: I do not understand that question, your Honor.

Mr. Hanley: That portion of the question may be withdrawn.

Trial Examiner Ballinger: That portion of the question is withdrawn.

Read the next question.

(The reporter read the second question as follows:

"Second: How you treated the allocations as to these five accounts which you say you eliminated from the thirteen salary accounts originally on Exhibit 101 of Respondent;"

The Witness: I can answer that question, your Honor.

Trial Examiner Ballinger: Proceed.

The Witness: I applied 2 per cent to those salary accounts as just testified to—

Trial Examiner Ballinger: (Interposing.) Now, will you please designate the salary accounts to which you refer?

The Witness: Your Honor, I have just stated them in the record, five of them; do you wish them again?

Trial Examiner Ballinger: Not if they are accounts which you have designated in your previous testimony this day given. 6862

The Witness: That is true.

—which gave me a figure of $6,117.47. That amount was deducted from the $26,226.38 which represented contributions made by the company to match contributions made by employees engaged in the Detroit field for the year 1940. That gave me a figure of $20,108.90.

Does that answer your question, Judge Hanley?

By Mr. Hanley:

Q. I really do not know, Mr. Warmack, if that is what you did?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Read question 3.

(The reporter read question 3 as follows:

"Third: What the effect of all of your treatment is of that account on the eight salary accounts and the five salary accounts on the differential, or as you call it 'net reduction' on the work sheets handed me this morning, on account 520 which 'net reduction' is .06366 cents;")

The Witness: I do not understand that. I was trying to answer step by step the procedure. If that is not what counsel desires then I would like the question to be a little further explained. 6863

By Mr. Hanley:

Q. If you do not understand it, I will reframe it.

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. If you care to further answer the question that you were answering, Mr. Warniack, please proceed.

A. Now, I do not understand exactly what you wanted, Judge Hanley. I was endeavoring to give you a step by step procedure which was my first understanding of what you wanted when you asked—

Trial Examiner Ballinger: Give him a step by step procedure.

By Mr. Hanley:

Q. You are right, and I would like it from the standpoint of procedure and the figures used.

A. Well, I had arrived at the manner by which I had calculated the figure of $20,108.90 in my answer just given.

The total salary accounts of the eight accounts we have just been talking about, after eliminating the five accounts that I have identified in the record as taken from 6864 Respondent's Exhibit 101, in figures, amount to $285,314. for the tank wagon reseller column and $2,783.23 for the jobber naphtha and gasoline column. The total of all of these salary accounts as spread through all of the columns by distribution channels in Respondent's Exhibit 101 amount to $893,672.

Mr. Austin: Still referring to those eight accounts?

The Witness: To those eight accounts, yes, sir.

The relationship or the ratio of the total amount of these salaries in the tank wagon reseller column to the total of the salaries; that is, of the eight accounts is 31.8141 per cent. The same for the jobber, naphtha and gasoline column .3114 per cent. These two respective percentages were then related to or applied to the figure of $20,108.90, arrived at as just stated, which gave me a figure of $6,397.47 which would apply to the tank wagon reseller channel in Commission's Exhibit 133, for the tank wagon reseller column of $62.62 which would apply or was applied in Commission's Exhibit 133 to the jobber, naphtha and gasoline column. I believe that is the step by step procedure as to what was done in making the calculations.

Mr. Austin: Did you say 31.8141 and .3114 per cent?

The Witness: Yes.

By Mr. Hanley:

Q. What is the influence upon the allocation ratios 6865 as used by the Respondent in allocating this expense item by omitting the five salaried accounts?

The Witness: May I have the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: In the case of tank wagon reseller column, the percentage of salaries as shown in Respondent's Exhibit 101 for the thirteen accounts will be slightly reduced after eliminating the five accounts.

The percentage in the jobber, naphtha and gasoline column—

Mr. Hanley: (Interposing.) Just a moment. Tell us how much you mean by "slightly reduced."

The Witness: Will be reduced from 33.019 per cent to 31.8141 per cent.

In the jobber, naphtha and gasoline column, the percentage will be slightly increased. It will be increased from .301 to .3114.

By Mr. Hanley:

Q. Now, will you please give us, Mr. Warmack, the ratios for each channel so that they will balance to one hundred per cent?

A. I can give them only for the thirteen accounts. I have not made them for the right or the five accounts.

Q. Well, the thirteen accounts were the ratios 6866 originally outlined on Respondent's Exhibit 101?

A. The ratios were not shown on the exhibit. I have made the calculation to determine what the ratios would be if they had been shown.

Q. But you did not make any calculation for the accounts that you eliminated or the accounts that you left in, in your allocation?

A Yes, sir, for the two respective channels I did.

Q. Then, you have just given those?

A. Tank wagon reseller column and jobber, naphtha and gasoline column only. You will understand that this was worked out hurriedly, and we did not go to the extent of determining in this calculation what ratios applied to the other columns.

Q. Have you finished your answer?

A. Yes, sir.

Q. Adverting to my request of a few moments ago, will you now please furnish me with work sheets which will indicate the various steps, procedures and calculations to which you have been testifying concerning your treatment of account 520, and the thirteen salary accounts.

the eight salary accounts, and the five eliminated salary accounts?

A. I am in position to make them available to you.

Q. That is what I mean, Mr. Warmack.

A. I rather think that we want to keep the work sheets.

Q. I am only asking for the opportunity to exam-
6867 ine them, Mr. Warmack, so that we may have some
means of following this great maze of figures.

A. Yes, sir.

Q. We just want to borrow them.

A. Sure.

Mr. Austin: What does that request involve? Of course, the work sheets will be available here, and inasmuch as Respondent made their work sheets available to us in Detroit, I assume that we will be perfectly glad to allow them to have copies, but whether we will want to lend them or let them go out of the office, that is another question. We made a similar request and I know Mr. Boatwright made the point that he did not want them to go out of his possession. This, I thought, was perfectly right.

Trial Examiner Ballinger: We will make them available in the hearing room.

Mr. Hanley: Can you give us copies, as we gave you copies?

Mr. Austin: I will be glad to.

The Witness: You required us to go to the extent of incurring a cost of $60 in copying the work sheets.

Mr. Hanley: All right; we will bear the expense of copying, we will be glad to do that if we may have copies.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

6868 Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. When may we have the copies?

A. That is up to Mr. Austin.

Trial Examiner Ballinger: Have you the copies in your possession?

The Witness: Yes, sir. They are right here all the time.

Trial Examiner Ballinger: When can you furnish counsel for the Respondent with copies?

The Witness: Well, your Honor, he can look at them right now or at any time he so desires. I thought that question was directed to Commission's attorney.

By Mr. Hanley:

Q. Well, I am asking now when you can have copies. I understand there is some disinclination to permit the originals to leave the possession of yourself and your counsel, and I am not requesting that we be supplied with the originals here or elsewhere.

What I want to know, Mr. Warmack, is something in the way of the work sheets, or some kind, that will indicate the answers, in procedures, in figures, in results, along the lines of the questions that I have been asking you, and along the lines of the steps that you have been taking and using as an expert accountant, Mr. Warmack. I think 6869 you, as an expert accountant really know what I want.

A. Judge Hanley, the work sheets are here and as far as I am concerned you can have the originals, or you can take the originals and have them copied, but I have no discretion about giving up any papers that belong to this Commission.

Mr. Austin: Well, there is no question about the papers being here, and Mr. Boatwright can sit down with Mr. Warmack and look at them at any time he wants to, and if you want to have any of them copied we will be glad to use our facilities to have that done, and we will do it now, or this afternoon, or at any time.

Mr. Hanley: May it be understood that Mr. Boatwright have whatever Mr. Warmack has in the way of work sheets and then request copies of any such work sheets that he may desire, and if you will supply such copies as he may request—

Trial Examiner Ballinger: It is so understood. Proceed.

By Mr. Hanley:

Q. I need to summarize this to some extent, Mr. Warmack.

Again adverting to your testimony on page 6839 where you are answering in connection with Part 2 and Part 3 of the annuity plan, account 520, are we now to understand definitely that you eliminated in its entirety $108,508.83 appertaining to Part 2?

A. Yes, that is correct.

6870 Q. Did you eliminate in its entirety the sum of $22,279.06 appertaining to Part 3?

A. That is correct, and when you say "eliminate" you

mean from the figures as shown on Commission's Exhibi
133, I understand.

Q. No, I mean from the figures shown on Respondent'
Exhibit 101.

A. And is reflected by Commission's Exhibit 133?

Q. No, you changed those figures on Commission'
Exhibit 133.

What I am trying to find out is what you eliminated fro
the figures as shown on Respondent's Exhibit 101.

Mr. Austin: The elimination has to be made for something—I want to place that before Judge Hanley—i
arriving at the figures on Commission's Exhibit 133.

The Witness: Eliminated for what? It has to be fo
something.

By Mr. Hanley:

Q. Well, let me put it this way, Mr. Warmack: Yo
eliminate the figures or amounts appertaining to Part
and Part 3 so far as the same made any basis for the cos
differential?

A. In my opinion, Judge Hanley, they should b
eliminated.

Q. Did you so treat those accounts in your calculations?

A. In my calculations, yes, sir.

Q. Now, you have stated that you gave credit an
6871 left in the account the sum of $26,226.38 appertaining to Part 1 of the account.

I now understand your testimony to be that in fact yo
gave credit to the Respondent for the purpose of calculating the cost differential, the sum of only $20,108.9
appertaining to Part 1.

Is that correct?

A. In my calculation, as just explained, the answer is—
yes, sir.

Q. Well, is it to be understood that you are correctin
your testimony on page 6840 when you said you left tha
in, $26,226.38, and your testimony this morning when yo
told me that you had left it in, and gave the Responden
credit for—

A. (Interposing.) The testimony is clear on that.
made a step by step explanation as to just what was don
whether it is left in or left out, why, the testimony wi
show the step by step procedure as just explained wi
show an answer what I did.

Q. Well, then, you do not care to say anything further in answer to my present question?

A. I stated that I have answered it over five times this morning already.

Q. Very well.

A. Yes.

Q. A few questions in connection with Commis-
6872 sion's Exhibit 129 which have to do with the year
1937, and the differential set up on Respondent's Exhibit 31 having to do with Ned's Service Station, Mr. Warmack.

Did you prepare Commission's Exhibit 129?

A. I do not have a copy of it, Judge, before me. I will just have to look at it.

Q. Are not those in your books—I mean, the exhibit books?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Yes, sir. I prepared that exhibit.

By Mr. Hanley:

Q. Were the gasoline percentages, as shown thereon, taken from Commission's Exhibits 88, 89, 102, and 103?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: May I have the question, please?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Your Honor, I will just have to look that up.

(The witness examines documents.)

They were not taken, as such, from those exhibits, but they were calculated from figures shown on those exhibits.

6873 Q. Were the estimates of time devoted to gasoline
by the reseller group constant on all of those exhibits?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: I can give you the figures and then you can judge if that is so. Here we go—

By Mr. Hanley:

Q. (Interposing.) I wonder if you cannot answer th question. I just want to know if it is constant, is it the same thing all the way through?

A. No, sir. It is not the same, but it is not so fa different.

Q. Are the figures of 52.8 per cent shown on Commission's Exhibit 129 the average for the four quarterly periods of 1940?

A. Yes, sir.

Q. Why did you leave out the special reseller salesmen group on that exhibit, Mr. Warmack?

A. Special reseller-salesmen group?

Q. Yes.

A. For the same reason that I left out all the rest of them.

Q. Are they not engaged primarily in selling gasoline and supervising the efforts of reseller salesmen who are also selling gasoline?

6874 A. Yes, sir. It is my understanding that they have some work which involves the traveling, I believe, with these salesmen occasionally. I believe that there is testimony that will show that.

Q. Are you aware of what the percentage of time o the average was of the reseller special salesmen for th year 1940?

A. That is shown in the exhibit mentioned.

Q. I did not hear you.

A. That is shown in the exhibits mentioned.

Q. Yes, sir, and I think it took some calculation, however. Is it or is it not the fact that it was an average of 62 per cent?

A. Oh, I do not know. I have not made the calculation I can make it.

Q. Mr. Warmack, while you were in Chicago an Detroit this spring, did you trace the history of the gasoline ratios of the reseller gasoline group for the Detroi field over a period of years, or any period of years?

A. May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not just exactly understand you question, Judge Hanley.

By Mr. Hanley.

6875 Q. I am referring to the ratios of time spent by this group on the sale of gasoline.

A. I reviewed many of the distribution time reports that the Respondent uses to allocate its salesmen's costs; that is, the salesmen's costs as appearing in account 004, and I secured copies of many of those distribution of time reports of which the exhibits mentioned are some of them.

Q. You have now stated what you looked at and what you did in Detroit and Chicago; are you now able to answer the question as to whether you did make a review relative to whether that gasoline ratio of the reseller group was traced by you over any period of years?

A. I did not do any more than I just stated that I did.

Q. Well, then, are you able to answer this question: Did the ratios, if you found any ratios, or studied any ratios, or calculated any ratios, tend to remain constant?

A. If my understanding of what you mean by "constant" is that they run relatively close together for the year 1940, they did run relatively close together; that is, the company's estimate of what portion of this class of expense was engaged in connection with the sale of naphtha and gasoline; those are estimate figures, you understand.

Q. What I think I really mean by "constant" is what you put in your Exhibit 129 for all the salesmen that you have treated on that exhibit, and for the year 1937
6876 you have used one figure 52.8 per cent. Now, I just understand the word "constant" to mean just that.

A. Well, then, that means "average."

Q. Well, it is a constant figure?

Trial Examiner Ballinger: Well, did the average remaineconstaint or continuous?

The Witness: Well, Judge, I would just love to put these figures in the record, and then you can let anyone, Judge, see whether they are constant or not.

By Mr. Hanley:

Q. They are in the record; they are in the record, Mr. Warmack.

A. Then anybody can judge whether they are constant or not.

Trial Examiner Ballinger: Strike that from the record, not physically, of course.

The Witness: Excuse me, your Honor, if I did not answer the question properly. It was my intention to do so.

By Mr. Hanley:

Q. What is the fact as to whether 1940 ratios of time, upon which you have now testified that Commission's Exhibit 129 was based, represent 1937 conditions in the Detroit field?

A. I only know what I have read in the record, and what I understood as the result of discussions on that point with your people in the Detroit office. I can answer that.

Q. Well, answer it the best way you can, if you
6877 think you know the answer to the question.

A. I do not know of my own knowledge—

Q. Go ahead.

Trial Examiner Ballinger: Well, answer the question.

The Witness: Well, your Honor, it is my understanding from this record the conditions with respect to these accounts and the handling of accounts run very closely in 1940 with 1937. In 1940, it is understood of course that the company distributed a considerable amount of its naphtha and gasoline, and some of its other petroleum products to tank wagon reseller customers, at least one of which, namely, Ned's Auto Supply Company, was, in 1940, getting in direct shipments. Ned's Auto Supply Company, as I understand it, received its supplies from bulk plants in Detroit in 1937.

As to the effect of your switching away, how much more time reseller salesmen devoted to the sales of naphtha and gasoline in 1940 than in 1937, or vice versa, I do not have information which will show that.

By Mr. Hanley:

Q. You may not have understood my question, Mr. Warmack, but do you not know as a fact that the reseller salesmen rarely if ever called upon the jobber customer?

A. That is my understanding, yes, sir.

Q. Now, I will—I am referring primarily to your exhibit 129 which you built up on 1940.

6878 A. It is the only information I had with which to build it up on, Judge Hanley.

Q. You built it up on 1940?

A. Yes, sir.

Q. And you have already testified you did not study Exhibit 31 to any extent for the year 1937?

A. I studied the exhibit, Judge, but not the underlying data, the underlying data.

Q. The underlying data?

Trial Examiner Ballinger: Referring to Exhibit 31?

Mr. Hanley: Covering the year 1937.

Trial Examiner Ballinger: Whose exhibit is that, Respondent's or Commission's?

Mr. Hanley: That is the Respondent's Exhibit.

The Witness: That is right.

By Mr. Hanley:

Q. Now, Mr. Warmack, do you regard it as sound accounting practice to distribute costs for the year 1937 by using 1940 figures without determining whether the 1940 figures are representative of conditions in 1937?

A. It is O.K. to make a calculation on this basis, you can make a calculation on any basis, but you should go to the best information when you are coming down to something that must be correct. I consider this as good as the cost time estimates that is shown in Respondent's Exhibit 31-L.

6879 Q. Do you regard that as a guess and not a study—Respondent's Exhibit 31?

A. I certainly regard it as a guess of what men thought that happened three or four years prior to that time, without having any record in their files to show what happened, if I made it, it would be a guess.

Q. Do you regard your Exhibit 129 as a guess and the result that it shows so far as it has any in it as to any influence at all on the differential shown on Respondent's Exhibit 31?

A. Well, I would not say that it is the most accurate figure that could be determined for 1937, if 1937 records are available from which this could be compiled, but I will say this, that it is based upon some documentary evidence.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: The question can be answered "yes" or "no."

The Witness: Do you want to strike the other answer?

Trial Examiner Ballinger: No. But answer the question.

The Witness: My answer is—no.

By Mr. Hanley:

Q. Inasmuch as you made no study of the underlying data, facts, and records whatever that went—that went into Exhibit 31, which do you regard as the more
6880 reliable, the calculation of those who did make a study of the underlying facts and figures in Exhibit 31, or your calculation as reflected in Commission's Exhibit 129?

A. Between the two, I certainly think that the figures shown on Commission's Exhibit 129 are much more reliable. I made inquiry as to that "study" you are talking about and I was never able to get any documentary evidence with respect to those estimated time percentages as shown on Respondent's Exhibit 31-L.

Q. You are willing to stand on that answer?

A. That is my answer.

Mr. Austin: I think it should be pointed out, your Honor, that Commission's Exhibit 129 is not a calculation of the same costs which were calculated on Respondent's Exhibit 31. The calculation was made for the entire Detroit field there whereas this calculation was put in for the purpose of comparison, being directed only to a particular sales territory in the City of Detroit. I think that should be pointed out.

Mr. Hanley: That will be pointed out.

Mr. Austin: Yes?

Mr. Hanley: Right away.

By Mr. Hanley:

Q. Does Commission's Exhibit 129 apply to all but a part of one territory, sales territory?

6881 A. That is my understanding, Judge Hanley, a part of it.

Q. And does that territory—and you chose that territory, did you not, as to which you would apply your Exhibit 129?

A. I picked up these three salesmen, Robinson, Moulenberg, and Couchie, and made the calculations based on their activities so far as the record shows.

Q. Well, then, the answer is—yes?

A. Well, I did not select any territory.

Q. But you determined it by using these three salesmen?

Mr. Austin: I requested the witness to make the calculation covering the territory of these salesmen, so I will take the burden myself of choosing the territory if this will aid the inquiry any.

By Mr. Hanley:

Q. Of course, it was understood by you, Mr. Warmack, that the complaint and charge in this case was not limited to any particular geographical territory other than as it was confined and limited finally in the lawsuit to the Detroit metropolitan area?

A. That is my understanding.

Q. Now, was that salesman's territory or the salesmen's territory representative of other reseller territories in the Detroit field, or in the metropolitan area of Detroit, or do you know?

A. I really do not know; I did not make a study of that.

6882 Q. Did you try to find out?

A. I made no inquiry with reference to that.

Q. In point of fact, you just made a calculation that Mr. Austin told you to make; is that right?

A. I made a calculation—

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Trial Examiner Ballinger: Answer the question.

The Witness: I stated, your Honor, that I made a calculation. Mr. Austin's ideas have no influence on me as an accountant and they never will—or any one else's.

Trial Examiner Ballinger: And that does not properly answer the question. Read the question again.

(The reporter again read the question.)

The Witness: Mr. Austin requested me to make a calculation. He did not tell me how to make the calculation. He discussed the things with me. As a result of that I did make a calculation.

Trial Examiner Ballinger: That answers the question.

By Mr. Hanley:

Q. Do you know now, or did you know when you made the calculation whether any other reseller salesmen in the entire Standard Oil of Indiana Company carried a sales load which aggregated as much as 6,500,000 gallons of gasoline per year?

6883 A. No.

Q. Do you know now or did you know in 1941 or whenever you made this calculation whether any salesman, any other salesman in Detroit, carried a load of as much as 2,308,606 gallons a year?

A. What do you mean by "carried a load", Judge?

Q. I mean handling that many sales, that much volume, calling on the people that bought that much gasoline.

A. I am sure I do not know.

Q. Did you not regard it as important to determine whether or not these salesmen were handling representative volume in the territory which they served when you undertook to make a calculation as to the cost per unit of selling that gasoline through those salesmen?

Mr. Austin: I object to that, your Honor, this is a question solely of the weight to be given the exhibit. It is argument. I am arguing one way, and Judge Hanley may argue another way, based on the record, as to the weight of this exhibit, but the exhibit was put in to show the calculation based on the territory sold by these salesmen.

Trial Examiner Ballinger: The objection is overruled.

By Mr. Hanley:

Q. I am asking you as an accountant, Mr. Warmack, these questions—from the standpoint of sound accounting.

The Witness: May I have the question, your Honor?

6884 Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: We are not trying to prove a cost justification; we are just trying to make some calculation.

Trial Examiner Ballinger: Strike the answer of the witness, not physically, of course, and read the question.

(The reporter read the question.)

The Witness: I do not understand the question, then, your honor.

Trial Examiner Ballinger: Counsel may reframe it.

By Mr. Hanley:

Q. To aid in your understanding of the questions that I am going to ask you, Mr. Warmack, your exhibit, Commission's Exhibit 129 attacks the claimed cost differential as set up by the Respondent in Respondent's Exhibit 31, and undertakes to demonstrate a lesser unit cost applicable to reseller salesmen in selling gasoline than was indicated in Respondent's Exhibit 31.

Now, do you not regard it as proper from a sound accounting standpoint that when you choose any territory upon which to determine or calculate the unit cost of selling gasoline through reseller salesmen, that it is important to give consideration to the fact of whether or not the territory you are choosing is a representative territory from the cost standpoint? Is that clear to you?

6885 Mr. Austin: I object to that question, your Honor; it is based upon a false premise as to the purpose of the exhibits. I would like to have the first sentence read over again.

Trial Examiner Ballinger: Read the first sentence—in fact, read the statement and the question.

(The reporter read the following:

"Q. To aid in your understanding of the questions that I am going to ask you, Mr. Warmack, your exhibit, Commission's Exhibit 129 attacks the claimed cost differential as set up by the Respondent in Respondent's Exhibit 31—")

Trial Examiner Ballinger: The objection is overruled. The witness may answer.

The Witness: The answer would be—yes, I certainly would subscribe to making a study of the points that you have just outlined, Mr. Hanley, as well as possibly many other points in the event that the Commission or the Commission's accountants were instructed to undertake to prove the cost justification.

We have not done that.

We set out to make a calculation from the figures shown, at hand, to compare with the figures that Respondent put in, without undertaking or going to the extent of making a field study of these things.

6886 By Mr. Hanley:

Q. Very well, Mr. Warmack, you have said the answer would be—"yes." If you did undertake to set about making a cost justification. I now ask you as an expert accountant what you have to say as to whether this is sound accounting procedure when you have set about, as an accountant, to destroy the claimed cost differential or justification? Is there any difference or distinction, and if so, what is it, from a sound accounting standpoint?

The Witness: Your Honor, I think that question properly should be directed to the Commission itself.

Trial Examiner Ballinger: Strike that portion of the witness' answer—not physically—from the record. You may proceed to answer the question.

The Witness: I just do not understand it. I was trying to answer it, your Honor.

By Mr. Hanley:

Q. I will try to simplify it. Do you think there is no difference from a sound accounting standpoint in the procedures adopted by a sound accountant when he undertakes to set up a cost justification as distinguished from a time when he undertakes to bear down on and destroy an already established cost differential and justification?

A. Well, you have two separate problems there altogether.

Q. You have answered one. You have answered 6887 the first one, namely, that you think it would not be sound accounting if you were trying to establish a cost justification.

I am asking you just one other thing: Do you not think the same responsibility is upon a good accountant to take the same precautions and observe the same sound accounting principles when he is trying to destroy somebody else's cost differential and justification as he would take when he was building a cost justification himself?

A. Most assuredly he should be careful and he should make a proper study and review, but I would like to explain that in connection with our work here in the Commission.

Trial Examiner Ballinger: If it is with reference to this case.

The Witness: Yes, sir.

Trial Examiner Ballinger: You may do so.

The Witness: Yes, sir.

Trial Examiner Ballinger: If it is the general work of the Commission—no.

The Witness: As far as it relates to this case, and it is particularly with reference to Exhibit 31—Respondent's Exhibit 31. Respondent made a bunch of calculations in those exhibits. Many of the calculations are what I consider to be pretty rough.

Well, in my work I was required to review that exhibit, especially with respect to the methods employed and 6888 the way that the calculations were made, and further studies along that line. In my study of this particular item in question, namely, Respondent's Exhibit 31-L, we were confronted with a group of estimates made by supervisory officials in the Detroit field three or four years after the occurrence of the things against which those estimates were going to apply, and my field work, and in my study of Respondent's work for 1940, which is Respondent's Exhibits 99, 100, and 101, I did make inquiry as to those estimates, and I was not shown any documentary evidence of any kind, so I did not go to the extent of trying to work out that which would absolutely be an ironclad and would be considered as the very best thing that you could have, but we made a calculation, and that is what we did to offset the calculation made by the Respondent—that is my answer.

(Witness temporarily excused.)

Trial Examiner Ballinger: One moment.

Mr. Hanley: Mr. Examiner, it is now ten minutes of one. I request, your Honor, that we take a recess until 2:15 o'clock this afternoon.

Trial Examiner Ballinger: The motion is granted and now at 12:50 o'clock p. m., the hearing will stand in recess until 2:15 p. m.

(Whereupon, at 12:50 p. m., a recess was taken until 2:15 p. m., this day.)

6889 Afternoon Session.

2:15 P. M.

Trial Examiner Ballinger: Come to order. You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination by Mr. Hanley (Continued).

Q. So far as you know, Mr. Warmack, from your investigation and studies prior to making Commission's Exhibit 129, is it not true that it may represent an entirely sport case in that it is unusual as in comparison with any other territory or any other situation, is it not, around Detroit and Vicinity.

A. Judge, I just would inquire what you mean by "sport case"?

Q. I mean an unusual case, not representative, unique.

Trial Examiner Ballinger: An unusual case.

The Witness: Yes, sir. The figures on that Commission's Exhibit 129 may not be the same as they would be in any other situation. Of course, I do not know that. They may be the same.

By Mr. Hanley:

Q. Just a few questions to summarize this matter, and then to go to something new.

6890 As I understand your testimony given frequently you did not make any studies of the underlying data that went into or support Respondent's Exhibti 31?

A. Relatively none.

Q. You do know that the territory around or upon which Commission's Exhibit 129 is based is a restricted, limited area somewhere within the City of Detroit?

A. Yes, sir.

Q. And that territory, Mr. Warmack, I presume you understand was in no wise contemplated by itself in the charge in this proceeding, in that the discrimination charged, and the cost differential sought to be justified by the Respondent was the difference between the price accorded Ned's in 1937 as distinguished from the tank wagon price accorded other reseller customers in the general Detroit vicinity?

Trial Examiner Ballinger: Judge, is that a fair question to ask this witness?

By Mr. Hanley:

Q. Is it not the fact?

Trial Examiner Ballinger: Well, did this witness know what territory was embraced in this complaint?

Mr. Hanley: Well, I assume he is familiar with the complaint.

Mr. Austin: That is a question of law, your Honor.

6891 By Mr. Hanley:

Q. If you do not know, why, all right, Mr. Warmack.

Trial Examiner Ballinger: This witness is not presumed to know anything about the pleadings. He is an accountant.

By Mr. Hanley:

Q. Well, if you do not—I do not insist upon an answer if you do not care to answer, or do not feel that you can, Mr. Warmack.

Mr. Austin: I object to the question on the ground that it calls for a conclusion of law on the part of the witness.

Trial Examiner Ballinger: The objection is sustained.

By Mr. Hanley:

Q. I understand it to be your testimony, Mr. Warmack, that you have no knowledge as to whether or not the territory upon which Commission's Exhibit 129 is predicated is representative of any other territory in the vicinity of Detroit or elsewhere in the Standard Oil Company of Indiana territory in respect of either gallonage, density of population, size of territory, or any other factors.

Mr. Austin: I object to the question so far as it embraces territory beyond the metropolitan area of Detroit,
because anything outside of the metropolitan area, I
6892 think, is outside of the bounds of the cross-examination.
The question is too broad.

Trial Examiner Ballinger: The objection is overruled.

The Witness: No, sir, Judge Hanley, I do not know. I have not made any intensive study and analysis; that is, cost study and analysis of this particular question, and, therefore, I could not know.

By Mr. Hanley:

Q. Have you any knowledge as to whether or not the territory on which Exhibit 129—Commission's Exhibit 129 is predicated and the circumstances which it represents is not an entirely unique case and wholly untrustworthy for purposes of comparison from any standpoint with any other situation or territory?

The Witness: I will have to have that question read.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I will have to ask you to explain that a little for me, Judge Hanley.

Mr. Austin: Can you not answer that as to whether you have or have not such—

The Witness (Interposing): It seems like two or three questions bound up in it—maybe I do not understand it correctly.

6893 Trial Examiner Ballinger: Read the question again to the witness.

(The reporter again read the question, as follows:

"Q. Have you any knowledge as to whether or not the territory on which Exhibit 129—Commission's Exhibit 129 is predicated and the circumstances which it represents is not an entirely unique case and wholly untrustworthy for purposes of comparison from any standpoint with any other situation or territory?")

The Witness: No, sir, I do not have any knowledge as to whether it is unique or whether it is not unique. Only a cost study would afford that information.

By Mr. Hanley:

Q. There has been a good deal of testimony, Mr. Warmack, in connection with gallonage allocations, in this lawsuit. I will ask you now if you have not testified repeatedly that you undertook to obtain documentary evidence of any studies which might support both gallonage and other types of allocations and separations of cost made by Respondent in its Exhibit 101. You have so testified, have you not?

A. Yes, sir.

Q. Did you not make this statement in your testimony:

"I was not given any information of any kind; that is, documentary information in the Detroit field to sup-

6894 port the accuracy of these methods or the results to be obtained from the use of these methods. And that goes to all of the accounts accounted for in form 189 in the Detroit field?"

You made that statement, did you not?

A. May I inquire where that is in the record?

Q. Pages 5935 and 5936, beginning with the last line on page 5935.

The Witness: Can I see that?

(The witness examines the documents.)

The Witness: Yes, sir. I made that statement. I was speaking, however, with especial reference to all of the accounts on form 189 in the Detroit field which were supported or separated on a basis of gallonage; that is, where gallonage was used as a factor.

By Mr. Hanley:

Q. I just wanted to know if you made the statement.

A. I did not mean that I did not receive any documentary evidence.

Trial Examiner Ballinger: You have answered the question.

By Mr. Hanley:

Q. You are familiar with the sales promotional costs and allocations?

A. Which account is that, Judge Hanley?

6895. Q. I do not know, Mr. Warmack, and I will have to hunt it up. I really do not know as much about this, even, as you do—002.

A. I believe I have already stated in this record that I made little, if any, study of that particular account.

Q. Well, you, I think, have testified that you know how it was allocated—surely, you know that; do you not?

A. I have information in this record that I reviewed; yes, sir; and I might have looked at that particular information in the Detroit field, but as I stated, I did not devote any particular time to a study of sales promotion. The account is rather small in comparison with some of the accounts and I just did not go into that thing in great detail.

Q. Well, did you ask for any documentary evidence in connection with this account?

A. I do not remember if I did, Judge Hanley.

Q. Well, did you ask for any documentary evidence in connection with it that you did not get? Do you remember that?

Mr. Austin: Well, I think it was stipulated between counsel and the witness that they were discussing here accounts which were allocated on a gallonage basis, that was the original premise, wasn't it?

Mr. Hanley: No, sir.

Mr. Austin: Your questions to the witness, I think

6896 the record will show, you previously had referred to that.

Mr. Hanley: If you think that I did I want the record because I am going to ask about other things than gallonage. Perhaps it was my introductory statement.

(The reporter read the question as follows:

"There has been a good deal of testimony, Mr. Warmack, in connection with gallonage allocations, in this lawsuit. I will ask you now if you have not testified repeatedly that you undertook to obtain documentary evidence of any studies which might support both gallonage and other types of allocations and separations of cost made by Respondent in its Exhibit 101. You have so testified, have you not?")

Mr. Austin: There you said "both" but the witness is only referring to his testimony.

Trial Examiner Ballinger: The witness can answer the question?

Mr. Austin: Yes, sir.

Mr. Hanley: I want to know.

Trial Examiner Ballinger: Read the question pending.

(The reporter read the question as follows:

"Q. Well, did you ask for any documentary evidence in connection with it that you did not get? Do you remember that?")

6897 The Witness: Your Honor, inasmuch as I did not study the question, I made no notes of the account.

Trial Examiner Ballinger: Well, now, you can answer according to the best of your memory.

The Witness: With respect to the account?

Trial Examiner Ballinger: Did you ask for any documentary evidence which was not furnished?

The Witness: I do not remember that I asked for any that I was not furnished, or any that was furnished me.

By Mr. Hanley:

Q. Do you recall account 006? Did you ask for any documentary evidence in connection with that account?

A. No, sir, I certainly did not.

Q. You were not concerned with it in connection with that account; is that correct?

A. According to the studies made as to all the information contained in Respondent's Exhibits 99 and 100, I could not imagine of any better way of making the allocation than the Respondent did make, and I accepted it for its face value, and I still think it is correct.

Mr. Hanley: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

898 Q. Did you inquire for any documentary evidence in connection with account 008?

A. No, sir.

Q. Referring to account 021 in connection with com- issions, did you inquire or request any documentary vidence?

A. Yes, sir.

Q. Did you get it?

A. Yes, sir.

Q. All that you asked for?

A. Yes sir.

Q. And in connection with account 070 ELA expense, id you ask for any documentary evidence?

A. I do not recall that I did ask for any, Judge Hanley. rather think that I did not.

Q. You criticized that account—or did you?

Mr. Austin: Well, the record shows that there was no irect examination on that account, Judge. There was some irect examination on account 111, which is also ELA, and hich you have in mind, no doubt.

Trial Examiner Ballinger: If it was not in his direct xamination—was this in his direct examination?

Mr. Austin: Your Honor, I was thinking of 1940, be- ause I was looking at Exhibit 101. There was some ex- mination on equipment loan for 1937.

Trial Examiner Ballinger: The witness may an- 899 swer the question.

The Witness: What is the question?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Austin: I object to this unless it is confined to 937, because the direct examination was confined to that.

Trial Examiner Ballinger: The Examiner is of the pinion that the cross-examination should be confined to he direct, and if the direct examination was confined to 1937, your cross-examination should be confined to that.

Mr. Hanley: I will pass from that for the moment.

By Mr. Hanley:

Q. I refer you to account 200. I will ask you about hat because I am sure you gave [illegible]me testimony about that.

Did you inquire for documentary evidence in connection with that account?

A. Yes, sir.

Q. Did you get it?

A. Yes, sir.

Q. Did you ask for any and were you refused anything?

A. No, sir. I might further qualify that by saying, your Honor, that the company helped me make that. I made further calculations, if I might add, on which the company's men helped me.

6900 Q. Referring you to account 243, Taxes on Federal Insurance. I am sure you testified about that.

A. Yes, sir.

Q. Did you ask for documentary evidence in connection with it?

A. No, sir, I did not go into great detail of that account that is account 243?

Q. Yes.

A. I might have inquired as to how it was handled, and I certainly did not question the fact that the company had incurred the expense. I made inquiry with respect to rates and so forth.

Q. You did not question—you did question the propriety of the allocation; did you not?

A. Only to the extent of this, that we had questioned the allocation of some of the accounts on which that expense was paid, and that naturally was the extent of the questioning of the allocation of this account.

Q. Referring you to account 244—Unemployment Insurance Taxes—you criticized the Respondent's treatment of that account; did you not?

A. Yes, sir.

Q. Did you request any documentary evidence in connection with that?

A. No, sir. I did not, and my sole—I might say that the answers which I gave in connection with account 6901 No. 243 will apply equally in answer to questions in connection with account 244.

Q. Did you get everything that you asked for?

A. Yes, sir.

Q. Do you think that you asked for anything and everything that you were under any obligation to ask for, if you were going to question the account?

Mr. Austin: I object to any answer to that question as the question being incapable of an answer which would have any relevancy. It is more argumentative than anything else.

Trial Examiner Ballinger: The objection is overruled.

The Witness: I think I went into it sufficiently, yes, sir.

By Mr. Hanley:

Q. I refer you to account 520, Annuities account; did you ask for any documentary evidence in connection with that?

A. Yes, sir.

Q. Did you get it?

A. Yes, sir.

Q. You got all the facts about that—you got a book about it?

A. Several of them, Judge Hanley.

6902 Q. You did, did you not, Mr. Warmack?

A. Yes, sir. I got a whole lot.

Q. Did you ask for anything in connection with that account that you did not get?

A. No, sir.

Q. State then just exactly what do you mean by your repeated statements, one of which was just read to you a few moments ago, that you did not get any documentary evidence in connection with any of the accounts on form 189?

A. I meant the accounts which were allocated on form 189 on the basis of a gallonage factor.

Q. Now, is it not true that some of these leased accounts—well, let us go further than that—some of these last accounts that we have just mentioned are allocated partly on all methods of allocation used by the Respondent including gallonage?

A. I do not understand your question.

Q. Perhaps it was a little confused. I will repeat it. Is it not true that some of these last accounts I just mentioned are allocated partly on all methods of allocation used by the Respondent including gallonage?

A. That is true, as I understand it. I am not questioning any of those accounts that we have been just speaking about except account 520.

6903 Mr. Hanley: Will you read the question to the witness again, please?

Trial Examiner Ballinger: You may answer the question.

(The reporter read the question.)

The Witness: Was my answer not sufficient, Judge?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: Back on the record.

No, you did not answer the question sufficiently.

The Witness: Perhaps I did not understand the question.

Trial Examiner Ballinger: Read the question again to the witness.

Mr. Hanley: I will repeat the question.

By Mr. Hanley:

Q. Is it not true that some of these last accounts I have just mentioned are allocated partly on all methods of allocation used by the Respondent, including gallonage, Mr. Warmack? You can answer it "yes" or "no"?

A. I am sorry, I will have to have the question read again.

Trial Examiner Ballinger: Read the question again.

(The reporter read the question.)

The Witness: Yes, in some part.

By Mr. Hanley:

Q. Well, that is true specifically of accounts 243, 6904 244, and 520; is it not?

A. Yes, sir.

Q. And you have just said that you got quite a little documentary evidence in connection with those accounts?

A. Yes, sir.

Q. All you asked for?

A. Yes, sir.

Q. And were refused none?

A. That is correct.

Q. And they were, in substantial part, allocated on a gallonage basis, were they not?

A. Not directly as such, no; they followed the allocation of the other accounts which had been allocated on a gallonage basis.

Q. Well, it follows that they were supported by a gallonage allocation procedure; is that true?

A. No. It just happened to be allocated on the basis of other salary costs which they, themselves, the other salary costs had been allocated on a basis of gallonage, and that basis of gallonage is the thing that I have been all of the time asking for and never did get any facts to support it with.

Trial Examiner Ballinger: That is not an answer to the question.

Read the question to the witness.

6905 (The reporter read the question.)

Trial Examiner Ballinger: Proceed.

Mr. Hanley: Perhaps I had better ask the witness the question in another way.

Trial Examiner Ballinger: Question withdrawn.

By Mr. Hanley:

Q. I do not want to argue this with you, Mr. Warmack, but from an accounting standpoint, if part of these accounts were allocated because that allocation followed another account which was allocated on a gallonage basis, would not it necessarily and arithmetically follow that a part of these accounts was allocated on a gallonage basis?

A. Yes, sir.

Q. Now, if you can explain your testimony, I wish you would do it, to the effect that you did not get any documentary evidence supporting or giving information about any of these accounts on form 189; you have testified to that a good deal, a good many times, categorically. Now, if you want to correct it, all right, Mr. Warmack.

A. Only if such a statement appears inadvertently in the record. I never secured any documentary evidence of any kind which supports, on form 189,—I fail to understand your statement, Judge Hanley. I most assuredly did receive much documentary evidence supporting many of the allocations made of accounts on Respondent's form 6906 189, and there was much documentary evidence requested which would support allocation factors for the separation of accounts on form 189, which I did not get, which I requested many times.

Q. Now, in respect of gallonage and many other things in the way of allocations treated in the study of the Respondent as represented by exhibits—Respondent's Exhibits 99, 100, and 101, I will ask you to just take a look at this folder of forms, and ask you if you recognize any of them as having been supplied to you in filled out condition in Detroit and in Chicago or both?

A. May I see the accounts?

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The reporter will mark the documents handed him by counsel for the Respondent as Respondent's Exhibits Nos. 109-A to and including 109-Z-20.

(The documents referred to were marked Respondent's Exhibits 109-A to and including 109-Z-20 for identification.)

By Mr. Hanley:

Q. Mr. Warmack, the bundle of blank forms which you have been examining and which has been marked by the Reporter, Respondent's Exhibits 109-A to Z-20, inclusive, for identification, have you examined those documents
6907 sufficiently now to answer the question?

The Witness: May I have the former question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do.

By Mr. Hanley:

Q. From an accounting standpoint when forms of that character, and of the character of any of those exhibits, are filled out with the material which they are designed to receive, would you call them documentary evidence?

A. Yes, sir.

Q. Mr. Warmack, you are familiar, are you not—Mr. Warmack—with the account series 3,000 and 7,000 used in the Respondent's regular accounting form 189?

A. Yes, sir.

Q. Where there are several accounts on form 189 where part of the charges were made direct to channel, part to account 3,000, and split between tank wagon reseller and tank wagon consumer, and part to the 7,000 series of account, which was allocated on an all-gallonage basis—

A. Is that a question or a statement?

Mr. Hanley: I was going to ask, were there?

The Witness: I am afraid I have lost the trend of your thought.

Mr. Hanley: All right. I will repeat the question.

6908 By Mr. Hanley:

Q. Were there several accounts on form 189 where part of the charges were made direct to channel, part to account 3,000, and split between tank wagon reseller and tank wagon consumer, and part to the 7,000 series account, which was allocated on an all gallonage basis?

The Witness: May I have that again, please?

Trial Examiner Ballinger: Read the question to the witness again.

(The reporter read the question.)

The Witness: Yes, that is correct. You used the term "all gallonage"; in that instance, with respect to the separation of the 7000 account, to mean bulk plant gallonage, not including direct shipment gallonage?

By Mr. Hanley:

Q. That is right, Mr. Warmack, that is right.

A. Yes.

Q. Did you review such accounts and such classifications of expense items thereunder?

A. Some of them, yes, sir.

Q. Did you differ with any of the direct charges?

A. No, sir. I never did.

Q. Or did you differ with any?

A. No, sir. I never made any analysis. I naturally assumed that they were applied properly.

6909 Q. Did you differ with any of the charges made in the 3,000 series?

A. I questioned the propriety of the gallonage allocation factor in separation because of the fact, as I have stated, that I have seen no documentary evidence which would or will substantiate the gallonage factor as the basis for separation of the accounts, or the accuracy of the results of the use of such a factor.

Q. What class of expense items are to be found in the so-called "7000 series of accounts"?

A. Those are what the company terms "general pro rata accounts" which are separated between the tank wagon reseller column and the tank wagon consumer column, and other methods, on Respondent's form 189, on a basis of all gallonage; that is, the gallonage falling—that is the ratio of the gallonage falling in each of those columns to the total bulk plant gallonage.

Q. Did and do the field offices of the Respondent com pany follow the code of accounts in their bookkeeping methods?

A. Yes, sir.

Q. Where, if you know, are those codes of accounts written and prepared?

Mr. Austin: I object to that, your Honor—I withdraw the objection.

Mr. Hanley: It is a foundation question.

6910 The Witness: It is my understanding that they are prepared in the general office, Judge Hanley.

By Mr. Hanley:

Q. Did you meet the manager of the marketing department—of the marketing accounting department while you were in Chicago?

A. Do you remember his name?

Q. King; F. L. King.

A. Yes, sir. I met him.

Q. Did you ask Mr. King for what you have termed a factual and objective cost study or analysis in respect of any of these series of accounts?

A. I remember contacting Mr. King on two or three occasions. The requests made of Mr. King, of course, were made through Mr. Houghton. I do not remember that I personally asked Mr. King for this particular material, in person. I might state that all of the requests, your Honor, made for this information, for the most part, were requested through Mr. Houghton, who was the accountant from the Chicago office, and who stayed with me almost continuously during my field investigation.

Trial Examiner Ballinger: He was placed at your disposal, was he not, to assist you?

The Witness: Yes, sir, and practically every request was made to Mr. Houghton.

In many instances, Mr. Houghton would contact 6911 others in securing the requested information which I had requested, but in some of those instances I would discuss with the other people of the company whom I contacted in that manner, the matter. Mr. Houghton was always present when such discussions, as they came up in Chicago, took place, but he was not present at all times in Detroit, due to the fact that Mr. Houghton could not be in Detroit quite all of the time that I was there making the study that I spent, making there, at least.

By Mr. Hanley:

Q. Mr. Warmack, is it not true that you have and do question the propriety of a gallonage allocation for each account so segregated where the Respondent has used that account as a part of or as a basis for a cost differential as represented by Respondent's Exhibit 101?

A. I question the use of it, Judge Hanley.

There are a few of those accounts that were small which I just did not go into materially, but I think the question of usage of the gallonage factor in separating costs between the three bulk plant channels, and where the bulk plant gallonage is used, in view of the fact that I have not as yet been able to find any information which, in my opinion, will substantiate the use of the gallonage factor.

Q. From your knowledge as an accountant, what is your judgment as to whether or not the gallonage method 6912 of allocation is always subject to confirmation or lack of confirmation by a so-called "factual and objective cost study"?

The Witness: May I have that question, Judge?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Judge Hanley, I just do not exactly understand what you are meaning there. Will you please—?

Trial Examiner Ballinger: (Interposing) Do you not understand the question?

The Witness: Not exactly.

By Mr. Hanley:

Q. In answering the previous question, Mr. Warmack, you stated that you questioned and criticized the method of the Respondent—that you criticized the practice of the Respondent in its use of a gallonage allocation in respect of accounts, which accounts were used as the basis for the cost differential; that is the question you just answered.

A. Yes, sir.

Q. Now, I am asking you if, in your judgment as an accountant, it is always possible to confirm the propriety of such an allocation by an objective and factual cost study? I will split this question now. I am just asking you if it is always possible to confirm.

A. Well, I would still think I would have to interpolate the question, Judge Ballinger, if I may ask a question 6913 of counsel—?

Trial Examiner Ballinger: You may, to clear your mind.

The Witness: Is it your question, Judge Hanley,— is it always possible to establish the accuracy of a gallonage basis factor, or the accuracy of the result by the use of some one, in other words, of the same, when used in the separation of costs by an objective and factual cost study?

By Mr. Hanley:

Q. I think that would be certainly one of the factors included in the word "confirm" and you may answer the question on that basis if you can.

A. The answer is that I do not know. Every case would have to stand on its own.

Q. Do I understand your answer to mean that you do not know, as an accountant, whether or not it is always possible to establish the accuracy of the method and the accuracy of the results—that is all inclusive, Mr. Warmack.

A. Well, you are asking me always—

Q. That is the point of the question.

A. That involves every industry in the world?

Q. Yes.

A. I could not answer the question, Judge Ballinger. If he will confine his question to one particular group.

6914 Q. I am asking you, as an accountant if you can always confirm the accuracy of a gallonage method of allocation, and confirm the accuracy of the results obtained by that method of allocation.

Trial Examiner Ballinger: Do you mean where the product is being sold by the gallon?

Mr. Hanley: By the gallon, surely.

The Witness: My answer to that would be: In my opinion, ordinarily yes; I cannot conceive of a situation where that would be—I will put it this way, I can conceive of a situation where that would be quite a difficult problem.

By Mr. Hanley:

Q. I will ask you, to just reverse it. I will ask you just the reverse of that, now. Can you always confirm the lack of accuracy of the method and accuracy of the result obtained by the use of the gallonage allocation process?

A. The same answer just given would apply to that situation.

Q. Would not both of your answers just given be true in connection with expense items of the following character, we will take first, the president's salary.

A. I certainly do not know.

Q. Do you know this, whether you know or could not—

A. (Interposing): Not if it were made to state—

Q. —definitely confirm the accuracy of that method of allocation in connection with the president's salary?

Trial Examiner Ballinger: Off the record.

6915 (There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Read the question.

(The reporter read the question.)

Mr. Hanley: I will withdraw that question.

Trial Examiner Ballinger: Read the previous question to that.

(The reporter read the question as follows:

"Q. Would not both of your answers just given be true in connection with expense items of the following character, we will take first, the president's salary.")

The Witness: That means?

By Mr. Hanley:

Q. That means with a study.

A. May I say this, your Honor, do you mean the all-gallonage sold by your company including direct shipment gallonage, or does that mean only the bulk plant gallonage which we are quarreling with here?

Q. Well, take it first—bulk plant gallonage.

A. I do not know. I certainly do not think you could apply all of his salary on the basis of bulk plant gallonage and say that no part of it would apply to direct shipments.

Q. I am sorry, but that is not an answer to the question.

A. I am sorry.

6916 Q. The question is: Can you, with a study definitely confirm the accuracy or the lack of accuracy of the gallonage method of allocation, and the results of that method of allocation—and the accuracy of the results?

A. Not having made the study, I am unable to answer your question. Only a study would afford information with which the question could be answered.

Q. Mr. Warmack, I am examining you now as an expert accounting witness. You can forget the Standard Oil Company, if you want to use, in the use of gallonage, think of vinegar being made by some pickling company, or anything sold on a gallonage basis.

Can you always, as an expert accountant, in your judgment, confirm the accuracy or the inaccuracy of the method and the accuracy or inaccuracy of the results of the gallonage method by a study, even if you made it?

A. I certainly do not know in any given instance. You asked me always, that would mean every industry in the world, and I could not know that.

Q. Do you not know—

Trial Examiner Ballinger: (Interposing) Within your knowledge.

The Witness: Knowledge of what, your Honor?

Trial Examiner Ballinger: Knowledge of existing industries.

6917 By Mr. Hanley:

And knowledge of accounting.

A. I answered—I do not know—and that is my answer.

Q. Then, if I understand your answer, if some accountant were to say to you:

"Well, you can always establish the accuracy of the method and the accuracy of the results or the inaccuracy of the method and the inaccuracy of the results,"

You would not dispute it, you would say:

"I do not know whether you are right or wrong."

Would that answer mean just that, is that what you intend to testify?

A. I was asked this hypothetical, conjectural question, and in answer to this statement that you have just made, I would say that I would ask that person:

"Did you make a study of every situation in the world?"

Q. Well, this is rather fruitless, I am afraid, Mr. Warmack, but perhaps I am not making this clear.

I will try, or at least I am trying to find out what you believe and what your judgment is as to whether it is possible to judge of the accuracy of these methods and their results, always, even if you make a study, as I am sure you will agree it is possible to judge of the accuracy of the
6918 addition of two and two equalling four—do I make it
any more clear to you?

A. Excuse me just one minute, Judge.

(The witness examined the documents.)

Mr. Hanley: Is that a confusing question, Judge?

Trial Examiner Ballinger: It is clear to the Examiner.

The Witness: Now, will you please read the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. Well, this is rather fruitless, I am afraid, Mr. Warmack, but perhaps I am not making this clear.

"I will try, or at least I am trying to find out what you believe and what your judgment is as to whether it is possible to judge of the accuracy of these methods and their results, always, even if you make a study, as I am sure you will agree it is possible to judge of the accuracy of the addition of two and two equalling four—do I make it any more clear to you?")

The Witness: Judge, you may understand it, but I do not. I do not understand it.

By Mr. Hanley:

Q. Very well. We will abandon it for the time being, Mr. Warmack. Perhaps we can get back to it some other way.

6919 A. Yes.

Q. Mr. Warmack, you were asked at page 5941 by counsel for the Commission the following questions:

"Q. Can you name or give us an example of an expense of a nature which may, in your opinion, properly be allocated on a gallonage basis between channels for the purpose of a cost study such as that prepared by respondent in this case, covering 1940?")

And you answered:

"A. Certain classes of managerial cost may be allocated there; they may be. Certain classes of advertising cost may be allocated there, properly, and it may be the very best allocation that you can arrive at regardless of how many studies you may make."

Did you ever hear that question and did you give that answer to that question?

A. Yes, sir. I was asked that question and I certainly did give that answer.

Q. What have you to say to such things as the salary of the president, vice-president in charge of sales, general manager of sales, and assistant general manager of sales, and field manager, assistant field manager, and plant agents of A-Stations in the organization of the Respondent company, in the light of your testimony, when their salaries are allocated on a gallonage basis?

6920 A. That depends upon what gallonage you are talking about. If you are talking about an all-gallonage, every gallon that the company sells, if you are, it affords no cost differential and there is no need to put it in. Now, if you are talking about bulk plant gallonage, that is a different matter. I would just have to know what you are talking about.

Q. Are you prepared to say that the gallonage used in the allocations by the respondent company in allocating those salaries may be the best allocation that can be arrived at regardless of how many studies may be made, and that latter is paraphrasing your own language.

A. That is very correct, and I subscribed to it, but for you to know that, you have to make the study.

Q. Are you prepared to say they were not?

A. I am prepared to say that I have no documentary evidence and I asked for it many times, and I did not get it. I asked for evidence and I got nothing.

Q. You still say you got no documentary evidence?

A. Not on gallonage allocation. That is what I am talking about. Whenever I have said I did not get any documentary evidence I mean supporting the gallonage allocation. I simply did not get anything whatsoever. I drew a blank.

Q. Did you inquire whether studies of possible alternate methods of allocation had been made and rejected in an effort to find better methods or means of allocation than the gallonage basis?

A. I asked many times for documentary evidence, I asked for anything. I asked them to give me anything you have done of any kind whatsoever, and I got nothing with respect to gallonage.

Q. Mr. Warmack, has nothing in this case convinced you of anything in connection with Respondent's accounting, and would nothing in this case convince you of anything in connection with Respondent's accounting except something which was, you say, written on a piece of paper? You have used the phrase "documentary evidence" so often that I just wonder if you got any information while out in Detroit except what you read; is that true?

A. No, sir. I got much information.

Q. Did you discuss this gallonage question with Mr. Boatwright and Mr. Houghton and other people, in Detroit?

A. Certainly I did, but the mere fact that they may have stated to me that they thought it was the company's best judgment would not be convincing to me. I asked them to give me something that was definite, something that I could put my hands upon—I got nothing.

Q. Did you talk to them hours at a time about it, Mr. Warmack?

A. I do not know how long I discussed it with them.

6922 Q. Do you not know that over the course of many weeks you discussed this matter with them hour upon hour upon hour?

A. I should imagine that we discussed it at considerable length, but as to the identical amount of time that we discussed it, that I could not tell you.

Q. Did not they explain to you what the practices of the company had been and were?

A. Yes, sir.

Q. With respect to constantly making studies?

A. Well, I was always saying: "Show me something, some information in the way of a report, in the way of tabulations, anything that was written on paper, a piece of paper with some writing, or many pieces of paper," and I got nothing with respect to the gallonage allocation factor.

Q. Have you, yourself, ever made two or more studies of means of allocating a given expense item, getting different results for each method, and then exercising your own judgment as to which method is the most appropriate?

A. Yes, sir. I have done that, but I always had papers to show what I had done.

Q. You always have papers to show what you have done?

A. Well, I have them at some time, if I make the calculations, yes, sir.

Q. I hope you can find the papers that support the calculations that you made this morning, and which we have asked you to supply us with, Mr. Warmack.

6923 A. They are here. (Indicating certain papers.)

Q. Was it not explained to you by the gentlemen in Chicago and Detroit that they were constantly testing alternate methods?

A. Yes, sir. I asked them to show me the papers that they used for testing just one, and they could not show me them—on the basis of gallonage allocation factor.

Q. Is it possible, Mr. Warmack, that they do their accounting rather differently from what you do, yourself, and that they just were not showing you what seemed to be convincing to you?

A. No. They did not show me anything in the way of supporting the gallonage allocation factor. But I know that they were making plant records and all sorts of records—plenty of records in both Detroit and Chicago. Now, what kind of records they were, I am not prepared to say.

Q. Did you not look at them?

A. No.

Q. Was there any record in Detroit that you wanted to look at that was not immediately shown to you?

A. I was furnished, Judge Handley, with everything I asked for, except what Mr. Houghton and others of the company stated were non-existent, and I certainly believed that everything they insisted upon was so; that everything that existed was furnished to me that I requested.

6924 Q. Is it not possible, Mr. Warmack, that the documentary evidence in respect of gallonage was in the records and current accounts of the company, and it just took an accountant to figure out what they meant?

A. Well, will you show me which one of these exhibits you refer to?

Q. Will you answer the question?

A. If you will show me there on any one of them where they appear, I would like to see it.

Q. Will you please answer the question?

A. I—

Trial Examiner Ballinger: (Interposing.) Strike that answer.

The reporter will read the question to the witness and the witness will answer the question.

(The reporter read the question.)

The Witness: May I have it again?

Trial Examiner Ballinger: Read the question again to the witness.

(The reporter again read the question.)

The Witness: Yes, sir. They may have been in the records of the company, if they were there Mr. Houghton knew nothing about it, and I am convinced that he knew nothing about it; in the current accounts of the company, I am convinced that they were not there.

6925 By Mr. Hanley:

Q. You looked?

A. I looked.

Q. Is it possible that you did not recognize what you were hunting for?

A. Well, I am sure that I would have recognized any information worked up to support a gallonage factor if it had been in any records reviewed by me; and I am sure Mr. Houghton would have recognized it.

Q. Out of the many, many records that were in Detroit—all of which you had an opportunity to look, and many of which you say you did look at—did you undertake, yourself, to make any test at all as to the propriety of this method of allocation?

A. Naturally, in my cost studies I was endeavoring to make every test possible with respect to those things; that is, tests that could be made with the information available to me.

I could only make a test of a gallonage factor—that is, a test of the propriety of the use of a gallonage allocation if I had something to test it against. In view of the fact that I did not hear the Respondent offer or indicate any alternate measuring factor, I certainly did not undertake, in my studies, to establish a measuring factor. Whatever tests that may have been made certainly were very limited, either made here or there, or in Detroit.

6925 Q. Did you not do any independent work out there? Did you depend on Houghton for everything, Mr. Warmack?

A. I did not go out there to prove the company's case on a cost differential.

Q. You went to disprove it, did you not?

A. No. I went out there to see if you were doing this right, and to check up on two or three of the accounts, and I arrived at a decision here, even before I went to Detroit—I am speaking to you very frankly.

Q. Mr. Warmack, will you answer my question, please?

Trial Examiner Ballinger: Read the question to the witness and the witness will answer the question.

(The reporter read the following question to the witness:

"Q. Out of the many, many records that were in Detroit—all of which you had an opportunity to look at, and many of which you did look at—did you undertake, yourself, to make any test at all as to the propriety of this method of allocation?")

The Witness: No, I did not go out there to disprove it, which I take to be the basis of the question you are asking me—I went out there to get the facts.

By Mr. Hanley:

Q. Did you do any independent work in your effort to arrive at conclusions on facts after you got there?

6927 A. Independent of what?

Q. Independent of Houghton: Did you take the records of the company as they were offered to you and have been offered to you since this lawsuit, and do any arithmetical work of your own?

A. Yes, sir. I analyzed many of the accounts myself.

Q. Now, have you determined upon any better method from the standpoint of sound accounting—from a sound accounting standpoint, in respect of all these accounts where the company has used the gallonage method, or where the company has used other methods, and have you a factual and objective cost study to support it if you did do that?

A. No, sir; I certainly did not do that. I just undertook in my study to determine how you made your separations. As far as establishing a proper measuring factor for the company that was not what I undertook in my study in the field, in this case, to do.

Q. You said a moment ago, Mr. Warmack, that you had had experience in making two or more studies with reference to allocating an expense item and getting different results from different methods, and then exercising your judgment as to which method you thought was most proper; do you remember that?

A. Yes, sir.

6928 Q. Do you remember that question and your answer?

A. Yes, sir.

Q. And your answer was, yes, that you had?

A. Yes, sir.

Q. Now, Mr. Warmack, do you regard that method that you used as a proven method even though another accountant might have reached another conclusion based on his judgment, the results of his study being different from the results of your study?

A. Yes, sir.

Q. That is a fact?

A. Yes, sir.

Q. That is to say, that if you decided it was appropriate, that it was proven, that is what your answer would intend?

A. Yes, sir, but I would like to explain that answer a little.

Q. I am not asking for an explanation. I just want an answer.

A. The record stands blank if I do not explain my answer.

Q. You have answered my question to my satisfaction.

Mr. Austin: But not to the satisfaction of the witness.

Trial Examiner Ballinger: The witness may explain his answer.

The Witness: The study that I had reference to, and that I have in mind, and that I had in mind a moment
ago was a study with respect to an allocation made
6929 of manufacturing costs when I was engaged in the
public practice of accounting.

There were some of those costs that were so broad that they were spread one way, and some that were spread another way. Sometimes we used man hours to spread some certain costs. Again, we would use machine hours. Sometimes we would use the combination of the two. We came down to just the most accurate thing that we—and when I say "we" I mean the group of accountants that had this thing under consideration there—that was the most accurate.

Trial Examiner Ballinger: Who is going to determine the accuracy of this, which accountant? Each accountant as he goes along?

The Witness: Your Honor, the accountants discuss these things, if your Honor please, if they want an accurate result, among themselves, and come down to the most accurate thing in the opinion of the group of accountants, considering the cost situation.

Trial Examiner Ballinger: Well, has this question as to the allocation upon a gallonage basis or upon a per-hour basis, one whichever has been decided by accountants?

The Witness: Yes, sir.

Trial Examiner Ballinger: And was any decision or conclusion ever arrived at?

The Witness: Well, Judge, we have — I think maybe the situation is wholly misunderstood. For the 6930 purpose of establishing an accurate figure, from an accounting standpoint, it is a—

Trial Examiner Ballinger: (Interposing.) Mr. Warmack, are you going to answer my question?

Read the question.

(The reporter read the question as follows:

"Well, has this question as to the allocation upon a gallonage basis or upon a per-hour basis, one whichever has been decided by accountants?")

The Witness: I would like to hear it again.

Trial Examiner Ballinger: Read it again.

The Witness: I was trying to answer that, your Honor.

Trial Examiner Ballinger: Has there ever been a study of that kind?

The Witness: That has been studied and studied and studied and is still being studied.

Trial Examiner Ballinger: Then a conclusion has not been arrived at?

The Witness: With respect to what conclusion?

Trial Examiner Ballinger: As to what was the most accurate.

The Witness: With what?

Trial Examiner Ballinger: Whether or not the 6931 adoption of a gallonage basis or a per-hour basis would arrive at the most accurate conclusion.

The Witness: The cost study will only show, your Honor, and that was what I was trying to explain. I am sorry, we just cannot, as accountants, your Honor, pick up some ready factor and say, "This is it," and feel that we have the actual accurate result. The problem has got to be studied, the measuring factor must be established. It may be that the study will show that the gallonage factor is the right factor, it may not.

Trial Examiner Ballinger: Mr. Warmack, what is bothering me and what I cannot understand is this, just who is going to decide.

Mr. Hanley: That is my question, when it is finished, then who is going to decide?

Trial Examiner Ballinger: Just what accountant is going to decide it, if he must, who is going to establish the rule among these various accountants, or is there an established rule among accountants which governs cases of this kind?

The Witness: There is an established rule, I believe, among all accountants that a reasoned study or studies are much better than guess work or rough estimates.

Mr. Hanley: Or what?

The Witness: Rough estimates.

Trial Examiner Ballinger: Forgetting about your
6932 rough estimates, if you have accurate facts as to
time, accurate facts as to gallonage, who is going
to determine which would arrive at the most accurate con-
clusion as to the allocation of cost?

The Witness: Well, in this case it will be the Federal Trade Commission.

Trial Examiner Ballinger: I did not ask you that. I asked you if that was not dependent solely upon the conclusion of the accountant that made the, or prepared the account.

The Witness: Well, I would say it would seem that it would. If I prepared the cost statement, why, I am sure that that cost statement would reflect my views as to the extent that I had covered the particular situation.

Trial Examiner Ballinger: Mr. Warmack, take the case at bar. Suppose you had actual facts disclosing the actual number of hours each man in connection with the organization worked in each particular channel, and on the other hand you had the actual gallonage basis and gallonages, and one line led to one conclusion and another line led to another conclusion, who would determine which conclusion was the correct one?

The Witness: Well, I assume, Judge, that is why they
have accountants. They have to make a study based upon
their experience and talent as accountants to determine by
reasoning, giving effect to the application of sound
6933 accounting principles just how to make these separa-
tions and the only point that I have been trying to
make throughout this case with respect to this gallonage allocation factor is that it is just used here and I have never been able to learn why it has been used, and what the basis for it is, except that they just use it and that is that.

Trial Examiner Ballinger: Proceed.

By Mr. Hanley:

Q. Mr. Warmack, you made a long hypothetical—or a long answer to a question which I asked you some little time ago in which you undertake to explain what you did at one time when you were a public accountant working with other accountants in some machine company, and you said you finally got down to a point where your group decided, after investigating different methods, that you had found the one that was most accurate.

Do you recall you made that statement?

A. Yes, sir, when they were through, the one that they thought was the most accurate.

Q. That, you did?

A. Yes, sir.

Q. Were you intending to explain your answer to me when I asked you when you thought the thing was proven by saying that you then thought that was a proven conclusion?

A. That is what I had in mind, yes, sir.

6934 Q. Would you so regard it?

A. I would regard the analyses and studies that were made, I would regard that as sufficient evidence of the allocation factor to base the allocation factor upon, and any figures resulting from the use of that allocation factor, I would think would be proven as correct as it is possible for accountants to make them correct.

Q. Now, how many accountants worked on that?

A. Oh, I do not know, a group, a large group.

Q. How many, roughly?

A. Four or five or six.

Q. How many and how long did you work?

A. All of them, and they worked on this thing, we made a study in our office of the system to be installed in the company.

Q. Well, a week or two weeks, or a month or two months?

A. I would say about a month.

Q. You were satisfied and regarded it as proven, as you use the word, that you had found the most accurate and best method of allocation when you rendered your opinion finally?

A. Yes, sir. We thought we did.

Q. Now, assuming a business—this is another question assuming you discussed among your own group the propriety of these various methods and their accuracy as to which would give the better results and more illuminating facts—

6935 A. (Interposing.) Well, those things are always discussed, of course.

Q. —in the Respondent's company, which had some fifty years of age, and in which some two thousand accountants work handling these accounts all the time; based upon what you have just said about your own experience, and as to the actual time that you put in; if those same two thousand accountants over a period of many years have discussed the affairs and accounting business of one organization and have agreed upon a method as being the best, having discussed it, as you say accountants do when they are confronted with alternate methods of solving the problem, would you then say that that method, as arrived at by that group of accountants, was proven or was not proven?

A. Well, I would have to inquire. Do you mean that they would talk about these things without ever having made a study whereby tabulations were made, and comparisons were made, but they would just talk about this matter all among themselves?

Q. No. Examine their records and handle their records. You saw the accounting department of the Standard Oil Company in Detroit; you saw it in Chicago, you saw the research department?

A. I did not see them, Judge Hanley, making any comparisons of the factor either of a gallonage allocation or some other allocation.

Q. You do not think they all loaf all the time, do you?

6936 A. Oh, no, indeed.

Q. Well, now, won't you answer the question fairly and honestly, Mr. Warmack?

A. I certainly will try.

Q. If they concluded, that group of accountants, and based on their knowledge of their company's business, and on the basis of attempting different methods of allocation, that the particular method was the soundest and most productive of accurate results, in your judgment as an accountant, is that proven or is it not?

A. Well, the extent to which they went to make these checks, and the checks would depend largely upon whether, in my opinion, it was proven or whether it was not proven.

What I am interested in is just what tests were made, and that is the one point that I have never been able to learn.

Q. Well, the extent to which they went, the amount of work that they have done, the attention that they have given it, these two thousand odd men over many years, do you think is comparable to the work that your group of four or five accountants did in perhaps one month?

A. We had a specific case, and it was not even comparable at all, the two situations are not comparable.

Q. Do you know what I am asking you, Mr. Warmack?

A. I know, yes, Judge, and if you have an answer to
the question coming to you, let me say to you frankly
6937 that you have many, many accountants in your de-
partment in Detroit and Chicago that do not have
a single thought in their minds about whether you are using a gallonage allocation or some other allocation. I doubt if, they, certainly, if they know what you are doing about it now, and they are just going along day in and day out without discussing it at all. I doubt if they know that you even have such a proposition, many of these accountants. Let us be fair about it.

Q. Oh, I doubt it also.

A. This allocation factor—

Q. I doubt it, too, if you please, Mr. Warmack, but this all goes into the research department of the general accounting office, from these accountants in the open, who are constantly keeping records and making reports, you understand it, do you not, Mr. Warmack, and you know what I have in my question, you understand what I mean.

A. Well, I understand that they are making reports, Judge, but they are not all studying this gallonage allocation factor all night and all day and tearing their hair.

Q. My question now is: Would you regard that as a proven thing?

A. Regard what?

Q. Their settled conclusion as to what is the most accurate method of allocation to produce the most accurate accounting results?

A. Why, if your company never made a comparison or
a study to determine that the gallonage allocation is
6938 proper, I certainly could not say that it is accurate,
or that it would afford accurate results.

Q. Do you just say that they just did not make any studies, do you not know that they did make many of these studies?

A. I do not know anything of that kind at all. As a matter of fact, I do not believe they ever did. I know positively that I asked for it and they never showed it to me.

Trial Examiner Ballinger: Judge Hanley's question presupposes that they did make such a study.

Mr. Hanley: I have been presupposing that, Judge, for days, and I can only say that they have made those studies and that we have proved it.

Trial Examiner Ballinger: If they did make the study and reached the conclusion, would you say that that was a proper study and a proper conclusion to be followed by the company?

The Witness: I do not know, Judge, just what is meant by "study" as he is now using it.

Mr. Hanley: You should know.

Trial Examiner Ballinger: Judge Hanley's question presupposes that they have gone into all the different ramifications, and as a result of that, had reached the conclusion and his question was as to whether or not you would consider that conclusion a proper conclusion for the company to adopt, and a proper conclusion for the United
6939 States Government to respect.

The Witness: Judge, Judge Hanley, if the Respondent company will produce information showing what they did, I will be in a position to answer the question, but up until this time I have never been able to get any information. I have never seen one thing.

Trial Examiner Ballinger: Just forget about what they did, and assume that they did a proper job.

The Witness: In my opinion, a proper, thorough, factual and objective cost study to prove that the gallonage allocation factor was correct and the results to be used, if it were accurate, if we assume that they did that, and they arrived at the fact that the gallonage allocating factor was correct and could be used in every instance that it has been used, I certainly would say that that is satisfactory.

By Mr. Hanley:

Q. All right. Now, assuming you looked at it and disagreed with it, as you have, what do you say as to whether or not it is proven?

A. Well, if I do not agree with that, I most certainly would say so and I think I would have to see it before I could agree or disagree with it. I have never seen it.

Q. You have been looking at a substantial part of it for six months, Mr. Warmack.

6940 A. If there is any part of this Respondent's "Exhibit 100 that proves or substantiates the gallonage allocation factor, then I certainly do not know what page it is on, and I have read every page in there many times.

Q. Going back to this "proven" thing in just one more question, assuming that you arrive at a conclusion after considering different methods, just a conclusion as to the method being the appropriate one to use, and assuming further that another accountant looks at your studies and he concludes that a different method is more appropriate and accurate to use, and there are just two of you, and you are in disagreement, which of the methods is proven?

A. Not necessarily either one.

Q. Which do you regard as being proven?

A. We have just stated—you do not like the "we," I have just stated I could not say either one. You are talking about a hypothetical situation.

Q. How would you go about proving the method in that situation?

A. And we have all of the basic material before us?

Q. Yes, assume that.

A. On which to make all of the numerous tests and calculations, then we would have to sit down and reason it out between us.

Q. Suppose you have done that, suppose you have made the tests and actually made a study and do not fall

6941 in with him at all, but that you are really trying to build up a study, and reach a conclusion, and you are not trying to tear down something as you were when you were in Detroit—

A. (Interposing.) I was not trying to tear down something in Detroit. I was trying to study this so-called allocation of yours.

Q. You were trying to reach a conclusion, now, assuming all of that, now, you are in disagreement—is it proven?

A. Is what proven?

Q. I say, either of those methods, is your answer the same—you said not necessarily.

A. Well, I do not know how to answer that.

Q. After assuming all of these things you want to assume that you reached a conclusion and the other fellow reaches a conclusion different from yours, which of those methods is proven?

A. Well, not necessarily either one of them.

Q. How do you go about it from there on to prove it?

A. Assuming the hypothetical situation which you have just told us of two accountants, the two accountants should sit down and reason the situation out, and if they cannot do it, then they will have to call in some other accountant and have him study the whole thing, because of those two accountants could not agree, then they would have to call in another accountant to settle the matter, and that is
5942 exactly what was never done in the case here. They never made the study.

Trial Examiner Ballinger: Is not the conclusion in part an arbitrary solution?

The Witness: I rather think not, Judge, I would not call that arbitrary. I think it is just a sound reasoning between men who have made a life work of these things to the extent of learning how other men do them.

By Mr. Hanley:

Q. Would it be a matter of reasoning and give and take, and more or less the adoption of arbitrary formulae and more or less cut and try until you found the best result; is that not true?

A. The last part of your statement is very true. I certainly do not subscribe to anything arbitrary, going out and picking up something. I think you just cut and try until you get the problem solved.

Q. Now, can you state what you did? I will make it clear; in your study and in your effort to find out something about gallonage in Detroit and in Chicago, Mr. Warmack, did you inquire into the standards of the methods used by the Respondent to increase or decrease its sales personnel?

A. I think that was gone into by some of the supervisors in Detroit. I believe Mr. Hamer told us something about that.

5943 Q. Well, what was the method or standard used?

A. I do not remember, Judge Hanley.

Q. Did it have anything to do with gallonage?

A. I think that the point that I gleaned from what was discussed on those things was to find a good man, and then to test him and see that he did good work, and if he did not do good work, another man would have to be assigned to his job.

Q. Oh that is not what I am asking you and you know it. I am asking you as to the basis as to how much they would use in the method of employment as to personnel; certainly, I am not asking you as to the basis on which the individual man would be hired, advanced, or fired. I am asking you what standard or method or control is used by the company in determining company policy as to whether the sales force will be increased or decreased in the case of a given locality, or overall.

A. Oh, I never inquired into that matter.

Q. Did you not think it was of some importance to learn whether that had any relationship to the gallonage volume?

A. If I had been undertaking to make your justification cost justification, I certainly would have inquired into it.

Q. Did you make any inquiry into, and do you know anything about the correlation between the number of salesmen in the various twenty-eight fields and gallonage?

6944 A. No. I did not study that.

Q. Well, do you know anything about it?

A. Judge Hanley, if I did not study it I could not know anything about it, except in the Detroit field.

Q. Did you not think that of some importance on this question as to the propriety of the use of gallonage as an allocation factor?

A. I asked your company over and over again to give me that information and if they wanted to give it to me they could have.

Q. Will you please answer the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: It might have. I would have been glad to have that information if the company would have given it to me.

Trial Examiner Ballinger: Mr. Warmack, you say it might have, can you not be definite?

The Witness: Well, I do not know whether it would or not. I did not make a study, I did not go out to prove their case of cost justification. He is talking about their case.

By Mr. Hanley:

Q. Did you make any study or inquiry into comparative size of sales load carried by different salesmen in the same field?

6945 A. Oh, I went into some discussion of those things with some of the officials in the Detroit office.

Q. Do you know what the policy or method or standard or practice is of the Respondent company with respect to trying to balance the sales load among salesmen on a gallonage basis?

A. No.

Q. Do you think that might be of some importance in determining the propriety of the use of gallonage as a measuring factor and as an allocating factor?

A. I think it would, and I would certainly investigate into this matter if I were attempting to prove your cost justification.

Q. What standards of methods do the Respondent apply to determine whether one or more or one less truck shall operate out of a given station?

A. I do not know what standards it applies.

Q. Would, in your judgment, gallonage have anything to do with it, and if the company uses gallonage, would you say that the company was wrong because they use gallonage?

A. In the establishing of these standards, do you mean?

Q. Yes.

A. Well, I think gallonage would have all to do with it—and distance.

Q. What standard or method does the company apply to determine whether an additional driver shall be kept on, and whether a driver shall be let out?

6946 A. I did not make inquiry.

Q. Would you think a gallonage would have any effect on that sort of thing, in your judgment?

A. I rather think it should, yes, sir.

Q. What standards, if you know, are used to gauge the efficiency of truck operations out of the salaried stations?

A. I do not know.

Q. Would you think volume would have anything to do with that?

A. I should imagine.

Q. Would you not think it a proper thing to be considered?

A. I think so, and—you just asked me about the hiring of truck drivers. I want to call your attention to the fact that you did not allocate that in your Respondent's Exhibit 101 on a gallonage factor.

Q. What standard is applied to determine, if you know, whether the additional storage tank should be made available at a bulk plant?

The Witness: May I have the question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not know.

By Mr. Hanley:

Q. Would you figure that gallonage would have anything to do with that?

6947 A. I rather think it would.

Q. Irrespective of how a driver is paid, irrespective of what accounting you find is used, irrespective of what account you find is used for his salary to be allocated to, still, does not the fact that he is there related to the volume of the company?

A. Yes, I should think it should be.

Q. Do you think that you can fairly say from a sound accounting standpoint that because in some instances the company has determined to use a gallonage factor rather than a time factor for the truck driver, or some other employee, that the company is just wrong because it uses one method as distinguished from the other?

A. I certainly do not.

Q. Well, what do you mean by asking me that question again and again, then?

A. I had no objection as to how the company keeps its records if and for its own use, but there again, there is another question when you start to try to support a gallonage factor for the purposes of this case.

Q. What determination if any have you made as to the amount of equipment made available to a 461 account as distinguished from a leased account?

A. What is the account—what is the question?

948 Q. What is the determination or what determines the amount of equipment is made available to a 461 ccount, or to a leased account?

A. 461 is the non-leased account?

Q. That is right.

A. I think that is in the record. I do not recall that ight at this moment.

Q. Do you not recall that gallonage has a good deal o do with it?

A. I should think that it should.

Q. What, Mr. Warmack, determines the amount of rent eceived for a service station?

A. Well, Judge, I have no idea, I have not gone into hat. I could not answer your question, except I could nswer your question in this manner, if I owned a service tation and it was a valuable piece of property, it would e the valuation of the property, and how desirable it was or service station usage, that would be the general sit- ation. I do not know how your company calculates the mount that it is going to charge for rent. It is my under- tanding—

Q. (Interposing.) On the basis of the valuation of he station, assuming it to be a very high evaluation, and ssuming further that it is so located that they cannot sell ny gasoline, how would you then regard the question of allonage as being a basic factor which controlled rental for the service station?

949 A. I think that that would have to be considered.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: Judge, I would like to modify one of the ther answers that I made just now, or amplify—it was y understanding that some of the 461 stations—that is, he non-lessee stations—do not borrow any equipment at ll from the Respondent company. That is my understand- ng. If that is true, and if it is, then I believe it is in the ecord, and I just wonder how gallonage may have to do ith such a situation as that.

y Mr. Hanley:

Q. Well, might it not also be true as to the—might it ot also be a factor in that situation as to the ability of the perator to put in his own equipment?

A. Well, I would think that would have something to do with it, yes, sir.

Q. And in the event he were, Mr. Warmack, does it not occur to you that it would be less of a burden for the Respondent company?

A. Oh, I think so. I have not seen any segregation of any account giving effect to that point.

Q. Is that a situation exactly in connection with Ned's?

6950 A. What?

Q. Is that not the situation exactly in connection with Ned's?

A. Well, the records will show.

Q. Do you not know? You have made a study of Ned's.

A. I think in 1937 those records show that you were leasing some equipment to Ned's, and I do not know just exactly what the records show with respect to non—to 1940 on that point.

Q. Is that not also the fact in connection with a very substantial number, if not all, of the service stations served by the other jobbers in Detroit?

A. I believe that has been testified to by Respondent's witnesses.

Q. Is that one reason, in your judgment as an accountant and an observer of the industry, why the Respondent can afford to sell gasoline more cheaply to that class of operator than to the class of 461 non-lessee stations, to whom equipment must be supplied?

A. Yes, sir. I would rather think that that would go to that point; that is, if it costs less in the way of renting equipment of this jobber, and if it is cheaper to let it go to Ned's; that would be an influence on this case, but to go into that matter, I think that you would want to take into consideration that if there were any other retail customers that you did not lend it to, I think that is a 6951 matter that would have to be explored.

Q. Would you mind repeating your answer, it was not clear to me.

A. I said that I would rather think that that would go to that point; that is, if it costs less in the way of lending equipment to this jobber, or to Ned's, that would be an influence on this case, but to go into that matter; I think that if there were any other retail customers that you did not lend it to. I think that is a matter that would have to be explored into.

Q. We will reach that. We will reach that. Has the Respondent resorted to a gallonage allocation factor in any case where the expense item—I should have said—

A. What is that?

Q. Repeating the question, Mr. Warmack, has the Respondent resorted to a gallonage allocation factor in any case except where the expense item was of an overall nature?

A. Will you explain what your mean by that, Judge Hanley?

Q. I would mean—

Trial Examiner Ballinger: (Interposing.) Do you mean the words "over all"?

Mr. Hanley: I see.

By Mr. Hanley:

Q. I would mean things like the president's salary, 6352 and that list of things that I asked you about a while ago, and did not get along with very well.

A. It would seem to me like the president's salary

Trial Examiner Ballinger: (Interposing.) Now, read the question.

(The reporter read the question.)

Mr. Austin: I object to that question unless Respondent's counsel makes clear what he means by "overall."

Trial Examiner Ballinger: He has illustrated it by reference to the president's salary.

The Witness: I tried to answer, your Honor, with special reference to that point.

Mr. Hanley: I will reframe it this way:

By Mr. Hanley:

Q. You have studied every account on Respondent's Exhibit 101; have you not?

A. No, sir.

Q. What?

A. No, sir.

Q. You have studied Respondent's Exhibits 99, 100 and 101; have you not?

A. Yes, sir.

Q. And you have undertaken to testify in respect of all the accounts on Respondent's Exhibit 101, have you not?

A. I do not remember.

6953 Q. You just got through yesterday, have you not, with the list?

A. Well, you see, some of these accounts, your Honor, yesterday that I was not questioned on direct on, and there were some of these that I answered all three questions propounded to me in this way—that I have not made any study of this account.

That is shown in the record.

Q. All right. With respect to those accounts then that you studied on Respondent's Exhibit 101, if any, please state whether or not the Respondent has resorted to a gallonage allocation factor in any case except where the expense item was of an overall nature? Now, do you not know what an overall nature is?

A. Please tell me. Please tell me.

Q. I refer you to that class of account in which the president's salary would fall.

A. (There was no answer.)

Trial Examiner Ballinger: Can you answer the question?

The Witness: May I have the last question read?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: It is my understanding that the president's salary falls in account 209, pro rata general

6954 administrative, and that particular account the Respondent uses all gallonage in the whole field including direct shipment gallonage, and the use of that gallonage factor does not make any—

By Mr. Hanley:

Q. (Interposing.) I am asking for the exceptions not the inclusion.

I asked you: Has the Respondent resorted to a gallonage allocation factor in any case except where the expense item was of an overall nature?

I referred you to the president's salary as an example of what I mean by overall nature, and now you have answered my question by telling me they were resorted to, they resorted to the gallonage method of allocation there. I know we did. That is the reason I referred you to the president's salary.

Please answer my question.

A. The question is not clear to me, Judge Hanley.

Trial Examiner Ballinger: Read the question to the witness.

Surely, that is understandable.

(The reporter read the question.)

The Witness: Now, the overall situation was explained. That same allocation factor, the gallonage allocation factor was used—.

Trial Examiner Ballinger: Now, one moment.

6955 The Witness: I do not understand the question.

Trial Examiner Ballinger: That is not a response.

The Witness: Well, I do not know what he is talking about.

Trial Examiner Ballinger: Answer the question.

Mr. Austin: That is not fair, your Honor, because the witness should be allowed to answer the question, because you do not know what the witness is going to say. If your Honor please, you do not know, I do not know, nobody knows what the witness is going to say, and whether it was going to be an answer to the question, and I demand on the record that the witness be permitted to answer this question, your Honor, because he is entitled to make an answer to it, and I do not think that any one in this room knows what he is going to say until he says it.

Trial Examiner Ballinger: We have just had an answer, and we have an answer that is not responsive, and then the witness has started on with another answer that was equally unresponsive.

The witness may start again, and the question may be reread to him, if he desires it to be reread to him.

Mr. Austin: I address your Honor most respectfully, but most urgently, that your Honor and I and no one else in this room knows what he was going to say, and we do not know whether it would be responsive or not until he says it.

6956 I think it would only be fair for the witness to be allowed to answer the question.

Trial Examiner Ballinger: The Examiner refers to what the witness said on the record, and further discussion of the matter is closed. The witness may have the question reread, and he may now answer the question.

(The reporter read the question as follows:

"Q. All right. With respect to those accounts that you studied on Respondent's Exhibit 101, if any, please state whether or not the Respondent has resorted to a gallonage allocation factor in any case except where the expense item was of an overall nature? Now, do you not know what an overall nature is?"

"A. Please tell me. Please tell me.

"Q. I refer you to that class of account in which the president's salary would fall.")

The Witness: The only two accounts that were allocated on an all-gallonage basis in Respondent's Exhibit 101 are accounts 290 and 295. I believe those are the only two accounts. Probably 515—I will just have to look it up; but those are on an overall gallonage basis.

By Mr. Hanley:

Q. Do you mean to say the company allocated on an all-gallonage basis in those accounts that you have now named?

A. Yes, sir.

6957 Q. Mr. Warmack,—I know that.

Trial Examiner Ballinger: The answer is not responsive to the question.

The Witness: Well, I just do not understand the question.

Trial Examiner Ballinger: The question was not what accounts were allocated, but what were not so allocated.

The Witness: Well, every one except those I named were not so allocated on an all-gallonage basis.

Trial Examiner Ballinger: That is more responsive.

By Mr. Hanley:

Q. It still does not answer the question.

A. Well, I am listening, Judge Hanley, and you will just have to explain it in some manner in which I can understand it. You have asked about twenty times.

Q. We have been talking about the allocation on a gallonage basis. Now, it may be gallonage other than direct gallonage, it may be all gallonage, but it is a gallonage basis.

Has the Respondent resorted to a gallonage allocation factor in any case except where the expense item was of an overall nature in any account on Respondent's Exhibit 101, which account you studied?

Do not answer if you do not know. If you studied the account and can answer, please do so. You have been criticizing gallonage allocations for weeks, so you

6958 must know surely some account. Now, is that explanation of the question clearer?

A. Not to me.

Q. I—

Mr. Hanley: Your Honor, I think the witness is just declining to answer the question.

The Witness: That is not true, your Honor. I will answer the question if I understand it.

Trial Examiner Ballinger: The question is very clear to the Examiner.

The Witness: Well, Judge, just tell me what he is talking about.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

The Witness: What does he mean by "overall nature" in a case like the president's salary?

Trial Examiner Ballinger: Read the question to the witness.

(The reporter read the question.)

The Witness: In my opinion, the answer is—yes. That means that certain of these costs have been spread between two of the channels on a gallonage factor, other parts, maybe, of the same account is spread between three channels on a gallonage factor, and in other instances
6959 some of the accounts have been spread between all
six petroleum products columns including bulk plant and direct shipments, on an all gallonage basis.

By Mr. Hanley:

Q. Mr. Warmack, you said you were familiar with the series of accounts 1,000, 2,000, 3,000, 7,000.

A. Yes.

Q. This afternoon.

A. Yes.

Q. What is your understanding of this 7000 account?

A. It is my understanding that that account, or that series, is portions of these separate accounts, or places where portions are applied for allocation between reseller, consumer, and other methods columns on regular form 189.

Q. It may be other columns as well?

A. Well, it is my understanding that the 7000 account is, as distinguished from the 3000 account—that the 3000 account is to be allocated between the tank wagon reseller channel and the tank wagon consumer channel, and that the 7000 account is to be allocated between the tank wagon reseller, tank wagon consumer, and other methods channels. That is my understanding.

Q. Do you not understand that the 7000 account might also have in it something that was allocated to other channels?

A. I do not understand what you mean.

6960 Mr. Hanley: Well, I withdraw the question. It is not important here.

By Mr. Hanley:

Q. The 7000 is a clearing account, is it not, what the accountants commonly refer to as a clearing account?

A. Yes, sir, also 3000.

Q. Now, the things that go into the 7000 account, and finally are spread out there are of the nature of the overall expenses, are they not?

A. That is my understanding that they are in the nature of overall expenses, I would say.

Q. Has the Respondent resorted to a gallonage allocation factor in any case except where the expense items or item was of a nature as to have been running through 3000 and 7000 clearing expense accounts?

A. Yes, sir, that is my understanding, Judge, that if the cost could be assigned directly, it is so assigned.

Q. Yes?

A. And the remaining portion of cost then in each of these separate accounts on Respondent's Exhibit 101, that are shown on Respondent's form 189 in the regular accounting procedure, the portions of the accounts applicable to the tank wagon channels; that is, reseller and consumer channels which cannot be assigned directly and placed wholly in those two accounts, is placed in the 3000 account, and then is reallocated whereby a portion falls in the tank wagon and a portion falls in the consumer. 6961 Now, there is in addition costs which fall in the 7000 account of the same nature which is re-allocated to tank wagon reseller, tank wagon consumer, and other methods. That is my understanding.

(Witness temporarily excused.)

Trial Examiner Ballinger: At the request of the witness, and by consent of counsel, the hearing is, at 5:00 p. m., adjourned to reconvene at 9:30 a. m., July 23, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

(Whereupon, at 5:00 p. m., July 21, 1942, the hearing in the above-entitled matter was adjourned.)

6962 Room 532, Federal Trade,
Commission Building,
Washington, D. C.,
Thursday, July 23, 1942.

Met, pursuant to adjournment, at 9:30 a. m.

Before:

Webster Ballinger, Trial Examiner.

Appearances:

Cyrus B. Austin, Esq., attorney for the Federal Trade Commission.

Harold R. Hanley, Esq., 910 South Michigan Avenue, Chicago, Illinois, appearing for the Respondent.

6963 PROCEEDINGS.

Trial Examiner Ballinger: Come to order. The hearing of Docket 4389, case entitled "In the Matter of Standard Oil Company (Indiana)" is reconvened pursuant to notice at 9:30 a. m., July 23, 1942, in Room 532, Federal Trade Commission Building, Washington, D. C.

The last hearing was held at the same place July 21, 1942.

The reporter will note counsel for the Commission and Respondent present.

You may proceed.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Cross-Examination (continued) by Mr. Hanley.

Q. Mr. Warmack, supposing that you, as an accountant, were to make a cost study and you did so on three premises:

First: You allocated cost on the basis of gross margins upon sales.

Second: That you allocated cost on the basis of total selling man hours required to secure volume sold.

Third: That you allocated cost on the basis of gallonage sold to customers.

Assuming that you got a different result in each of 6964 those studies, which, in your judgment, would you regard as proven?

A. The nature of the study, of course, would have to govern.

The word "study" is quite all-inclusive, and a very elusive thing.

Just to make an allocation on those bases, without going to the extent of applying your study; that is, exploring every function involved, its influence on the case, if this were not done and the allocations were made as you just said, without that being done, without a proper exploration being made of everything which the accountant could consider, I would not consider that the costs in either instance had been proven.

Mr. Hanley: The Respondent moves to strike the answer of this witness as unresponsive.

Trial Examiner Ballinger: The motion is denied.

By Mr. Hanley:

Q. I will restate the question to you, Mr. Warmack.

You may assume that the study to which I referred in each of these three instances is of the type of study which you have been referring to as a factual and objective study.

With that premise, will you please answer the question as to which of the three results you would regard as proven.

6965 A. That question cannot be answered in the absence of the study itself. The study might disclose that a part of the cost could be allocated on either basis, and I doubt very seriously if a study would disclose that all of the cost could be allocated on any of the bases.

Q. Have you found that to be just exactly what the Respondent in this case did?

A. I found that it separated its costs on several bases—if that is what you mean, Judge Hanley.

Q. That is what I mean.

A. I see.

Q. Do you regard that as objectionable?

A. Oh, no, if your factors have been properly proven—which I contend they have not—in every instance.

Q. I am certainly undertaking to understand what you mean by "properly proven."

In this instance, I have left it entirely to your interpretation of what you mean by a study and I have asked you to assume these three studies which you, as an accountant, presumably have made, and you have gotten, presumably, a different result in each of those careful studies.

A. Yes, sir.

Q. Now, I wish you would please, Mr. Warmack, just tell us which of the three you would regard as proven.

A. Your Honor, that is impossible, to answer that question.

6966 The study will stand for itself. I just explained that a thorough and proper cost study of a situation or of the costs in this case would probably afford many measuring factors, probably more than Judge Hanley has just outlined, applicable to many of the separate classes of costs, and you just could not say which would be the best until you had made the study.

Trial Examiner Ballinger: Mr. Warmack, the question is a simple question. It is, in effect, that if you had made all the studies that you have described, made an exploration to the extreme limits—

The Witness: (Interposing.) Yes, sir.

Trial Examiner Ballinger: —and as a result you arrived at the same conclusion, the same figures, in each of the three different classifications—

The Witness: (Interposing) Than what?

Trial Examiner Ballinger: Which one of the studies would you consider as proven?

The Witness: We would have only made one study, if we had done that then we would have those comparable—those measuring factors, your Honor, outlined by Judge Hanley, and probably many others, and as a result of this thorough cost study which I have termed "factual and objective cost study" that would be the thing that would prove the cost, and the fact that you allocate all of the
6967 costs on one basis or all on another,—which I know you would not do—if you did it, why, it will be the first case I have ever known of, of all costs or where all costs could be allocated on one basis as a result of a study—because, your Honor, you cannot establish a measuring factor that I have ever known in which you could measure, or with which you could measure everything, every class of costs with it, it just cannot be done.

Trial Examiner Ballinger: The question did not include what you have known. It presupposes a situation—

Mr. Austin: (Interposing.) Well, he says that situation could not exist.

Trial Examiner Ballinger: He says in his opinion it would not. Suppose it does exist, then what?

The Witness: Then, we can answer it if you would your Honor, in the only way in the world we can answer it—the measuring factor, that is, the gallonage measuring factor, the time measuring factor, or the other measuring factor that the Judge used or spoke of may be established by a cost study—

Trial Examiner Ballinger: (Interposing.) Mr. Warmack,—

The Witness: I just cannot answer the question.

Trial Examiner Ballinger: Mr. Warmack, assuming all the conditions that you have just described existed, 6968 and you made three studies, and they all led to the same result, the question is which one of the studies would have been—or you would consider as proven?

The Witness: Now, I will have to answer as to the nature of the three studies, if all three studies were factual and objective cost studies, as I have outlined, you could not arrive in any given case at all three.

By Mr. Hanley:

Q. As I understand, Mr. Warmack, you cannot answer the question?

A. I have answered your question over four times, in my opinion.

Q. I will now ask you this:

Assuming that you are dealing with one item of expense, and assuming that you made a study of the allocation of that one item of expense, a factual and objective cost study of the thorough nature, or of as thorough a nature as you think should be made as an accountant—

A. Yes, sir.

Q. And you made such a study of each of these three stated methods of allocation in respect of that one single item of expense, and you reached a different result in each of those three studies, which of the three would you regard as proven?

A. As far as I am concerned, that would be a physical impossibility. If you made a factual and objective 6969 cost you would arrive at some method for that one item of expense, and that would be your method, and your factual cost study would point to that measuring factor, and that would be what you would use and nothing else.

Q. I understood you to say the other day, Mr. Warmack, that you, yourself, had an experience of investigating a problem and following it along two different lines to reach two different conclusions, and that you then had to exercise your judgment as to which result you would choose.

This is the same type of a problem that I am now presenting in this question. It is to be assumed that you, as an accountant, approached the problem of allocating some given cost item, and you undertook to determine how you would do that, and you chose these three different methods, and in each of them you reached a different result:

I will ask you again, Mr. Warmack, if you will please state which of those results is proven in your judgment as an accountant?

A. I could not answer that except by an example, the example you referred to, Judge Hanley, and I believe this will answer your question.

From my experience as a public accountant, I was dealing with overhead costs of manufacturing, such as depreciation of machinery, and that class of expense, in the
opinion of accountants, should be allocated in, of
6970 course, the most reasonable and equitable manner.
Each situation will have to stand on its own.

Depreciation of a machine may be allocated on several bases. Most, or many people, like machine hour rates; that is, based on the number of hours that the machine runs, when compared with the estimated hour-life of the machine. There may be varying factors coming in there, in considering that, like this, we may assume that the machine would run a large number of hours over a long number of years, but we have a problem in accounting of obsolescence to be considered. Various other factors, new inventions coming out that would necessitate that particular man that owned this machine to replace it in order to attain greater efficiency in his factory, long before the machine is worn out.

In situations, as I say, each must stand upon its own, the accountants set out in an effort to make an allocation of this general cost that is very elusive, and is very hard to determine where it should go, or at least how it should go to the product being manufactured, how the allocations are going to be made.

Now, in a situation of that kind, seldom do accountants quarrel with what another accountant does as long as he follows some reasonably equitable allocation. One man's idea of how it should go will not vary a great deal, generally, from what another man's will, in an ordinary situation.

6971 In the petroleum industry, it might be different. I have not explored the methods that you employ there. But I can show to you instances of the allocations on different bases of general overhead manufacturing costs, and I can show you where on several bases the allocation will be relatively the same in dollars. Now, when you come back to something in distribution cost accounting, that is of a general nature, for example, certain general office costs which may follow costs in the field of a similar nature, those costs in the field have, if a proper measuring factor is established for them, then I can see little objection to allocating the general costs in the home office on the basis of those costs, assuming, of course, that the same influencing factors of accounts in the field had to do with the general office costs which were of the same or of a very similar nature.

But, I do not see how in the world I can answer the question any better than using an example.

Mr. Hanley: If your Honor please, at this time the Respondent moves to strike the answer as totally unresponsive, this long speech of the witness, and respectfully requests that the Court have the question reread to the witness, and he requests that the witness be instructed to answer the question, and if he cannot, then, if he cannot, that he say so.

6972 Trial Examiner Ballinger: That portion of the motion to strike the answer is denied.

Mr. Hanley: I did not understand that, your Honor.

Trial Examiner Ballinger: That portion of the motion to strike the answer is denied.

The Examiner does not consider the question fully answered, and the witness may proceed.

Read again the question to the witness.

(The reporter read the question as follows:

"Q. I understood you to say the other day, Mr. Warmack, that you, yourself, had an experience of investigating a problem and following it along two different lines to reach two different conclusions, and that you then had to exercise your judgment as to which result you would choose.

"This is the same type of a problem that I am now presenting in this question. It is to be assumed that you, a-an accountant, approached the problem of allocating some given cost item, and you undertook to determine how you would do that, and you chose these three different methods, and in each of them you reached a different result;

"I will ask you again, Mr. Warmack, if you will please state which of those results is proven in your judgment as an accountant?").

6973 The Witness: I can answer this question, your Honor, in this way:

Any one of the results will be proven and properly substantiated if a thorough cost study and analysis, what I have termed in this record a "factual cost study and analysis" and not using the term loosely, has been made, and if that results in the allocation on a basis of any of these methods that Respondent's counsel has outlined, any one of them will be proven and properly, properly proven, and one will be proven just as good as the other if that study shows which one should be used; that is the best I can answer the question, your Honor.

Trial Examiner Ballinger: Supposing each study was made on what you would consider proper methods; that is, that is supported by reason, and each resulted in a different result; would you say that they were all proven, or would you say that only some of them were proven, and if so, which?

The Witness: I would say—

Mr. Austin: If your Honor please, I want to be sure that that question is understood by the witness as you asked it.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Mr. Austin: You are referring to a single item of expense, or are you referring to three studies, and three

6974 different items of expense?

Trial Examiner Ballinger: To a single item of expense.

The Witness: May I say this, your Honor, there would be only one study, and that would afford you information as to which separation factor or measuring factor to use, and that would be properly proven, irrespective, in my opinion, of which measuring factor came out to be the right factor as the result of the study, and you would not start right in again making another study after you had already proven one.

Trial Examiner Ballinger: That would depend entirely upon the opinion of the accountant making the study?

The Witness: Oh, yes, indeed.

Trial Examiner Ballinger: And might not that accountant be in disagreement with other accountants?

The Witness: Who made a separate study, yes, sir; yes, sir; oh, yes, that is, like any other professional men.

Trial Examiner Ballinger: And might not both conclusions be based upon reasonably sound reasoning?

The Witness: That is right. Yes, sir. Yes, sir.

By Mr. Hanley:

Q. In that situation, would you regard both as proven?
A. Well, I would have to review, Judge Hanley, I
6975 would have to review, Judge Hanley, I would have to
make a review of it, and I cannot come out and say that I would regard both as proven. Surely, I could not agree with both men's studies. If I saw them I could agree with one of them, or I might not agree with either one of them.

Q. Does it not finally and always go back to this, so far as you are concerned, Mr. Warmack, that that is proven with which you agree?

A. Well, I would use the word "proven" in this instance to mean substantiate and one may be fully substantiated, another study may be—the measuring factors I am speaking of—may be partially substantiated, in a further study that may not be substantiated at all, as in the case of your gallonage factor.

Trial Examiner Ballinger: Well, the question of substantiation depends entirely upon the opinion of the accountant, does it not?

The Witness: I would not say exactly upon the opinion of the accountant, I think most accountants will agree if you do not make a study you do not have any substantiation.

By Mr. Hanley:

Q. Mr. Warmack, all of these questions that you have been answering, both those propounded by the Examiner and by counsel for the Respondent, have presupposed and
given you to assume that there was a factual and objec-
6976 tive and a careful analysis cost study, on that basis,
will you please answer the question that I asked you,

and I will ask, if your Honor please, that the question be reread to the witness.

Trial Examiner Ballinger: Read the question to the witness.

Mr. Austin: Which question, there are a lot of them?

Mr. Hanley: The last question I asked as to what he thought about when the thing was proven if it were not his agreement or disagreement.

Trial Examiner Ballinger: Reread the basic question.

(The reporter read the following question:

"Q. Does it not finally and always go back to this, so far as you are concerned, Mr. Warmack, that that is proven with which you agree?")

Mr. Austin: Off the record.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: May I make this request, that counsel restate his question or suggestion that he made to the witness off the record?

Mr. Austin: If the Examiner desires it.

The Witness: I would like to have the question

6977 restated anyhow.

Trial Examiner Ballinger: Do you press that?

Mr. Hanley: Not in view of the witness' statement.

The Witness: May I make this request, that counsel restate his question, if your Honor please unless he has it read right here in the record.

Mr. Hanley: I will do that.

By Mr. Hanley:

Q. Mr. Warmack, I asked you if in all of these answers you have given and if in your testimony relative to the cost studies and accounts that you have reviewed in this case, where you have used the word "proven" does not mean proven to your individual satisfaction, or proven to a point where you individually agree with the method or the result.

The Witness: Now, will you read that question again?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

Mr. Austin: I object to that question on the ground that the witness has already fully answered it and explained what he means by "proven," and I think he has answered every other question that he has been asked.

Trial Examiner Ballinger: The explanations offered by the witness were not clear to the Examiner.

The Witness: I will be glad to answer this; your
6978 Honor.

Trial Examiner Ballinger: You may answer it. The objection is overruled. Read the question to the witness.

(The reporter read the question as follows:

"Q. Mr. Warmack, I asked you if in all of these answers you have given and if in your testimony relative to the costs studies and accounts that you have reviewed in this case, where you have used the word 'proven' does not mean proven to your individual satisfaction, or proven to a point where you individually agree with the method or the result.")

The Witness: When I say "proven," I mean, if and if made in my testimony, substantiated by studies which in my opinion were made in accordance with sound and accepted accounting practice, and that is what I have meant when I stated "proven."

Trial Examiner Ballinger: That is methods may have been used according to what you consider sound methods?

The Witness: Yes, sir; measuring factors must have been established by the use of those methods in accordance with the application of sound accounting practice.

By Mr. Hanley:

Q. That is to say what you believe to be sound accounting practice, Mr. Warmack?

6979 A. Yes, sir, what I believe to be sound accounting practice, Mr. Hanley.

Q. You have stated, Mr. Warmack, that many times studies will result in different results and that those studies may have been conducted on a careful and thorough basis and that the results of each are substantiated and supported by reasons and that some accountants will agree that one result is the better, and another accountant may think a different result is the better; is that true, is it?

A. Yes, sir. That is true and especially with respect to general costs.

Q. Permit me now to ask you if, in the final analysis, always, it does not essentially follow that the selection or the choice must be exercised by the accountants to determine just what method they will apply in any particular business, or to any particular problem?

A. I did not get your verb in that?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: That is correct, giving weight, of course, to all of the factors concerned and to the logic in the approach, and carry through of the study, and those things and of course, in each instance, there is always a question as to how far we should go—is this sufficient—should we care to go a little further, and is that sufficient, and
6980 that is all naturally up to the accountant, and in my case I always get somebody to bear me out on it, if I am going far enough and not going too far, what I mean is, conferring with my chief accountant, Judge, and several other competent accountants as may be around the Commission and available for discussions.

Trial Examiner Ballinger: Well, that is the method you employ to resolve and determine any question which may be before you?

The Witness: Well, I do not want to go too far, and I still want to go far enough in these studies, and I think these present too lareg a problem for one man to try and resolve.

By Mr. Hanley:

Q. Mr. Warmack, I was not asking you at all about the methods of the Commission's accounting staff in prosecuting cases that may be brought by the Commission.

I was simply asking you if, in the conduct of a business, the accounting staff of that business was confronted with different methods of arriving at a conclusion and followed out those methods and studies and analyzed and found that each resulted differently, isn't it just true, Mr. Warmack, that those accountants are forced to exercise their discretion and their best judgment, taking into consideration all of the factors which you have named, of course?

6981 A. Why, surely, they must exercise their best judgment in giving effect and consideration to all of these things.

The Witness: Your Honor, with reference—just a minute, if I may refer to the statement that the accounting staff of the Commission has to do with the prosecution of cases, we have nothing to do with them.

Mr. Hanley: Just a moment.

Trial Examiner Ballinger: Just a moment.

The Witness: He stated in that record that, and I thin the record should show that statement of mine that the accounting division does not prosecute any cases. We d what we are told to do and that is all. We do not go beyon that.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

Mr. Hanley: The Respondent moves to strike whateve portion of the witness' answer has to do with any attempte explanation of the activities of the accounting staff of th Commission. I do not know whether that is on the recor or not, your Honor, because there was an interruption a the time that the witness started making his statement.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record. Pleas
6982 make your objection again.

Mr. Hanley: The respondent now moves to strik that portion of the witness' answer beginning "just a moment, if I may," and so forth, as unresponsive an improper.

This motion takes the place of or is in lieu of the motio previously made.

Trial Examiner Ballinger: Motion is granted, and th matter is stricken, not physically, of course.

By Mr. Hanley:

Q. Mr. Warmack, you named a number of factors tha accountants who are under the obligation to choose a method of allocation would properly use in making that selection. Is it not true that one very important factor tha accountants would use would be the experience of the business with which they were concerned?

A. Yes, indeed, it certainly would be.

Q. And the longer that that experience has existed, th more experiments that had been made in the course of thi business experience, would all be very compelling factors would it, in your judgment?

A. I rather think they would, but I would not say tha the longer would have so much to do with it because I se some businesses that have not been going so long that hav an enormous amount of information which some other busi nesses which have been in operation for 50 years or 6983 more do not; and that in my opinion is true of the thing down the line. I see some people hire young men and pay them high salaries, and hire old men and pay them low salaries. I think there is some merit to those things. That follows through with businesses.

Q. Now, Mr. Warmack, from your experience and observation of the affairs and business of the Respondent, do you understand it to be the fact that the Respondent company invests its capital on the basis of the accounting reports that it obtains from its accounting department?

A. I certainly did not make any inquiry to how the company invests its capital.

Q. Do you know whether or not that is true?

A. I should assume that any business would, any business of any particular size would of course have to have good accounting and know how it stood financially before it could make any large commitments. I am sure of that.

Q. Do you know it to be the fact that on the basis of the expense allocations and the reflections from the accounting standpoint as indicated by the marketing accounting of the Respondent company determine its policy with reference to investment?

The Witness: May I have that question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

6984 The Witness: No, sir. I do not know that to be the fact.

By Mr. Hanley:

Q. Would you regard that as a reasonable assumption?

A. I would rather think, just in my own opinion that the more information the company has with respect to its own business, the better the business can be managed.

Q. I am sorry, Mr. Warmack, I do not believe that answers the question.

Trial Examiner Ballinger: The question is not responsive.

Read the question.

(The reporter read the question.)

The Witness: Well, I just do not know.

By Mr. Hanley:

Q. I asked you for an opinion.

Trial Examiner Ballinger: Read the question again.

(The reporter again read the question.)

Trial Examiner Ballinger: Read the question befor that.

(The reporter read the following question:

"Q. Do you know it to be the fact that on the basis o
the expense allocations and the reflections from the account
ing standpoint as indicated by the marketing account-
6985 ing of the Respondent company determine its polic
with reference to the investment?")

(The reporter also read the following question:

"Q. Would you regard that as a reasonable assumption?")

The Witness: I stated, Judge, that I regarded it as an influencing factor. I do not know if it is a reasonable assumption or not.

By Mr. Hanley:

Q. Mr. Warmack, are you aware of the fact that the Respondent company frequently, and indeed constantly, is subject to investigation and inquiry by accountants from Federal Treasury Department for tax purposes?

A. I would like to hear the question read.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Yes, sir, I understand that the Treasury Department covers all companies and individuals also as to paying taxes.

By Mr. Hanley:

Q. You know that the Respondent company does business in fourteen states; do you not?

A. That is my understanding.

Q. Are you aware of the fact that in many if not all of
those fourteen states there are various taxing and other au-
thorities which are frequently if not constantly making
6986 investigations and inquiry into the accounting meth-
ods and the results and the accuracy thereof, of the
Respondent company?

A. Well, I know it to be a fact that they are making inquiries to the end of trying to get as many taxes as they can get out of the company; that is, to determine that their profits, if it is based on profits, are stated correctly in accordance with their theory of accounting, and if it is based on something else, that the calculations are made to give the municipal body the highest possible revenue.

Q. Both from the Federal and from the State standpoint; Mr. Warmack, would not what you have just said involve a broad analysis of the propriety and of the accuracy of the accounting methods used by the Respondent?

A. Some of the accounting, yes, sir. Those authorities are interested for the most ~~part~~ in the broad picture. Taxing authorities concerned with assessments and assessed value of property are concerned with that; taxing authorities concerned with income taxes are concerned with the overall picture. They do not care whether you put cost of selling against tank wagon reseller, tank wagon consumer, or other methods, or somewhere else, they only want to know what the final result is in dollars.

Q. Have you completed your answer?

A. I believe so. Did I answer your question?

6987 Q. Very well. I will repeat the question, Mr. Warmack. Just answer the question I asked you.

A. I tried to do it, Judge.

Q. Would not the taxing authorities be concerned with the accuracy and propriety of the methods and results of the accounting practices employed by the company whose growth or net profits the taxing authorities were undertaking to determine?

A. Well, now, I answered that question and gave you an example.

Mr. Hanley: If your Honor please, may the witness answer "yes" or "no"?

Mr. Austin: I object to that, I think it is repetitious fully answered, and of course if the witness is going to answer it yes or no, I have no objection, but I think that it is answered fully.

Trial Examiner Ballinger: The objection is overruled.

The Witness: Your Honor, a "yes" or "no" answer without explanation is worthless and valueless.

Trial Examiner Ballinger: You can offer any explanation you desire, but you can certainly answer the question "yes" or "no."

The Witness: The answer is "yes," subject to all the qualifications and examples which I just gave in response to the same or similar questions. 6988

By Mr. Hanley:

Q. In your former response, as I understand it, you undertook to speak for the judgment and purposes and opinions of the accounting staffs of some fourteen states and the Federal Treasury.

A. It was not intended to do that. You first asked me to do that, and then I did it, and then you would question it because I did do it.

Trial Examiner Ballinger: Off the record. That is largely argumentative.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. Are you aware of the fact, Mr. Warmack, that the Respondent company is required to make reports to the Securities and Exchange Commission?

A. It is my understanding, yes, sir.

Trial Examiner Ballinger: The hearing will stand in recess for five minutes.

(A short recess was taken.)

Trial Examiner Ballinger: Come to order.

By Mr. Hanley:

Q. Do you know it to be a fact, Mr. Warmack, that the stock of the Respondent Company is listed on the 6989 New York Stock Exchange; that is, what is commonly called the "Big Board"?

A. That is my understanding, Judge Hanley. I do not know that to be a fact. I have not looked it up.

Q. Do you know it to be a fact that annually the Respondent company is required to and does make a financial statement of condition?

A. Well, I do not know it to be a fact. It is my understanding that it does and that that information is the kind of information that is submitted to the Securities and Exchange Commission.

Trial Examiner Ballinger: Judge, you have been inquiring about this for some time, just how does this become material in the case which involves differential cost accounting?

Mr. Hanley: I will tie it up in a moment, Judge Ballinger.

Trial Examiner Ballinger: You may do so.

By Mr. Hanley:

Q. Do you know it to be the fact that the Respondent company is audited annually by the Price-Waterhouse auditing firm?

A. No, sir. I do not know it to be the fact.

Q. Assuming it to be the fact, please, Mr. Warmack, if you please, Mr. Warmack, and then tell me if in respect of all of these things, namely, reports to the Securities 6990 and Exchange Commission, reports and investigations made by Price-Waterhouse, if the accountants for those agencies would not be concerned with the accuracy of the methods and results obtained by the accounting practices of the Respondent?

Mr. Austin: I object to that as irrelevant, immaterial, and incompetent as to what the Securities and Exchange Commission or Price-Waterhouse are concerned with.

Trial Examiner Ballinger: The Examiner understands this is material leading up to something in a subsequent question that will connect it up with the case on trial.

On that basis, the objection is overruled subject to renewal.

The Witness: May I have the question, please?

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: In the overall picture, yes, I assume that that would be true. I do not think that it would be or would have anything to do with the determination of a cost differential.

By Mr. Hanley:

Q. In your judgment, Mr. Warmack, as an accountant, if there were anything seriously wrong with the cost accounting methods of the Respondent company in respect of its marketing activities, would that not be criticized by the accountants for the Federal Government, and by as responsible an accounting firm as Price-Waterhouse?

6991 Mr. Austin: I renew the objection to that on the ground that it is irrelevant and immaterial as to whether or not criticism would be or has been made by Price-Waterhouse or by the Government for the purposes of this case.

Trial Examiner Ballinger: The objection is overruled, subject to renewal.

The Witness: In the overall picture, I would say, "yes" to your question, but in the separation of the company's costs in regular accounting procedure as to classes of customers or product, I certainly do not, and could not have an opinion as to just how extensively the public accounting firm of Price Waterhouse would be interested in those matters, or just how much they would be concerned with them, or go into them.

Trial Examiner Ballinger: Off the record.

(There was a discussion off the record.)

Trial Examiner Ballinger: On the record.

By Mr. Hanley:

Q. I understand from your answer that you now understand what the term "overall" means?

A. Well, the way I used it means that accounting firm would look at the picture in a broad sense and not necessarily with respect to product classifications, customer classifications; that is what I mean, expense to one single item which might be termed an overall expense.

6992 Q. You spent considerable time, did you not, Mr. Warmack, examining into account 004 having to do with salaries?

A. Yes, sir, at the Detroit field for the year 1940.

Q. And at several points in your testimony you have questioned the manner of Respondent's allocation of salaries and other expenses, have you not?

A. Not necessarily the manner, I questioned the measuring factor, the accuracy of the measuring factor as developed by the Respondent company.

Q. Did you not state, page 5854—if you desire to follow me—state a criticism of the Respondent's methods of allocations of these expenses because of the fact that these allocations are made on a composite basis and not upon the basis of the time spent by any individual group of salesmen?

A. I stated that.

Q. In your judgment as an accountant, would you suggest that the allocations could more properly be based upon individual groups of salesmen?

A. In my opinion they can, assuming of course that the measuring factors for the individual groups were properly worked out.

Q. After allocating each individual group of salesmen's and expenses as you suggest, would you recapitulate the separate group allocations to secure a total for the particular expense classifications referred to under account 004—salaries—; account 032, traveling expense; account 047, operation and maintenance of vehicles; account 102, depreciation on vehicles? 6993

The Witness: Your Honor, I do not understand that. May I have the question read.

Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: I do not just exactly understand that, Judge Hanley.

By Mr. Hanley:

Q. What do you not understand about it?

A. What do you mean by "recapitulate"?

Q. Just what the word means, Mr. Warmack. How would you handle the other accounts?

A. Which other accounts?

Q. The ones I named; 032, 047, 102, 004?

A Those accounts should follow the salesmen.

Q. Would you add them together, the individual group expenses, to get a composite total for those three accounts?

A. If I wanted an average I would; if I did not want an average, I would not.

Q. If you were allocating on form 189, would you do it?

A. I would determine what portion of that expense went to each class of salesman.

Q. Would the procedure that you suggested increase the amount of accounting work necessary and 6994 result in increased cost for the maintenance of records of the company?

A. Well, I do not mean in the regular accounting procedure. I do not quarrel with the way the company keeps its accounts. It can keep them in any way it likes, and I think it should be satisfactory to anybody if it is satisfactory to the company; but, for the purpose of proving a cost differential I think that is a different matter.

Mr. Hanley: The Respondent moves to strike the answer to the question as not responsive and asks that the question be reread to the witness.

Trial Examiner Ballinger: Before the Examiner passes on the motion, read the question and the answer.

(The reporter read the last question and the last answer.)

Trial Examiner Ballinger: The motion is granted. The witness may answer the question.

The Witness: May I hear the question?

Trial Examiner Ballinger: Read the question.

(The reporter read the question as follows:

"Q. Would the procedure that you have suggested increase the amount of accounting work necessary and result in increased cost for the maintenance of records of the company?")

The Witness: Yes, sir, it would involve more costs 6995 but I think that needs an amplification, your Honor.

Trial Examiner Ballinger: You may offer an explanation.

The Witness: My answer to the previous question was intended; that is, the refinement was stated as being necessary, was intended if a study were made to determine the cost differential, but it was certainly not intended that the company should keep those records to such a degree of refinement.

By Mr. Hanley:

Q. Do you know whether or not as an accountant, Mr. Warmack, that any company could prove to your satisfaction a cost differential without keeping records to the degree of refinement which you have indicated in your testimony in this case?

A. It is my opinion that it could, but it would take a cost study to determine the cost differential. I know that it is not common practice for companies to keep costs in such a way at all times to determine cost differentials without making some greater refinement of the separation of those costs than are currently kept on their records.

Q. Assuming your practice were adopted or your suggested practice, would the end result be any different from that already reached by the Respondent in its present accounting?

A. In this case you mean, Judge Hanley?

Q. Yes.

6996 Mr. Austin: Referring to the same four or five accounts.

The Witness: A cost study would prove that and that is the only way that could be proven.

By Mr. Hanley:

Q. Do you know?

A. A cost study and analysis could prove it; that is the only way it could be proved in my opinion.

Q. Do you know?

A. Of my own knowledge?

Q. Yes, do you know? I am asking you.

A. I have not made such a cost study, and I am sure the company has no other studies; I have not seen any information along that line.

Q. You are sure the company has not made any such?

A. I am sure if they had been, Houghton would have given me the papers on it.

Q. That is your opinion, I assume?

A. I certainly do believe that Mr. Houghton would have given me anything in the world I asked for, and I asked him for that, and that information was not there.

Q. Mr. Warmack, is it not true that the end result would vary if the salaries of one group of salesmen failed to conform to the average of all groups?

The Witness: May I have that again?

6997 Trial Examiner Ballinger: Read the question.

(The reporter read the question.)

The Witness: Oh, not necessarily. A study would show that, and that is the only way it could be developed, would be by a proper study.

By Mr. Hanley:

Q. Well, is not that question clear to you?

A. Yes, sir, and it has been answered. I answered it.

Q. You answered it but I understand from the question that no study is necessary; I will repeat the question.

A. Yes.

Q. Would not the end result vary only if the salaries in one group of salesmen failed to conform with the average for all groups?
